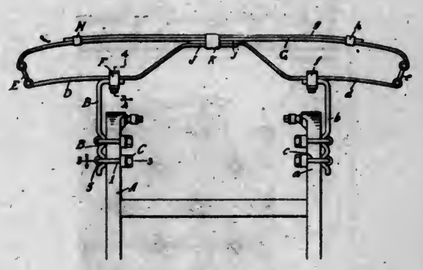
Particular description of goods.—Dyes and Dyestuffs.
Claims use since about Oct. 17, 1904.

178,744. (CLASS 39. CLOTHING.) THE SALT'S TEXTILE MANUFACTURING COMPANY, Bridgeport, Conn., and New York, N. Y. Filed June 3, 1921. Serial No. 148,621.

KHIVA-FUR

Particular description of goods.—Women's, Children's, and Infants' Coats, Cloaks, Wraps, Capes, Suits, Costumes, Dresses, Waists, Skirts, and Hats.
Claims use since Jan. 18, 1921.

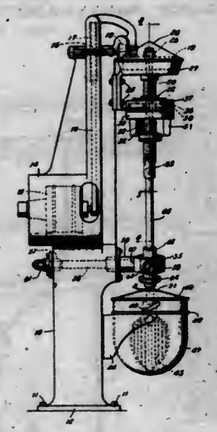
178,745. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE ERWIN COTTON MILLS CO., West Durham, N. C. Filed Sept. 22, 1920. Serial No. 137,456.



PEERLESS

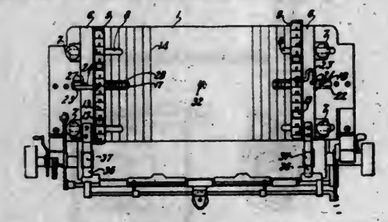
Particular description of goods.—Denims in the Piece.
Claims use since Mar. 3, 1908.

REISSUES



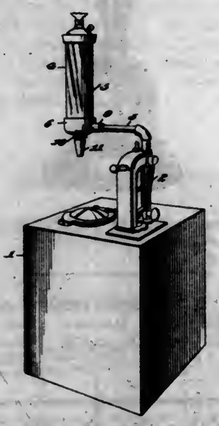
JANUARY 15, 1924.

15,745. WHEEL FENDER. ALEXANDER M. HUDSON, New York, N. Y. Filed Sept. 21, 1923. Serial No. 644,139. Original application filed Jan. 29, 1919, Serial No. 273,703. Renewed Mar. 16, 1921, Serial No. 452,722. Original No. 1,393,020, dated Oct. 11, 1921. 11 Claims. (Cl. 293—55.)



6. In a wheel fender, the combination with fender supports, of a main buffer front spring, a rear auxiliary spring, shackles pivotally connecting the outer ends of the main and rear springs and spacing the said ends apart.

15,746. BEATER. FREDERICK WESTERMAN, Chicago, Ill. Filed Nov. 26, 1923. Serial No. 677,190. Original No. 1,438,281, dated Dec. 12, 1922, Serial No. 534,301, filed Feb. 6, 1922. 6 Claims. (Cl. 259—102.)

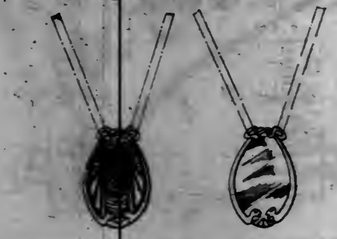


1. In apparatus of the class described, an operating shaft capable of simultaneous rotation and revolution, and a paddle shaft operatively connected to said operating shaft by a flexible joint.

15,747. COLLATING DEVICE FOR TYPEWRITERS AND ADDING MACHINES. JOHN A. WHEERY, New Orleans, La., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 4, 1921. Serial No. 475,121. Original No. 1,336,453, dated Apr. 13, 1920, Serial No. 289,120, filed Apr. 10, 1919. 35 Claims. (Cl. 197—127.)

1. In a machine of the class described, the combination with a rotatable platen and a traveling carriage, of a collating board associated therewith, said board having deformable supporting standards, whereby the angle of inclination and the distance of the lower edge of the board from the platen may be varied.

15,748. VISIBLE DISPLAY ATTACHMENT FOR MEASURING PUMPS. WILLIAM S. TOWNSEND and FRANK E. DOUGLASS, Rochester, Pa. Filed Nov. 14, 1923. Serial No. 674,774. Original No. 1,450,994, dated Apr. 10, 1923, Serial No. 567,836, filed June 12, 1922. 5 Claims. (Cl. 221—67.)



5. A visible display attachment for pumps, comprising a visible container having an inlet in its bottom for connecting it with the discharge side of a pump and an outlet also in the said bottom having a restricted passage of less cross sectional area than said inlet, and a normally closed vent valve in the upper end of the container which, when opened, will first allow the liquid retarded at the restricted outlet to rise and fill the container for display purposes and which, when closed, will cause the liquid to be held in the container while liquid is being forced by the pump from the inlet to the outlet for dispensing purposes.

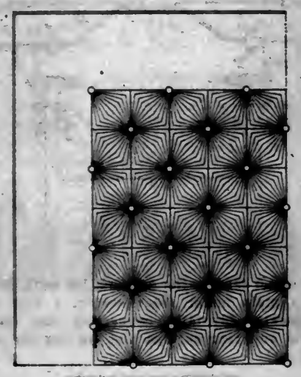
DESIGNS

JANUARY 15, 1924.

63,765. PENDANT MIRROR. ILDEBERTO J. ALVAREZ, New York, N. Y. Filed May 29, 1923. Serial No. 6,315. Term of patent 3½ years.

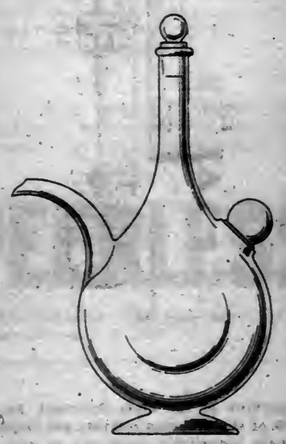
The ornamental design for a pendant mirror, as shown.

63,766. COMBINED CLOCK CASE AND ELECTRIC LAMP. LOUIS BALDINGER, Brooklyn, N. Y. Filed Aug. 3, 1923. Serial No. 6,939. Term of patent 7 years.



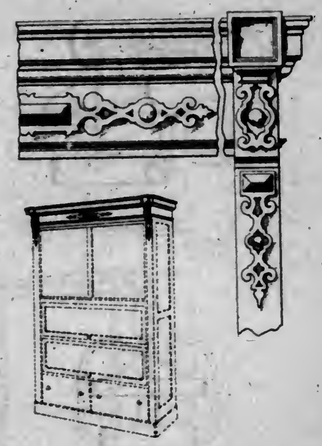
The ornamental design for a combined clock case and electric lamp as shown.

63,767. VEHICLE TIRE TREAD OR SIMILAR ARTICLE. ARTHUR B. BAUMAN, Akron, Ohio. Filed June 28, 1922. Serial No. 2,875. Term of patent 14 years.



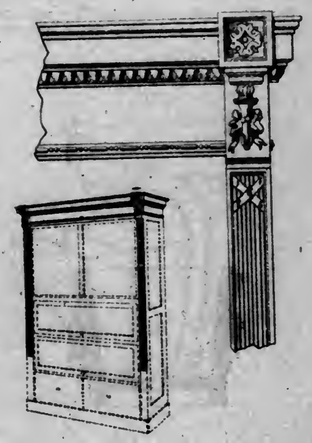
The ornamental design for a vehicle tire tread or similar article, as shown.

63,768. RUBBER BATH MAT. ALFRED BENEDEK, New York, N. Y. Filed July 12, 1923. Serial No. 6,769. Term of patent 7 years.



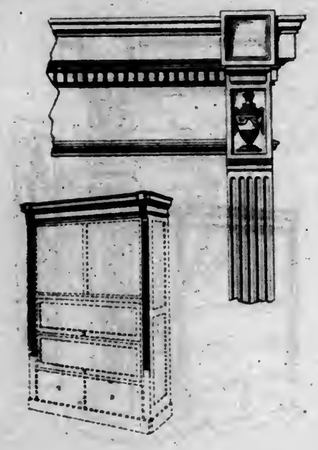
The ornamental design for a rubber bath mat, as shown.

63,769. DECANTER. PETER BIANCO, New York, N. Y. Filed Sept. 15, 1922. Serial No. 3,732. Term of patent 7 years.



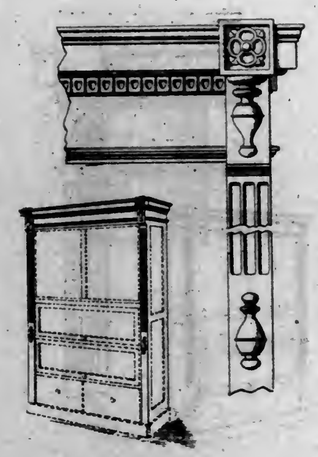
The ornamental design for a decanter as shown.

63,770. COMBINATION CORNICE AND PILASTER FOR STORE FURNITURE. THOMAS C. CAMERON, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 3, 1922. Serial No. 14. Term of patent 14 years.



The ornamental design for a combination cornice and pilaster for store furniture, substantially as shown.

63,771. COMBINATION CORNICE AND PILASTER FOR STORE FURNITURE. THOMAS C. CAMERON, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 3, 1922. Serial No. 15. Term of patent 14 years.

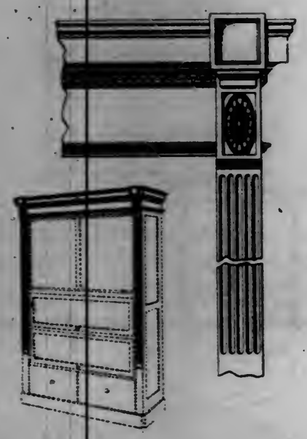


The ornamental design for a combination cornice and pilaster for store furniture, substantially as shown.

63,772. COMBINATION CORNICE AND PILASTER FOR STORE FURNITURE. THOMAS C. CAMERON, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 3, 1922. Serial No. 16. Term of patent 14 years.

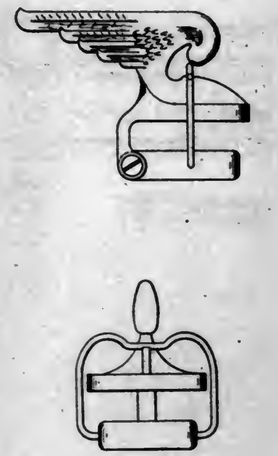
The ornamental design for a combination cornice and pilaster for store furniture, substantially as shown.

63,773. COMBINATION CORNICE AND PILASTER FOR STORE FURNITURE. THOMAS C. CAMERON, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 3, 1922. Serial No. 17. Term of patent 14 years.



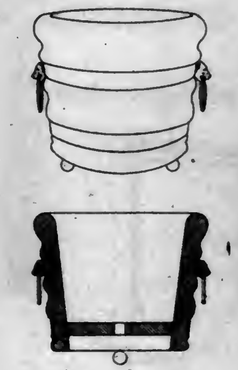
The ornamental design for a combination cornice and pilaster for store furniture, substantially as shown.

63,774. COMBINATION CORNICE AND PILASTER FOR STORE FURNITURE. THOMAS C. CAMERON, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 3, 1922. Serial No. 18. Term of patent 14 years.



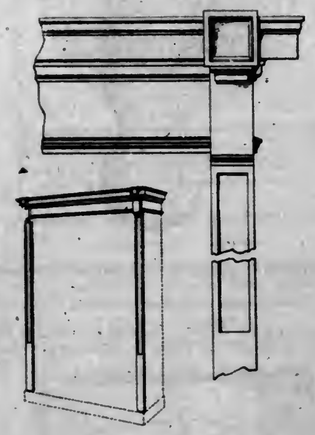
The ornamental design for a combination cornice and pilaster for store furniture, substantially as shown.

63,775. COMBINATION CORNICE AND PILASTER FOR STORE FURNITURE. THOMAS C. CAMERON, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 3, 1922. Serial No. 19. Term of patent 14 years.



The ornamental design for a combination cornice and pilaster for store furniture, substantially as shown.

63,776. RADIATOR CAP. FRANK E. CHRISTENSEN, Necedah, Wis. Filed Oct. 11, 1923. Serial No. 7,478. Term of patent 7 years.



The ornamental design for a radiator cap, as shown.

63,777. FLOWERPOT. PETER E. DE YOUNG COOK, Brooklyn, N. Y. Filed Apr. 12, 1923. Serial No. 5,792. Term of patent 7 years.

The ornamental design for a flowerpot, as shown.

63,778. COMBINED CORNICE AND PILASTER FOR STORE FURNITURE. CHARLES C. CURTIS, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 17, 1923. Serial No. 4,908. Term of patent 14 years.

The ornamental design for a combined cornice and pilaster for store furniture, substantially as shown.

63,779. COMBINATION BOWL AND SPOON HOLDER. JOHN DEMSTADT, Wilkes-Barre, Pa. Filed Mar. 31, 1922. Serial No. 1,469. Term of patent 14 years.

The ornamental design for a combination bowl and spoon holder, as shown.

63,780. PERCOLATOR URN OR SIMILAR ARTICLE. EDWARD ALBERT FARR, Meriden, Conn., assignor to Manning, Bowman & Company, Meriden, Conn., a Corporation of Connecticut. Filed Feb. 2, 1923. Serial No. 5,053. Term of patent 14 years.

The ornamental design for a percolator urn or similar article as shown.

63,781. TIRE. CHARLES E. FELLOWS, Trenton, N. J., assignor to Globe Rubber Tire Manufacturing Co., Trenton, N. J., a Corporation of New Jersey. Filed Dec. 26, 1922. Serial No. 4,703. Term of patent 14 years.

The ornamental design for a tire, as shown.

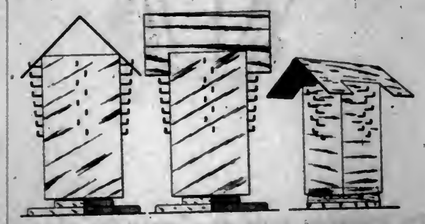
63,782. TOY BANK. ANTHONY FOLTA, Clarkson, Nebr. Filed Mar. 6, 1923. Serial No. 5,373. Term of patent 7 years.

The ornamental design for a toy bank, as shown.

63,783. PAN FOR LIGHTING FIXTURES. RUTH LUCILLE GRIFFIN, Minneapolis, Minn., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 27, 1922. Serial No. 1,407. Term of patent 14 years.

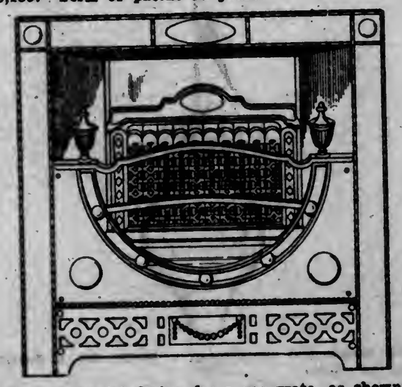
The ornamental design for a pan for lighting fixtures, as shown.

63,784. HUMIDIFIER. GEORGE GUNTHER, Long Beach, and ADELBERT J. SEBASTIAN, Los Angeles, Calif., assignors, by direct and mesne assignments, to The Gunther Humidifier Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 6, 1920. Serial No. 349,816. Term of patent 3½ years.



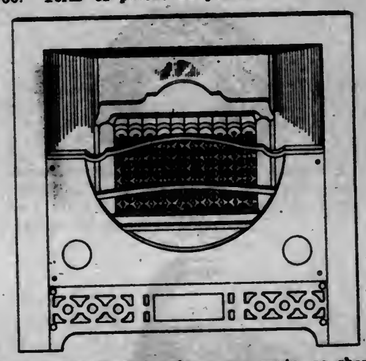
The ornamental design for a humidifier, as shown.

63,785. COVERED DISH. GEORGE HASSALLS, Penkhull, England, assignor to Hugh C. Edmiston, New York, N. Y. Filed Nov. 5, 1923. Serial No.o 7,683. Term of patent 3½ years.



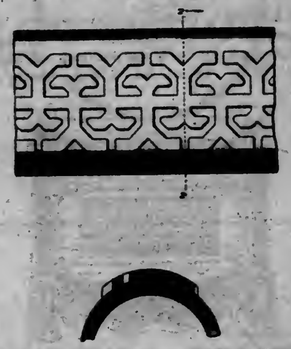
The ornamental design for a covered dish, as shown.

63,786. DISPLAY RACK. PAUL S. HENDERSON, Denver, Colo. Filed Apr. 18, 1922. Serial No. 1,827. Term of patent 3½ years.



The ornamental design for a display rack as shown.

63,787. GAS GRATE. HUBERT R. HUMPHREY, Kalamazoo, Mich., assignor to General Gas Light Company, Kalamazoo, Mich. Filed Feb. 12, 1913. Serial No. 5,159. Term of patent 14 years.

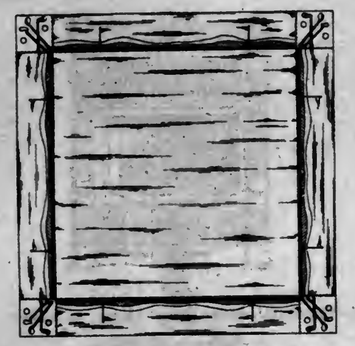


The ornamental design for a gas grate, as shown.

63,788. GAS GRATE. HUBERT R. HUMPHREY, Kalamazoo, Mich., assignor to General Gas Light Company, Kalamazoo, Mich. Filed Feb. 12, 1923. Serial No. 5,160. Term of patent 14 years.

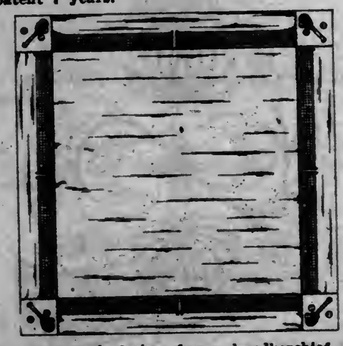
The ornamental design for a gas grate, as shown.

63,789. RESILIENT TIRE. ROBERT IREDELL, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 15, 1922. Serial No. 2,262. Term of patent 14 years.



The ornamental design for a resilient tire, as shown.

63,790. WALL BRACKET FOR LIGHTING FIXTURES. GEORGE J. KLEIN, Cleveland, Ohio. Filed Oct. 19, 1923. Serial No. 7,545. Term of patent 7 years.



The ornamental design for a wall bracket for lighting fixtures, as shown.

63,791. HANDKERCHIEF. JACK KLEIN, New York, N. Y. Filed Oct. 9, 1923. Serial No. 7,486. Term of patent 7 years.

The ornamental design for a handkerchief substantially as shown.

63,792. HANDKERCHIEF. JACK KLEIN, New York, N. Y. Filed Oct. 9, 1923. Serial No. 7,437. Term of patent 7 years.

The ornamental design for a handkerchief substantially as shown.

63,793. SHOE. VINCENT MARTELLI, Revere, Mass. Filed July 10, 1923. Serial No. 6,748. Term of patent 7 years.

The ornamental design for a shoe as shown.

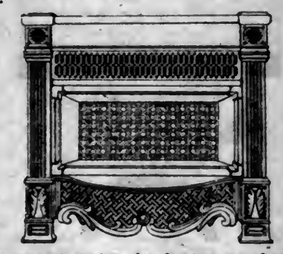
63,794. HEATER. BERTRAM L. MILLER, Cleveland, Ohio, assignor to Peerless Mfg. Company, Louisville, Ky., a Corporation of Delaware. Filed Jan. 9, 1922. Serial No. 136. Term of patent 7 years.

The ornamental design for a heater, as shown.

63,795. PLAQUE. WILLIAM PATRICK MORAN, Honesdale, Pa., assignor to T. B. Clark & Co., Inc., Honesdale, Pa., a Corporation of Pennsylvania. Filed Jan. 18, 1923. Serial No. 4,923. Term of patent 7 years.

The ornamental design for a plaque, as shown.

63,796. BOTTLE FOR A FLOATING SIGNAL. GEORGE F. MULHOLLAND, Belleville, Ill. Filed July 23, 1921. Serial No. 487,194. Term of patent 7 years.



The ornamental design for a bottle for a floating signal as shown.

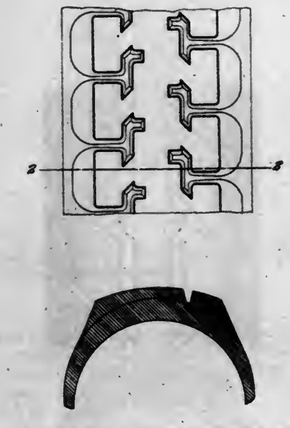
63,797. BALL LAMP COVER FOR LIGHTING FIXTURES. KARL NACKE, Brooklyn, N. Y., assignor to United Metal Spinning Co., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 27, 1922. Serial No. 1,404. Term of patent 3½ years.

The ornamental design for a ball lamp cover for lighting fixtures, as shown.

63,798. HEATER. FRANK A. NIEBERDING, Cleveland, Ohio, assignor to The Guardian Gas Appliance Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 24, 1923. Serial No. 7,296. Term of patent 7 years.

The ornamental design for heater, as shown.

63,799. DIRECTION SIGNAL. STEPHEN B. NOWAK, Buffalo, N. Y. Filed Apr. 14, 1922. Serial No. 1,767. Term of patent 14 years.



The ornamental design for a direction signal, as shown.

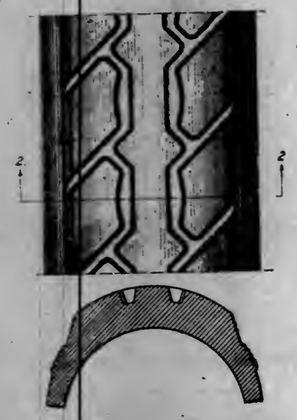
63,800. PLATE OR SIMILAR ARTICLE. HARRY OAKES, Wolstanton, England, assignor to William S. Pitcairn Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1923. Serial No. 5,624. Term of patent 3½ years.

The ornamental design for a plate or similar article as shown.

63,801. TIRE TREAD. MEYER PARMET, New York, N. Y., assignor to Dragon Tire & Rubber Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1922. Serial No. 4,654. Term of patent 14 years.

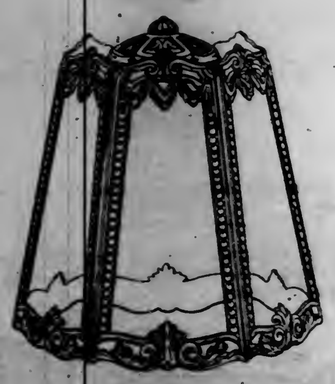
The ornamental design for a tire tread as shown.

63,802. COMBINED TABLE AND LAMP. EDWARD C. PELKEY, Portland, Me. Filed Sept. 21, 1923. Serial No. 7,285. Term of patent 7 years.



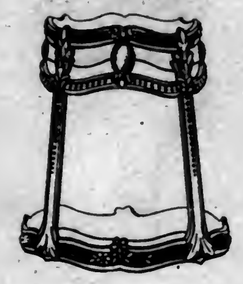
The ornamental design for combined table and lamp as shown.

63,803. FLOWERPOT. GEORGE REASNER, New York, N. Y. Filed June 10, 1923. Serial No. 6,534. Term of patent 7 years.



The ornamental design for a flowerpot, as shown.

63,804. TIRE TREAD. HAROLD D. REICHARD, Akron, Ohio, assignor to The Salem Rubber Company, Salem, Ohio, a Corporation of Ohio. Filed Oct. 20, 1923. Serial No. 7,617. Term of patent 14 years.

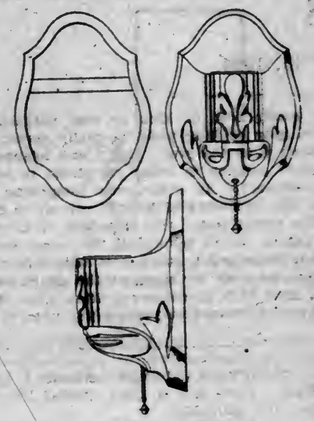


The ornamental design for a tire tread, as shown.

63,805. SHADE FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Mar. 4, 1922. Serial No. 1,032. Term of patent 7 years.

The ornamental design for a shade for lighting fixtures, as shown.

63,806. SHADE FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Mar. 4, 1922. Serial No. 1,036. Term of patent 7 years.



The ornamental design for a shade for lighting fixtures, as shown.

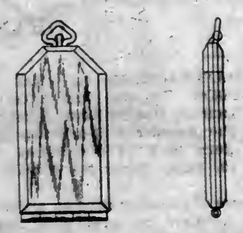
63,807. SHADE FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Mar. 4, 1922. Serial No. 1,037. Term of patent 7 years.

The ornamental design for a shade for lighting fixtures, as shown.

63,808. ELECTRIC LIGHT BRACKET. CEPHAS B. ROGERS, Danbury, Conn. Filed Mar. 31, 1923. Serial No. 5,657. Term of patent 3½ years.

The ornamental design for an electric light bracket, as shown.

63,809. HAND BAG. MAX SCHEUER, New York, N. Y. Filed Aug. 12, 1922. Serial No. 3,361. Term of patent 7 years.



The ornamental design for a hand bag, as shown.

63,810. BADGE. JOHN J. SOMMER, North Attleboro, Mass., and JAMES O. OTIS, ELLIS W. MACALLISTER, and ALFRED B. LEMON, Providence, R. I. Filed July 14, 1923. Serial No. 6,776. Term of patent 3½ years.

The ornamental design for a badge, as shown.

63,811. DOCUMENT CASE. FRANK M. WOJCIECHOWSKI, North Attleboro, Mass., assignor to Marathon Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Apr. 27, 1923. Serial No. 5,070. Term of patent 3½ years.

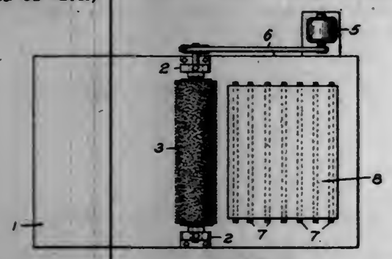
The ornamental design for a document case substantially as shown and described.

63,812. DOCUMENT CASE. FRANK M. WOJCIECHOWSKI, North Attleboro, Mass., assignor to Marathon Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Apr. 21, 1923. Serial No. 5,892. Term of patent 3½ years.

The ornamental design for a document case substantially as shown and described.

63,813. LAMP. HERMAN H. WOLTER, Meriden, Conn., assignor to Edward Miller & Company, Meriden, Conn., a Corporation of Connecticut. Filed Oct. 27, 1923. Serial No. 7,609. Term of patent 7 years.

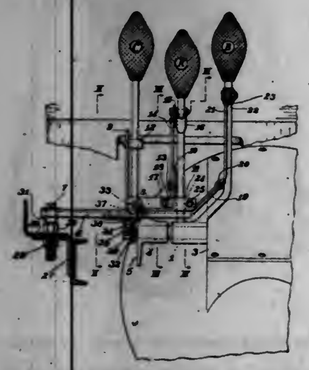
The ornamental design for a lamp as shown.



PATENTS

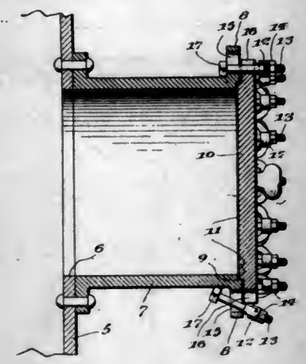
GRANTED JANUARY 15, 1924.

1,480,541. MANUFACTURE OF ARTICLES FROM WOVEN GOODS. THOMAS DOW AINSLIE, Metuchen, N. J., and RICHARD MARION LEVY, Brooklyn, N. Y., assignors to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed July 19, 1923. Serial No. 652,655. 12 Claims. (Cl. 2—67.)



1. The process of manufacturing an article from woven fabric which consists in forming a rough oversized multiple layer article from unbleached piece goods, then bleaching and shrinking.

1,480,542. PROCESS OF POLISHING GLASS. CHRISTOPHER BROWN, Charlerol, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Nov. 7, 1919. Serial No. 336,385. 2 Claims. (Cl. 51—278.)

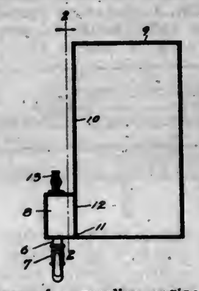


1. A process of smoothing or polishing a glass sheet which consists in rotating a brush with its axis extending transversely of the sheet and having radially extending fibers with the ends of such fibers in contact with the sheet at a high rate of speed so that the fibres engage the sheet with an impact or whipping action, and supplying an abrading or polishing material to make such action effective to smooth or polish the glass.

1,480,543. ATTACHMENT FOR GEAR-SHIFTING AND BRAKING MECHANISM. VACLAV CHUCHEL, Pittsburgh, Pa. Filed July 13, 1923. Serial No. 651,310. 8 Claims. (Cl. 74—89.)

1. In combination with the gear shifting and braking mechanism of an automobile including a brake pedal normally spring held at back or rear position, and a clutch and gear shifting pedal normally spring held at rear position with the gear "high," and adapted at its next forward position to bring the clutch to release or neutral position, of an attachment comprising a lever pivoted to the framework or body of the car on the outer side of the clutch pedal and extending transversely of the two pedals, means connecting the inner end of the lever to the brake pedal, and means carried by the lever intermediate its ends for engaging the clutch pedal and moving it from high to neutral position when the brake pedal is pressed forward and before the brake is applied.

1,480,544. CLOSURE FASTENER. ALBERT J. COX, Spokane, Wash. Filed Jan. 5, 1922. Serial No. 527,122. 2 Claims. (Cl. 220—55.)

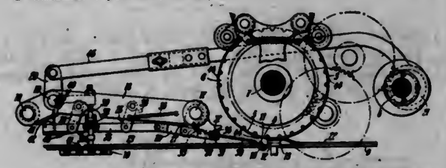


1. The combination with an element having an opening and an outstanding annular flange at the outer end of the opening; of a cover on said flanged end, said cover having edge recesses and the flange having radial slots terminating at their outer ends beyond the edge of the cover and short of the edge of the flange, bolts passing through said recesses and slots, nuts carried by the bolts, and arched clamping bars slidably mounted on the bolts beneath the nuts for engagement by the latter to force the ends of said clamping bars against the cover.

1,480,545. AUTOMATIC LUBRICATOR FOR GASOLINE ENGINES. THOMAS H. CUMMINGS, St. Louis, Mo., assignor of one-half to Hattie L. Cummings, St. Louis, Mo. Filed Dec. 23, 1921. Serial No. 524,434. 2 Claims. (Cl. 184—108.)

1. An automatic lubricator for gasoline engines comprising a main reservoir provided with an air tight closure on its top for the introduction of lubricant, oil passages formed in one wall thereof adjacent its bottom, an air passage formed in said wall adjacent to and above said first mentioned passages, an auxiliary reservoir formed integral with the main reservoir, said auxiliary reservoir enclosing said openings and having its bottom in the same plane as the bottom of the main reservoir, a stop cock for admitting air to the auxiliary reservoir,

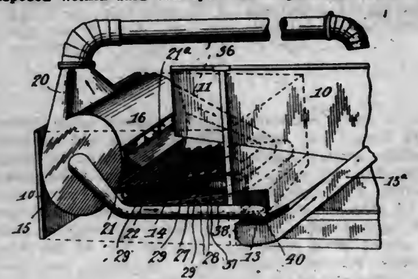
a stop cock secured to the bottom of said auxiliary reservoir, a pipe secured to the last mentioned stop cock and



to the crank case of a gasoline engine, and a bracket for securing the main reservoir to the crank case of said engine.

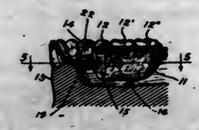
1,480,546. TIMER. WILLIAM M. CUMMISKEY, Newark, N. J. Filed Sept. 24, 1919. Serial No. 326,011. 7 Claims. (Cl. 200—27.)

3. In a timer, the combination of a timer shaft and contacts disposed about the same, an insulating bushing eccentrically mounted upon the timer shaft, an annular ball bearing having the inner race ring thereof engaged on said insulating bushing and diverging contact arms engaged with the outer race ring of the bearing and provided with contacts for engagement with the contacts aforesaid.



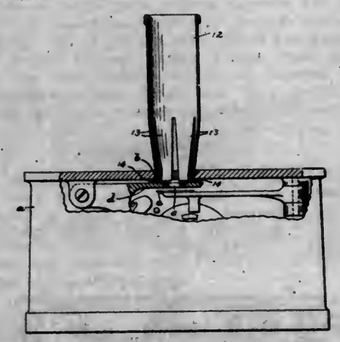
1,480,547. ADDRESSING MACHINE. FRANK DE MINICO, New York, N. Y., assignor to Pollard-Alling Manufacturing Company, New York, N. Y., a Corporation of New York. Filed July 7, 1920. Serial No. 394,517. 8 Claims. (Cl. 101—58.)

1. In a machine of the class described the combination of a series of printing plates, means for advancing said plates serially to and away from printing position, a classification printer carrying a latch, a hammer for impressing said classification printer upon an article, a trigger carried by said hammer, and means carried by one of said printing plates for bringing said latch into the path of said trigger whereby said hammer is brought into operative relation with the classification printer.



1,480,548. ATTACHMENT FOR THRASHING MACHINES. ELZEAR DORÉ, Laprairie, Quebec, Canada. Filed Jan. 27, 1921. Serial No. 440,435. 2 Claims. (Cl. 130—21.)

1. An attachment for a thrashing machine comprising an endless conveyor adapted for communication with the discharge end of the machine, a reciprocable sieve disposed within said conveyor for cooperation therewith,



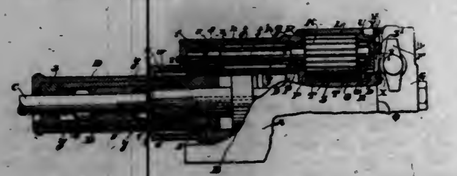
a blower adapted to draw from the upper lap of the conveyor, and means for directing a blast of air to the underside of the sieve.

1,480,549. DENTAL STRESS BREAKER. CHARLES J. EMERSON, Omaha, Nebr. Filed Mar. 6, 1923. Serial No. 623,285. 4 Claims. (Cl. 32—12.)

1. A dental stress breaker comprising a narrow tubular boxing imbedded longitudinally in a denture body and having one side flush with the lingual surface of the body as well as one end forming a lingual edge of the body, a transverse retaining pin removably seated in the boxing, and a slidable plate covering the mouth of the boxing and having a slotted portion extending into the boxing and working in its own plane on the retaining pin.

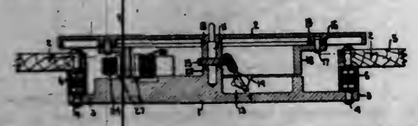
1,480,550. GUARD FOR CIGAR CUTTERS. ERNEST W. GATES, Wrentham, Mass. Filed Dec. 14, 1922. Serial No. 606,850. 4 Claims. (Cl. 131—38.)

1. A self-attaching guard for cigar-cutters, composed of a cigar-receiving tube having resilient means at one end, adapted to yieldingly engage the top plate of a cigar-cutter around the margin of a cigar-receiving orifice therein.



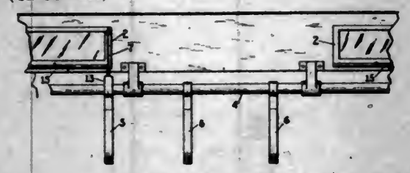
4. A self-attaching guard for cigar-cutters, composed of a cigar-receiving tube, provided at one end portion with means for slidably and yieldingly engaging the top plate of a cigar-cutter, around a cigar-receiving orifice therein, the arrangement being such that said tube is capable of a limited endwise movement to actuate a member of the cutter.

1,480,551. RULER. MARIS JOSEPH GOESEL, Alton, Iowa. Filed Sept. 28, 1922. Serial No. 591,090. 7 Claims. (Cl. 33—107.)



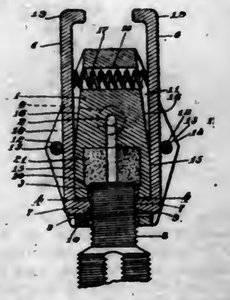
7. A ruler consisting of an elongated plate formed with flanged and unflanged ruling edges and an intermediate portion interconnecting the edges, the flange being disposed at an acute angle to the intermediate portion, and the unflanged edge portion being bent at an obtuse angle to the face of the intermediate portion opposite from the flange, and a longitudinal series of spaced studs projecting from the face of the intermediate portion opposite from the flange, and position adjacent to the flanged edge.

1,480,552. INDEPENDENT ROTATION FOR PERCUSSIVE TOOLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Apr. 7, 1922, Serial No. 550,421. Divided and this application filed Mar. 5, 1923. Serial No. 622,721. 4 Claims. (Cl. 121—7.)



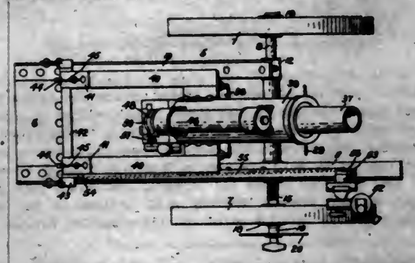
1. In a fluid actuated percussive tool, the combination of a cylinder and reciprocating piston, and a fluid pressure rotation motor mounted at the side of the rearward end of the cylinder and operatively connected to rotate the drill steel, said motor having a casing, a back head for said motor casing, rotary gears mounted in said motor casing, a sectional driving shaft having forward and rearward sections slidably coupled together, the rearward section being keyed to one of the gears, and having anti-friction bearings in the said back head and in the body portion of the cylinder, the forward shaft section having an anti-friction bearing at the forward end of the cylinder body, and a loose shaft sleeve over said shaft coupling, whereby the motor may be dismounted without removing the entire driving connections.

1,480,553. PHONOGRAPH MOTOR. EARL B. HOFF, Cleveland, Ohio, assignor to The Apex Motor Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 3, 1922. Serial No. 572,556. 6 Claims. (Cl. 172—278.)



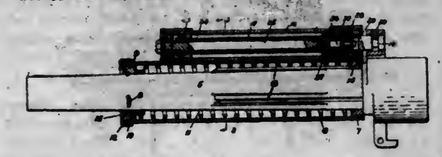
1. In a phonograph motor, a cylindrical conducting band, a magnetizable core located on one side of said band and having spaced pole pieces presented thereto, wire wound on said core between adjacent pole pieces, and a magnetizable bridge member located upon the opposite side of said band from said pole pieces and having a pole piece opposite each of said first pole pieces, corresponding portions of all of said pole pieces being magnetically shielded.

1,480,554. CAR VENTILATION. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Mar. 27, 1923. Serial No. 628,001. 5 Claims. (Cl. 98—23.)



1. Car ventilating means of the character described comprising a ventilator, a hanger strap for supporting passengers, and ventilator operating means connected with and actuated by said hanger strap.

1,480,555. AIR-PUMP CONNECTION. WALTER M. INGRAM, Baltimore, Md., assignor to The Reliance Pump and Machine Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 11, 1920. Serial No. 430,035. 3 Claims. (Cl. 285—150.)

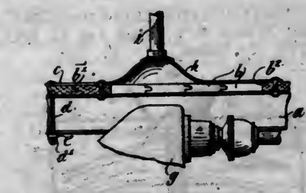


1. A tire pump hose connection consisting of a block having an air passage, means for connecting the pump hose at one end and a chamber to receive the valve tube at the other end of the passage, the block having angular surfaces at the side, gripper arms mounted to rock on said surfaces and having fingers at their ends at each side of said chamber, and a spring tending to hold the grippers in gripping position with their fingers in engagement with the valve tube.

1,480,556. SEPARABLE GUN CARRIAGE. BRYAN P. JOYCE, Davenport, Iowa. Filed Oct. 1, 1923. Serial No. 665,866. 5 Claims. (Cl. 89—40.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

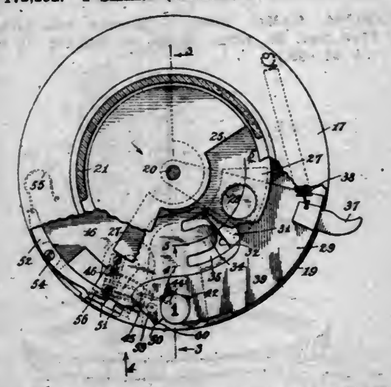
4. A separable gun carriage including a trail, a gun cradle supported on said trail, wheels for said carriage, an axle connecting said wheels, an axle housing fast on said trail and adapted to receive said axle, cooperating means on the axle housing and axle for traversing the trail and means in said axle housing for elevating the gun.

1,480,557. GUN RECOIL MECHANISM. BRYAN P. JOYCE, Davenport, Iowa. Filed Oct. 1, 1923. Serial No. 665,867. 1 Claim. (Cl. 89—43.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



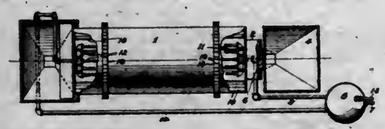
In combination, a gun barrel, a casing for said barrel, a ring in said casing surrounding said barrel, means for limiting the movement of said ring in one direction, a bearing in said casing for slidably supporting said barrel, said bearing being adapted to limit the movement of said ring in the other direction, cooperating means on said bearing and gun barrel for preventing rotation of said barrel with respect to said casing, said ring and barrel being formed with tongues and grooves, said ring being adapted to be rotated to releasably lock said barrel in said casing.

1,480,558. SHOE AND METHOD OF MAKING THE SAME. JOHN A. KELLY, Brooklyn, N. Y. Filed May 27, 1920. Serial No. 384,535. 8 Claims. (Cl. 36—22.)



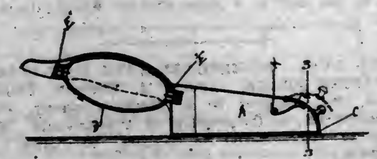
8. A single sole shoe embodying a sole provided in the top face with a channel extending from said face to a definite line from the edge and with a second channel extending from the edge inwardly of the sole and parallel to the under face thereof, a lip on the upper face joined to the edge portion of the sole and having a free edge in contact with an upper exteriorly thereof, a second lip provided on the sole at the under face thereof by said second channel, an upper the margin of which is encased within the first channel, and a seam passing through the upper and the sole in the material thereof intermediate said channels, said seam being parallel to the edge of the sole and being encased by closing the lips of said sole, one of which is closed against the upper to produce a shoulder contacting with said upper exteriorly thereof.

1,480,559. BUS BODY FOR MOTOR-PROPELLED VEHICLES. FRANK KOHLBERGER, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1921. Serial No. 513,636. 1 Claim. (Cl. 296—28.)



In body constructions for self-propelled motor vehicles, cross planks supported directly on the side frame members of the chassis, means to secure the planks in place on the side frame members, a well to provide clearance for the differential housing formed by sawing out an opening in the planks over the housing, a dome-shaped cover secured to the floor and completing the well, and a suitable hand rail secured to the dome-shaped cover and extending upwardly through the body and secured at its upper end to the roof to afford support thereto.

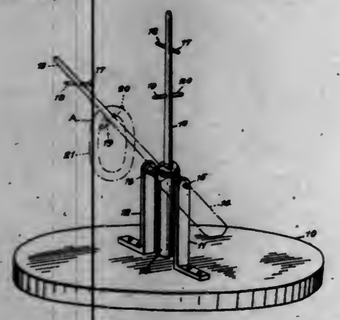
1,480,560. COIN-CONTROLLED APPARATUS. HANS K. LORENTZEN, New York, N. Y. Filed Mar. 19, 1914, Serial No. 825,753. Renewed May 24, 1921. Serial No. 472,292. 1 Claim. (Cl. 211—8.)



In a device of the character described, the combination of a reservoir having an opening formed in its bottom, a base comprising a top plate and upon which the reservoir is supported with its bottom in spaced relation to said top plate, a swingingly mounted flat plate movable bodily in a horizontal plane beneath the opening of the reservoir, said plate carrying a tubular downward extension which opens at the top of said plate, said tubular extension having a transverse slot formed horizontally in its wall, a trough depending from the top plate of the base and having two levels connected by an abrupt descent, said top plate of the base having an opening formed therein for the passage of the tubular member into said trough and having an integral tongue at the end of said opening which enters the slot of the tubular member at one of the limits of movement of the latter.

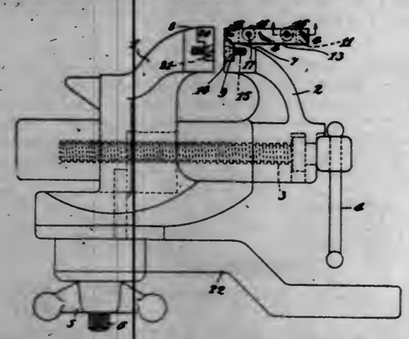
1,480,561. COATING GRANULES. CLAUDE P. MCNEIL, Whiting, Ind., assignor to Secretary of War of the United States of America, trustee. Original application filed Apr. 21, 1919, Serial No. 291,585. Divided and this application filed Jan. 16, 1922. Serial No. 529,789. 2 Claims. (Cl. 91—68.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. In a process of coating soda-lime granules, passing the granules through a spray of a solution of an oxidizing salt and agitating said granules in a spray of a solution of an oxidizing salt.



1,480,562. CRUMB COLLECTOR. HUGO MOCK, New York, N. Y. Filed Nov. 3, 1922. Serial No. 598,705. 3 Claims. (Cl. 65—20.)

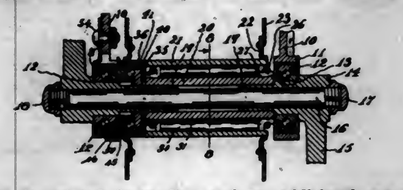
1. In a crumb collector, a chamber having a longitudinal orifice, and handle at the rear of said chamber,



and a bulb located under said handle so that the bulb and handle may be simultaneously gripped by one hand of the operator.

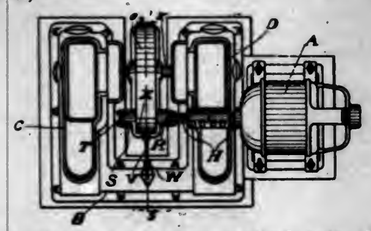
1,480,563. GAME. EDWIN J. MORGAN, New York, N. Y. Filed Mar. 23, 1922. Serial No. 546,213. 3 Claims. (Cl. 46—59.)

1. A game including two closely spaced parallel upstanding brackets, a goal post between the brackets, having intermediate its ends two oppositely extending lugs pivoted to the brackets whereby the post may be swung to and from vertical positions and the portion of the post above the brackets having spaced obstructing arm members protruding laterally in relative radial directions, and a separate ring element of a diameter adapted to encircle the post and said arm members.



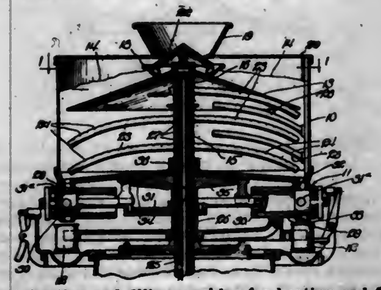
1,480,564. GUIDE FOR USE IN FILING. HARRY MORRISON, New York, N. Y. Filed Mar. 25, 1922. Serial No. 546,719. 6 Claims. (Cl. 81—38.)

1. The combination with a pair of clamping jaws movable relatively to one another to clamp a work object between them of a roller-supporting structure disposed at one side of the jaws, and a pair of rollers supported by said structure, in spaced parallelism to said jaws, the rollers projecting beyond said structure and beyond said jaws to provide a file bearing plane which limits the filing operation upon a work object held by the jaws to a plane slightly removed from the jaws.



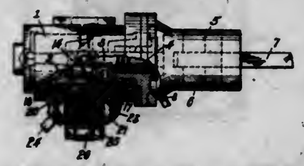
1,480,565. REVERSE-PEDALING BALL-CLUTCH COASTER BRAKE. AUGUST J. MOTTLAU, Philadelphia, Pa., assignor to A. Mecky Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 17, 1922. Serial No. 537,293. 19 Claims. (Cl. 192—6.)

1. In combination, a rotatable drive means; a driven sleeve member rotatable relative to the drive means when the latter is at rest; roller clutch means whereby the driven member is clutched to the drive means when the



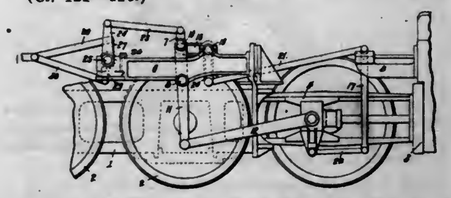
latter is rotated forwardly; and an additional means whereby the driven member is rotated backwardly.

1,480,566. GEAR DRIVE. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 14, 1922. Serial No. 529,284. 1 Claim. (Cl. 74—7.)



In a gear drive for direct connected power driven units and the like, the combination of a driving shaft supported at one end in stationary bearings, the outer end of the shaft being overhung beyond the bearings, a pinion on the outer end of the driving shaft, bearing sleeves on the driving shaft at each side of said pinion, a driven shaft extending parallel to the driving shaft, a gear on the driven shaft meshing with said pinion, bearing sleeves on the driven shaft at each side of said gear, a longitudinally split gear case enclosing said gear and pinion and supported at its larger end by the driven shaft on said bearing sleeves at each side of the gear, the smaller end of the gear case having outwardly extending bearing housings at each side of the pinion, and the bearing sleeves on said driving shaft being carried by said housings, a cap for closing the housing over the outer end of the driving shaft, a gland in the other housing for sealing the housing, and a distance piece supported from a stationary portion of the power unit and adjustably connected to the smaller end of said gear case for supporting the gear case to counteract torque and permit angular adjustment of the driving and driven shafts.

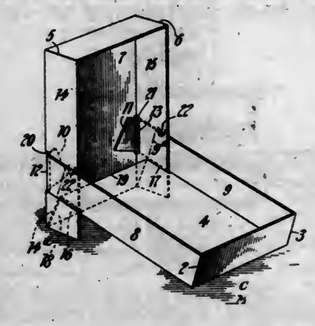
1,480,567. HEATING AND FILLING MACHINE. GEORGE E. PELLAM, Newark, N. Y. Filed Aug. 23, 1922. Serial No. 583,711. 14 Claims. (Cl. 99—2.)



1. A heating and filling machine for heating and filling semi-fluid material, comprising a cylindrical tank rotatable about a vertical axis, means for withdrawing the heated material from the bottom of the tank and putting it in cans, a stationary material distributing and heat-retaining partition extending across said tank substantially below the level of the material in the tank, means for supplying heat to the material beneath said partition and means for delivering material to said tank above said partition.

1,480,568. FLUID-CONTROL MEANS. CHARLES J. PILLIOD, Toledo, Ohio, assignor to Daniel Searles, trustee, Toledo, Ohio. Filed June 5, 1920. Serial No. 386,849. 2 Claims. (Cl. 121—38.)

1. In a fluid control, a cylinder, a live fluid chamber having a valve seat, an inlet passage from each end of the cylinder to the valve seat, exhaust passages also leading from each end and from the central portion of the cylinder to the valve seat, and a disk valve mounted on the seat and having a pair of ports for opening communication respectively between the chamber and one or the other of the inlet passages when the valve is in a predetermined position, said valve seat also having a main exhaust passage to the atmosphere, and said valve having a recess in permanent communication with each end exhaust passage and a recess in like communication with the exhaust passage from the central portion of the cylinder, said valve recesses cooperating to place the exhaust passages for either cylinder end in series communication with the main exhaust passage when the inlet passage at the opposite cylinder end is open.

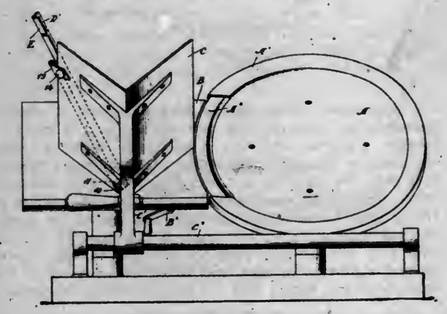


1,480,569. VALVE GEAR. CHARLES J. PILLIOD, Toledo, Ohio, assignor to Daniel Searles, trustee, Toledo, Ohio. Filed Feb. 10, 1921. Serial No. 443,742. 3 Claims. (Cl. 121—116.)

2. In a locomotive, a cross-head operated valve gear having a radius-lever, a cross-shaft, a rocker-arm connecting the cross-shaft and radius lever, a combination lever having a cross-head operated lap and lead movement and directly connected to the valve, and a connection between the cross-shaft and upper end of the combination lever for communicating valve accelerating movements thereto from radius lever actuating movements of the cross-shaft, and means for reversing the valve operating motion.

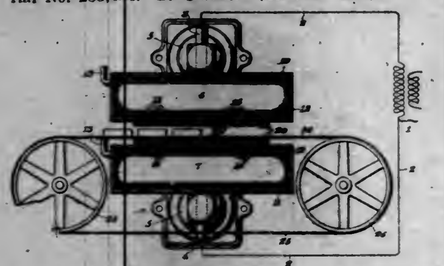
1,480,570. DISPLAY CARTON. CHARLES E. SCHODER and MAX A. TROEGER, New York, N. Y., assignors to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1921. Serial No. 502,329. 6 Claims. (Cl. 206—44.)

1. A display carton including in combination a body comprising a bottom, a front-wall and opposite side-walls, a cover adapted for closing over said body, said cover having side walls and an end wall hingedly connected to said body bottom, said cover end wall being severed from the adjacent ends of the cover side-walls respectively, whereby said cover end-wall may be folded into said cover when the carton is erected, thereby providing



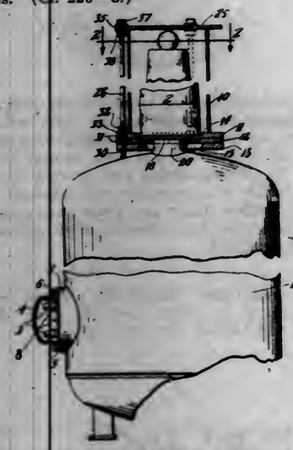
a downwardly reaching foot for elevating the adjacent end of the body, said body side-walls having ears inreaching from their rear ends respectively, and each of said cover side-walls having a slot therethrough for the reception of the adjacent body-side ear.

1,480,571. BEARING. HARRY SELKER, Cleveland, Ohio, assignor to The Buckeye Brass and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 2, 1922. Serial No. 591,697. 2 Claims. (Cl. 64—10.)



1. A removable bearing member comprising, an outer annular supporting member and an inner wearing member wedged together by complementary longitudinal non-parallel-sided projections and slots formed, respectively, upon and in said supporting and wearing members, the aggregate width of a projection and adjacent slot lying within the limits of ¼-inch and ⅜-inch; and amalgamating material securing said members together, substantially as shown and described.

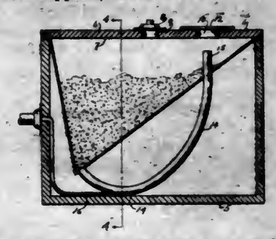
1,480,572. SLICING MACHINE. PETER SIVERTSEN, New York, N. Y. Filed Apr. 18, 1922. Serial No. 555,034. 18 Claims. (Cl. 146—102.)



1. A slicing machine combining a cutting mechanism and reciprocative gravity feeding means for feeding the object to be sliced to said cutting mechanism, the direction of feed being variable relatively to the direction of the reciprocation.

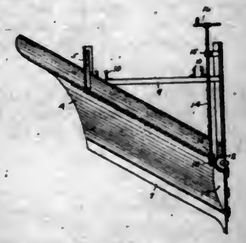
1,480,573. APPARATUS FOR TREATING GRAIN, BEANS, ETC., BY DISRUPTIVE CONDUCTION. FRANKLIN S. SMITH, Philadelphia, Pa., assignor to The Products Protection Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 27, 1919. Serial No. 285,484. 27 Claims. (Cl. 175—311.)

1. In an apparatus for treating products electrically, the combination of a transformer, a plurality of condensers, and a plurality of electrodes connected with the respective condensers, the electrodes having connection with one condenser being situated in opposed spaced relation with respect to those connected with the other condenser, and the said condensers and electrodes being arranged in series with the secondary of said transformer.



1,480,574. PROTECTIVE MEANS FOR THE LEADS OF ELECTRIC TRANSFORMERS. FRANKLIN S. SMITH, Philadelphia, Pa., assignor to The Products Protection Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 2, 1922. Serial No. 540,410. 6 Claims. (Cl. 220—3.)

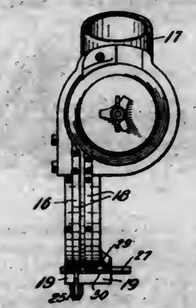
1. Protecting means for the lead structures of electric transformers, comprising a pipe section and a plate in contact with the outer end of said pipe section to close the same, a plurality of annular plate members in contact with the opposite end of said pipe section, said annular plates being concentrically situated with respect to the axis of the said lead structure, and means for clamping and holding said plates against the opposite ends of said pipe and for clamping one of said annular plates against a portion of said lead structure to interlock the said protecting means with the said terminal structure.



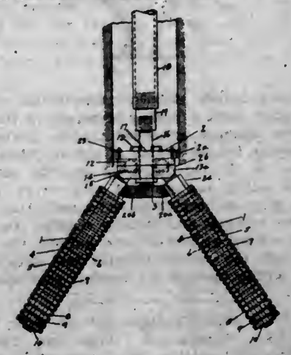
1,480,575. SPARK-PLUG CLEANER. ERNEST E. SNIDER, Wichita, Kans. Filed Dec. 11, 1920. Serial No. 430,037. 1 Claim. (Cl. 51—8.)

A device for cleaning spark plugs comprising a casing, a hopper for loose abrasive material arranged within and supported from the upper edge elements of the side and end walls of the casing and sealed with respect to the remainder of the casing; a cover for the casing, an article support through the cover of the casing at one end thereof adjacent the sloping floor of the hopper, a vent in the cover of the casing towards the opposite end thereof; a U-shaped pipe connecting to the base of the hopper and upwardly leading from the base portion of the casing through the sloping floor of the hopper to a point below the article support; blast means connecting with the

base of the said U-shaped pipe and so as to inject a flow of air in the axial direction of the flow of the abrasive material from the hopper; a screen in the vent of the proper mesh to permit escape of air and fine dust particles without permitting the escape of abrasive materials driven under air pressure from the pocket formed between the sloping floor of the hopper and its connection with the top of said casing and forced thereby to pass said screened opening prior to the action of gravity forcing the abrasive material into the bottom of the hopper.



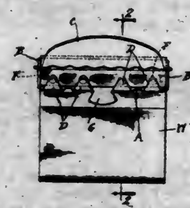
1,480,576. SNOWPLOW. OLE O. SONJU, Two Harbors, Minn. Filed Mar. 19, 1923. Serial No. 626,024. 2 Claims. (Cl. 37—50.)



1. The combination with a snow plow of the character described having a mould board and landside sheet, of steering means at the forward end of the landside sheet for directing the course of the plow.

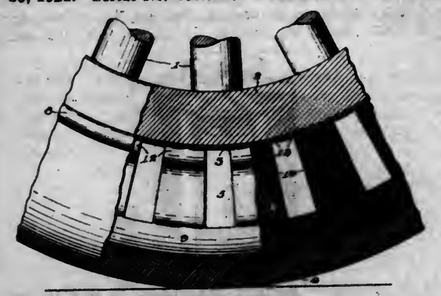
1,480,577. RIVET-SETTING MACHINE. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed June 16, 1921. Serial No. 477,967. 7 Claims. (Cl. 218—21.)

6. In a machine of the kind described, a stationary member having a downwardly extending main raceway on its outer face and terminating at the lower end thereof in a nose, said nose consisting of two plates fastened to the inner face of the stationary member with their edges spaced apart and formed with grooves in which the head of a rivet may be accommodated with its shank passing in the space between the plates, said grooves being out of registry with the main raceway, and a slide in the lower end of the stationary member movable between the lower end of the stationary member and the plates, and having a longitudinal face projecting at the outer face of the stationary member, having a rivet-guiding groove extending therethrough transversely of its length adapted to register either with the raceway or with the grooves in the spaced plates, as the slide is moved in one direction or the other, the outwardly projecting longitudinal face of the slide having a cut-out, and a detent carried by the stationary member and extending into the cut-out, said detent being movable into and out of the cut-out, the detent comprising an internally threaded tubular member passing through the stationary member with a head and a finger resting non-rotatively against the outer face of the stationary member, a screw entering the tube from the inner face of the stationary member with a flange resting rotatively against the inner face of the stationary member, and means for holding the flange against the stationary member while permitting its rotation.



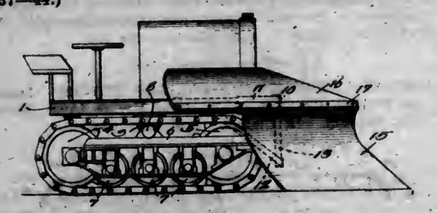
1,480,578. WELL REAMER. ELVIN TILTON, Wheeling, W. Va., assignor to himself, Joseph M. Du Bois, and Samuel G. Crow, both of Bellaire, Ohio, and C. Monroe Watson, Wheeling, W. Va. Filed Mar. 14, 1922. Serial No. 543,567. 14 Claims. (Cl. 255—76.)

1. In a reamer for oil wells and the like a plurality of pivoted cutting arms, and a rotatably mounted cam having a plurality of operating wings arranged to act upon said arms and so curved in both a horizontal and a vertical plane that the contour lines of their operating faces lie parallel to the longitudinal axis of the cutting arms in all angular positions thereof.



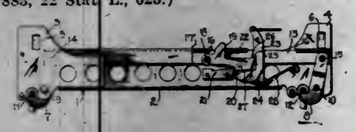
1,480,579. BUCKLE. DE VER H. WARNER and LOUIS B. LOVEJOY, Bridgeport, Conn., assignors to The Warner Brothers Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 21, 1923. Serial No. 652,884. 2 Claims. (Cl. 24—184.)

1. A buckle comprising a back plate provided with upstanding ears in which a clamping lever is pivotally mounted, the lower edge of said back plate being cut into teeth which are bent up and adapted for securing the end of a piece of webbing to said buckle, said teeth being provided at their ends with prongs adapted to penetrate said webbing, and said back plate being provided with openings which register with and are adapted to receive said prongs, the running length of the webbing passing up between the back plate and lever, thence across the



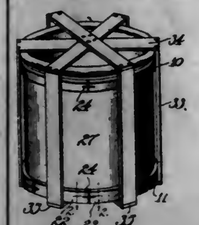
upper edge of said back plate and down, to form a loop, and thence up between said clamping lever and the secured end of the webbing.

1,480,580. TIRE FILLER. THOMAS C. WATKINS, Brooklawn, N. J., assignor to Master Tubeless Tire Corporation, a Corporation of Delaware. Filed July 30, 1921. Serial No. 488,512. 4 Claims. (Cl. 152—5.)



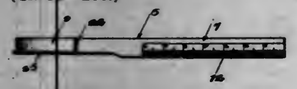
1. The combination of a vehicle wheel provided with a rim having oppositely disposed tire-retaining means, with a hollow tire casing carried by said wheel yieldingly between said means and substantially circular in cross-section, and a tire-filler comprising a circumferentially continuous body portion normally bearing uniformly against the inner surface of the road-contacting portion of the said casing, and spaced resilient integral projections extending radially from said body portion and normally bearing against the rim of the wheel, and operative to maintain said body portion and road-contacting portion of said casing in spaced relation from said rim, the laterally opposite sides of said projections being spaced from the adjacent walls of said casing, to permit the free passage of air circumferentially of said casing.

1,480,581. SNOWPLOW. ARTHUR B. WEBB, Watertown, Wis., assignor to Monarch Tractors Incorporated, Watertown, Wis., a Corporation of Delaware. Filed Apr. 17, 1922. Serial No. 554,328. 5 Claims. (Cl. 37—44.)



1. In a road plow, the combination with a vehicle; of a scraping blade carried by the vehicle obliquely thereof and having an upper rear portion overhanging and projecting rearwardly of and outwardly from the underlying portion of the blade.

1,480,582. BOMB RELEASE GEAR. HARRY D. WEED, U. S. Army. Filed June 7, 1919. Serial No. 302,585. 1 Claim. (Cl. 244—1.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

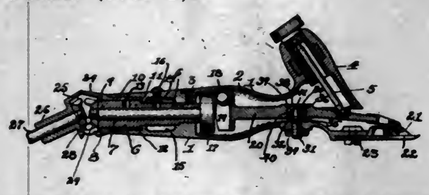


In a bomb release, a hanger, a hook pivoted to said hanger, said hook being so designed that the weight of a bomb tends to move the hook in a given direction, a stop, a bar pivoted to the hook, a sear pivoted to the bar and movable with the bar and hook, the sear normally engaging the stop to lock the hook against movement, and a trigger normally locking the sear in stop engaging position and movable to release the sear and trip the same to stop disengaged position.

1,480,583. PACKAGE FOR STONEWARE OR THE LIKE. RICHARD P. WHITE, Chicago, Ill. Filed Apr. 1, 1922. Serial No. 548,665. 6 Claims. (Cl. 217—52.)

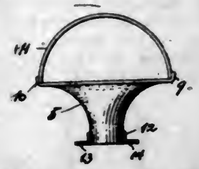
1. A stoneware package comprising, in combination, a jar or the like having an upwardly facing circumferential shoulder adjacent its lower edge, and a protecting hoop extending about the jar above the shoulder and underneath the jar.

1,480,584. RULE. EUGENE M. WILHITE, Indianapolis, Ind. Filed Dec. 24, 1921. Serial No. 524,595. 3 Claims. (Cl. 33—200.)



1. A rule for use by opticians comprising a single length of material having one end portion curved whereby a temple piece may be flatly engaged with the outer surface of the same, said length of material being formed along one longitudinal edge with a flange constituting a means to limit the lateral movement of the temple piece, the curved end of said length of material being formed with a second flange limiting the endwise movement of the temple piece and cooperating with the first named flange in strengthening the rule.

1,480,585. ATTACHMENT FOR GAS STOVES. JAMES G. WILKIE, Brooklyn, N. Y. Filed Dec. 9, 1922. Serial No. 605,805. 6 Claims. (Cl. 126—214.)



1. An attachment of the class described provided with an aperture having a downwardly and an outwardly flared wall, and a plurality of supporting members adjustably mounted in connection with said attachment and movable inwardly and radially of said aperture.

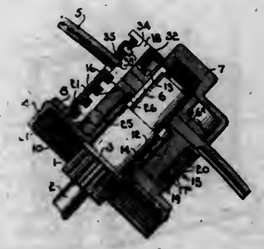
1,480,586. SHEEP SHEARS. FRANK N. L. WILLETT, Aurora, Ill. Filed July 19, 1920. Serial No. 397,319. 5 Claims. (Cl. 30—1.)

1. A fulcrum for sheep shears comprising a support and a vibrating arm provided with a rounded recess on its lower surface, in combination with a fulcrum stud on said support and extending into said recess, and a bearing member rotatably mounted on said stud and resting on said support, said bearing member having an upper portion located in said recess and shaped to conform to the curvature of the latter.

1,480,587. ELECTRIC WIRING SYSTEM. RAY C. WILSON, New York, and HARRY S. ARNOLD, Brooklyn, N. Y. Filed June 10, 1922. Serial No. 567,260. 8 Claims. (Cl. 247—3.)

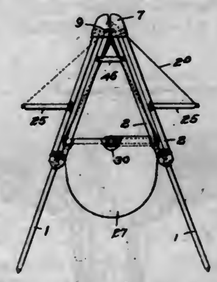
1. Overhead flexible electrical distribution comprising in combination with a ceiling structure, a line of conduit or wire raceway embedded therein, providing continuous passage for the fishing of electric wires and having outlets at desired intervals opening downwardly through the ceiling and provided with covers closing the tops of the same conforming to and constituting continuations of the raceway and thereby enabling the drawing out of the wiring at any of said outlets, the insertion of wiring into the conduit through said outlets, or the feeding of wiring through the conduit past said outlets.

1,480,588. ADJUSTABLE WHEEL FOR VACUUM CLEANERS. WILLIAM J. WISE and THOMAS O. ADAMS, New Philadelphia, Ohio, assignors to The Wise-McClung Manufacturing Company, New Philadelphia, Ohio, a Corporation of Ohio. Filed Nov. 23, 1921. Serial No. 517,397. 2 Claims. (Cl. 16—19.)



1. A castor for a vacuum cleaner or the like having an outwardly extending lug, a vertically adjustable screw located through the lug, a head upon the upper end of the screw for operating the same, a wheel swivelled upon the lower end of the screw, said lug having a horizontal tapped bore, a disk in said bore frictionally engaging the screw, a tension spring engaging the disk and an adjusting screw for adjusting the tension upon the spring.

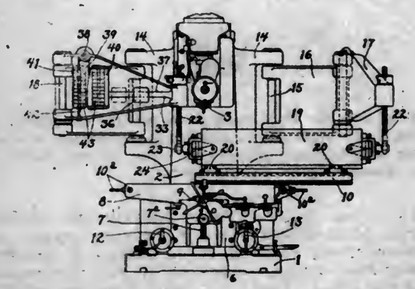
1,480,589. CUTTING OIL. JOSEF WONDRUSCHKA and STANLY DUDA, New York, N. Y. Filed Dec. 4, 1922. Serial No. 604,746. 1 Claim. (Cl. 87—9.)



A cutting oil composed by volume of two parts of cotton seed oil, two parts of tallow, one part of plastic soap, all thoroughly mixed and boiled in two parts of water, until the resultant product resembles a thick grease, and an additional amount of hot water thoroughly mixed with said grease in the proportion of one pound of grease to three gallons of hot water.

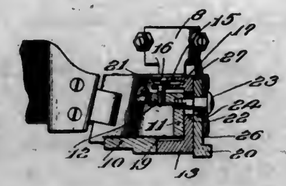
1,480,590. PERMUTATION LOCK FOR AUTOMOBILES. GILBERT LINCOLN BAKER, Oakdale, Calif. Filed Oct. 18, 1922. Serial No. 595,249. 9 Claims. (Cl. 70—53.)

1. In an automobile steering assembly, a post having a steering wheel keyed thereto, a gear cover in which the post is journaled, a plate fastened to the cover, a core secured to the wheel hub and covering the plate fastening means, tumblers revolubly mounted on the core, a cap secured onto the outer end of the post and concealing the core securing means, and a bolt insertible through the cap and hub and into said plate, the tumblers being operable to lock the bolt after it has been inserted.



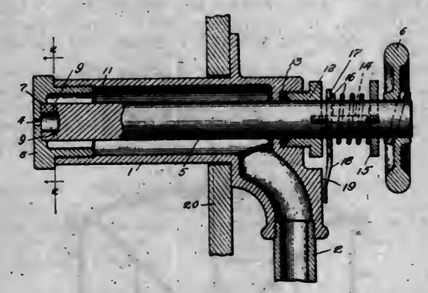
1,480,591. COLLAPSIBLE HAMMOCK. SAMUEL BAKERSEF and HARVEY H. EPSTEIN, Los Angeles, Calif. Filed Jan. 18, 1922. Serial No. 530,087. 2 Claims. (Cl. 5—128.)

1. In combination in a hammock, two pairs of legs with the legs of each pair secured together at their upper ends, and a roller shade extending between said upper ends and serving as a brace between the two sets of legs, the roller and shade being made in two sections with the roller sections releasably secured together, and a hammock body suspended from such legs.



1,480,592. COUNTERBALANCING MECHANISM. LOUIS GARFIELD BAYBER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 6, 1921. Serial No. 498,834. 11 Claims. (Cl. 90—58.)

1. In a machine tool, a work supporting mechanism comprising the combination of a support, a lever fulcrumed between the ends thereof on the support and comprising a short arm and a long arm, means on the short arm of the lever for supporting a piece of work, and

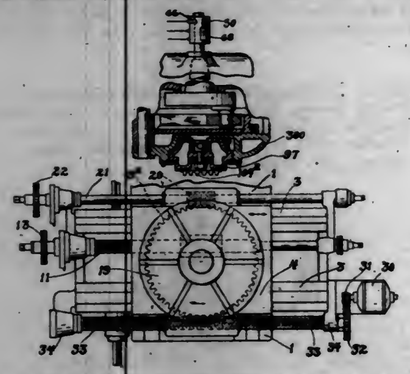


counterweight means operatively connected to the long arm of the lever and adjustable in a manner to exert either a downward or upward force on the said long arm.

1,480,593. PRESSER FOOT FOR SEWING MACHINES. JOSEPH BERGER, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 1, 1921. Serial No. 497,533. 11 Claims. (Cl. 112—235.)

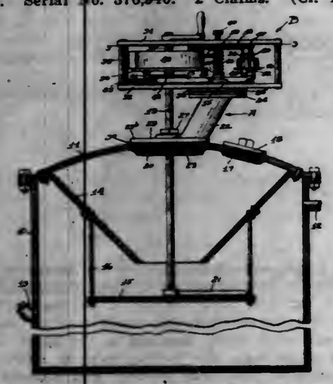
1. A presser foot for sewing machines including a supporting shank, a main foot section rigidly carried thereby, an auxiliary foot section, and means for positively shifting said auxiliary section vertically up and down relative to the main foot section to various set positions.

1,480,594. SPRAY APPLIANCE. HARRY D. BINKS, River Forest, Ill. Filed Mar. 25, 1921. Serial No. 455,545. 7 Claims. (Cl. 299—119.)



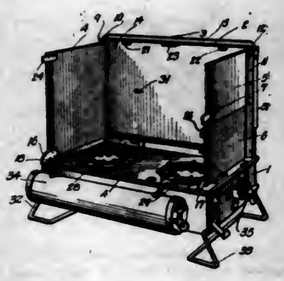
2. In a spraying appliance, a casing having an outlet and having a pair of spaced opposed longitudinal passages, a rotatable stem having a chamber extending through one end thereof and communicating with the outlet, said stem being disposed in the space between the pair of passages and having pairs of lateral ports leading directly into said chamber and adapted to be brought into register with the respective passages upon rotation of the stem.

1,480,595. WAD FOR SHOT SHELLS OR CARTRIDGES. CHARLES S. BIRD, East Walpole, Mass. Filed Mar. 3, 1920. Serial No. 363,040. 6 Claims. (Cl. 102—43.)



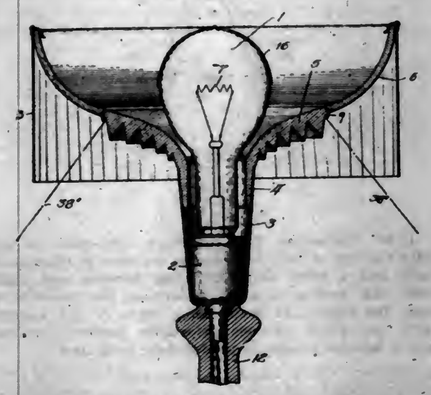
1. A wad for shot shells or cartridges comprising a plurality of plies of compressible paper secured to each other by a suitable adhesive with the external faces of the outermost plies waterproofed.

1,480,596. WORK-SUPPORT-POSITIONING MEANS FOR GEAR-GENERATING MACHINES. HAROLD L. BLOOD, North Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 7, 1921. Serial No. 506,001. 10 Claims. (Cl. 90—9.)



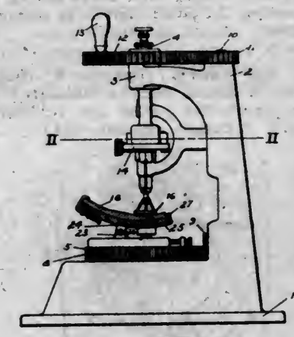
1. A metal cutting machine comprising in combination, a cutting tool, a work support, means to move said work support in opposite directions to position work carried thereby relative to said cutting tool, auxiliary means to assist in moving said support, said auxiliary means being reversible to assist in moving said support in both directions, and means to operate said auxiliary moving means to lock said support in predetermined positions during the cutting operation.

1,480,597. ACETYLENE-GAS GENERATOR. LORN CAMPBELL, Jr., Minneapolis, Minn. Filed Apr. 27, 1920. Serial No. 376,940. 2 Claims. (Cl. 48—52.)



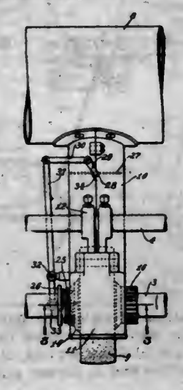
1. In a device of the class described, the combination with a generating tank of a unitary carbide feeding mechanism for said tank having communication therewith through a single opening therein, said mechanism including a motor, a feeding shaft operated thereby and reaching into the tank through said opening, a diaphragm, motor controlling means actuated by the latter, and a hollow bracket upon which said members are mounted, said bracket supplying the sole anchorage to the tank for said mechanism and serving to close the opening in said tank, also serving as a conduit between the tank and diaghragm and as a bearing for said shaft at its point of entry into the tank.

1,480,598. OVEN. WILLIAM C. COLEMAN, Wichita, Kans. Filed Mar. 24, 1923. Serial No. 627,329. 6 Claims. (Cl. 126—38.)



1. A stove comprising a burner-carrying case, a vertical side wall hinged to said case, end walls hinged to said side wall but offset with respect thereto to provide receiving grooves, the end walls having swinging movement toward and away from the side wall, and a combined top and side wall structure co-operating with the first side wall member and the end walls to form an oven, the combined top and side wall structure being receivable in the grooves when the oven is collapsed.

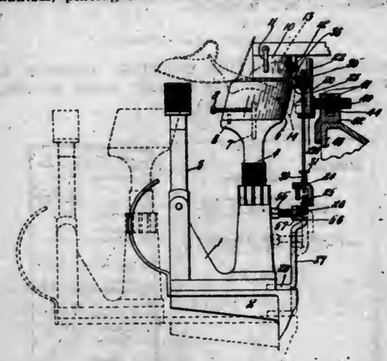
1,480,599. FLOOR LAMP. JAMES R. CRAVATH and AUSTIN M. CRAVATH, Berkeley, Calif. Filed Mar. 11, 1921. Serial No. 451,499. 14 Claims. (Cl. 240—81.)



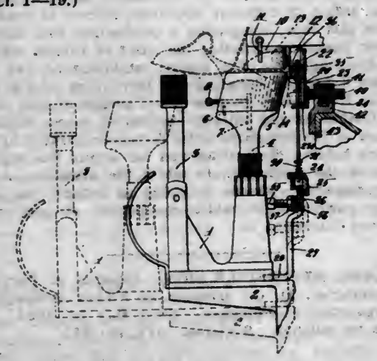
1. In a lighting unit, a glass refractor having on its outer face a series of concentric annular prisms, each prism having its laterally outward face composed of a plurality of convex annular surfaces of relatively slight transverse convexity.

1,480,600. LENS CUTTER. OCTAVE DE GRENIER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 12, 1920. Serial No. 423,667. 13 Claims. (Cl. 83—28.)

1. A bifocal lens cutter including a table, a holder pivotally supported by the table, means for securing the holder in angularly adjusted position to one side of the center of the table, a cutter disposed over the table toward the center line thereof, and means for causing relative rotary movement between the cutter and holder to effect the cutting action, substantially as described.



1,480,601. SHOE-FINISHING MACHINE. STEPHEN A. DOBYNE, St. Louis, Mo., assignor to Champion Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 20, 1922. Serial No. 530,550. 2 Claims. (Cl. 51—273.)



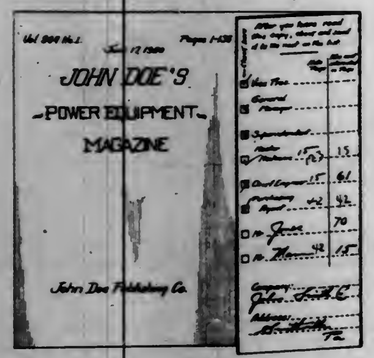
1. In a shoe finishing machine, the combination with a rotary finishing tool, its dust hood and an outlet connection therefrom, of a damper in said connection, a drive shaft on which said tool is loosely mounted, an endwise movable grooved cam sleeve between said tool and said shaft, a roll on said tool engaging the groove in said cam, and an operating connection from said sleeve to said damper.

1,480,602. METHOD FOR ATTACHING MOLDED COUNTERS TO TURN SHOES. MILTON L. DODGE, Newburyport, Mass. Filed Mar. 7, 1922. Serial No. 541,667. 8 Claims. (Cl. 12—142.)

1. That improvement in the art of fastening counters to turn shoes which comprises removing the last before the shoe is turned, placing the unturned heel portion of the shoe in inverted position over a block movable in a determined path into cooperative relation to a nailing mechanism, placing a molded counter in position on the nailing mechanism, moving the block with the shoe thereon to said nailing mechanism, and nailing the counter to the shoe sole.

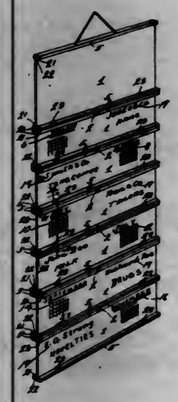
1,480,603. MACHINE FOR ATTACHING MOLDED COUNTERS TO TURN SHOES. MILTON L. DODGE, Newburyport, Mass. Original application filed Mar. 7, 1922, Serial No. 541,667. Divided and this application filed Sept. 27, 1922. Serial No. 590,836. 4 Claims. (Cl. 1—19.)

1. In a nailing machine, a nailing mechanism, a jack post movable horizontally into and out of position beneath said nailing mechanism and vertically into cooperative relation therewith, and a centering gage movable vertically with said jack post and against which a shoe supported on said post is brought when said post is moved to position it beneath said nailing mechanism, to center the shoe laterally in relation to said nailing mechanism.



1,480,604. TERMINAL CONNECTION FOR CONDENSERS. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser & Radio Corporation, a Corporation of Delaware. Filed Jan. 27, 1921. Serial No. 440,309. 6 Claims. (Cl. 250—41.)

1. A condenser stack including adjacent sections each provided with a plurality of conducting plates having terminals extending from the sides of the stack in combination with metallic members enclosing the terminals

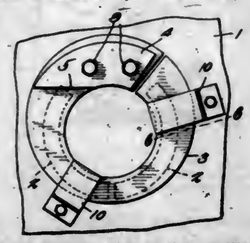


of both sections, said metallic members having a smooth rounded exterior contour at points adjacent the outer extremities of said terminals.

1,480,605. PUBLICATION ROUTING. GLENN H. EDDY, Chicago, Ill. Filed July 6, 1920. Serial No. 394,235. 7 Claims. (Cl. 283—36.)

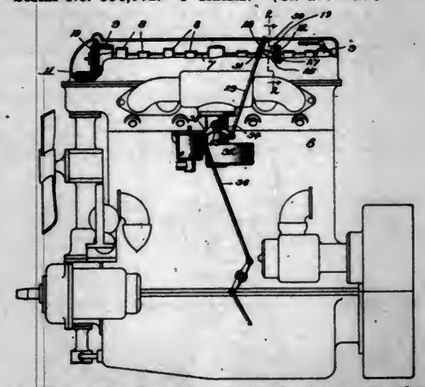
1. Means for routing a single copy of a publication through an organization or institution and for calling the attention of different employees thereof to contents of the said copy, comprising a publication part bearing printed legends designating the titles of various officials or other employees of a typical establishment and also bearing a heading directing the forwarding of the publication from one to another of the holders of said titles, and further having suitably designated spaces adjacent to each of the respective titles for check-marking by the persons holding these titles and for noting the page or pages of the publication to which the attention of the other respective persons is called to indicate the part of the publication in which the holders of such titles are most interested in.

1,480,606. REVERSIBLE SIGN. CHARLES A. FETTERS, Washington, D. C., assignor to X-Lent Company, a Corporation of Delaware. Filed May 23, 1923. Serial No. 640,859. 8 Claims. (Cl. 40—64.)



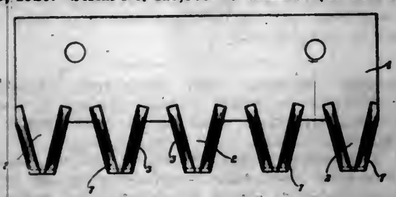
1. The combination with a reversible sign comprising a plurality of sections reversible independent of each other, of means carried by the opposite sides of the sections for receiving slides.

1,480,607. PROCESS OF TREATING AND PRESERVING CHERRIES. JOSEPH A. FORD, Brooklyn, N. Y. Filed Oct. 18, 1922. Serial No. 595,424. 6 Claims. (Cl. 99—14.)



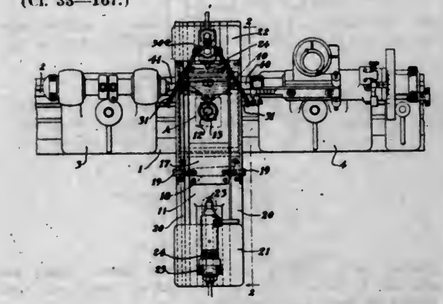
1. The process of treating and preserving cherries, which consists in chilling them before pitting, removing the pits, packing the pitted cherries in containers, and freezing them.

1,480,608. AIR VALVE. CHARLES W. GARDNER, deceased, late of Austin, Tex.; by Elizabeth F. Gardner, executrix, Austin, Tex. Filed Apr. 17, 1922. Serial No. 554,316. 6 Claims. (Cl. 251—123.)



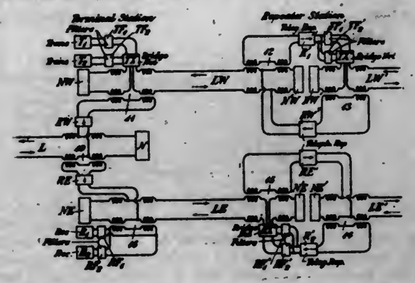
1. An air valve comprising a flat resilient split ring, fastening means secured on one end portion of the ring and providing a bending edge tangent to the inner edge of the ring.

1,480,609. INTERNAL-COMBUSTION ENGINE. CHARLES R. GREUTER, Chicago, Ill. Filed Oct. 21, 1922. Serial No. 596,072. 6 Claims. (Cl. 123—90.)



1. The combination of an engine having a cam shaft; a releasable brake serving to oppose the rotation of the cam shaft; and a mechanism serving to apply said brake when the engine idles and to release said brake at higher speeds.

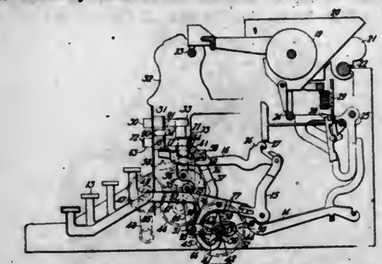
1,480,610. GEAR CUTTER. JOHN HARTEN, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 30, 1920. Serial No. 413,877. 7 Claims. (Cl. 29—95.)



1. A metal cutting tool comprising, a body portion, a rack tooth formed thereon, the intersection of the flanks of said rack tooth and one of the faces of the tool forming cutting edges, said face adjacent said flank having a cut away portion intersecting one of the flanks of the rack tooth whereby the cutting angle of said cutting edge is reduced uniformly throughout its length.

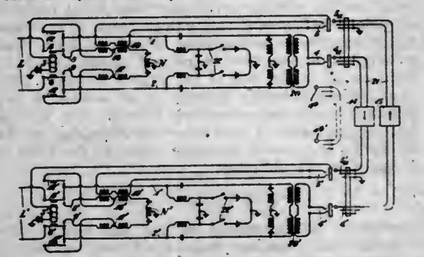
1,480,611. MEASURING MACHINE. REUBEN HILL, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 2, 1920. Serial No. 348,094. 15 Claims. (Cl. 33—167.)

1. A device for measuring diameters of threaded bodies adapted to be applied to a measuring machine, comprising in combination, a carriage, a support for said carriage, means for adjustably attaching said support to a part of the measuring machine, ball bearing means between said carriage and support permitting a limited amount of free movement between said support and carriage, and means for adjustably mounting a specimen to be measured on said carriage in measuring position.



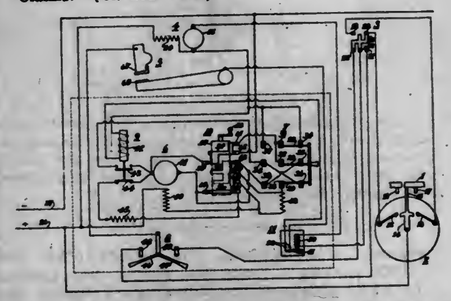
1,480,612. MULTIPLEX SIGNALING SYSTEM. HARRY W. HITCHCOCK, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 12, 1921. Serial No. 514,736. 8 Claims. (Cl. 179—4.)

1. In a multiplex transmission system, a four-wire circuit comprising two lines, over one of which telephone currents are transmitted in one direction and over the other of which telephone currents are transmitted in the other direction, and means whereby signaling currents within the voice range may be transmitted over each of said lines in a direction opposite that to which the voice currents are transmitted.



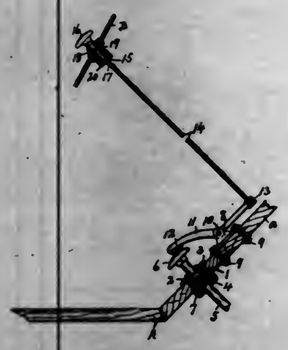
1,480,613. TYPEWRITING MACHINE. ARTHUR E. HOWELL, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1920. Serial No. 361,783. 27 Claims. (Cl. 197—118.)

1. In a typewriting machine, in combination, a plurality of leader-types, leader-type-actuating keys, means operable continuously for actuating any one of said leader-types repetitiously to type a leader across a work-sheet, but normally ineffective therefor, and selecting means



settable at will, independently of the leader-type-actuating keys, to render said actuating means effective to operate a selected type.

1,480,614. TELEPHONE REPEATER. OLIVER B. JACOBS, Morris Plains, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 18, 1919. Serial No. 331,679. 17 Claims. (Cl. 179—4.)



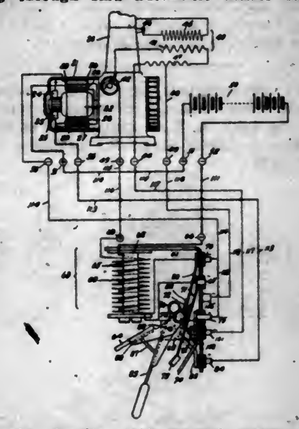
10. In combination, two telephone lines normally adapted for direct connection, a two-way two-element repeater, and means to connect said lines directly, or alternatively, through said repeater.

1,480,615. CONTROL SYSTEM FOR MACHINE TOOLS. SVEN P. JOHNSON, Philadelphia, Pa., and HARRY HARDING, Collingdale, Del., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 2, 1921. Serial No. 441,827. 17 Claims. (Cl. 172—240.)

1. In a control system, the combination comprising a feed and a control motor, means comprising a cam member operated by the control motor for closing a circuit of the feed motor, and means comprising a second cam member adjustable with respect to the cam member for closing the feed motor circuit and operated by the control motor for opening the circuit of the feed motor after a predetermined time.

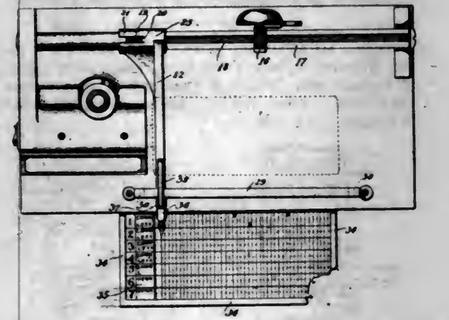
1,480,616. ACCELERATING-PEDAL-OPERATING DEVICE. JOHN P. KANTAK, Manlius, N. Y. Filed Feb. 17, 1923. Serial No. 619,642. 1 Claim. (Cl. 74—39.)

The combination with a foot board, an instrument board, and an electric switch operating pedal reciprocally movable in an opening in the floor board of a forwardly and rearwardly extending lever of the first kind pivotally mounted upon the floor board and having its rear end engaging the upper face of the switch operating pedal, a hand piece reciprocally movable in an opening in the instrument board and connections between said hand piece and the rear end of said lever for operating the latter to depress the switch operating pedal as the hand piece is moved in one direction.



1,480,617. EXPANSIBLE SPIKE OR BOLT. JAKOB HOJNOWSKI, Nekoosa, Wis. Filed Apr. 18, 1922. Serial No. 554,630. 2 Claims. (Cl. 85—26.)

1. An expansible fastener having a slot formed in its entering end, a wedge in said slot, and interlocking elements on said wedge and the walls of the slot holding said wedge in said slot, against outward displacement both axially and transversely.



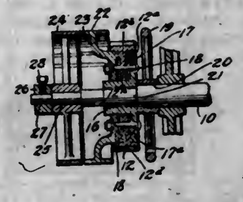
1,480,618. CONTROLLER FOR ELECTRICAL SYSTEMS. LESTER S. KEILHOLTZ, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed May 26, 1919. Serial No. 299,876. 11 Claims. (Cl. 290—35.)

10. In a controller for an engine starting and battery charging system, including an engine, a storage battery, a dynamo driven by the engine to charge the battery or operable on battery current to crank the engine, and ignition means for the engine including a primary circuit having a resistance, the combination with automatic means for maintaining closed circuits from the battery to the dynamo and ignition means; of manual means operating through said automatic means for initially

closing said circuits, said manual means being also adapted to reduce the ignition circuit resistance when moved to close said circuits.

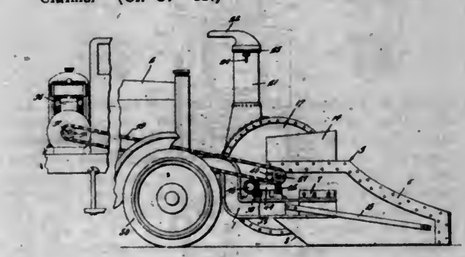
1,480,619. CORRECTION INDICATOR FOR SOUND RECORDING AND REPRODUCING MACHINES. LOUIS Z. LA FOREST, Bridgeport, Conn., assignor, by mesne assignments, to Dictaphone Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1921. Serial No. 440,577. 16 Claims. (Cl. 274—17.)

1. In a correction device for dictating machines, correction indication means, a movable sound box carriage, an indicating member adapted to be moved to indicating position relative to the carriage, a tubular supporting guide therefor, provided with a longitudinal slot, means on the indicating member engaging the slot and permitting a limited vertical swinging movement of the indicating member, a coiled spring disposed in the tubular guide member, adapted to exert pressure on the last mentioned means to move the indicating member into relative position with the carriage, and spring-pressed releasable holding means adapted to yieldably oppose the vertical swinging movement of the indicating member and retain it stationary until released by such vertical swinging movement thereof.



1,480,620. STONE SPREADER. JAMES L. LATTURE, Portland, Oreg., assignor to The Burch Plow Works Company, Crestline, Ohio, a Corporation of Ohio. Filed July 12, 1921. Serial No. 484,178. 9 Claims. (Cl. 94—44.)

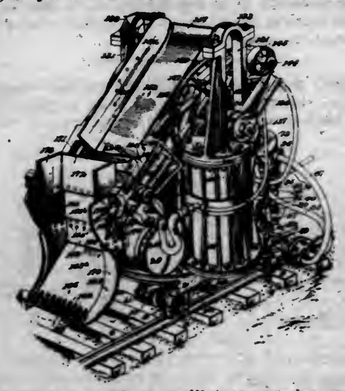
1. A device of the character described including a hopper provided with a discharge opening, and a spreading wing connected with the hopper and inclined in a direction across said opening from one end thereof for



distributing all of the material issuing from said opening laterally in one direction with respect to the hopper.

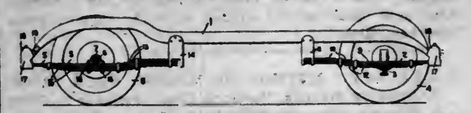
1,480,621. TRANSMISSION MECHANISM FOR LOOMS. ANDREW J. LEE, Inman, S. C. Filed June 21, 1922. Serial No. 569,844. 2 Claims. (Cl. 74—7.)

1. In transmission mechanism for looms, the combination with a gear having an internal web positioned intermediate its side edges, the said web being formed with transverse openings and transversely projecting lugs, of a hub member provided with a web formed with a series of transverse openings to receive the said lugs, the said web of the hub being housed within a space bounded by one edge portion of the gear rim, and a drive pulley carried by the hub at the other side of the said gear.



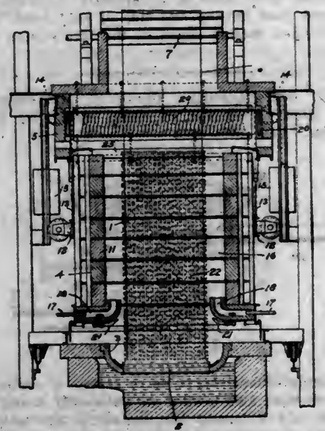
1,480,622. SNOWPLOW. MARVIN G. LEE, Alliance, Nebr. Filed Apr. 23, 1923. Serial No. 634,103. 4 Claims. (Cl. 37—43.)

1. A snow plow comprising a support; a scoop carried thereby; a suction and blower mechanism located at one side of the scoop and communicating therewith; a first conveyor operating longitudinally of the scoop; a second conveyor operating transversely of the scoop and receiving material from the first conveyor, the second conveyor discharging into the suction and blower mechanism; and means for operating the conveyors.



1,480,623. AUTOMATIC FLUID-PRESSURE-OPERATED MACHINE SHOVEL. AUGUST G. LIEBMANN, Chicago, Ill. Filed July 7, 1919. Serial No. 309,053. 92 Claims. (Cl. 214—90.)

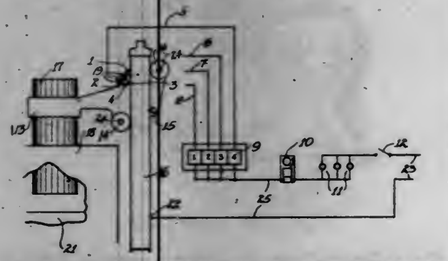
1. In a shoveling machine, a chute, a shovel supported for oscillatory movement with relation to the receiving end of the chute and having its entering portion located, in the loading position of the shovel, below the plane of the bottom of the chute, and fluid-pressure means including a piston coacting directly with the shovel to



operate the same with an oscillatory scooping movement independently of the chute to accumulate a load of the material to be handled.

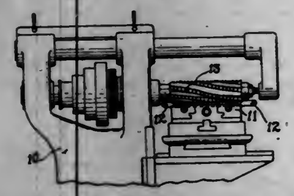
1,480,624. SPRING CONSTRUCTION FOR VEHICLES. RALPH M. LOVEJOY, Meredith, N. H. Filed Aug. 4, 1919. Serial No. 315,051. 10 Claims. (Cl. 267—54.)

1. In combination with a vehicle comprising a frame and an axle, a spring comprising a long leaf having superimposed upon one end a plurality of progressively shorter leaves rigidly secured together and to the frame and upon the opposite side of the leaf intermediate of its ends a series of progressively shorter leaves secured together and to said axle and means including a universal joint connecting the other end of said long leaf to the end of the frame.



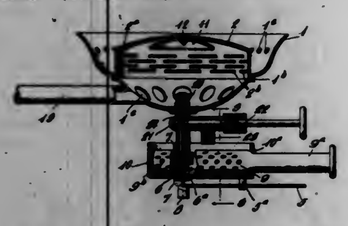
1,480,625. APPARATUS FOR DRAWING SHEET GLASS. ROBERT A. MILLER, Creighton, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Oct. 11, 1922. Serial No. 593,721. 4 Claims. (Cl. 49—17.)

4. In apparatus for drawing sheet glass from a bath of molten glass, means for drawing a sheet upwardly from



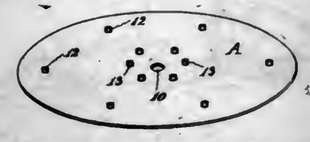
the bath, temperature equalizing means in the form of a flexible open work curtain surrounding the sheet and extending upwardly from the bath, a leer casing surrounding the curtain, and means for applying heat to the interior of the casing.

1,480,626. ELECTRIC-FURNACE SIGNAL. WALTER W. MIRON, Oakland, Calif. Filed July 3, 1919. Serial No. 308,604. 2 Claims. (Cl. 177—311.)



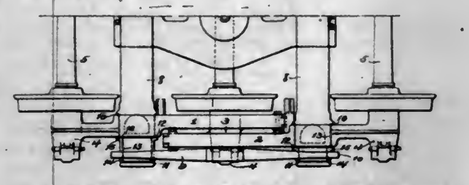
2. In an electric furnace, the combination with a movable electrode; of a supporting arm carrying said electrode, a support on which the arm is slidable and also free to tilt upon contact of the electrode with an obstruction, an electro-responsive signal device, an energizing circuit for said device grounded on the aforesaid support, and a switch blade carried by the aforesaid arm, said blade making contact with the support when said arm tilts.

1,480,627. METHOD OF MAKING HACK SAWS. FRIEDERICH MÜLLER, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 31, 1921. Serial No. 526,120. 5 Claims. (Cl. 76—25.)



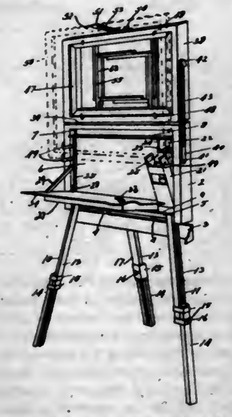
1. The process of forming hack-saw blades comprising first milling both sides of a plurality of teeth of the blades, and then milling one side of said teeth to form sharply defined cutting edges at the intersection of said sides.

1,480,628. OIL BURNER. CLYDE W. MUMMERY, Richmond, Mich. Filed Nov. 27, 1922. Serial No. 603,557. 3 Claims. (Cl. 158—68.)



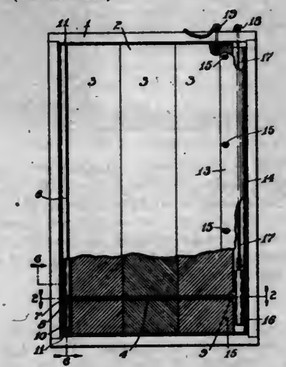
1. A burner comprising a valve casing, a cupper body mounted thereon and having an outwardly flared perforated rim, and a burner cap seated in the body, said cap having a depending slotted flange, the body having air holes therein below the cap.

1,480,629. YIELDABLE SUPPORT FOR PHONOGRAPH RECORDS. JAMES G. NOLEN, New York, N. Y. Filed Sept. 29, 1921. Serial No. 504,227. 6 Claims. (Cl. 274—39.)



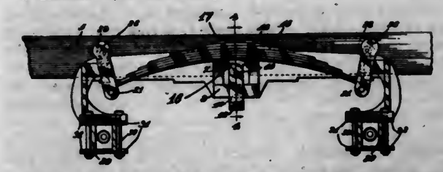
1. A record support comprising, a base member, and a plurality of cupped projections extending upwardly from the base member, said projections constituting zones of yieldable support for rotation of a record by a phonograph turntable.

1,480,630. CAR TRUCK OF THE SIX-WHEEL OR THREE-AXLE TYPE. CLAUDE L. ORR and GEORGE T. JOHNSON, Columbus, Ohio, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Jan. 18, 1923. Serial No. 613,440. 6 Claims. (Cl. 105—195.)



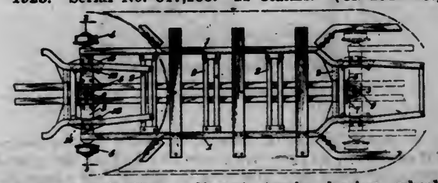
1. In a six-wheel truck of the type described, the combination of the bolsters and a bridge engaging the ends of the bolsters and interlocking with the latter, whereby the use of bolts or similar means of attachment other than the interlocking connection is obviated.

1,480,631. ARTIST'S SKETCH BOX. SYDNEY OSBORN, Philadelphia, Pa. Filed Dec. 21, 1922. Serial No. 608,151. 5 Claims. (Cl. 45—129.)



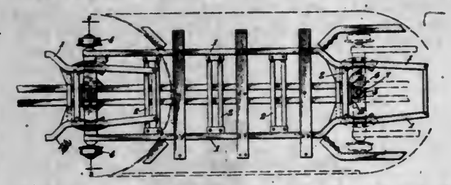
1. An artist's sketch box comprising a body open at the front and having one of its sides hinged thereto, partitions for dividing the interior of said body into a plurality of compartments one of said compartments being formed adjacent the hinged side, adjustable legs hinged at opposite ends of said compartment and adapted to be foldel therein, an adjustable brace leg adapted to be detachably connected with the back of the body and when folded removed to be placed within one of the compartments of said body, rods secured to and located between the partitions in said body, a tray, means rotatably connected with said tray and slidably mounted on said rods to permit said tray to be placed within the body or set at substantially right angles thereto, means for holding the inner end of said tray against accidental upward movement, and means for supporting the outer end of said tray.

1,480,632. STOCK DOOR. HENRY H. PALS, Meservey, Iowa. Filed Sept. 18, 1922. Serial No. 588,982. 7 Claims. (Cl. 20—16.)



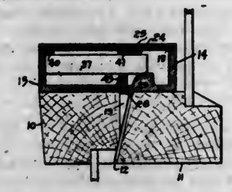
5. A swinging wooden door, a tubular hinge rod extending along the side edge of the door, and clamping bolts extending transversely through said rod and door for securing said rod and door in fixed relation to each other.

1,480,633. SPRING DEVICE. FRED N. PETTEGREW, Fox Lake, Wis. Filed Nov. 9, 1922. Serial No. 599,839. 5 Claims. (Cl. 267—52.)



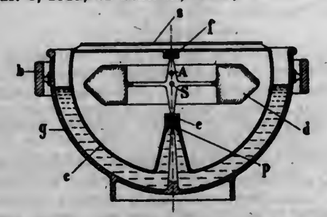
1. In a device of the character described, a bracket member having a depression formed in the under side thereof, a U-shaped member associated with the bracket member and having a depressed portion, the depressed portions adapted to cooperate to accommodiate a ball bearing, a spring member, means for pivotally supporting the spring member within the U-shaped member, and shackles at the ends of the spring member for pivotally supporting the spring member at the ends thereof.

1,480,634. COUPLING MECHANISM FOR TRUCKS AND THE LIKE. HENRY S. PUTNAM, New York, N. Y., assignor to Continuous Transit Company, New York, N. Y., a Corporation of Delaware. Filed June 22, 1923. Serial No. 647,135. 11 Claims. (Cl. 104—25.)



1. In combination, adjacent trucks having wheels adapted to guide the same along a trackway, and coupling mechanism for said trucks comprising a vertical king pin pivotally engaging a part on one truck, a trunnion member pivoted on a horizontal axis to the other truck, said king pin also pivotally engaging said trunnion member.

1,480,635. TRUCK CONSTRUCTION FOR MOVING PLATFORMS. HENRY S. PUTNAM, New York, N. Y., assignor to Continuous Transit Company, New York, N. Y., a Corporation of Delaware. Filed June 22, 1923. Serial No. 647,136. 12 Claims. (Cl. 104—25.)



2. In combination a series of trucks disposed end to end, coupling devices near the ends of adjacent trucks to interconnect the same, alined racks extending respectively along the several trucks adapted to cooperate with driving elements disposed along a trackway to propel the trucks, and means associated with coupling devices for altering the spacing between the ends of adjacent racks to bring the teeth of the racks into phase with each other.

1,480,636. SASH LOCK. MAX S. ROSENTHAL, New York, N. Y. Filed July 20, 1921. Serial No. 486,311. 3 Claims. (Cl. 70—14.)

1. A lock having a casing formed of two box sectional members, each having an open side, co-acting tongues and grooves formed on all edges of the open sides of both said parts, a locking bar normally projecting from one said part and adapted to be projected into the other said part, resilient means for retracting said locking bar and resiliently operated means for retaining said locking bar.

1,480,637. ARTIFICIAL HORIZON. MAX SCHULER, Neumuhlen, near Kiel, Germany, assignor to Anschütz & Co., Neumuhlen, near Kiel, Heikendorfer, Germany. Filed Feb. 23, 1918. Serial No. 218,871. 1 Claim. (Cl. 74—78.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

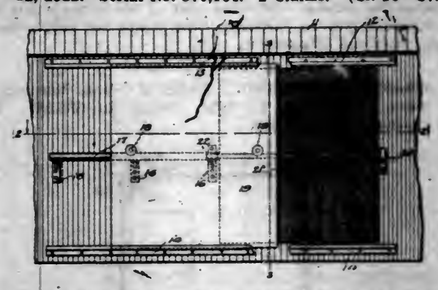
In a device of the kind described, an outer vessel an inner vessel, a liquid in the outer vessel buoyantly supporting the inner vessel, a gyroscope mounted in the inner vessel with its axis vertical and having its center of gravity below the center of flotation of the liquid, the

distance of said center of gravity below said center of flotation being such as to cause the gyroscope when running at the normal speed to describe its precession cone in eighty-four minutes and a mirror mounted on top of the inner vessel in a plane normal to the axis of the gyroscope.

1,480,638. PERMANENT HAIR WAVING. MARIE CATHERINE STEICHEN, New York, N. Y. Filed June 9, 1923. Serial No. 644,332. 1 Claim. (Cl. 132—33.)

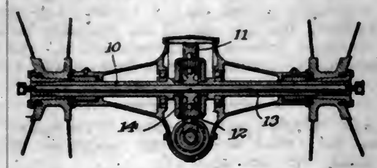
A form for producing a Marcel wave, comprising a substantially round and straight stem having substantially round tapering branches projecting from diametrically opposite sides of the same and terminating in abruptly curved hooks, said hooked branches forming substantially right angled curved bends relative to the stem to enable a strand of hair being caught within the curve of the hooks and interlaced back and forth across the back of the straight stem and said stem having a substantially round continuation of the same extended beyond the last hooked branch to provide a terminal for the end of the strand of hair to be wrapped about.

1,480,639. PRODUCING IMITATIONS OF OIL PAINTINGS. HOWARD R. STONE, Evanston, Ill., assignor to American Colortype Company of Illinois, Chicago, Ill., a Corporation of Illinois. Filed Oct. 5, 1921. Serial No. 505,500. 7 Claims. (Cl. 41—25.)



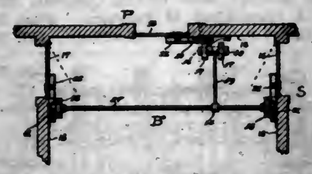
1. The method of imitating oil paintings which consists in mounting a flat color print, producing surface irregularities in imitation of canvas marks thereon, brushing a coating material on the print to form brush marks, using the resulting doubly marked print as the matrix for making an embossing die, and embossing duplicates of the said flat color print with the said die.

1,480,640. MANUFACTURE OF CHROMIUM COMPOUNDS OF AZO DYESTUFFS. FRITZ STRAUB and RICHARD SALLMANN, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Feb. 27, 1922. Serial No. 539,739. 1 Claim. (Cl. 260—12.)



The herein described manufacture of chromium compounds of azo-dyestuffs containing groups capable of being chromed, consisting in uniting in a single operation the manufacture of the dyestuff and that of its chromium compound by preparing the azo-dyestuff in presence of alkali compounds of the trivalent chromium hydroxide $Cr(OH)_3$ and then heating the product of the reaction until the dyestuff is completely converted into its chromium compound.

1,480,641. SLIDING-DOOR SUPPORT. FRANK TETZLAFF, Brooklyn, N. Y.; Ella Geffke and Herman Geffke executors of said Frank Tetzlaff, deceased. Filed June 22, 1922. Serial No. 570,164. 2 Claims. (Cl. 16—87.)

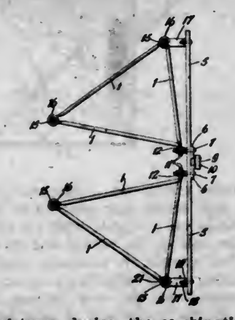


1. A sliding door support comprising a rigidly supported tubular member for supporting the door in open position, a rigid member slidably mounted in said tubular member and adapted to be withdrawn therefrom and bridged across the door opening to support the door in closed position, and means for supporting said rigid member across the door opening.

1,480,642. AXLE CONSTRUCTION. LIONEL THEORET, Asquith, Saskatchewan, Canada. Filed Apr. 2, 1923. Serial No. 629,505. 1 Claim. (Cl. 74—99.)

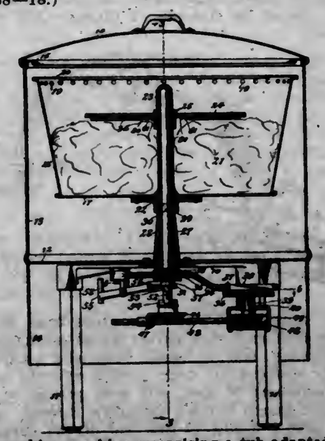
In an axle construction, a housing, a solid axle extending throughout the length thereof, a ring gear rigidly secured upon the center of said axle and carrying a plurality of differential pinions, a pair of hollow axle sections engaged upon said solid axle and having their inner ends reduced and threaded, bevel gears on said reduced ends meshing with said pinions, nut members screwed onto said reduced ends for holding said gears on the hollow axle sections, circular supporting members within the housing outwardly of said last named gears, bearing elements carried by said circular members, other bearing elements carried by the hollow axle sections and co-operating with said first named bearing elements, the axle sections having enlargements engaging against the last named gears and the last named bearing elements, and wheels secured upon the outer ends of said hollow axle sections.

1,480,643. PLURAL-DOOR LOCK. WILLIAM R. THOMPSON, Rowayton, Conn., assignor to John Tiebout, New York, N. Y. Filed Nov. 2, 1922. Serial No. 598,504. 9 Claims. (Cl. 292—33.)



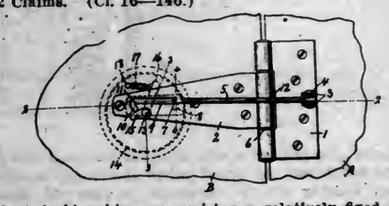
1. In combination a plurality of doors, locking means for each door, an operative connection between the locking means whereby they will move in unison, and means for preventing locking of one door when the other door is open.

1,480,644. DIE AND METHOD OF MAKING THE SAME. FRANK M. VOGAN, Canton, Ohio. Filed July 3, 1922. Serial No. 572,433. 6 Claims. (Cl. 22—190.)



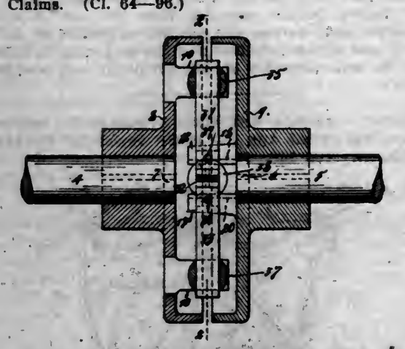
1. The method of forming dies which consists in forming a mold having sockets upon opposite edge portions, making a plaster impression of the same, producing lugs in the impression interfitting with said sockets, using the original mold as a pattern to cast an iron die, making a second plaster impression from the first named plaster impression, using said second plaster impression as a pattern to cast an iron mold and making a lead impression of the iron mold, said lead impression forming a die to co-act with the iron die.

1,480,645. RESISTANCE DEVICE. ALFRED ERNEST WALLER, Bronxville, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed Mar. 27, 1922. Serial No. 547,006. 16 Claims. (Cl. 219—63.)



1. In a resistance device, the combination of a ribbon resistor element having a flat supporting portion, a bolt passing through said portion, a rectangular washer of a size approximately equal to the width of said portion in contact therewith, and means on said bolt for clamping said rectangular washer against said flat portion of the resistor element.

1,480,646. WASHING MACHINE. PHILIP H. WALLER, Buffalo, N. Y., assignor to Excel Tool, Die & Machine Corporation, Buffalo, N. Y., a Corporation of New York. Filed Aug. 23, 1921. Serial No. 494,480. 4 Claims. (Cl. 68—18.)

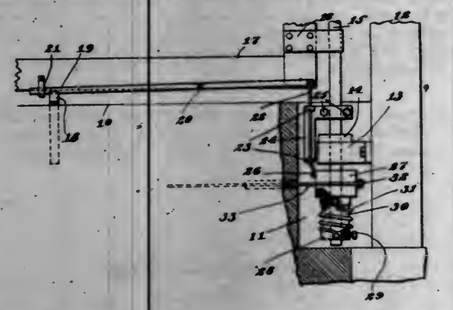


1. A washing machine comprising a tub adapted to turn about a vertical axis and to receive the washing liquid and the articles to be washed and provided with a central hollow post projecting upwardly from the bottom of the tub, an upright shaft the upper end of which receives said hollow post, and means for coupling and uncoupling said shaft and tub consisting of a collar arranged on the shaft and a hub arranged on said bottom, said collar and hub being provided with coupling surfaces which are adapted to be interlocked upon lowering the tub on said shaft and to be unlocked upon raising said tub relatively to said shaft.

1,480,647. LOCK HINGE FOR DOORS AND OTHER MOVABLE ELEMENTS. ALBERT F. WALTERS, Syracuse, N. Y. Filed Jan. 25, 1923. Serial No. 614,774. 2 Claims. (Cl. 16—146.)

1. A locking hinge comprising a relatively fixed hinge section and a movable hinge section, in combination with a latch bar hinged at one end to the fixed section to swing vertically and horizontally and having its other end extended across and some distance beyond the hinge joint and provided with an offset slidable in a slot in the movable hinge section as the door is opened and closed, said slot having a downwardly extending branch into which the offset of the latch bar is adapted to drop when the door is opened to lock the door in said open position, and a rock shaft journaled on the movable hinge section and having one end provided with a cam for engaging said offset and tripping the latch from its locking position when the rock shaft is rotated in one direction, and a hand piece on the other end of the rock shaft for operating the same.

1,480,648. FLEXIBLE COUPLING. ARTHUR C. WOODWARD, Cranford, N. J., assignor to The A. & F. Brown Company, Elizabethport, N. J., a Corporation of New Jersey. Filed Apr. 5, 1922. Serial No. 549,833. 13 Claims. (Cl. 64—96.)

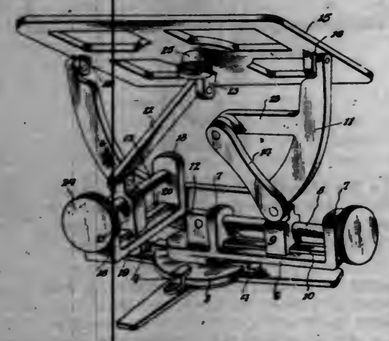


1. A flexible coupling comprising two abutting coupling members, means capable of universal rotation mounted in said members, and an inner floating member having radially disposed arms engaging said means.

1,480,649. SHOCK-ABSORBING DEVICE FOR GATES. FRANK R. ASHLEY, Denver, Colo. Filed June 29, 1922. Serial No. 571,637. 1 Claim. (Cl. 39—28.)

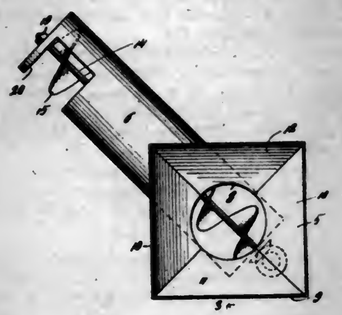
In a device of the kind described, the combination of a rotatably mounted gate post, a gateway secured to said post and rotatable therewith, a latching member pivotally mounted on the gate and cooperating with the

latch to maintain the gate in closed position, a member loosely mounted on said post, an operating lever located at a point remote from the gate, an operating cable extending between said operating lever and the loosely mounted member on the post, a collar secured to the



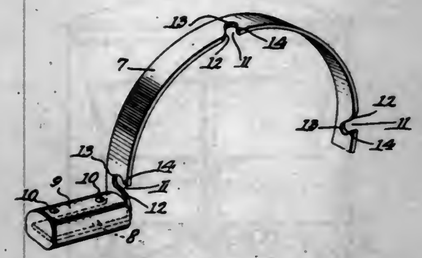
lower end of said post, a helical spring attached one end to said collar and the other end to the loosely mounted member whereby relative movement between the loosely mounted member and post is permitted, and injury to the gate or operating means prevented on sudden stoppage of the gate.

1,480,650. MEANS FOR PREVENTING THE TURNING OF CYLINDER AND LIKE LOCKS. WILLIAM DANIEL BACON, Wellington, New Zealand. Filed Jan. 6, 1922. Serial No. 527,494. 3 Claims. (Cl. 70—46.)



1. The combination with a door having an opening therein, a lock secured to said door, said lock comprising a latch bolt and spring container, of a keeper comprising a cylindrical body portion adapted to be seated within said opening, prongs extending from one end of said cylindrical body portion and adapted to project on each side of said spring container and fins projecting radially from the outer periphery of said cylindrical body portion.

1,480,651. CAMERA SUPPORT. CHARLES G. BAILEY, York, Pa. Filed Apr. 17, 1922. Serial No. 553,545. 6 Claims. (Cl. 248—47.)



1. In a camera support, the combination of a turntable, a carrying arm rigid with and projecting radially from the turntable, a camera-carrying frame arranged over the turntable and having a pendent member, fixed guides upon the turntable engaging opposite sides of said pendent member to prevent relative lateral movement of the camera-carrying frame, and means mounted upon the carrying arm and operatively connected with the camera-carrying frame for angularly adjusting the said frame and effecting movement of the pendent member between said guides.

1,480,652. SNOWPLOW. FLETCHER B. BURRIS, Minneapolis, Minn. Filed Dec. 2, 1920. Serial No. 427,856. 1 Claim. (Cl. 37—45.)

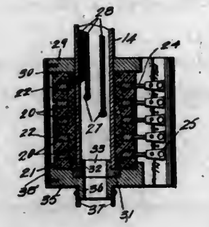
A snow collector comprising a stationary tubular casing having its ends closed and adapted to be positioned in inclined relation on a vehicle with its upper end disposed beyond one side of the vehicle and its lower end in proximity to the ground, a rotatable screw or auger conveyor extending longitudinally through the casing and being journaled in the ends thereof, the relative under surface of the upper end of said tubular casing having a discharge opening, the relative side of the lower end of said tubular casing being provided with an opening, and a scoop extending laterally of the casing and having a top, bottom and sides, said scoop communicating with said opening in the lower end of the tubular casing whereby the material collected by the scoop is delivered laterally of the auger and into the path thereof through the opening in the lower end of the tubular casing.

1,480,653. IMPLEMENT FOR TURNING LENS RIMS. FRANK H. BARR, Washington, D. C. Filed Jan. 3, 1923. Serial No. 610,444. 3 Claims. (Cl. 81—64.)

1. An implement for removing rims from headlights of automobiles, such rims having spaced projections upon their periphery, said implement comprising a curved substantially semi-circular body portion whereby one side of the implement is open, said body portion being provided with spaced notches extending through one edge thereof, and a handle at one end of the curved body portion.

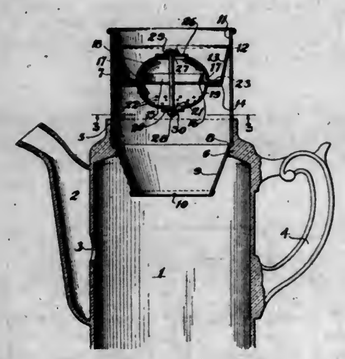
1,480,654. BOX. CHARLES E. BEARDSLEY, Waterbury, Conn., assignor, by mesne assignments, to American Safety Razor Corporation, Brooklyn, N. Y., a Corporation of Virginia. Filed Sept. 19, 1921, Serial No. 501,762. Renewed Nov. 17, 1923. 3 Claims. (Cl. 220—76.)

1. A box of sheet material having opposed flanged sides whose flanges are provided with openings, and opposed sides whose edges are seamed over said flanges and crimped into said openings.



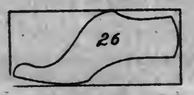
1,480,655. FISHING FLOAT. GEORGE EVERETT BENNETT, Corry, Pa. Filed Dec. 7, 1921. Serial No. 520,647. 8 Claims. (Cl. 43—49.)

1. A float comprising a body provided with an inclined bore adjacent to each of its ends and converging towards each other, a longitudinal groove connecting the bores at their convergent ends, longitudinal grooves extending from the opposite ends of the bores towards the respectively adjacent ends of the body and inclined slots communicating with said bores to admit a connecting line thereinto.



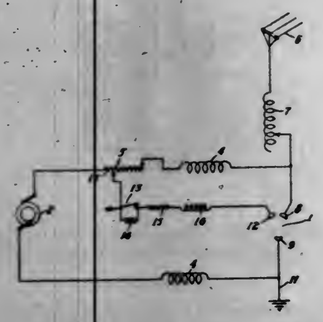
1,480,656. ELECTRICAL CONNECTION FOR AUTOMOBILES. JASPER BLACKBURN, Webster Groves, Mo. Filed Nov. 8, 1919. Serial No. 336,763. 2 Claims. (Cl. 173—324.)

2. A device of the class described, comprising a rotating steering column, a core of insulating material surrounding said column near its lower end and firmly secured thereto, a plurality of spaced apart peripheral grooved conductor rings embedded in said core, a collar loosely mounted on said steering column at each end of the core, an insulated housing surrounding the core and secured to said collars, sliding conductors carried by said housing, said conductors fitting within the peripheral grooves of the conductor rings and embracing the major



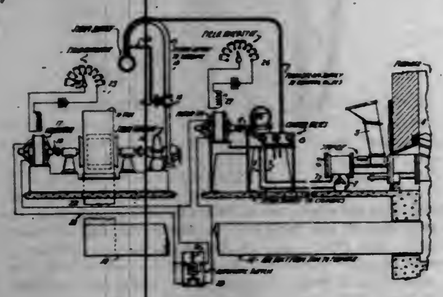
portion thereof, and means carried by one of said collars for preventing the rotation of said housing.

1,480,657. COFFEEPOT. CYRUS F. BLANKE, St. Louis, Mo. Filed Nov. 9, 1923. Serial No. 673,767. 3 Claims. (Cl. 53—3.)



1. In combination with a coffee pot, a coffee container adapted to be supported within the pot, a screen at the lower end of the container, a removable cup normally closing the upper end of the container, a perforated water spreader depending from the bottom of said cup, a dome-shaped hood arranged above the water spreader, said hood being provided with a series of perforations near its base, and means for holding the hood and the spreader to the cup.

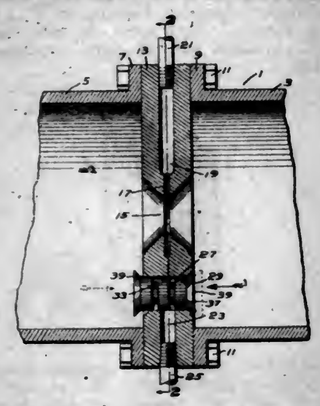
1,480,658. MANUFACTURE OF WOODEN ARTICLES. WILLIAM F. BOSTOCK, Braintree, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 29, 1920. Serial No. 399,796. 3 Claims. (Cl. 12—133.)



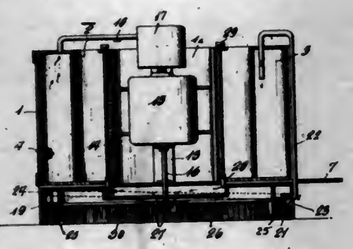
1. That improvement in the art of manufacturing lasts which consists in compressing the block normally to its annual layers while holding it firmly supported tangentially thereto, placing it in a last lathe and turning it to the desired shape.

1,480,659. SIGNALING SYSTEM. QUINCY A. BRACKETT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1920. Serial No. 428,876. 23 Claims. (Cl. 250—19.)

1. The method of arc signaling which consists in selectively supplying energy either to an oscillatory circuit or to a non-oscillatory circuit while maintaining uninterrupted operation of the arc.



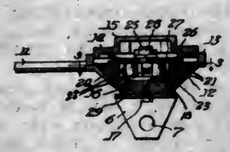
1,480,660. CONTROL MECHANISM FOR STOKERS. JOSEPH BRESLOVE, Pittsburgh, Pa. Filed Apr. 19, 1920. Serial No. 374,922. 8 Claims. (Cl. 236—14.)



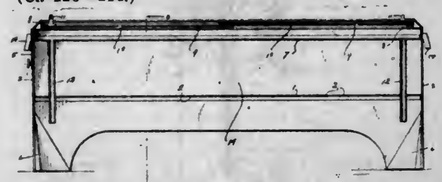
1. In combination with a furnace and the boiler associated therewith, a blast delivery mechanism, means responsive to changes in the steam output of the boiler for driving said blast delivery mechanism, an electric generator operatively connected to said means, a fuel feeding mechanism, means for controlling the operation thereof, and electrical apparatus responsive in operation to variations in the speed of said generator for controlling the operation of said last mentioned means.

1,480,661. DIFFERENTIAL-PRESSURE RESPONSIVE DEVICE. FRANCIS H. BROWN, Glen Olden, Pa. Filed July 2, 1920, Serial No. 393,640. Renewed June 8, 1923. 12 Claims. (Cl. 73—167.)

1. A differential fluid pressure responsive device, comprising a plate having therein an orifice adapted to have fluid flow therethrough, a groove communicating with said orifice, a port for transmitting kinetic fluid pressure from said groove, a port for transmitting static fluid pressure, and valve means automatically responsive to the direction of flow of fluid through said orifice for enabling transmission of static fluid pressure through said static pressure port on flow of fluid toward either side of said plate.

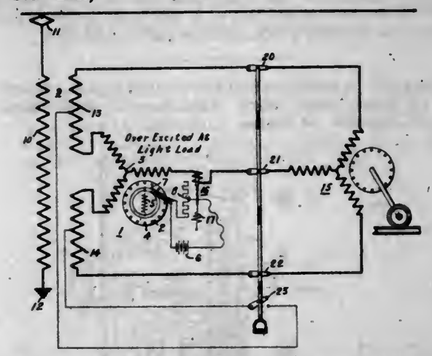


1,480,662. FOUNTAIN SCRUBBING MACHINE. ANSEL M. CAINE, New Orleans, La. Filed Sept. 11, 1922. Serial No. 587,517. 3 Claims. (Cl. 15—50.)



1. A scrubbing machine comprising a frame, a tank thereon having concentrically arranged compartments, one of which is closed and another divided into pockets, a circular head arranged adjacent and beneath the tank and divided into a plurality of compartments, absorbent material in each of said compartments, suction creating means supported upon the tank and communicating with one of said compartments and a circular pipe arranged in proximity to said head having branch pipes extending into engagement with said absorbent material, said pipe communicating with that compartment connected to the suction creating means, a rotatable brush received in the head and a common means for driving said brush and suction creating means.

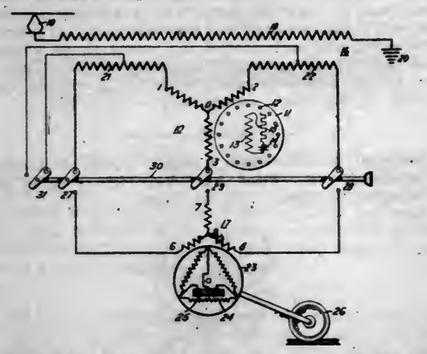
1,480,663. SHOCK ABSORBER. AUGUSTINE G. CAMPORINI, Chicago, Ill. Filed June 3, 1921. Serial No. 474,740. 6 Claims. (Cl. 188—130.)



1. In a shock absorber, the combination of a frusto-conical housing member, a friction member disposed therein and adapted to be rotated in one direction by said housing member, ratchet mechanism disposed within said friction member for holding said friction member against rotation in the opposite direction, a spring for yieldingly urging said friction and housing members together and a closure cooperating with said housing member to enclose said spring and ratchet mechanism, said closure being adjustable to regulate the tension on said spring.

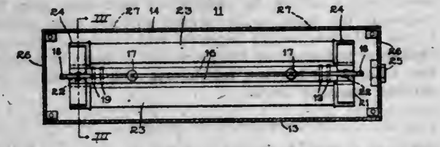
1,480,664. STOVE. PHILIP CHOKAS, Bluefield, W. Va. Filed Apr. 2, 1923. Serial No. 629,394. 3 Claims. (Cl. 126—214.)

1. A stove of the class described comprising a hollow member, the top wall of which forms a hot plate, a damper controlled opening in communication with the interior of said member, the walls of the member extending above the top plate, and cover sections associated with said extended portions of the walls.



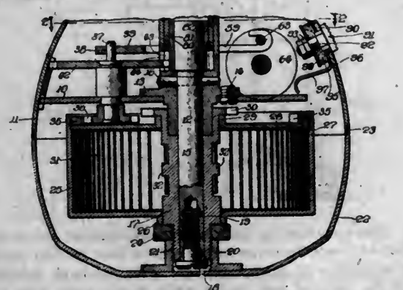
1,480,665. PHASE-CONVERTING SYSTEM. LEWIS WARRINGTON CHUBB, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 13, 1918, Serial No. 564,220. Renewed May 27, 1922. 14 Claims. (Cl. 173—246.)

4. The method of operating a synchronous phase-converter operatively associated with a supply transformer and having a plurality of its phases connected to a load circuit through portions of the secondary winding of said transformer in such manner as to reverse the phase-sequence of the output electromotive forces thereof, which comprises over-exciting the secondary member of said converter during light-load operation whereby leading currents may be supplied to said supply transformer at the expense of balance in said system.



1,480,666. BALANCED PHASE-CONVERTING SYSTEM. LEWIS WARRINGTON CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1917, Serial No. 206,924. Renewed Oct. 14, 1922. Serial No. 594,645. 17 Claims. (Cl. 171—238.)

1. In a converting system, the combination with a phase-converter having "n" primary windings and a tertiary winding, of a single-phase source subdivided into "n" portions, a polyphase load circuit, connections from each primary winding through one of said portions of the source, respectively, to a phase division of said load circuit, and connections from the tertiary winding of said converter to other phase-divisions of said load circuit, said connections being such that the electromotive forces of said source sub-divisions combine with the electromotive forces supplied from said converter to supply a resultant system of electromotive forces to said load circuit having the reverse phase-sequence from the converter electromotive forces.



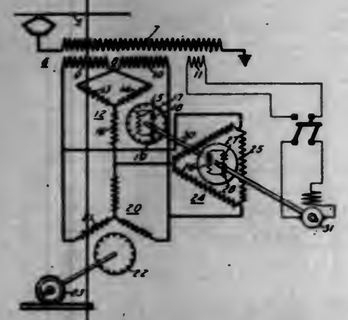
17. In a balancing system, the combination with a phase-balancer, of a supply circuit therefor, a load circuit, only one of said circuits being a balanced polyphase circuit, and symmetrical connections for inserting the unbalanced circuit between said converter and the balanced circuit.

1,480,667. ELECTRIC HEATER. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1922. Serial No. 585,844. 5 Claims. (Cl. 219—34.)

1. In an electric heater, in combination, a pair of parallel, co-extensive, insulating bars, terminal members clamped between and supported by said bars, resistor supporting means carried by said terminal members, and refractory resistor rods supported by said resistor-supporting means.

1,480,668. SPRING MOTOR. CAP B. COLLINS, Franklin, Pa., assignor to Collins Safety Razors, Chicago, Ill., a Common Law Business Trust. Filed Feb. 24, 1920, Serial No. 360,887. Renewed June 18, 1923. 9 Claims. (Cl. 185—37.)

7. In an appliance of the character described, the combination of a casing composed of registering sec-

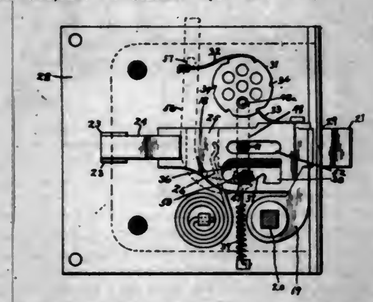


tions capable of rotation relatively to one another, a post carried by one of said sections, a sleeve revoluble on said post and connected to the other casing section, a coil-spring having its inner end connected to said sleeve, a ratchet-wheel rotated by said sleeve, a pawl co-operating with said ratchet-wheel to prevent backward rotation of the sleeve on the post, a spring-barrel connected to the outer end of the spring and revoluble on said sleeve, a second sleeve on said post, and gearing connecting said spring-barrel and second sleeve whereby the motor revolves the latter, the spring being wound up by the turning of one of said casing sections relatively to the other, substantially as described.

1,480,669. FOOT-POWER BRAKE. JAMES L. COLVIN, Scranton, Pa. Filed Nov. 24, 1920. Serial No. 426,270. 1 Claim. (Cl. 74—116.)

In a brake comprising a supporting bracket, a brake shaft, a bevelled gear carried by the end of said shaft, a stub shaft disposed at right angles to the brake shaft, a bevelled gear mounted upon the stub shaft and engaging the gear on the brake shaft, and a ratchet on the periphery of the second gear; a double armed lever pivoted upon the stub shaft and normally disposed in an inclined position relative the horizontal with one end above the shaft, means carried by the lever for engagement with the ratchet whereby to rotate said gears upon the application of pressure to the upper end of said lever, means carried by the end of said lever arm for returning the same to its normal position upon release of the pressure, means engaging said ratchet to prevent backward movement of the gears and a finger carried by the supporting bracket to contact and disengage the ratchet engaging means.

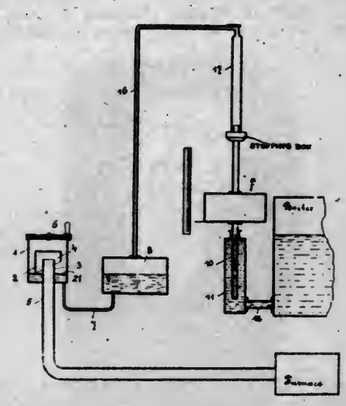
1,480,670. PHASE-CONVERTING AND POWER-FACTOR-CONTROL MACHINE. STUART H. COWIN, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 17, 1918. Serial No. 258,581. 10 Claims. (Cl. 172—246.)



6. The combination with a dynamo-electric phase balancer, of a synchronous motor, and a lost motion means for supplying a torque to the rotor of said balancer from the rotor of said motor while at the same time permitting changes in the relative angular relationship of the two rotors.

1,480,671. MEANS FOR VARYING THE TEMPERATURE OF THE ATMOSPHERE IN A CHAMBER. EDWARD T. CURRAN, Detroit, Mich. Filed Dec. 6, 1920. Serial No. 428,781. 2 Claims. (Cl. 257—154.)

1. In means for changing the temperature of the atmosphere in a chamber, an element to be placed in said chamber for the circulation of a medium therethrough of a temperature different from the temperature of the atmosphere in the chamber and about which the atmosphere of the chamber is circulated, said element comprising spaced tanks, said tanks being arranged with transverse partitions to divide the tanks into justaposed chambers, tubes connected at opposite ends to the chambers of the tanks and arranged so that one tube will communicate with a chamber of one tank and the successive chamber of the other tank, and an inlet leading to the chamber at one end of a tank and outlet leading from the chamber at the opposite end of said tank.

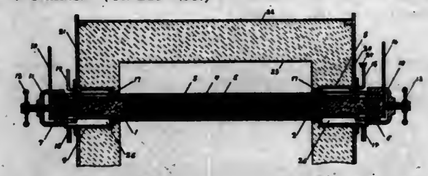


1,480,672. CARTRIDGE-FIRING DOOR LOCK. JOSEPH DE JOHN, Detroit, Mich. Filed June 18, 1923. Serial No. 646,022. 4 Claims. (Cl. 116—11.)

3. In combination with a shell, a manually actuatable latch piece limitedly movable therein and through one edge thereof, an ammunition magazine rotatably supported within said shell in position to be normally actuated by the movement of said latch to successively place its several firing chambers in registry with a suitably positioned aperture in one side of said shell, a pivoted firing member also actuatable to firing position by the movement of said latch, and means regulatable from either side of the shell whereby the response of said firing member to the releasing movement of the latch may be selectively controlled.

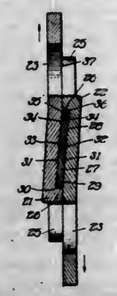
1,480,673. DEVICE FOR REGULATING THE AIR SUPPLY TO FURNACES OF STEAM BOILERS. SIEGFRIED DEUTSCH, Vienna, Austria. Filed June 23, 1920. Serial No. 391,249. 4 Claims. (Cl. 236—26.)

1. In a device of the character described having an air passage, the combination of a regulator proper for varying the cross-section of the air passage, and fluid pressure means for actuating the regulator proper, said means comprising a reserve vessel for holding a liquid, a pipe connection between the lower part of said reserve vessel and said regulator proper, a vessel of relatively large cross-section, a pipe connection between the upper



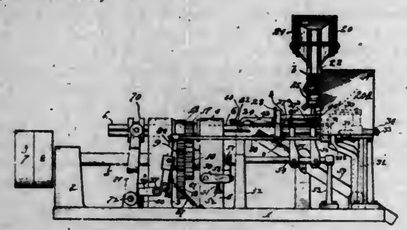
part of said reserve vessel and the upper part of said vessel of large cross-section, a pipe connection of relatively small cross-section between the lower part of said vessel of large cross-section, and the boiler, said pipe connection being normally filled with a liquid up to the bottom of said vessel of large cross-section.

1,480,674. DRILLING WELLS. SAMUEL E. DIESCHER, Wilkinsburg, Pa., assignor to S. Diescher & Sons, a Partnership consisting of Samuel E. Diescher and August P. Diescher. Filed Mar. 7, 1921. Serial No. 450,170. 3 Claims. (Cl. 61—36.)



3. The method herein described for rendering the wall of a well impervious to water and permanent which consists in filling the bore of the well with concrete in a fluid state to a suitable distance above the porous or frangible portion thereof and causing the concrete to penetrate the crevices or openings in the bore of the well by blows or impacts of a string of tools employed in boring the well and forming a bore through the concrete in the previously formed bore.

1,480,675. ELECTRIC RESISTOR AND ITS PROCESS OF MANUFACTURE. JOHN F. DIRZUWEIT, Laurel, Md., assignor of one-half to William W. Varney, Baltimore, Md. Filed Nov. 11, 1920. Serial No. 423,232. 7 Claims. (Cl. 219—68.)



7. An electric resistor provided with water cooled terminals and regulating means between said terminals for compressing the resistor, a conductor between said terminals comprising a pile of carbon blocks surrounded by silica contained in a refractory casing and means of introducing a gas through said silica from the exterior of said terminals.

1,480,676. AUTOMATIC SPRINKLER. SAMUEL DORAIS, Chicago, Ill., assignor of one-third to Charles L. Byron, Winnetka, Ill. Filed July 20, 1922. Serial No. 576,180. 5 Claims. (Cl. 169—42.)

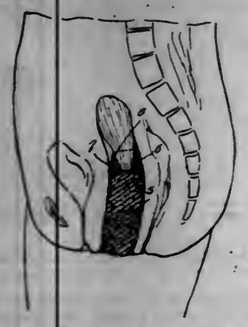
1. In an automatic sprinkler, a control link including a plurality of relatively movable members normally sealed together and having keyways therein at an angle with respect to the oppositely directed forces tending to separate said members longitudinally, and keys mounted in said keyways inclined in the same manner and having a knife edge fulcruming engagement with respect to each other for causing a quick lateral separating movement of said members upon the occurrence of predetermined thermal conditions.

1,480,677. BOLT AND NUT ASSEMBLING MACHINE. THOMAS EYNON, Rock Island, Ill., assignor to Williams, White & Company, Moline, Ill., a Corporation of Illinois. Filed Apr. 23, 1921. Serial No. 464,010. 38 Claims. (Cl. 10—155.)

30. In mechanism of the class described, the combination of a nut holder, an upright longitudinally movable and rotatable spindle in axial alinement with the nut holder, said spindle having means to engage and rotate

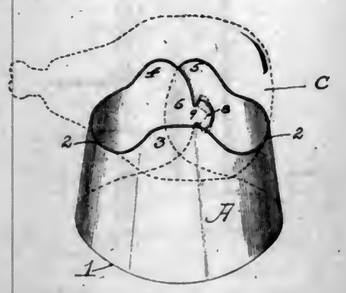
a bolt when pressed against it and to automatically release the bolt when retracted, means for holding a bolt in axial alinement with said spindle and said nut holder, and an ejector device operating in timed relation with the spindle to eject the assembled nut and bolt laterally after retraction of the spindle.

1,480,678. CAR COUPLING. CHRISTIAN G. FEUCHT, Brooklyn, N. Y. Filed June 3, 1922. Serial No. 565,541. 7 Claims. (Cl. 213—46.)



1. In a car coupling, an outer casing provided at one end with a car connection, a tubular member disposed in spaced relation within said casing and secured at one end to the car connection thereof and arranged to form a spring abutment thereon, means provided at the opposite or free end of said tubular member for engaging the inner wall of said casing and forming a spring abutment, a coupling rod having an end longitudinally slidable in said tubular member and provided at its opposite end with a car connection, a collar slidably mounted on said tubular member and connected through the walls of the latter in fixed relation with said coupling rod, and helical springs mounted upon said tubular member on opposite sides of said collar and disposed to engage said abutments and exert an endwise resistance in opposite directions to the movement of said rod.

1,480,679. COLLAPSIBLE TOOTHBRUSH. JAMES W. FORD, Chicago, Ill. Filed May 24, 1922. Serial No. 563,193. 7 Claims. (Cl. 15—202.)



1. A toothbrush construction comprising an elongated handle member having a fixed abutment thereon, a brush head removably associated with the same, and a screw propelled non-rotatable head-engaging element movable longitudinally of the handle member for clamping the brush head rigidly against the abutment.

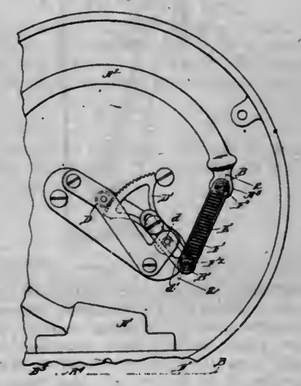
1,480,680. PESSARY. FRED MACK GLOVER, West Point, Ga. Filed Feb. 26, 1923. Serial No. 621,454. 1 Claim. (Cl. 128—127.)

In an article of the class described, a longitudinally pliable body of soft rubber formed in its upper end with a womb receiving pocket, the upper end of said pocket being cut inwardly of the front edges thereof for preventing displacement of the womb therefrom, and said pocket opening upon one end and upon one of the vertical faces of said body.

1,480,681. DISPLAY STAND. CHARLES B. GOES, Chicago, Ill. Filed May 4, 1923. Serial No. 636,512. 1 Claim. (Cl. 211—24.)

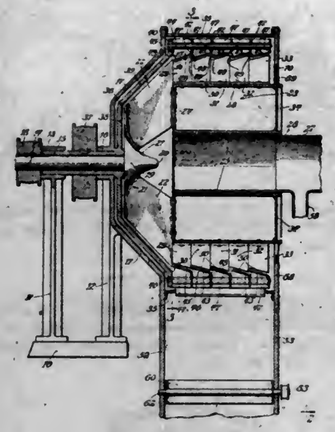
The blank for a display stand consisting of a single, substantially crescent shaped, thin but relatively stiff card board adapted when folded and its ends secured together to form a truncated cone, said blank being provided with a curved lower margin or base and rounded ends and with a top margin having a lug at each end and a centrally disposed lug, the portions of the top margin on each side of said central lug being substantially parallel with the base curve of the blank, a slot aperture through one end of the blank with a tongue projecting from one margin of the slot, and a lug projecting from the margin of the other end of the blank and adapted for interlocking engagement with said slot and tongue, substantially as described.

1,480,682. BOX STITCHER. EMIL HENNINGS, Chicago, Ill. Filed Nov. 19. 1919. Serial No. 339,082. 2 Claims. (Cl. 1—15.)



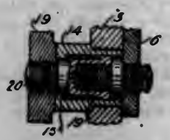
1. In a stitcher for sealing fibre shipping boxes having an inturned flange around the edge of the box and a flat cover therefor, a stitcher head, a short clincher block for insertion beneath the flange, a support for the clincher block extending inwardly then rearwardly and angularly upwardly and then outwardly above and over the flange beneath the cover and beyond the edge thereof whereby the block may be moved along beneath the flange so as to stitch the flange and cover along their overlapping portions, said support being of dimensions and construction to be capable of clenching the staples without any additional support beneath the clincher block.

1,480,683. GAME. HARRY HOLBROOK, Shawnee on Delaware, Pa., assignor to Worthington Mower Company, Shawnee on Delaware, Pa., a Corporation of Delaware. Filed Dec. 1, 1922. Serial No. 604,150. 3 Claims. (Cl. 46—4.)



1. In the game of golf, the combination with the fairway and the adjoining rough, of a set of targets of conspicuous and singular appearance placed in said rough and serving as datum points wherewith to fix the location of the ball.

1,480,684. SPRING LINK. WILLIAM S. HUDSON, West Medford, Mass., assignor to The Ashton Valve Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 19, 1922. Serial No. 595,651. 2 Claims. (Cl. 74—17.)

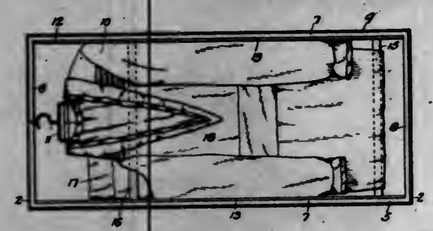


1. A spring link mechanism comprising two movable elements; a rigid link having two openings; a member connected with one of said elements and passing through one of said openings; another member connected with the other of said elements and passing through the other of said openings; and a spring connected to said members and tending to draw them together.

1,480,685. DUST COLLECTOR. LESTER L. LADD, Lockport, Ill. Filed June 19, 1922. Serial No. 569,195. 26 Claims. (Cl. 183—76.)

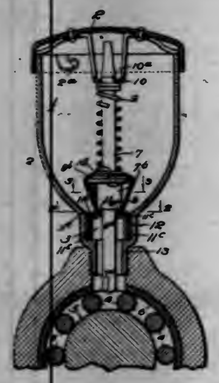
1. In a dust collector, a stationary casing, means for producing a current of air in said casing, a plurality of revolving members having conical inner wall portions within said casing, said members being spaced to provide gaps therebetween and means for dislodging dust from the wall of said stationary casing, said casing having a discharge opening in said wall and said means moving over said opening to force the dislodged dust therethrough.

1,480,686. SECURING DEVICE. ALBERT T. LIGHT, New York, N. Y. Original application filed May 28, 1919, Serial No. 300,293. Divided and this application filed Aug. 20, 1921. Serial No. 493,977. 7 Claims. (Cl. 220—55.)



1. In a device for attaching two structures together, a seating member having threaded lugs projecting therefrom in opposite directions, one of said structures being provided with a threaded opening for engagement by one of said threaded lugs, said other structure being provided with an opening into which said seating member may be fitted, and a holding member arranged to have threaded engagement with the other of said lugs, said holding member including a portion having a greater diameter than the diameter of the seat-securing opening.

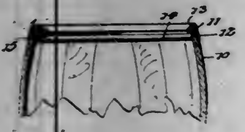
1,480,687. DEVICE FOR SUPPORTING GARMENTS IN BOXES. HARRY T. LOOMIS, Jamaica, N. Y. Filed Oct. 7, 1921. Serial No. 506,060. 3 Claims. (Cl. 206—7.)



1. A garment supporting device of the class described, comprising a frame composed of elongated strips, spaced

transverse members rigidly secured to said strips, one of said transverse members being located adjacent to the

lower edges of said strips and the other of said transverse members being located centrally of the top and bottom edges of said strips.

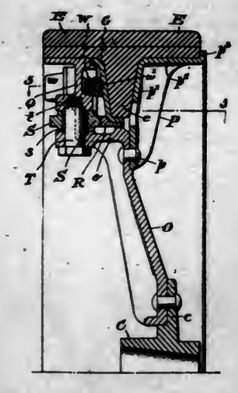


1,480,688. LUBRICATOR. HERBERT L. MAGILL and FREDERICK J. KEORE, Chicago, Ill. Filed May 23, 1917, Serial No. 170,548. Renewed May 17, 1923. 35 Claims. (Cl. 184—65.)

8. In combination with a roller bearing, a chamber for lubricant provided with an outlet leading to the bearing rollers, and a movable feed pin in said chamber extending through the outlet for contact with said rollers in their travel.

10. In the combination defined in claim 8, said feed pin being yieldingly held in position for contact of its end portion with the rollers in their travel.

1,480,689. BARREL. BENJAMIN B. MICHAELS, Brooklyn, N. Y. Filed Apr. 16, 1920. Serial No. 374,291. 1 Claim. (Cl. 217—76.)

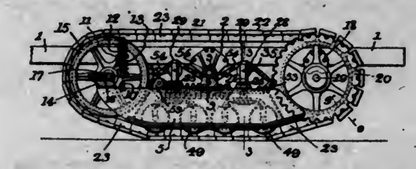


In combination with a container having an inner, circumferential groove adjacent one end thereof; a closure for said container comprising a top, said top having a peripheral, upwardly and outwardly bent portion adapted to snap and be seated in the groove of the container, said upwardly and outwardly bent period being formed integral with a chime and hoop encircling the top edge externally of the container.

1,480,690. CHECK PROTECTOR. STANLEY E. PETERS, Chicago, Ill., assignor to Kritikson Brothers, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Apr. 3, 1922. Serial No. 548,891. 8 Claims. (Cl. 101—24.)

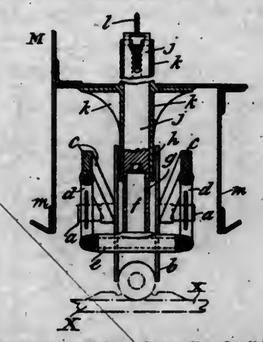
6. A fountain pen cap having an end wall thereof provided with a recess for the reception of a roller having inking and mutilating elements, the axis of said roller being arranged transversely to the axis of the cap, and inking material for feeding ink to said roller.

1,480,691. GRIP PULLEY. GEORGE JOHN RACKHAM, Putney, London, England, assignor to Roadless Patents Holding Company, Washington, D. C., a Corporation of Delaware. Filed June 17, 1922. Serial No. 568,895. 7 Claims. (Cl. 64—40.)



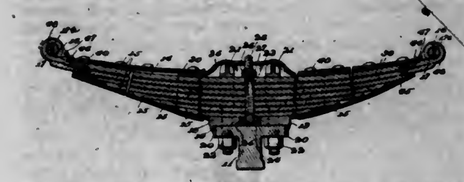
6. A grip pulley adapted to be associated with a belt having a rib or flange on its inner side, comprising two opposed sections, and a gripping member interposed between the pulley sections, and engaging the rib of the belt and being associated with devices which automatically cause it to firmly grip the ribbed part of the belt when the belt starts to slip on the pulley.

1,480,692. ENDLESS-TRACK VEHICLE. GEORGE JOHN RACKHAM, Chicago, Ill., assignor to Roadless Patents Holding Company, Washington, D. C. Filed Jan. 16, 1923. Serial No. 613,004. 7 Claims. (Cl. 305—9.)



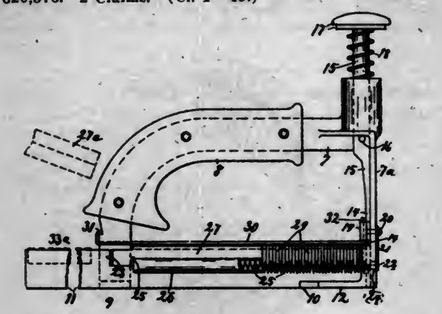
3. An endless track vehicle comprising a chassis, subframes supported from opposite sides thereof and each

mounted to rock fore and aft about an axis intermediate its front and rear portions, tractor belts on opposite sides of the vehicle, pulleys for the belts carried by the front portions of the subframes, pulleys for the rear portions of the belts carried by the chassis, body supporting wheels engaging the lower runs of the belts,



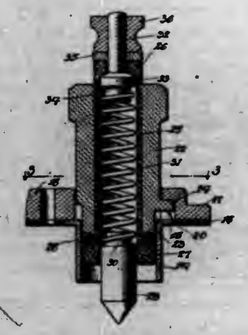
frames within the subframes in which the wheels are mounted, flexible cables connected with the subframes on which the vehicle body rests and vertically movable connections between the frames of the body-supporting wheels and said cables which also permit the frames to swing sidewise or laterally with the tractor belts.

1,480,693. ENDLESS-TRACK VEHICLE. GEORGE JOHN RACKHAM and FREDERICK BRIDDON LAMB, London, England, assignors to Roadless Traction, Limited, London, England. Filed Mar. 17, 1923. Serial No. 625,751. 12 Claims. (Cl. 305—9.)



11. In combination with a laterally flexible track, a bogie supporting or wheel-carrying frame which is mounted to swing laterally with the tractor belt when the latter is bent or flexed laterally for steering and other purposes.

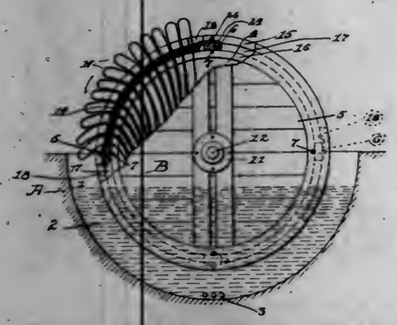
1,480,694. SPRING DEVICE. ALFRED R. ROCHE, Casper, Wyo. Filed Sept. 6, 1922. Serial No. 586,467. 4 Claims. (Cl. 267—37.)



3. In a device of the character described, a leaf spring and a jacket enclosing said leaf spring, said jacket being constructed of fabric and comprising a center section folded around the leaf spring and having its meeting ends overlapping around the bottom of the leaf spring, snap fasteners for releasably securing said overlapping ends together, and end sections folded around the leaf spring and having their meeting ends overlapping along the top of said leaf spring, said end sections also overlapping portions of said center section, snap fasteners for releasably securing the end sections to the center section, and snap fasteners for releasably securing the meeting ends of the end sections together.

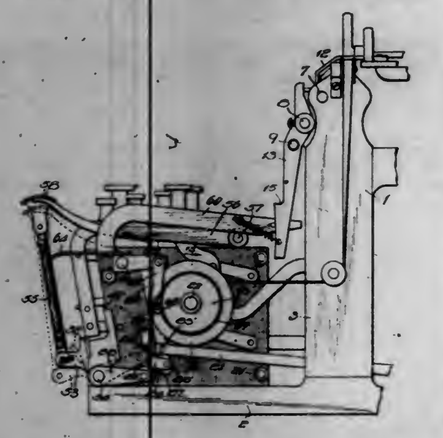
1,480,695. STAPLE DRIVER. THOMAS T. RODEBERG, Montevideo, Minn. Filed Feb. 23, 1923. Serial No. 620,576. 2 Claims. (Cl. 1—49.)

1. A staple driver having an open frame forming a horizontal staple holding bar, a vertical body portion extending at about right angles upward from the front end of the horizontal bar, and a curved handle connecting said two bars, a plunger slidable in the vertical body portion and having its upper end provided with a head and a spring engaging said head to raise the plunger, means limiting the raising of the plunger, the lower end of the plunger forming a punch arranged to drive one staple at a time through a slotted hole in the frame close by the front end of the staple supporting bar, a guiding strip fixed near above the staple supporting bar to prevent raising of the staples, a channel-shaped follower straddling the horizontal bar to push the staples toward the punch and a contracting coil spring arranged to pull the follower forward, said spring being long enough to permit removal of the follower from the bar without detaching either end of the spring while the bar receives a supply of staples.



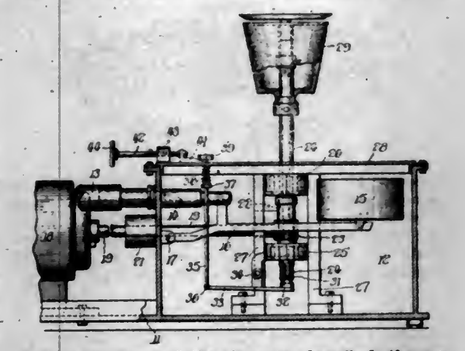
1,480,696. MAGNETO CONTACT. PETER A. SCHAEFER, Greensburg, Pa. Filed Mar. 1, 1922. Serial No. 540,262. 5 Claims. (Cl. 173—324.)

5. In a magneto contact for motor vehicles, the combination of a shell for connection with an element having an opening therethrough, a tubular insulator slidably fitting through the shell and provided at its lower end with a shoulder, a gasket interposed between said shell and the shoulder, and an electrical conductor extending within the insulator and including a spring tending when compressed to shift the insulator upon the shell for com-



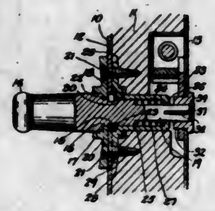
pressing the gasket between said shoulder and the shell and feeding the gasket to the wall of said opening forming a joint therewith yieldably closed by said spring.

1,480,697. TANNING APPARATUS. WILLIAM S. SHAW, Chicago, Ill. Filed May 1, 1922, Serial No. 557,764. Renewed June 20, 1923. 6 Claims. (Cl. 149—11.)



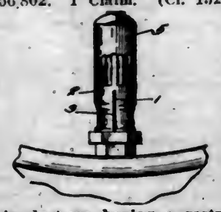
1. A tanning apparatus comprising a vat for containing the tanning liquid, and a rotary drum or wheel mounted therein, said wheel having two spaced apart heads, spreader bars, binding rods, and a plurality of removable slats, strips of soft, liquid absorbing material between the slats and means for clamping the hides between said strips.

1,480,698. POWER-DRIVEN OPERATING MEANS FOR TYPEWRITERS AND THE LIKE. DANIEL W. SHIEK, Aurora, Ill., assignor to S. E. Miller, Aurora, Ill., trustee on behalf of said Daniel W. Shiek and Miller-Bryant-Pierce Company, a Corporation of Illinois. Filed Oct. 5, 1921. Serial No. 505,544. 28 Claims. (Cl. 197—17.)



1. In a machine of the kind described and in combination, key levers for type bars, type keys, word spacing mechanism, means for locking said keys against accidental operation, said means being controlled by the weight of the operator's hands, and means controlled by the lifting of the operator's hands from said first-mentioned means for automatically operating said spacing mechanism.

1,480,699. ADJUSTABLE VALVE. CHARLES H. SIMMONS, Chicago, Ill., assignor to Milton E. Page, jr., Adolph T. Johanson, and Christopher M. Page, all of Chicago, Ill., trustees for Anball Manufacturing Company, a Common Law Trust. Filed Mar. 28, 1923. Serial No. 628,269. 5 Claims. (Cl. 158—77.)

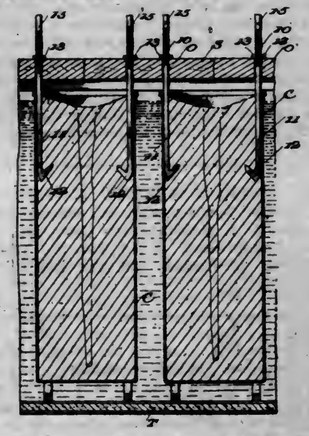


1. In a structure of the character described, the combination of a member having a valve-port, means to revolve said member, a relatively-stationary valve cooperating with said port, and means to adjust said valve and member with relation to one another to vary the extent of port opening.

1,480,700. ANTIRATTLING DOORKNOB. JOSEPH SOSS, New York, N. Y. Filed Jan. 25, 1921. Serial No. 439,764. 5 Claims. (Cl. 292—355.)

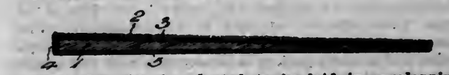
1. The combination with the door knob of a motor vehicle door, of means for retaining said knob against displacement in the door and for preventing rattling thereof comprising a part secured to the door and provided with a spring seat, a shoulder on the shank of the knob forming another spring seat between which and said first named spring seat is mounted a coil spring and an escutcheon plate secured to the door outwardly of said part and which serves to limit the inward movement ff the door knob in the door, and a lock washer mounted on the shank of the door knob inwardly of said escutcheon plate and cooperating with said plate to retain the door knob against displacement in the door.

1,480,701. FRICTION-GRIP DUST CAP. WILLIAM F. STAGGERS, Mannington, W. Va. Filed Apr. 26, 1922. Serial No. 556,802. 1 Claim. (Cl. 152—12.)



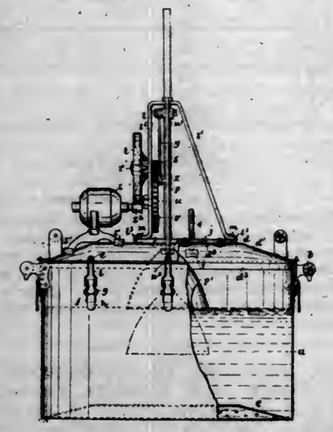
A friction-grip dust-cap having a restricted end portion, the cap having a plurality of slots extending longitudinally of the cap through said end portion, and a rubber cover snugly fitting over the entire cap and preventing the ingress of dust through the slots.

1,480,702. STOVEPIPE COUPLER. LOUIS P. VOGTMAN, Park Rapids, Minn. Filed June 25, 1921. Serial No. 480,331. 2 Claims. (Cl. 285—185.)



1. A pipe coupler comprising pipe sections having adjacent ends telescoped to provide a joint, separable fasteners, and means comprising loop straps for radially hinging one separable fastener to each pipe section.

1,480,703. ICE-REMOVING APPARATUS. JOHN CLARK WARD, Beaumont, Tex. Filed May 10, 1922. Serial No. 559,970. 1 Claim. (Cl. 294—1.)



In a device for removing manufactured ice from cans, a pair of grappling devices having shanks provided at their lower ends with inwardly directed and upturned hooked heads, said grappling devices being adapted to be inserted into a can before the ice is formed whereby the shanks and the upturned hooked heads are embedded in the sides of the block of ice with the hooked heads engaging the ice in such manner as to be held against accidental displacement or against displacement by upward pull while being readily removable by a blow on the upper end of the grapples.

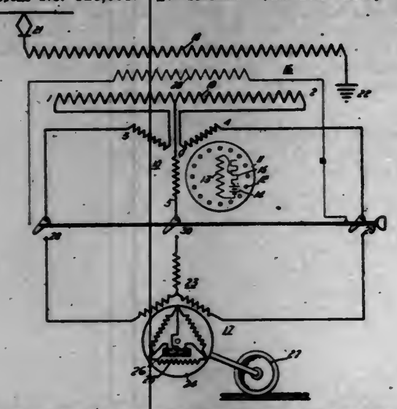
1,480,704. SHINGLE. HENRY A. WHEELER, Jacksonville, Fla. Filed Sept. 27, 1923. Serial No. 665,197. 1 Claim. (Cl. 108—8.)

A wooden shingle adapted to be laid in overlapping relation with other shingles upon spaced roofing lath and adapted to have its edges spaced from adjacent shingle edges to form ventilating passages, a thick fire-resisting plastic coating of uniform thickness over the entire upper side and extending around the edges of said shingle to resist fire on the portion of the shingle exposed to the weather and to also resist fire burning through an overlapping shingle, said coating being convertible by fire heat into a thick viscous fluid adapted to run into and seal the above-mentioned ventilating passages to resist passage of fire therethrough to the interior of the roof.

1,480,705. WASHING MACHINE. WILLIAM WIRTZ, Cristobal, Canal Zone, Panama. Filed Nov. 28, 1921. Serial No. 518,206. 3 Claims. (Cl. 259—113.)

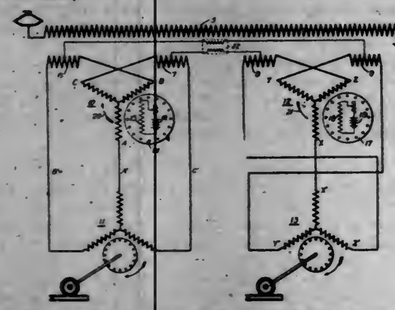
1. A washing machine including, in combination, with a housing comprising a receptacle and a cover therefor, inverted bent uprights forming a supporting structure and arranged in planes crossing each other and one straddling and bearing down on the other, the latter upright being mounted on the cover, means to detachably clamp the first-named upright to said receptacle, an agitator projecting into the housing, and means on said structure to actuate the agitator.

1,480,706. FORGEABLE ALLOY OF IRON AND NICKEL. TRYGVE D. YENSEN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1919. Serial No. 290,022. 6 Claims. (Cl. 75—1.)



1. A forgeable alloy comprising unequal quantities of iron and nickel and a relatively small amount of titanium, the amount of titanium varying in proportion to the amount of the lesser metal present.

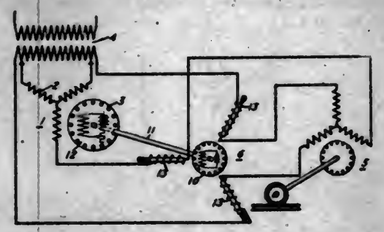
1,480,707. FISH LURE. LE ROY OSBORN EDWARDS, East Hampton, N. Y. Filed Aug. 7, 1922. Serial No. 580,331. 1 Claim. (Cl. 43—45.)



A fish lure comprising a non-metallic core, a solid metal casing of prolate spheroid shape surrounding said core and a shank passing through the core and casing, said shank having a fish hook on one end and an eye on the other end.

1,480,708. BALANCED PHASE-CONVERTING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1917, Serial No. 206,932. Renewed Dec. 30, 1921. Serial No. 526,035. 23 Claims. (Cl. 172—238.)

3. The combination with a polyphase dynamo-electric machine wherein the electromotive force drops in the different phase windings have the opposite phase sequence from the electromotive forces of said windings, of means for, in effect, reversing the phase sequence of one of said sets of electromotive forces relative to the other.

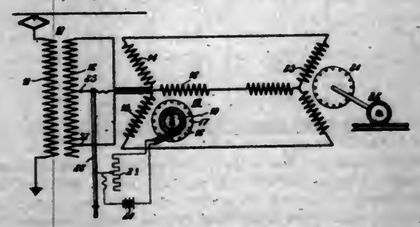


1,480,709. BALANCED PHASE-CONVERTING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1918. Serial No. 254,312. 14 Claims. (Cl. 172—238.)

1. The method of producing single-phase current which comprises dynamically combining a system of polyphase currents having a given phase-sequence with another system of polyphase currents having the same phase-number but the opposite phase-sequence, generating the desired single-phase current by the resultant alternating energy, and providing for the flow of currents between the two systems in such manner as to maintain substantially balanced conditions in the system.

3. The combination with two balanced polyphase systems of like phase-number, of means for deriving equal balanced polyphase components of current from each system, respectively, means for dynamically combining said components with opposite phase-sequence, whereby an alternating force is produced, means for generating a single-phase current by said alternating force, and means for providing for the flow of currents between the two systems in such manner as to maintain substantially balanced conditions in the systems.

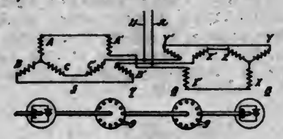
1,480,710. BALANCING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 17, 1918. Serial No. 258,578. 46 Claims. (Cl. 172—246.)



3. The combination with an alternating-current system having two component electromotive-forces, of a system carrying currents corresponding to only one of said components, and a dynamo-electric machine connecting said systems for precluding the flow of currents corresponding to the other of said component electromotive forces therebetween, said component electromotive forces being of such nature as to tend to drive said dynamo-electric machine at different speeds.

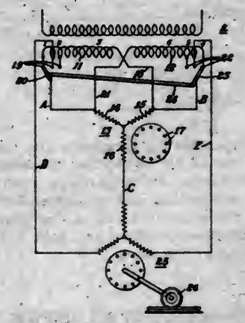
19. In a polyphase system of distribution, the combination with an unbalanced translating device, of a balanced translating device, a dynamo-electric machine connecting said devices for precluding the flow of unbalancing currents therebetween, and a unidirectional exciting means for said dynamo-electric machine.

21. An electrical system comprising a polyphase network having a balanced portion and an unbalanced portion, and a series balancer for automatically balancing the polyphase currents flowing between said portions, said series balancer comprising a dynamo-electric machine having a damper winding and having its rotor running backwardly at substantially synchronous speed.



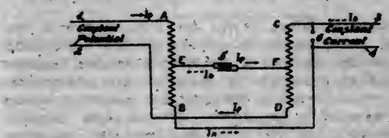
1,480,711. PHASE-CONVERTING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 16, 1918. Serial No. 262,809. 22 Claims. (Cl. 172—238.)

16. An electrical system including, in combination, a three-phase translating device, a single-phase transformer winding provided with three taps dividing the same into two winding elements, a dynamo-electric machine having non-interconnected three-phase primary windings and a damper winding, connections for connecting the three primary windings severally in series circuit relation between the respective transformer taps and the three-phase translating device, and means for shifting the intermediate transformer tap.



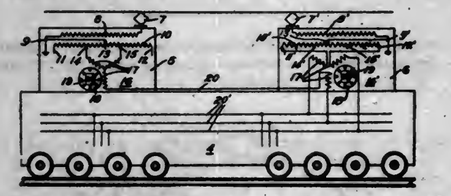
22. The method of operating a series synchronous phase-balancer to substantially prevent the flow of reverse phase-sequence currents in an unbalanced three-phase line, which consists in adjusting the unidirectional excitation of the balancer in accordance with the magnitude of the reverse phase-sequence symmetrical component voltage of the unbalanced line.

1,480,712. PHASE CONVERTER FOR SINGLE-PHASE CURRENTS. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 5, 1921. Serial No. 442,763. 12 Claims. (Cl. 172—246.)



11. The combination with a plurality of dynamo-electric machines, of a polyphase system, said machines being connected in symmetrical relation to different conductors of said polyphase system, and dynamo-electric means connected in series with said conductors for providing a path for the flow of only symmetrical polyphase currents in said conductors.

1,480,713. PHASE-CONVERTER SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Nov. 16, 1918, Serial No. 262,809. Divided and this application filed Feb. 5, 1921. Serial No. 442,766. 5 Claims. (Cl. 172—246.)

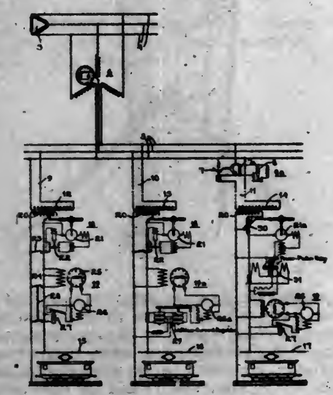


1. The combination with single-phase windings and a polyphase circuit, of a phase converter connecting said windings to said circuit for interchange of power, said windings being provided with taps whereby the voltage applied to the converter may be varied with respect to the voltage applied to the polyphase system, switch-arms for selectively engaging said taps, and connections whereby said converter operates as a shunt-connected machine when said switch-arms are in engagement with said taps and whereby said converter operates as a series-connected machine during the transition period in which said switch arms are disengaged from said taps in passing from one position to another.

1,480,714. SYSTEM OF DISTRIBUTION. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 1, 1921. Serial No. 497,755. 11 Claims. (Cl. 171—119.)

1. The combination with a supply circuit and a receiving circuit, of means for converting electrical energy from a constant potential in said supply circuit to a constant current in said receiving circuit, said means comprising a plurality of inductively related inductive devices, a condensive device associated therewith and means for varying the mutual inductance of said inductive devices while maintaining the self-inductance thereof substantially constant.

1,480,715. PHASE-CONVERTER SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 27, 1922. Serial No. 556,858. 28 Claims. (Cl. 172—246.)

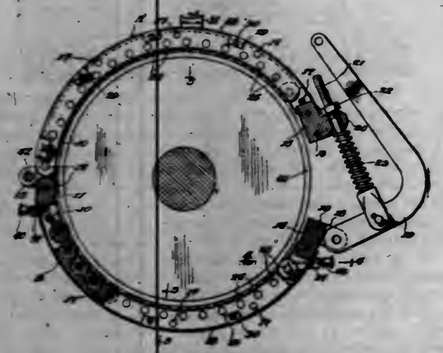


5. The combination with a single-phase system and a substantially balanced three-phase system, of phase converter means for providing an unbalanced three-phase system and for interconnecting the same for interchange of power with said single-phase system and with said balanced three-phase system, respectively, said unbalanced three-phase system having substantially an isosceles triangular polygon of electromotive forces in which the altitude is substantially 0.289 of the base.

6. In combination, a single-phase system, a substantially balanced polyphase system having one phase directly connected to said single-phase system and having a tertiary component electromotive force at substantially right angles to the single-phase electromotive force in said first-mentioned phase, and phase-converter means for providing an unbalanced polyphase system and for interconnecting the same for interchange of power with said single-phase system and with said balanced polyphase system respectively, said unbalanced polyphase system having, in effect, a tertiary component approximately half as large as said balanced system.

15. The method of operating a phase-converting system embodying shunt and series phase-converting machines, which consists in utilizing said shunt machine to perform materially less than the whole of the phase-converting operation under all load conditions and utilizing said series machine to complete the phase-converting operation.

1,480,716. PHASE-BALANCING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 24, 1922. Serial No. 596,597. 15 Claims. (Cl. 172—246.)

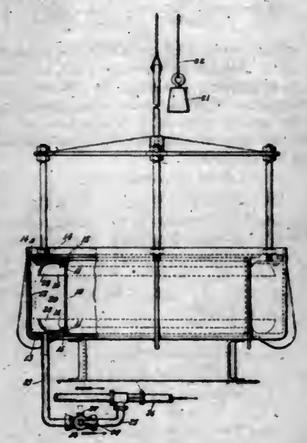


3. The method of operating a plurality of unbalanced single-phase loads from a polyphase supply line with

which is associated a dynamo-electric series phase balancer in series circuit relation to the load currents, said method comprising adjustably transforming the resultant unbalanced voltages to maintain predetermined voltage conditions on the respective single-phase loads.

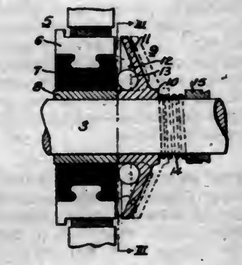
6. The combination with a polyphase supply line and a plurality of single-phase load lines, of means for maintaining an instantaneous balance in the currents drawn from the supply line and means for individually adjusting the voltages in the respective single-phase lines.

1,480,717. BRAKE BAND. WILLIAM L. FOURNIER, Seattle, Wash. Filed Sept. 9, 1922. Serial No. 587,108. 8 Claims. (Cl. 188—262.)



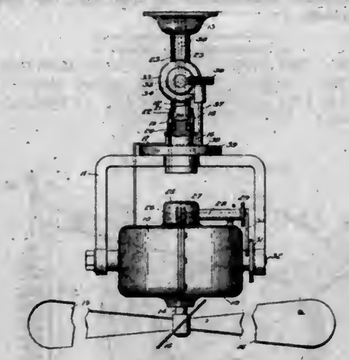
5. A brake band including companion pivoted sections each having side bars, gripping rollers provided at their ends with trunnions journaled in said side bars, the side bars being formed with lubricant channels having passages leading therefrom to the trunnions of said rollers, and lubricant cups feeding said channels.

1,480,718. WIREBOUND SHIPPING PACKAGE. NEIL A. FOWLER, Indianapolis, Ind., assignor, by mesne assignments, to Wirebounds Patents Company, a Corporation of Maine. Filed July 6, 1915, Serial No. 38,178. Renewed Mar. 17, 1921. Serial No. 452,996. 35 Claims. (Cl. 217—44.)



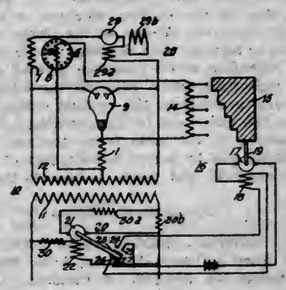
1. A wirebound package comprising a considerable number of comparatively narrow strips of thin material arranged with their edges abutting at their inner corners, each of said strips being provided with a transverse cleat having a maximum length substantially equal to the width of the sheet and having its ends beveled at an angle materially less than 45°, binding wires extended transversely across the series of strips and firmly attached thereto, said binding wires being extended beyond the series of strips to facilitate fastening.

1,480,719. METHOD AND APPARATUS FOR MAKING OR MANIPULATING TIRES. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 15, 1920. Serial No. 389,171. 19 Claims. (Cl. 154—10.)



18. In an apparatus for forming a tire casing from an endless band, means for supporting the band by its edge portions and moving these portions relatively axially of the band and means for creating differential fluid pressures on the opposite faces of the band, to distend the middle portion thereof, the fluid acting directly against the faces of the band.

1,480,720. SHORT-CIRCUITING DEVICE. GEORGE H. GARCELON, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 12, 1922. Serial No. 581,317. 6 Claims. (Cl. 172—279.)

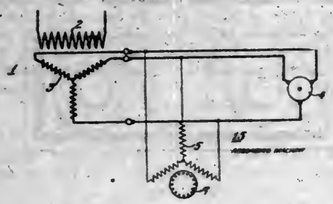


1. A short-circuiting device for dynamo-electric machines of the commutator type comprising a short-circuiting member adapted to be carried by said machine and in spaced relation with respect to the commutator cylinder thereof, and a substantially spherical contact member adapted to be confined between said short-circuiting member and said commutator cylinder for movement both about constantly changing axes and for movement in a radial direction into and out of short-circuiting engagement with the segments of said commutator cylinder and said short-circuiting member.

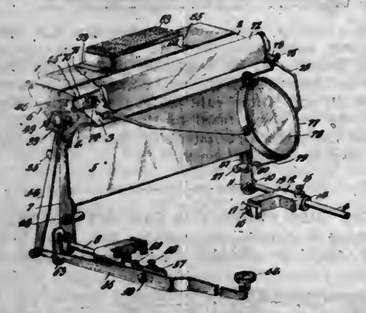
1,480,721. FAN. MAURICE M. GLASSER, Charleston, S. C. Filed Mar. 15, 1923. Serial No. 625,848. 7 Claims. (Cl. 230—1.)

1. In a fan, the combination of a motor and its rotor, a series of blades carried by the rotor, means for oscillating the rotor and blades, and means for revolving said rotor and blades, said rotor oscillating and revolving means being operable independently of one another.

1,480,722. MEANS FOR AND METHOD OF ELIMINATING HARMONIC DISTURBANCES. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1918. Serial No. 266,748. 25 Claims. (Cl. 172—238.)



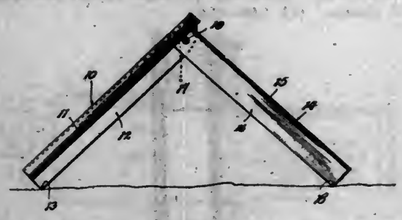
3. In combination with an alternating-current circuit and a rectifier connected thereto, a squirrel-cage induction machine having its primary connected in parallel with said rectifier, and a series inductance device included in the connections between said rectifier and said alternating-current circuit.



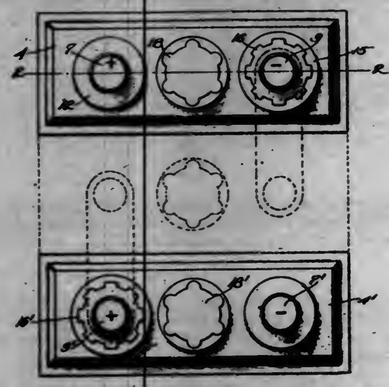
9. In combination with an alternating-current rectifier and a transformer supplying power thereto, dynamo-electric means for adjusting the phase of the higher-harmonic currents relative to the phase of the primary fundamental wave of the transformer current.

1,480,723. ABSORPTION OF CURRENTS OF UNDESIRABLE FREQUENCIES. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1918. Serial No. 266,750. 14 Claims. (Cl. 172—238.)

2. The combination with a dynamo-electric machine having primary and secondary circuits, said secondary circuit carrying currents of a plurality of frequencies, of means connected to said secondary circuit and furnishing a negligibly small conductance to currents of one of said frequencies but being substantially a short circuit for currents of the other frequencies.



1,480,724. COMBINED COPYHOLDER, SIGHT READER, AND SPACER. GEORGE C. HOHEIN, Clarendon, Va. Filed Oct. 2, 1922. Serial No. 591,860 4 Claims. (Cl. 120—32.)

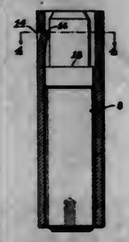


3. A device of the class described including a body provided with a line displaying opening, a roller journaled in the body below the opening, means for rotating the roller, a frame fulcrumed in the body, a guide rod disposed at the upper end of the frame in substantial horizontal alignment with the opening of the body, a roller journaled in the frame in horizontal alignment with the first mentioned roller, a spring engageable with the frame for holding the second mentioned roller in engagement with the first mentioned roller, a rod rotatable on the frame, a cam keyed to the rod and engageable with the body, and means for rotating the rod so as to engage the cam with the body so as to fulcrum the frame thereby separating the two mentioned rollers.

1,480,725. WHEEL CHOCK. ELI ISRAEL, Wilkes-Barre, Pa. Filed Feb. 3, 1922. Serial No. 533,873. 5 Claims. (Cl. 188—32.)

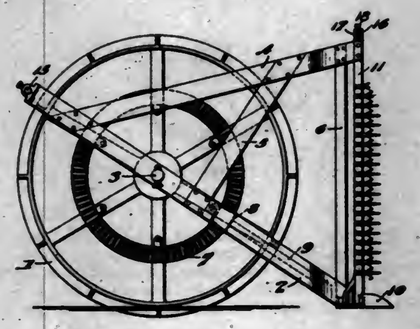
1. A wheel chock including pivotally connected channel-shaped members each open at one side and movable into divergent relation locked against each other, the members being foldable into nested relation each closed at its open side by the other.

1,480,726. STORAGE BATTERY. LOUIS JACQUEMIN, Orlando, Fla. Filed July 2, 1923. Serial No. 648,864. 4 Claims. (Cl. 204—29.)



4. In a storage battery, the combination of a plurality of battery units each including a jar containing the battery elements of its respective unit, connections between the electrodes of the units, and a metal cover for each of the end jars of said units, the negative terminal of one end jar being fused to the metal cover for said jar and the positive terminal of the opposite end jar being fused to its metal cover.

1,480,727. SIDE FRAME FOR FREIGHT-CAR TRUCKS. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed Nov. 20, 1922. Serial No. 602,138. 13 Claims. (Cl. 105—205.)



1. A truck side frame comprising an upper chord, a lower chord, and upright struts defining with said chords a central bolster opening, said lower chord depending from said upper chord as nearly as practicable in the form of a catenary and having a U-section opening downwardly below said bolster opening, and opening upwardly through the remainder of its extent.

1,480,728. THREAD-HOLDING DEVICE. WILLIAM E. KING, Needham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 24, 1920. Serial No. 398,613. 5 Claims. (Cl. 242—138.)

5. A thread holder comprising a stationary base, a cop spindle secured at one end to the base, a thread cop provided with a cop tube having its wall bent inward near one end to form a stop for preventing the placing of the cop on the spindle this end first, and a thread guide arranged substantially in line with the free end of the spindle.

1,480,729. EXTENSION SICKLE FOR MOWING MACHINES. CHARLES W. LEFLER, Boise, Idaho. Filed Mar. 10, 1921. Serial No. 451,117. 2 Claims. (Cl. 56—233.)

1. An extension sickle for mowing machines including with a substantially U-shaped main frame member to be mounted on the axle of a mowing machine and embrace one of the ground wheels thereof, supporting frame members and braces associated with the main frame member to provide a supporting frame structure extending forwardly and substantially in vertical line with the shoe of the mowing machine, a hollow shoe mounted on the lower portion of the frame structure to receive and be secured upon the shoe of the mowing machine, an extension sickle structure pivoted at one end upon the supporting frame adjacent the hollow shoe to swing to any angle from the vertical outwardly, a rod pivoted on the outer end of the extension sickle bar, a holder mounted on the main frame through which said rod is slidable and by which adjustments of the extension sickle are held, and means to operate the extension sickle.

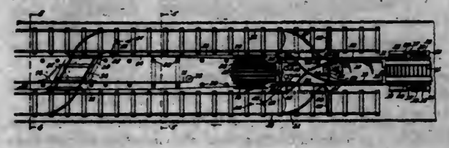
1,480,730. DENTAL SHOULDER-CUTTING INSTRUMENT. JOHN A. LENTS, Phoenix, Ariz. Filed May 31, 1922. Serial No. 564,790. 5 Claims. (Cl. 32—10.)

1. A dental instrument for cutting a shoulder into a tooth comprising a rotary bur and a sheath for the same leaving one side of the bur free for lateral engagement with the tooth at any desired elevation.

1,480,731. DOOR-HANGER STRUCTURE. LON LIGHT and NORMAN E. WILKINS, Cedar Rapids, Iowa. Filed July 26, 1922. Serial No. 577,509. 5 Claims. (Cl. 16—88.)

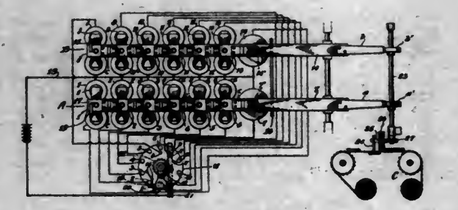
1. A door hanger structure comprising a tubular track having a longitudinal slot in its lower portion, a hanger plate movable longitudinally in said slot, oppositely

facing pockets in the upper portion of said plate and positioned within the track, and antifriction balls



mounted in said pockets, one of said pockets adapted to support the door through its respective ball upon the lower portion of the track.

1,480,732. PLATFORM SCALE. JOSEPH J. MAGRADY, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 554,837. 6 Claims. (Cl. 94—4.)

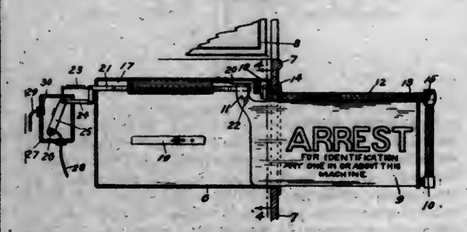


1. An all-metal deck for heavy duty platform scales including a series of spaced parallel supporting beams, a series of spaced parallel channel beams inverted upon, and disposed at right angles to, the said supporting beams, clamping members secured to the several supporting beams at spaced points therealong, said clamping members being disposed within and connected to the channel beams and completely covered and protected thereby and bolts connecting said clamping members with the channel beams.

1,480,733. SYSTEM AND APPARATUS FOR MINING COAL. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Apr. 28, 1920. Serial No. 377,415. 70 Claims. (Cl. 262—1.)

1. In a system of mining, the combination with a mine track extending longitudinally along a mine chamber, of a plurality of track extensions in stacked relation and mounted directly on the forward portion of said track, and means for sliding said stack or track extensions beyond the end of said track to effect the laying of said track extensions one after another beyond the end of said track and in continuation thereof to extend the length of said track longitudinally along the mine chamber.

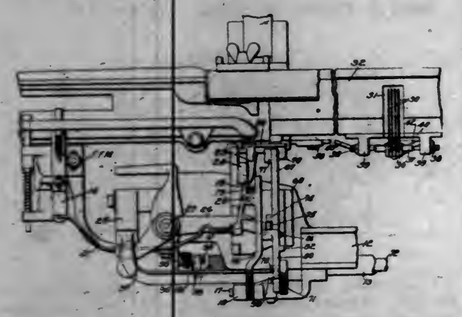
1,480,734. ACTUATING DEVICE. KARL O. NELSON, Mineola, Long Island, N. Y. Filed Oct. 28, 1920. Serial No. 420,323. 37 Claims. (Cl. 234—1.5.)



1. Actuating devices comprising in combination, a movable actuating element, a series of power applying members adapted to operate it, and a stop associated with each such member adapted to limit the movement of said actuating element, each stop being effective to limit movement of said actuating element only when its power applying member is active and thereby adapting said actuating element to be moved to successive different positions according to the actuation of the power applying members.

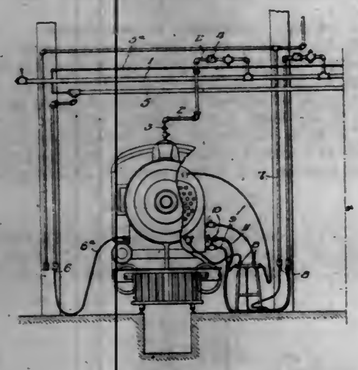
13. Actuating devices comprising in combination, an actuating element subject to actuation by power applied thereto, a series of movably mounted members associated with said actuating element, means movable in opposite directions in response to the movement to be made the basis of actuation of the actuating element and operatively related to said movably mounted members for giving controlled actuating movement to said actuating element whatever the direction in which said means moves.

36. A recorder comprising in combination a control movable in opposite directions in correspondence with movements which are to be made the basis of the record, a stylus, an actuating lever operatively connected therewith, a series of pivotally or flexibly mounted members carried by the lever, a corresponding series of operating means, a series of stepped stops corresponding to said pivotally or flexibly mounted members, and operative connections between said control and said operating means.



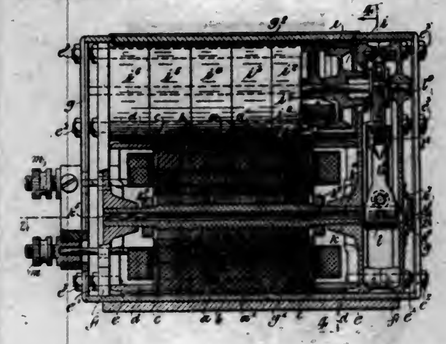
1,480,735. AUTO THEFT-PREVENTING DEVICE. ROBERT O. NELSON, San Francisco, Calif. Filed July 27, 1923. Serial No. 654,243. 5 Claims. (Cl. 40—2.2.)

1. The combination with a motor vehicle, of a sign plate movable from a concealed to an exposed position,



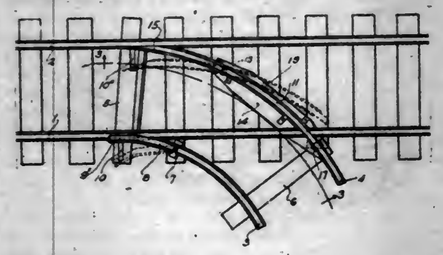
means operable by so moving the plate to break an ignition circuit, and means for locking the plate in said exposed position.

1,480,736. FEELER LOOM. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Aug. 19, 1919. Serial No. 250,412. 12 Claims. (Cl. 139—228.)



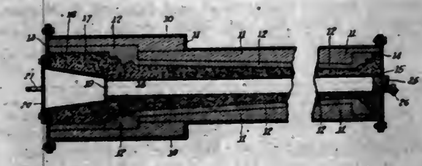
1. A weft replenishing loom having, in combination, loom controlling devices, a filling feeler mechanism, a filling detector mechanism, and connections between the two mechanisms having provision whereby the loom controlling devices are rendered inoperative on the first pick of the shuttle after replenishment.

1,480,737. METHOD OF AND SYSTEM FOR WASHING OUT BOILERS. SPENCER OTIS, Chicago, Ill. Filed Jan. 29, 1920. Serial No. 354,767. 17 Claims. (Cl. 122—396.)



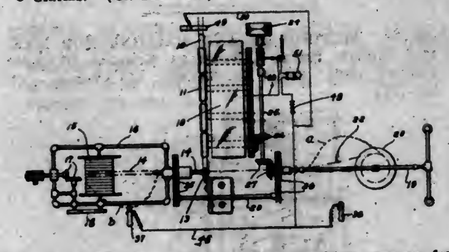
1. The improvement in the art of washing out steam boilers while under pressure, which consists in delivering into the boiler, under a pressure sufficient to overcome the pressure of the boiler and causing to rise through the water of the boiler a gas that is non-absorbing in the water, thereby bringing the sediment to a state of suspension in the water, collecting the added gas under pressure in the steam space of the boiler and evacuating the resultant water and sediment by pressure within the boiler.

1,480,738. MAGNETIC COUNTER. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 14, 1922. Serial No. 581,693. 5 Claims. (Cl. 235—92.)



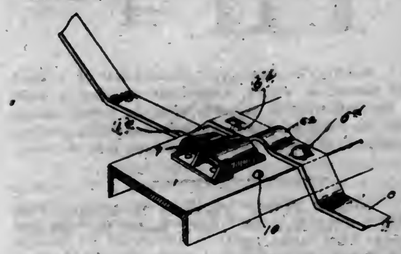
1. A magnetic counter comprising counting mechanism, an electromagnetic actuating mechanism having an oscillating armature, and operative connections between the armature and the counting mechanism including a toggle lever.

1,480,739. CROSSOVER MINE SWITCH. ROBERT T. BAGBY, Birmingham, Ala., assignor of one-half to E. M. Kilby, Birmingham, Ala. Filed June 9, 1923. Serial No. 644,343. 11 Claims. (Cl. 238—12.)



5. In a cross-over switch, the combination with main track rails and siding rails, of a pivoted latch rail operable to connect one main and one siding rail, and an intermediately pivoted turn-out rail adapted to connect the other main and the other siding rail, and means to elevate the movable switch rails as they are shifted towards operating position.

1,480,740. PROCESS OF MAKING AND CURING HOLLOW CONCRETE BODIES. HENRY A. BARKSCHAT, Los Angeles, Calif. Filed Mar. 18, 1922. Serial No. 544,763. 5 Claims. (Cl. 25—155.)



1. A process of curing a hollow concrete body that includes introducing steam into the interior of the body under pressure and holding it in the interior under a pressure.

1,480,741. STOP MOTION FOR FLEXIBLE-TUBE-MAKING MACHINES. STEPHEN W. BOURN, Providence, R. I. Filed Nov. 9, 1922. Serial No. 599,955. 5 Claims. (Cl. 113—35.)

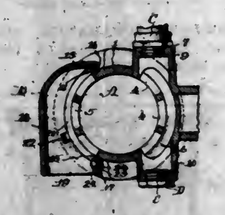
1. In a flexible conduit making machine, means for winding a strip of metal into tubular form, means for feeding the strip to the point of winding, means for advancing the tube as wound and means for automatically stopping the machine if the strip or tube move from their normal line of travel.

1,480,742. MOUNT FOR THIRD OR FOURTH POINT SUPPORTS FOR BRAKE BEAMS. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1921. Serial No. 491,800. 10 Claims. (Cl. 188—213.)

5. The combination of a part of a car truck, a bracket thereon, a flexible third or fourth point support having a projection formed in its truck engaging portion, said projection being adapted to interlockingly engage said bracket, whereby said support is held against longitudinal movement in said bracket, and a fixed projection on said part of the car truck and in the path of movement of said support to and from its operative position for holding said support against lateral movement when in its home position.

1,480,743. METHOD OF PREVENTING SULPHUR DIOXIDE IN SMELTER GASES. GEORGE CAMPBELL CARSON, San Francisco, Calif. Filed May 21, 1917. Serial No. 170,092. 3 Claims. (Cl. 75—60.)

3. A method of oxidizing metal sulphides which consists of introducing them in a divided condition into a gas mixture produced by heating an oxide gas mixture produced by heating an oxide of sulphur to dissociation.



1,480,744. CLOTHES WRINGER. FLOYD L. CHAMBERLAIN, Waterloo, Iowa. Original application filed Feb. 17, 1921, Serial No. 445,702. Divided and this application filed Apr. 17, 1922. Serial No. 554,151. 3 Claims. (Cl. 68—82.)

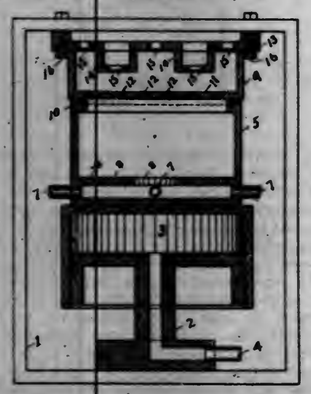
1. A clothes wringer, comprising in combination, a frame, a pair of coacting rolls rotatably mounted therein, a rock-shaft provided with cranks and mounted in said frame with one bent angularly, a deflector positioned below said rolls and above said rock-shaft, pivotally

mounted on said cranks, and a releasbale gravity-locking device adapted to interlock with the bent end of said rock-shaft when said deflector is in either of oppositely extended positions.

1,480,745. REVERSIBLE CYLINDER. HARVEY W. CUTSHALL, Chicago, Ill., assignor to Mudge & Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 21, 1922. Serial No. 595,911. 5 Claims. (Cl. 123—193.)

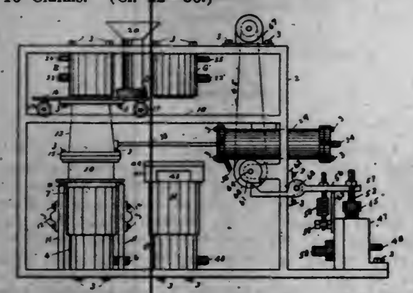
5. In an internal combustion engine, a cylinder, exhaust port or ports through its wall, a pair of circumferentially extending ribs on the outside of the cylinder, one on each side of said exhaust port or ports, a pair of radially and longitudinally extending lugs on the cylinder between said rib ends, one at each end of the exhaust port or ports, the outer face of each lug being centrally recessed, in combination with an open bottomed, removable deflector hood member, the side walls of which have curved faces to fit upon the cylinder and to fit over said circumferential ribs, a downwardly projecting lug or hook member on said deflector adapted to fit over and engage one of the longitudinally extending cylinder lugs, a front wall member on the deflector, one edge of which is adapted to engage the edge of the other cylinder lug and is provided with a recess complemental to the recess in said lug, and a locking bolt in said registering recess.

1,480,746. SEPARABLE FASTENER. NAOMI I. DE BIE, West Medford, Mass. Filed Oct. 31, 1921. Serial No. 511,682. 7 Claims. (Cl. 24—109.)



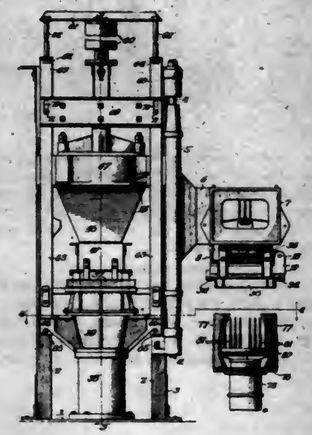
1. A device of the class described comprising a head member, a pair of resilient substantially parallel prongs fixedly secured thereto, said prongs being provided respectively with oppositely directed, outstanding shoulders, and having inclined cam like surfaces leading from said shoulders to their respective, free extremities, and a shallow open cap-like guard member having inturned flange means defining a central broadly elliptical opening and engageable with said shoulders, the prongs substantially maintaining their parallel relationship after application of the cap.

1,480,747. MEANS FOR VENTING CORE BOXES. HENRY L. DEMMLER, Kewanee, Ill. Filed Aug. 13, 1921. Serial No. 492,032. 6 Claims. (Cl. 22—13.)



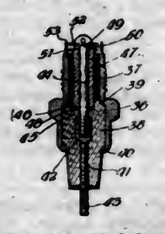
1. A mold or core box provided with outlet openings, and perforated plugs secured in the respective openings.

1,480,748. MOLDING APPARATUS. HENRY L. DEMMLER, Kewanee, Ill. Filed Aug. 16, 1921. Serial No. 492,810. 14 Claims. (Cl. 22—36.)



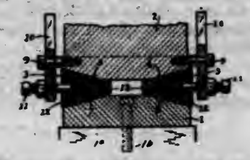
1. The combination of a flask provided at one end with a plate having openings for the admission of sand and air, and a closure plate for the other end of the flask having openings adapted to permit the escape of air and prevent the escape of sand.

1,480,749. MOLDING MACHINE. HENRY L. DEMMLER, Kewanee, Ill. Filed Sept. 6, 1921. Serial No. 498,650. 16 Claims. (Cl. 22—36.)



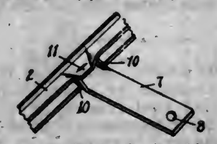
1. In a molding machine, the combination of a sand container, means for compacting sand in the container, means for securing a mold form to the container, and means for forcing sand from the container into the form by gaseous fluid pressure.

1,480,750. METHOD OF AND MACHINE FOR MAKING MOLDS. HENRY L. DEMMLER, Kewanee, Ill. Filed Feb. 15, 1922. Serial No. 536,668. 37 Claims. (Cl. 22—36.)



1. In a molding machine, the combination of a sand container having an outlet, means for securing a mold form to the container in register with the outlet, means for jolting the container, and means for supplying gaseous fluid pressure to the container to force sand into the form.

1,480,751. SPARK PLUG. FRANKLIN H. ELWELL, Chicago, Ill. Filed Mar. 29, 1920. Serial No. 369,828. 2 Claims. (Cl. 123—169.)



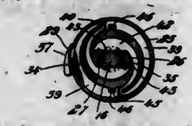
1. In a spark plug of the kind described and in combination, a metallic body part having an opening therethrough, a core of insulating material arranged in said body part and projecting therefrom at the outer end thereof, gaskets arranged between the body and core, means for substantially permanently and inseparably securing said core in place, an electrode comprising two parts detachably connected together, one part permanently imbedded in said core between its ends so as to be integral therewith and projecting therefrom at the outer end thereof, the inner end of said electrode part enlarged and provided with a threaded recess, said core recessed at its inner end and having an opening connecting with said recess and with the recess in said electrode. The other electrode part being of a size to closely fit within said opening and threaded so as to engage with said recess of the first mentioned electrode part, said second electrode provided with a head at its opposite end and flanged about said head, a sleeve of insulating material arranged between the head of the second electrode and engaging the bottom of the recess in said core, and provided with a very thin flange of insulating material extending outwardly to adjacent the inner wall of the opening in the body part.

1,480,752. ELECTRIC WELDING MACHINE. LLOYD L. EVANS, Cleveland, Ohio, assignor to The American Welding & Mfg. Company, Warren, Ohio, a Corporation of Ohio. Filed Aug. 28, 1922. Serial No. 584,886. 12 Claims. (Cl. 219—4.)

1. A sliding contact block for electric welding machines including a stationary base member, an upper slidable member, said members having opposed oppositely inclined faces, wedge blocks fitting between the opposed faces of said members, means for connecting said wedges with one of said members whereby longitudinal movement of said wedges with respect to one of said members is prevented.

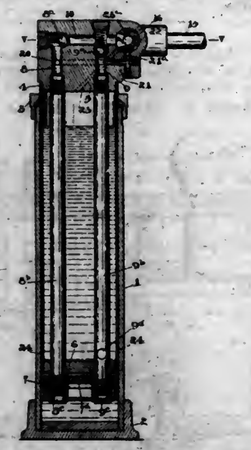
1,480,753. SPRING STRUCTURE. WILLIAM A. FALLS, Detroit, Mich., assignor to The L. A. Young Industries, Inc., Detroit, Mich. Filed Jan. 12, 1923. Serial No. 612,183. 7 Claims. (Cl. 5—246.)

7. In a spring structure, the combination with the springs, of a support therefor comprising a supporting member of U cross section engaging coils of the springs, and an attaching member adapted for attachment to a support for the spring structure and having one end disposed within the channel of said supporting member and conformed to receive a part of the supporting member clamped thereon whereby the attaching member is secured to the support member.



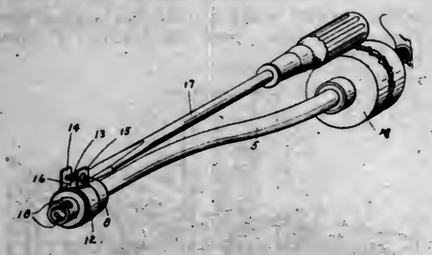
1,480,754. SHAVING BRUSH. LOUIS FOLTAN, New York, N. Y. Filed July 20, 1922. Serial No. 576,236. 5 Claims. (Cl. 15—137.)

1. A shaving brush comprising a circular block having an axial passage leading therethrough, bristles on said head grouped about the mouth of said passage to leave a central space, a hollow handle fixed to said block and adapted to enclose a flexible shaving cream container, a follower in said handle, and means for moving said follower longitudinally of said handle, and a valve controlling the said passage through the said block, and a device communicating with the said passage for forcing air under pressure thereinto to expel the cream therefrom.



1,480,755. CUFF BUTTON. OVE L. GAMMELL, Attleboro, Mass., assignor to Smith and Crosby, Attleboro, Mass., a Firm composed of Alfred D. Crosby and George H. Crosby. Filed Sept. 19, 1923. Serial No. 663,611. 6 Claims. (Cl. 24—10.)

1. A separable cuff button formed in two parts each having a post, a stud carried by one post, a casing supported by the other post provided with an opening to receive the stud, yieldable cam members mounted within

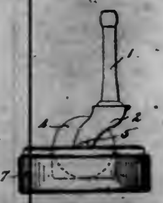


the casing extending across the opening adapted to engage and retain the stud, and rotatable means in the casing engaging the cams for releasing the stud.

1,480,756. HYDROSTATIC JACK. DALLAS F. GRAHAME, Toronto, Ontario, Canada, assignor to Hydrostatic Jacks, Limited, Toronto, Canada. Filed Sept. 2, 1922. Serial No. 586,377. 8 Claims. (Cl. 138—9.)

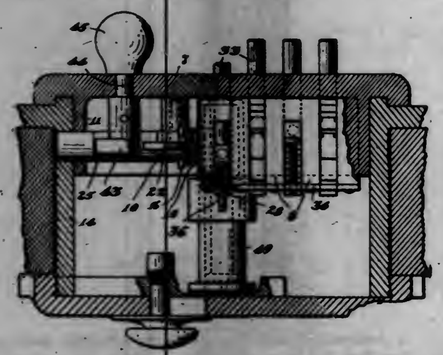
1. A hydrostatic jack provided with a return passage for reversing the flow of liquid to lower the movable part of the jack; a pump having a hinged connection with the jack; and means for controlling the flow of liquid through the said passage formed in the hinged connection between the pump and the jack.

1,480,757. COUPLING. EDWARD HAFER, Cincinnati, Ohio. Filed Sept. 14, 1922. Serial No. 588,237. 2 Claims. (Cl. 285—1.)



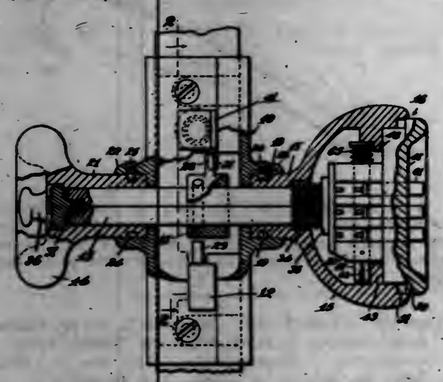
2. In a device of the class described, the combination of a tube, and a coupling revolubly mounted on the tube, the coupling being provided with a seat for receiving the end of a screw driver for imparting rotation to the coupling.

1,480,758. CASTER CUP. WILLIAM T. HIGHT, Boston, Mass., assignor to W. T. Hight Co., Boston, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1923. Serial No. 612,581. 3 Claims. (Cl. 45—137.)



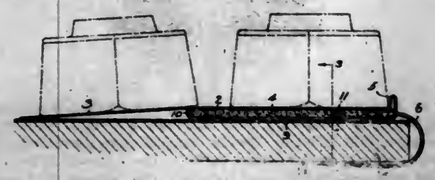
1. A caster cup having a caster recess shaped to prevent a caster from sliding or rolling out of the cup, the

cup being formed of a solid block of material and the recess having integral upright side walls closely confining the caster on both sides, lateral and angular move-



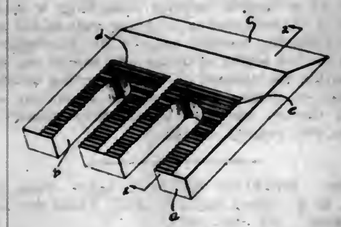
ment of the caster relative to the cup being restrained by engagement between the sides of the caster and said upright walls.

1,480,759. LOCK. ELBERT A. HILL, Los Angeles, Calif., assignor to Stop-Burglar Lock Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 14, 1922. Serial No. 536,581. 8 Claims. (Cl. 70—54.)



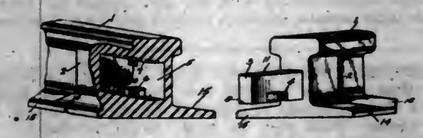
1. In a lock a reciprocal bolt, a plurality of rotary tumblers mounted for complete rotation on said bolt, spring means for retracting said bolt, means on said tumblers engageable with said bolt for holding the bolt in advanced position in opposition to said spring means, and means whereby retraction of the bolt relative to the tumblers may be permitted on disposing of said tumblers in a pre-determined position relative to each other.

1,480,760. LOCK. ELBERT A. HILL, Los Angeles, Calif. Filed Apr. 1, 1922. Serial No. 548,770. 8 Claims. (Cl. 70—58.)



1. In a lock, door locking means, a knob for operating said door locking means to unlock the lock, means whereby the knob is normally disposed out of operative relation to said door locking means, a rotary element on said knob, means whereby turning said element in relation to said knob will position the knob in operative connection with the door locking means whereby on turning the knob the door may be unlocked, and a lock carried by said rotary element for locking it in either an operative or inoperative position.

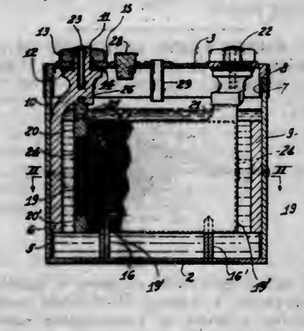
1,480,761. STAND FOR SADIRONS. CHARLES H. HOOK, Pittsburgh, Pa. Filed Sept. 13, 1920. Serial No. 409,890. 3 Claims. (Cl. 68—27.)



3. A sad iron stand comprising a single sheet of metal bent to form the top, bottom and the front and rear sides of a box-like body portion having an upstanding flange at one edge and having an inclined plane portion at its opposite edge, a filling of heat-insulating material contained within the said body portion, and side flanges formed integral with the said metal sheet for retaining the said insulating material within the said body portion.

1,480,762. HOG KNIFE. EVERETT F. HOWARTH, Fitchburg, Mass., assignor, by mesne assignments, to Simonds Saw and Steel Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed July 27, 1922. Serial No. 577,827. 2 Claims. (Cl. 144—241.)

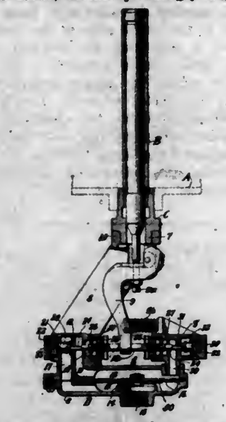
1. A tool of the class described comprising a substantially flat plate beveled at one edge to form a cutting element and having a recess extending inwardly from its opposite edge to accommodate a bolt for securing it to a holder, and a series of ribs projecting upwardly from the surface of the plate at either side of the recess, said ribs inclining away from the cutting edge of the plate and having sharp edges extending substantially parallel to said cutting edge.



1,480,763. RAIL JOINT. DAVID B. HUEY, Youngstown, Ohio. Filed Sept. 15, 1922. Serial No. 588,497. 1 Claim. (Cl. 238—231.)

In a rail joint, the combination of abutting rails having thickened webs at each end, a straight four cornered

member projecting out of one rail end, a notch centrally formed on the under side of said projection, a rail end provided with a recess for the reception of said projection, said recess having a lug centrally located upon the lower surface of said recess, this lug being of a size and shape so as to engage in the notch above mentioned, openings formed in the side walls of said recess, these openings being located a distance from the bottom of said recess equal to the vertical height of the projection above mentioned, a square bodied securing bolt projecting through said wall side openings of said recess and directly over the upper surface of said projection, a yoke member formed to embrace the lower flanges of said rails, openings in said yoke, semi-circular notches in the lower flanges of said rail and means for securing said bolt, substantially as described for the purpose set forth.

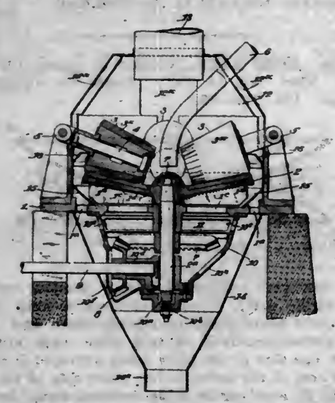


1,480,764. ELECTRIC ACCUMULATOR OR BATTERY FOR MINERS' SAFETY ELECTRIC LAMPS. RICHARD KOCH, Pittsburgh, Pa. Filed Feb. 9, 1923. Serial No. 617,900. 5 Claims. (Cl. 204—29.)

1. An electric accumulator comprising a container, positive and negative electrodes disposed in spaced relation in said casing, with substantially the entire space between adjacent faces of said electrodes free and unobstructed, the negative electrode comprising spaced portions forming a unit which snugly fits the interior of the container whereby to prevent lateral movement therein, the said positive electrode comprising two spaced plates rigidly connected at their tops to form a unitary structure disposed intermediate the said portions of the negative electrode, a terminal post projecting upwardly from the connection between the said plates and fitting within an aperture in the top closure of the container whereby to anchor the same against lateral movement, a supporting rest upon which the lower portions of the positive electrode plates seat, said rest being provided with an upstanding finger bridging the gap between said plates to anchor the same against lateral movement, and a solid electrolyte filling the spaces between the several parts whereby to form a solid, rigid and unitary structure.

1,480,765. SNAP-VALVE MECHANISM. JOHN H. KOLTS, Crafton, Pa., assignor to Pittsburgh Water Heater Company, a Corporation of New Jersey. Filed Aug. 26, 1921. Serial No. 495,624. 12 Claims. (Cl. 236—48.)

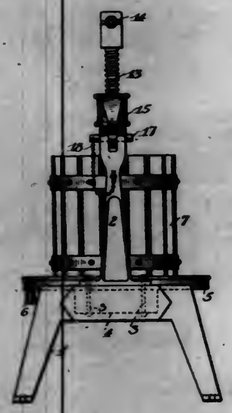
1. In a heater, the combination with the thermostat and its lever, of a snap valve comprising a casing, a diaphragm dividing said casing into two compartments, one of which is provided with an inlet and outlet, and the other of which has a relief outlet, a port establishing communication between the two compartments, a valve controlling said port and a valve controlling said relief outlet, the stems of which are adapted to be engaged by the lever, means yieldingly urging said valves



to closed position, and a seat adjacent the first mentioned outlet on which said diaphragm is adapted to seat upon opening of the relief outlet.

1,480,766. FLY. LEWIS P. KELLY and HARRY W. KELLY, Peoria County, Ill. Filed Mar. 17, 1923. Serial No. 625,706. 10 Claims. (Cl. 43—48.)

6. A fish-hook having a shank irregular in cross sectional form, a bundle or tuft of hair disposed upon that side of the shank lying nearest the barb of said hook, the strands thereof being separated in fan-like form and extending from said shank beyond the barbed end of the hook and lying parallel to and upon said hook and its barb covering the same, and means to secure the bundles or tufts in position and for maintaining the separation of said strands in said fan-like form.



1,480,767. PULVERIZER. OTTO A. KREUTZBERG, Lake Bluff, Ill. Filed Feb. 24, 1920. Serial No. 360,820. 10 Claims. (Cl. 83—45.)

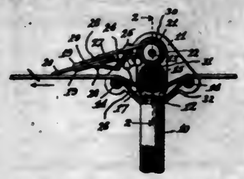
1. A pulverizer comprising in combination with a fixed support, a rotating table whose upper surface com-

prises a central upraised portion and an annular track encompassing said portion, said annular surface being inclined slightly upward substantially from the central up-raised portion to the outer edge of the table; pulverizing rollers lodged to roll upon the annular inclined surface and having their shafts pivoted to permit vertical oscillation of the rollers in planes substantially radial with respect to the table, whereby nearly the entire weight of the rollers operates for crushing material on the table; means for delivering the material to be treated onto the table adjacent the inner ends of the rollers, and means for receiving the pulverized material from the outer circumference of the table.

1,480,768. KNOCKDOWN PRESS. WILLIAM J. KRIEG, Rochester, N. Y. Filed Nov. 29, 1922. Serial No. 604,066. 1 Claim. (Cl. 100—44.)

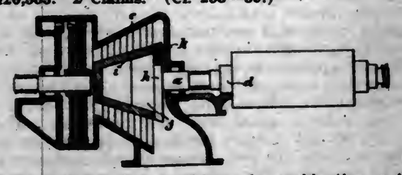
A knock-down press comprising metal ends including base portions and independent upright portions, a wooden support connecting the base portions and located beneath the tops thereof, said upright portions being located above the tops of the base portions, attaching bolts each of which is common to a base portion, upright portion, and the wooden support when in operative position and acts to secure the upright portion and wooden support to the base portion, a crosshead pivotally mounted on one of said upright portions and detachably connected to the other of said upright portions, and a screw movable vertically in the cross-head.

1,480,769. HOSE REEL. GEORGE J. LEBER, Cleveland, Ohio. Filed July 14, 1921. Serial No. 484,717. 11 Claims. (Cl. 242—86.)



1. A hose reel comprising a body portion consisting of a metallic plate, a series of arms secured to each side of said plate near its circumference and equally spaced circumferentially of said plate, each arm in a series on one side of the plate being arranged to register with an arm of the series on the other side of the plate, the arms in each series being inclined away from the arms in the other series and a rim mounted on the free ends of the arms of each series.

1,480,770. KNOCKDOWN HOSE REEL. GEORGE J. LEBER, Cleveland, Ohio. Filed Dec. 22, 1922. Serial No. 608,414. 19 Claims. (Cl. 242—86.)



1. A hose reel comprising two knockdown similarly formed nestable halves, each comprising a dished, frustum cone-shaped portion, and means for detachably connecting said halves together thereby forming a V-shaped hose receiving portion.

1,480,771. SAFETY-RAZOR STROPPER. WILLIAM H. LISH, York, Pa. Filed May 16, 1922. Serial No. 561,365. 3 Claims. (Cl. 51—153.)

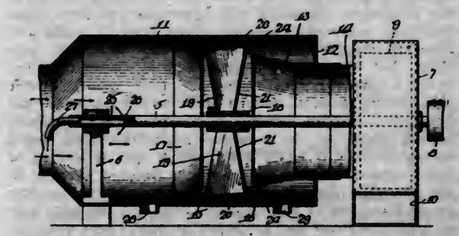
1. In a safety-razor-blade stropper, a handle and a pair of side-plates, a flopping blade-holder journaled in the side-plates, a series of strop-guiding rollers journaled in the side-plates, the central one of which is bodily movable toward and from the journal of the blade-holder, a gear carried by the blade-holder, and a companion gear carried by said central roller, for the purpose set forth.

1,480,772. TURBINE COUPLING. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Oct. 29, 1920. Serial No. 420,553. 2 Claims. (Cl. 253—39.)

1. In turbine driven machinery in combination, a turbine drum, a casing surrounding said drum, a driven machine beside said casing, the unsupported end of the shaft of said machine extending into said casing and a rigid connection between said end and said drum within said casing.

1,480,773. REED ARTICLE AND METHOD OF MAKING THE SAME. MARSHALL B. LLOYD, Menominee, Mich., assignor, by mesne assignments, to Levi H. Greenwood and George A. Keyworth, both of Gardner, Mass., and William E. Holman, Leominster, Mass., trustees. Filed July 13, 1921. Serial No. 484,393. 7 Claims. (Cl. 147—48.)

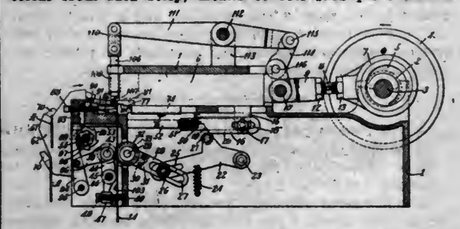
1. The herein described method of producing woven reed articles of tubular form from non-tubular fabric that consists in providing a non-tubular piece of woven reed fabric, securing metallic binder strips to opposite end portions thereof, forming the fabric into tubular



shape, and bringing the metallically bound end portions into proximate relation, mean time folding the metallic binder strips back upon that face of the fabric that forms the inner face in the completed article.

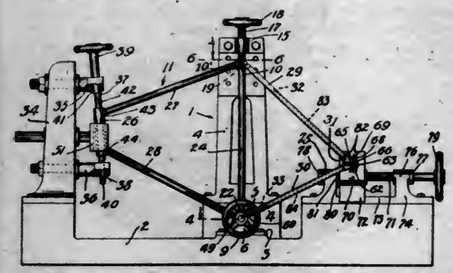
1,480,774. REED ARTICLE AND METHOD OF MAKING THE SAME. MARSHALL B. LLOYD, Menominee, Mich., assignor, by mesne assignments, to Levi H. Greenwood and George A. Keyworth, both of Gardner, Mass., and William E. Holman, Leominster, Mass., trustees. Filed July 13, 1921. Serial No. 484,394. 4 Claims. (Cl. 147—48.)

1. The herein described method of producing woven reed articles of tubular form from non-tubular fabric that consists in providing a non-tubular piece of woven reed fabric or the like, securing metallic binder strips to opposite end portions thereof, forming the fabric to tubular shape, meantime folding one metallic binder strip backwardly toward one face of the fabric, and folding the other metallic binder strip backwardly toward the opposite face of the fabric, and in interlocking the binder strips one with the other.



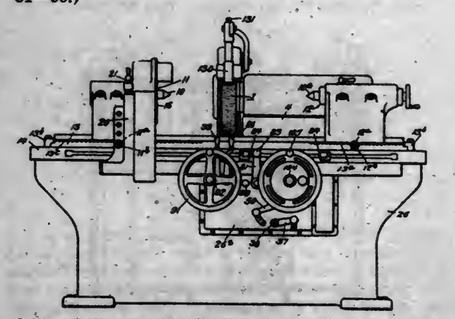
1,480,775. AIR WASHER. NICHOLAS C. MARIEN, Chicago, Ill. Filed Jan. 5, 1923. Serial No. 610,952. 4 Claims. (Cl. 183—24.)

1. In an air washer, the combination with a casing having one of its ends open for the entrance of air, of means near its open end for spraying water, an eliminator wheel mounted for rotation within said casing for co-operation with the moistened air, said wheel comprising radial blades set at an angle to its axis and provided with a peripheral rim connecting the outer ends of said blades, a ledge or baffle member on the rear edge at each side of each of said blades, a ledge or baffle member connecting each pair of said blades transversely and resting on the inner surface of said rim, an outlet at one of the corners between the outer ends of each pair of blades, and means for producing a current of air through said casing.



1,480,776. LACE-TIPPING MACHINE. CARL A. MATSON, Swampscott, Mass., assignor to Matson Lace and Braid Company, Boston, Mass., a Corporation of Massachusetts. Filed May 8, 1920. Serial No. 379,734. 42 Claims. (Cl. 153—1.5.)

1. A lace tipping machine having, in combination, means to feed a strip of sheet material, a work-support, means to clamp and feed lacing transversely thereof upon said work-support, means to sever a piece of material from said strip, means to roll said piece around

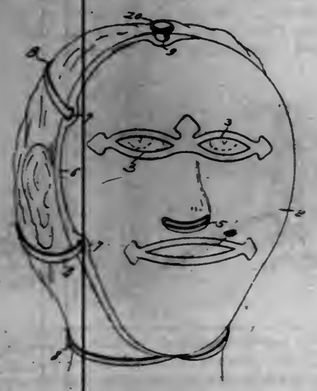


said lacing, and means cooperating with the work-support to subsequently sever said lacing and the material located therearound.

1,480,777. METHOD AND MEANS FOR BUILDING AND TESTING TUBULAR FRAMES. AUGUST D. MEISELBACH, Chicago, Ill., assignor to Margaret Meiselbach, Chicago, Ill. Filed Apr. 26, 1920. Serial No. 376,561. 22 Claims. (Cl. 29—89.)

1. The herein described method of building tubular frames which consists in clamping one part of the frame provided with means for doweling tubular parts thereon in a fixed position, setting the remaining connections in positions relative to said fixed connection, with tubular connecting parts arranged between said connections, then forcing said remaining connections towards the fixed connection to tightly clamp the intervening tubes and while the several parts of the frame are thus clamped, rigidly and permanently securing the several connections to the several tubes so that when the connections are relieved of pressure the several parts will remain rigid in their true fixed positions.

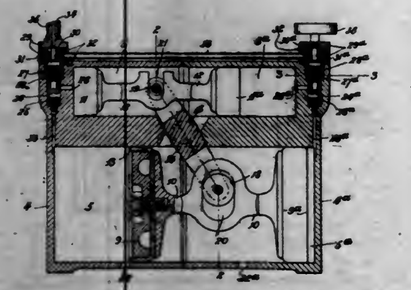
1,480,778. GRINDING MACHINE. CONRAD L. OTT, Chicago, Ill., assignor to American Grinder Company, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1920. Serial No. 397,323. 17 Claims. (Cl. 51—95.)



1. A grinding machine having, in combination, traveling work-supporting means; a grinder for operating on

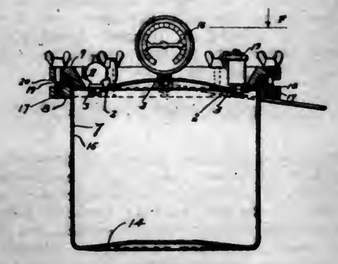
the work; belt-driven means for rotating the work; a traveling belt drive for said work-rotating means, including a driving pulley therefor; actuating means housed in the base of the machine; and a direct operating connection from said actuating means to said belt-driving pulley constructed and arranged to permit said pulley and belt-drive to travel with the work.

1,480,779. COMPOSITION OF MATTER AND METHOD OF MAKING SAME. ALADAR PACZ, Cleveland Heights, Ohio. Filed Mar. 26, 1920. Serial No. 368,080. 4 Claims. (Cl. 75—1.)



1. A powdered alloy of aluminum and silicon containing at least about 1 per cent of silicon and the balance mostly aluminum.

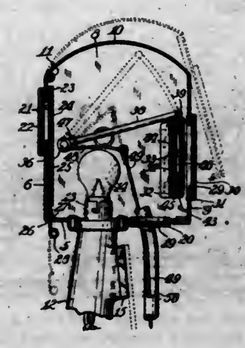
1,480,780. MASK FOR SKIN TREATMENT. CATHERINE PAULEY, Lockland, Ohio. Filed July 14, 1920. Serial No. 396,969. 1 Claim. (Cl. 128—259.)



A device for the purpose indicated consisting of spaced inner and outer walls of which the inner is more flexible, the said walls integrally connected around the eye holes, the mouth opening and nose portion as well as the edges, a binding strip secured to the device at the connecting edges and provided with eyelets whereby a cord may be employed to attach the device to the head of a person and a filling spout provided with a removable closure so that the space between the walls may be filled with a liquid.

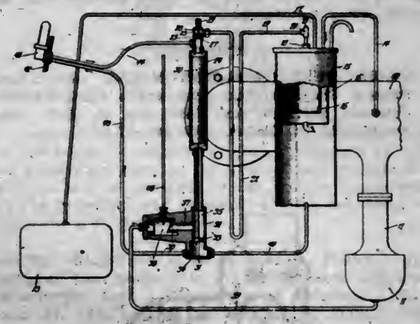
1,480,781. AIR PUMP OR COMPRESSOR. FREDERICK JAMES PAYNE and PERCY CHARLES PAYNE, Keynsham, near Bristol, England. Filed May 14, 1923. Serial No. 638,767. 3 Claims. (Cl. 230—32.)

1. A multi-stage air pump or compressor comprising in combination, two half castings each containing complementary cylinders of each stage, assembled with the cylinders of like stages in axial alignment and joined together in a plane midway between the co-axial cylinders; connected pistons in each two co-axial cylinders, a rocker lever operatively engaged with the connected pistons of each stage, a trunnion on which said rocker lever is mounted and which extends to the outside of the casing parts, and means for operating said trunnion to rock said rocker lever to reciprocate the connected pistons.



1,480,782. PRESSURE COOKER. ARTHUR L. PRIMEAU, Cambridge, Mass. Filed Aug. 4, 1921. Serial No. 489,738. 4 Claims. (Cl. 220—61.)

1. A pressure-cooker comprising a sheet metal body member with a bottom and upstanding peripheral wall, and a sheet metal cover, which cooker is characterized by having on the body member a reinforcing ring with an annular upstanding resisting ledge which in cross-section is in the form of a modified inverted V approaching in contour the shape of a hyperbola and over which ledge the upper edge portion of the body is rolled and fitted to provide concentric inner and outer seat portions that upwardly converge, and by having on the cover a clamping ring with an annular grooved under side, which grooved portion in cross-section is in the form of a modified inverted V corresponding in general to the shape of the resisting ledge, the cover being shaped so that it has a bent portion that is located in and engaged by the sides of said grooved portion of the clamping ring when the latter is functioning, the grooved portion of the clamping ring and the bent portion of the cover being shaped so that there are provided on the under side of the cover a grooved portion having concentric inner and outer seat portions that upwardly converge and that rest upon the inner and outer seat portions of the body member but so that a clearance space is provided between the metal at the uppermost portion of the body member and the under side of the uppermost portion of the cover whereby when the clamping ring is in clamping position and pressing towards the resisting ring, a tight joint is effected between the concentric inner and outer converging seat portions of the body member on the one hand, and the concentric inner and outer converging seat portions of the cover, on the other hand, said cooker having means for pressing the clamping ring towards the resisting ring and for holding said rings in clamping position.

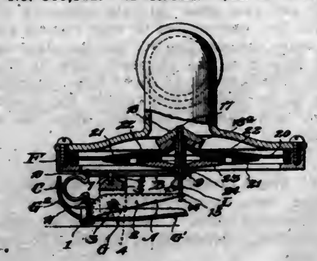


1,480,783. MOTOR-VEHICLE SIGNAL APPARATUS. WILLIAM HUBERT SAWYER, Monroe Township, Morgan County, Ind. Filed Apr. 14, 1922. Serial No. 552,451. 4 Claims. (Cl. 116—45.)

1. A motor-vehicle signal apparatus including an inclosing case having two permanent externally-visible signals on opposite sides thereof, a shutter for one of the signals movably supported by the case, and a word signal

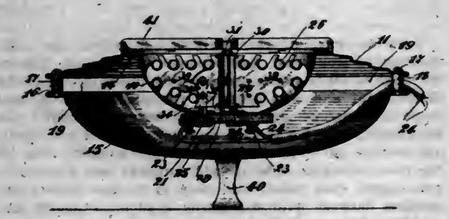
device movably supported by the case to co-operate with the remaining one of the permanent signals and provided with means to operate the device.

1,480,784. AUTOMATIC BY-PASS AND PRIMER FOR FLOW METERS. RUDOLPH W. SCHROEDER, Chicago, Ill. Filed July 2, 1921. Serial No. 482,275. 35 Claims. (Cl. 158—36.)



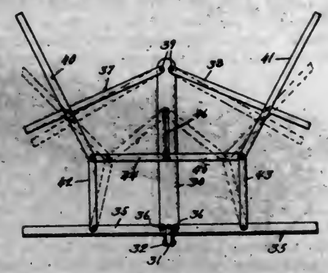
1. The combination with a liquid fuel engine having an intake manifold, of a flow meter for measuring the flow of fluid to said engine, a conduit for connecting said flow meter to said engine, and means comprising a different conduit for periodically subjecting said flow meter to manifold vacuum.

1,480,785. DIAPHRAGM FOR SOUND REPRODUCERS. CHARLES E. SEMPLE, Jr., Youngstown, Ohio. Filed May 24, 1922. Serial No. 563,441. 3 Claims. (Cl. 181—32.)



1. A construction for reproducer diaphragms comprising a resilient body disk having a central unpadded offset portion and an unpadded outer edge portion, and a ring of suberous material secured to one face of the body disk adjacent the edge of the offset and disposed inside of the unpadded outer edge portion.

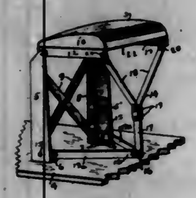
1,480,786. PHONOGRAPH REPRODUCER. CHARLES E. SEMPLE, Jr., Youngstown, Ohio. Filed May 24, 1922. Serial No. 563,442. 21 Claims. (Cl. 274—29.)



1. A sound reproducer including a diaphragm, a stylus bar operatively connected with the diaphragm, and a second bar having a tensioning connection with the stylus bar and engaging with the diaphragm and normally neutralizing the tension imposed on the diaphragm by the stylus bar.

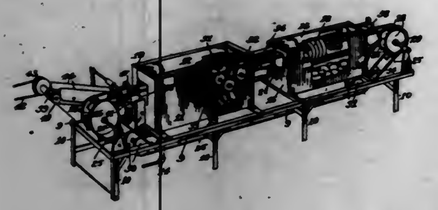
1,480,787. ELECTRIC HEATER. LEMUEL W. SERRELL, New York, N. Y., assignor to Serrell Electric Appliance Corporation, a Corporation of Delaware. Filed Oct. 16, 1920. Serial No. 417,372. 9 Claims. (Cl. 219—34.)

1. An electric heater comprising a concave reflector, an openly supported electric heating element therein consisting of a resistance coil and an insulating support therefor comprising a plurality of divergent arms provided with notched edges into which said coil is inserted and uniformly wound about said support and terminal contacts, forming means by which said heating element may be placed in or removed from said reflector.



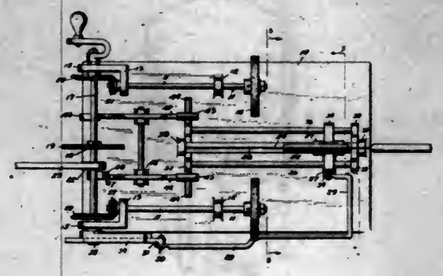
1,480,788. MUSIC STAND. FORTUNATO SORDILLO, Dorchester, Mass. Filed Feb. 23, 1923. Serial No. 620,645. 4 Claims. (Cl. 45—121.)

4. A collapsible music rack having a vertical supporting member formed with a vertical slot therein intermediate its ends, a horizontal shelf-member pivoted to said vertical supporting member below said slot, pivotally connected links of substantially equal length, one pivoted at its free end to said horizontal shelf member and the other having its free end pivotally received in



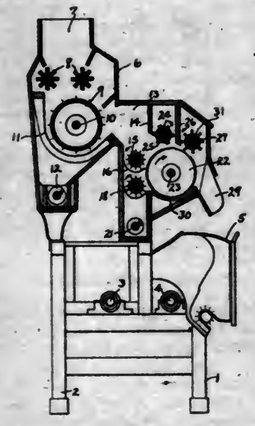
the slot in said vertical supporting member, said links and said shelf and supporting members arranged to form substantially a parallelogram when the rack is fully extended, and two other pivotally-connected links, one having its free end pivoted to said vertical supporting member above the slot therein, and the other having its free end pivoted to the aforesaid links at the pivotal connection therebetween, and said links constructed and arranged to lie substantially within the boundaries of said shelf and vertical members when the stand is collapsed.

1,480,789. SEAT CONSTRUCTION. EDWARD J. STAHL, Cleveland, Ohio, assignor to The Baker R & L Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 13, 1922. Serial No. 574,800. 3 Claims. (Cl. 155—12.)



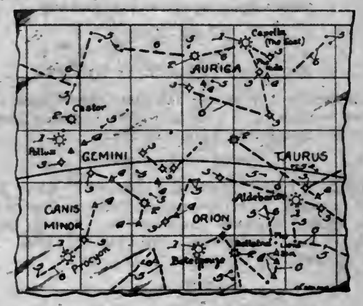
1. In a device of the character described, the combination of front and rear supports arranged to engage the floor at their lower ends, a seat pivotally connected at its front and rear edges to the upper ends of said supports, whereby said seat may swing upwardly and downwardly relative to said rear support, and a connecting member pivotally connected at its opposite ends to the floor engaging ends of said supports and serving to space such ends when said seat is in use, pivot connections between said connecting member, supports and seat permitting said front support and connecting member to be folded about their connecting pivot into a reversed relationship to dispose the pivot between them substantially in alignment with the pivot between the rear edge of said seat and said rear support, whereby said seat may be swung downwardly into compact relationship with said rear support with the front support and connecting member between them.

1,480,790. PARAFFINING APPARATUS. IRVING STANLEY, New York, N. Y., assignor to Angel International Corporation, New York, N. Y., a Corporation of Maine. Filed July 14, 1921. Serial No. 484,604. 12 Claims. (Cl. 91—55.)



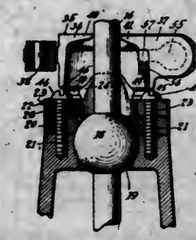
1. In apparatus for impregnating paper articles with paraffine, a receptacle for liquid paraffine, a refrigerator chamber, and an article transporting conveyer arranged to travel through the paraffine receptacle and refrigerator chamber and immerse articles carried thereby in the paraffine while travelling through the former.

1,480,791. MACHINE FOR SHARPENING CUTLERY. JULIUS W. STEIN and EMIL BUCHMAN, New York, N. Y. Filed Jan. 19, 1921. Serial No. 438,404. 3 Claims. (Cl. 51—85.)



1. A machine as characterized comprising a rocking cradle; a vise slidably mounted in said cradle; a plurality of abrasive members disposed at opposite sides of said cradle; means for reciprocating said vise lengthwise of said cradle; and means for rocking said cradle in timed relation with said reciprocating mechanism for rocking said cradle when said vise approximates the opposite ends of said cradle, said means embodying a plurality of beater arms engaging said cradle, one at each side thereof, and a driven shaft having cams for rocking said beater arms in timed relation with said reciprocating mechanism.

1,480,792. FEEDER FOR COTTON GINS. JOHN ARNOLD STREUN, Sherman, Tex., assignor to Hardwicke-Etter Company, Sherman, Tex. Filed Jan. 15, 1923. Serial No. 612,655. 2 Claims. (Cl. 19—67.)

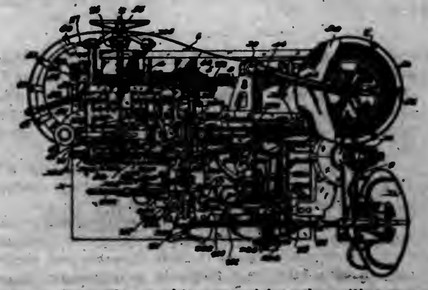


2. A cleaner attachment for cotton gins comprising a plurality of vertically spaced agitating rolls, a saw cylinder of comparatively large diameter in front of said agitating rolls, a screen closing the space below said rolls and cylinder except for an opening intermediate the ends of the lowest of said rolls, and a comparatively small brush roll above said saw cylinder adapted to brush the cotton therefrom in the manner described.

1,480,793. STAR MAP. ERNEST W. SUNDELL, Oak Park, Ill. Filed Oct. 20, 1921. Serial No. 509,137. 4 Claims. (Cl. 35—3.)

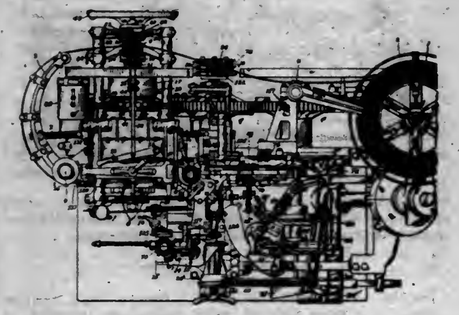
1. A star map on which the stars are represented by spots of radiant luminous material rendering them readily distinguishable in the dark.

1,480,794. AUTOMOBILE LOCK. LAURENCE A. SWEET, Los Angeles, Calif. Filed Jan. 29, 1920. Serial No. 354,943. 5 Claims. (Cl. 70—128.)



5. A device for locking a lever mounted on a universal joint comprising, a stationary base, a projection on the base, a clamp for engaging the lever adapted to cover the projection and be connected to the base by engagement with the projection, and means for locking the clamp in engagement with the projection.

1,480,795. BLASTING CAP. ERNEST M. SYMMES, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 21, 1922. Serial No. 583,862. 1 Claim. (Cl. 102—9.)

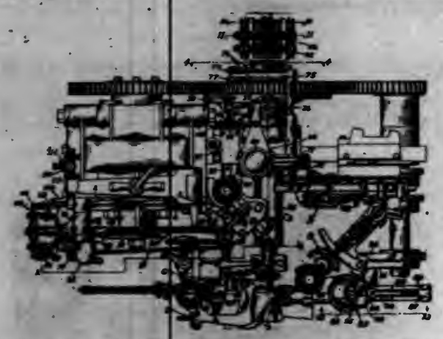


A blasting cap or primer, for detonating explosives, including a charge of trinitrobensol.

1,480,796. WIRE-SPRING-MAKING MACHINE. BERT L. VAN ORMAN, Wyandotte, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich., a Corporation of Michigan. Filed June 2, 1921. Serial No. 474,899. 69 Claims. (Cl. 140—1.)

1. A wire spring machine comprising wire coiling means, means for feeding wire thereto from a bundle and means actuated by the formed springs for compensating for variations in hardness and gauge of the stock, adapted to control the coiling means.

1,480,797. AUTOMATIC MACHINE-CONTROL MEANS. BERT L. VAN ORMAN, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Oct. 21, 1922. Serial No. 595,095. 39 Claims. (Cl. 140—1.)

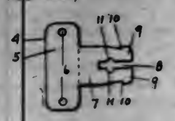


1. The combination with a spring coiling machine comprising a wire feed means including a wire tensioning member, a coiling means, first and second knotters, a locating means between said first and second knotters, a transfer member for transferring the springs from said coiler to said first knotter, a transfer member for transferring the springs from the first knotter to said locator and transfer member for transferring the springs from said locator to said second knotter, of means for driving the said mechanisms including a clutch, an electrically actuated control means therefor, a control circuit, contact plates connected to said control circuit and disposed in such relation to said coiler, knotters, locator and transfer members that a dislocated spring will coact therewith to close the said circuit, a circuit closing means connected to said control circuit and arranged to be held normally open by the wire passing to the machine so that when the wire is exhausted the circuit closing means is actuated, independent circuit closing means operatively associated with said first and second transfer members connected to said control circuit, the connections having control timers therein, an electromechanical stop means for said second transfer member connected to the circuit breaker associated therewith whereby when such circuit is closed, the stop is actuated to position to coact with said transfer member, a circuit closing member operatively associated with the second knotter and independently connected to said control circuit, its said connection having a timer therein, and a clutch control member operatively associated with said wire tensioning member whereby the clutch is disengaged by excessive stress upon the wire.

1,480,798. WIRE-SPRING-MAKING MACHINE. BERT L. VAN ORMAN, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed July 13, 1922. Serial No. 574,846. 48 Claims. (Cl. 140—1.)

1. In a structure of the class described, the combination of a coiler block, a rock shaft on which said coiler block is mounted, an arm on said rock shaft, an actuating link connected to said arm, an actuating lever, an adjustable connection for said link to said lever comprising a screw disposed longitudinally of the lever and provided with a nut to which said link is connected, a pivoted support for said screw, a governor screw carried by said lever and disposed transversely thereof, a nut on said governor screw provided with an arm connected to said support, a ratchet wheel secured to said governor screw, a pawl carrier mounted to oscillate on said screw, a pawl mounted on

said pawl carrier to coact with said ratchet wheel for turning the screw in either direction, means for returning



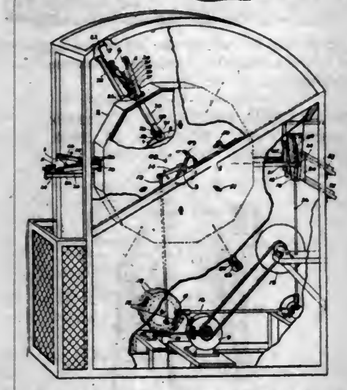
said pawl carrier to its initial position, a pair of solenoids operatively associated with said pawl, and means for controlling said solenoids including a testing means.

1,480,799. VENDING MACHINE. JOSEPH VASS, Sharpsville, Pa. Filed May 18, 1921. Serial No. 470,550. 1 Claim. (Cl. 194—65.)

In a coin controlled vending machine a coin chute, a rotary socket member in registry herewith said socket member comprising a hub element, a fixed finger projecting therefrom in a general radial direction, a movable jaw cooperating with said fixed finger, and movable circumferentially of the socket member toward and away from the said fixed finger, and means whereby an article may be fed forward by said socket member when a coin is inserted therein, and an abutment stop adapted to engage said spring pressed jaw, for the purpose specified.

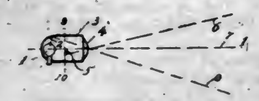
1,480,800. CURTAIN FIXTURE. THADDEUS S. WAIT, Sturgis, Mich., assignor of one-half to James Henry, Sturgis, Mich. Filed Dec. 12, 1921. Serial No. 521,742. 4 Claims. (Cl. 156—19.)

3. The combination in a curtain fixture, of a wall bracket comprising a flat outwardly projecting arm having a longitudinal slot open at its outer end providing a pair of fingers and having an enlargement adjacent the inner end of the slot, and a curtain rod member of channel cross section having in-turned flanges adapted to telescope with said bracket arm, the body portion of said rod member having spaced longitudinal slots therein, the portion between the slots being struck inwardly providing a spring member engaging said enlargement in said slot.



1,480,801. CORN OR FERTILIZER SOWER MACHINE. MICHAEL WALTHER, Central Bridge, N. Y. Filed Sept. 25, 1922. Serial No. 590,256. 3 Claims. (Cl. 221—122.)

2. An elongated hopper having a series of delivery chutes spaced therealong, and a supplementary bottom member adjustably placed in said hopper and adapted to cover varying numbers of said chutes and to direct the

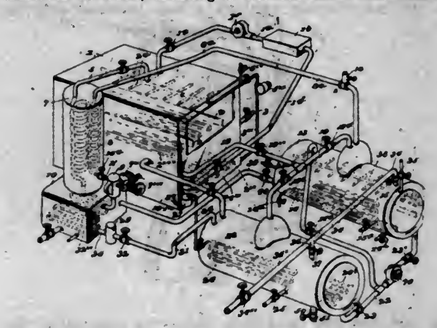


material in the hopper into the other chutes, said bottom member comprising a pair of boards inclining upwardly toward one another to a common apex.

1,480,802. PEACH PITTER. JOSEPH P. BEM, Fresno, and JAMES K. TUTTLE, Oakland, Calif., assignors to Pacific Pitting Machine Company, Inc., Fresno, Calif., a Corporation of California. Filed Dec. 26, 1922. Serial No. 608,992. 28 Claims. (Cl. 146—28.)

12. In a peach pitter of the class described, means for locating the bloom tip of a peach, devices for clamping the peach, a cutter arranged for cutting off the tip of the peach, and means for co-operatively actuating said devices and said cutter.

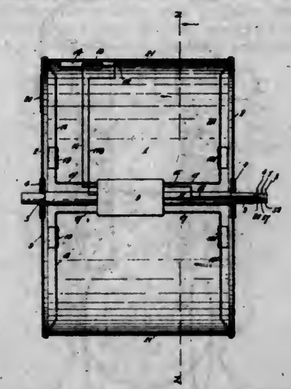
1,480,803. MOTOR-VEHICLE HEADLAMP. EVAN P. BOXE, Cincinnati, Ohio. Filed Dec. 20, 1920. Serial No. 432,018. 3 Claims. (Cl. 240—41.)



1. In combination with a headlamp provided with means for projecting a real image, a screen disposed substantially at an inner focus of said means, conjugate with a portion of the field of illumination in the upper half, with an extension into the lower half, said extension having an oblique edge.

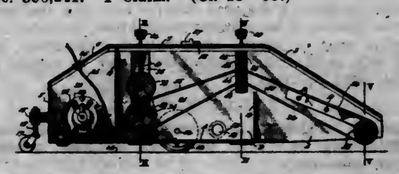
1,480,804. PROCESS OF TREATING LUMBER. FREDERICK K. FISH, Jr., Reno, Nev., assignor, by mesne assignments, to Wood Products and By-Products Corporation, a Corporation of Nevada. Filed Sept. 30, 1920, Serial No. 413,700. Renewed Apr. 13, 1923. Serial No. 587,028. 38 Claims. (Cl. 99—12.)

1. The process of treating lumber comprising subjecting the lumber to heated moist atmosphere containing added volatile extractives from lumber.



13. The process of treating lumber comprising submerging lumber in superheated liquid charge with volatile solvent extractives of wood to melt, dissolve and remove a portion of soluble and insoluble constituents, removing the liquid from around the lumber, and thereafter drying the lumber.

28. The process of treating lumber comprising subjecting the lumber to vapor charged with volatile extractives of wood, creating a vacuum about the lumber

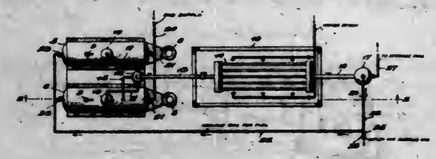


and simultaneously spraying with water to cause a surfacewise movement of moisture and extractives, submerging the lumber in heated liquid charged with wood extractives removing the liquid and drying.

1,480,805. HEATER. FRED V. HADLEY, Needham, and ROBERT A. CARLETON, Newton, Mass. Filed July 20, 1921. Serial No. 486,210. 7 Claims. (Cl. 219—47.)

1. The machine above described comprising a step-down transformer the secondary of which comprises comparatively low resistance elements, and a dryer having a drying portion composed of a comparatively high resistance metal, said low resistance elements being connected in circuit with said drying portion, in combination with a primary circuit comprising a heat regulator located to be heated by said dryer so that the temperature of said dryer will control the current supplied thereto.

1,480,806. FLOOR MACHINE. ALBERT J. HITCH, St. Thomas, Ontario, Canada. Filed Oct. 23, 1922. Serial No. 596,241. 1 Claim. (Cl. 15—99.)



A floor machine of the character described, comprising a casing on wheels, said casing having compartments therein, an electric motor in one of said compartments, rolls in the other of said compartments, an endless belt trained over said rolls and having a portion thereof protruding from the bottom of said casing, a train of gears outside of said casing transmitting power from said electric motor to one of said rolls for driving said belt, and a handle attached to said casing for moving said casing about on its wheels.

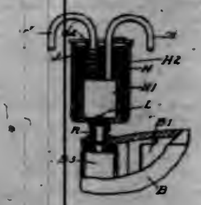
1,480,807. LITHOPONE AND PROCESS OF MAKING THE SAME. EDWARD C. HOLTON, Olmsted Falls, Ohio, and JAY CLYDE OWENS, Chicago, Ill., assignors to The Sherwin-Williams Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 11, 1922. Serial No. 560,226. 4 Claims. (Cl. 134—78.)

4. The steps of the method of producing lithopone, having the optimum qualities for paint manufacture, which consists in furnacing a mixture of lithopone and a deoxidant in an atmosphere charged with a deoxidant and then for a short interval under oxidising conditions and then quenching.

1,480,808. PRODUCTION OF LIQUID MOTOR FUELS. KORK KELLEY, Okmulgee, Okla., assignor of one-half to Thomas L. Kerr, Bartlesville, Okla. Filed Aug. 15, 1921. Serial No. 492,368. 26 Claims. (Cl. 196—25.)

17. The method of making a hydro-carbon oil which includes distilling casinghead gasoline, fractionally distilling kerosene, commingling the distilled vapors, and condensing the commingled vapors.

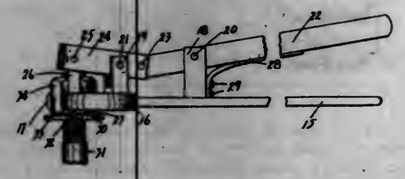
1,480,809. SET-UP PAPER BOX. ELIE W. LABOMBARDE, Nashua, N. H. Filed Dec. 2, 1921. Serial No. 519,357. 6 Claims. (Cl. 229—32.)



1. A box member blank having stiffening panels adhesively secured to wall sections thereof, said wall sections having creased portions beyond the panels foldable to positions to substantially meet the outer edges of said panels.

3. A set up paper box comprising a bottom section having integral side and end wall sections, the side wall sections having end flaps overlapping the said end wall sections and abutting edge to edge on an oblique line, said box being constructed to retain said end flaps in abutting relationship.

1,480,810. VAPOR INTERCEPTOR FOR VACUUM FUEL-FEED DEVICES. LEONARD H. WHEELER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 12, 1922. Serial No. 567,572. 7 Claims. (Cl. 158—36.)



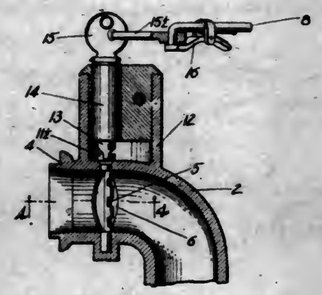
1. In combination with an internal combustion engine, a vacuum fuel feeding device for the same and a liquid circulating pump, connections from the vacuum chamber of the vacuum fuel feed device to the liquid pump intake for producing vacuum by means of said pump; a

gravity trap in said connection; drainage connection from the trap to the service chamber of the vacuum

fuel feed device, and means in said drainage connection for preventing suction-caused outflow from said service chamber.

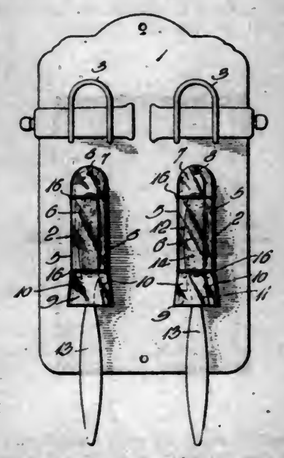
1,480,811. NUT-LOCK WRENCH. BARNEY A. BARON and EDWARD M. POFCHER, Los Angeles, Calif. Filed Sept. 22, 1922. Serial No. 589,835. 9 Claims. (Cl. 81—10.)

1. A nut lock wrench comprising a handle, and a wrench portion adapted to embrace a nut having teeth adapted to be engaged by the pawl of a lock washer, and means movable when gripping the handle to engage said pawl to move the latter away from the nut so that the nut is free to be turned by manipulation of the wrench.



1,480,812. LOADER FOR REVOLVERS. GUILLERMO RODRIGUEZ ZAYAS BAZÁN, Moron, Cuba. Filed Nov. 6, 1923. Serial No. 673,193. 4 Claims. (Cl. 42—89.)

1. A loader for revolvers comprising a main body having enlarged bullet receiving holes, slidable means for frictionally securing the bullets in said holes, and rotary means for controlling and adjusting the sliding means.

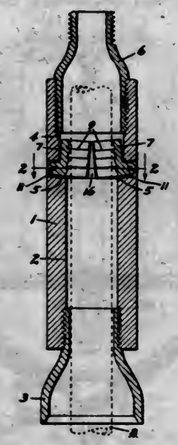


1,480,813. MANIFOLD LOCK. ALBERT BOONE, Sawtelle, Calif. Filed Sept. 8, 1922. Serial No. 586,849. 1 Claim. (Cl. 251—6.)

In combination, a carburetor including a throttle valve, a key controlled lock attached to the valve for opening and closing the same, a throttle actuated link, a key for actuating the lock, and a device providing for the ready attachment and disconnection of the key to

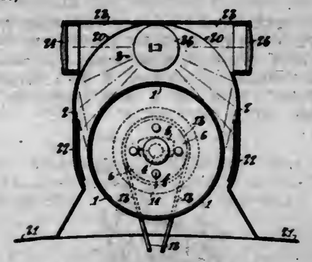
the said link and permitting the entire removal of the key from the throttle controlling lock and from the throttle link.

1,480,814. TOOTHBRUSH RACK. WILLIAM F. BRIGHT and GEORGE SCHNEIDER, East St. Louis, Ill. Filed Mar. 26, 1923. Serial No. 627,703. 1 Claim. (Cl. 248—63.)



A tooth brush rack comprising a support, a one-piece container carried by said support and comprising a flat back wall contacting with the support, a pair of flat side walls at right angles to and extending forwardly from said back wall, and a convex front wall, the upper end of said container being closed, while its lower end is open for the insertion of the head of a tooth brush, the lower ends of said side and front walls being flared to facilitate entrance of the brush head, said container having near its lower end a pair of horizontally spaced lugs in the rear corners of the container, said lugs having front surfaces spaced rearwardly from the front wall of the container a distance slightly less than the length of the bristles of an ordinary tooth brush, whereby these bristles must be sprung when inserting the brush head and will exert their inherent resiliency to engage the brush with the lugs.

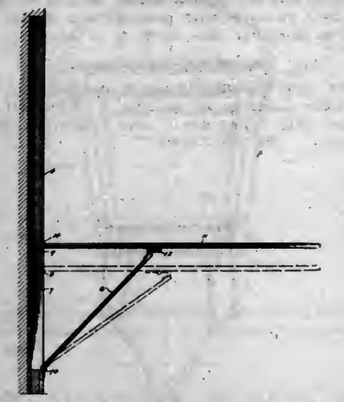
1,480,815. OVERSHOT. KING E. BYNUM, Fellows, Calif. Filed Aug. 31, 1921. Serial No. 497,344. 1 Claim. (Cl. 294—113.)



An overshot comprising a casing, having openings therein, concave gripping members provided with extensions arranged in said openings, pins extending

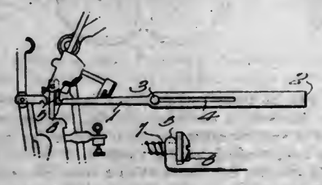
through the openings and engaging said extensions for pivotally supporting the gripping members within the casing, teeth formed on the confronting faces of the gripping members, and a shoulder formed interiorly of

the casing at a point between the inner surface of the casing and said pins whereby said gripping members are caused to normally occupy inclined positions and to engage said shoulders when in gripping position.



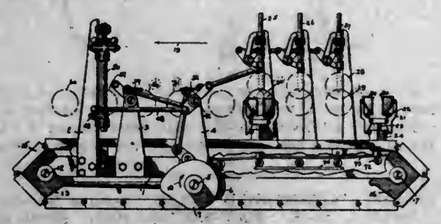
1,480,816. DIRECTION INDICATOR FOR AUTOMOBILES. GEORGE H. DAVIS, Richmond, Va. Filed Mar. 29, 1922. Serial No. 547,847. 4 Claims. (Cl. 116—43.)

1. In a signalling device, a housing adapted for mounting on an automobile, said housing having front and back and end walls and a crown portion, a signal carrying drum mounted in the housing below the crown portion, said drum having sight openings in its front and back walls to expose opposite signals on the drum, an illuminant in the crown portion of the housing adapted, in combination with the inner surfaces of the crown and front and back wall portions of the housing adjacent thereto, to illuminate the signals on the drum opposite the sight openings and means for operating the drum.



1,480,817. DISAPPEARING IRONING BOARD. HENRY PERCIVAL DIXON, Los Angeles, Calif. Filed May 15, 1922. Serial No. 560,935. 2 Claims. (Cl. 68—10.)

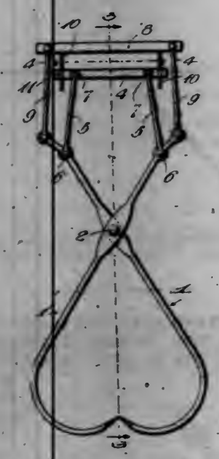
1. In a device of the class described, the combination of a cabinet having horizontal lateral slots at different heights, a panel pivoted at its lower end to the lower portion of said cabinet to be swung on a horizontal axis and for closing the lower portion thereof, an ironing board having guide pins at its rear slidable in said cabinet and arranged to be disposed in said slots, a triple leaf hinge securing the upper end of said panel to said ironing board so that said panel may be disposed to



support said board at different places intermediate its ends and thereby to support said ironing board at varying heights.

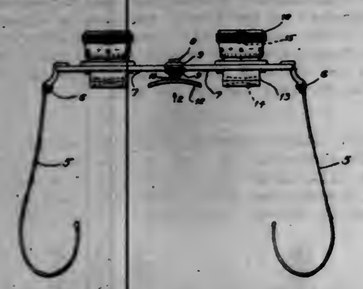
1,480,818. PIANO-ACTION-FLANGE SCREW AND PLATE HOLDER. WILLIAM B. ELLSWORTH, Hudson, Ohio. Filed Apr. 5, 1923. Serial No. 630,120. 1 Claim. (Cl. 81—3.)

1. A screw and plate holder comprising arms movable towards and away from each other and having at their ends flat plate gripping jaws extending transversely from the arms, the arms being recessed at their junction with the jaws to provide seats for snugly receiving the head of a headed fastener and preventing movement thereof longitudinally of the arms, and flanges extending inwardly from the sides of said jaws in opposed relation to limit movement of a plate in one direction, the flanges being recessed to provide opposed seats for receiving the shank of the headed fastener and firmly gripping the shank between the jaws.



1,480,819. FRUIT PITTING AND SLICING MACHINE. JAMES FORRESTER and JOHN S. SLATTERY, San Francisco, Calif., assignors to F. & S. Pitting Machine Co., Inc., a Corporation of California. Filed May 31, 1923. Serial No. 642,681. 10 Claims. (Cl. 146—28.)

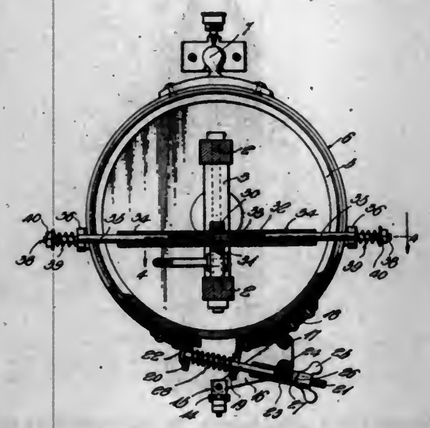
1. In a fruit pitting and slicing machine a plurality of pairs of cup elements mounted to travel into a plurality of consecutive fixed positions and adapted to hold



a fruit embraced between each pair, gauging means which adjust the fruit while in the first of said positions, right and left pitting spoons adapted to operate on the fruit at consecutive positions and slicing knives adapted to thereafter slice the fruit to the pit.

1,480,820. ICE TONGS. OLIVER B. HENDRICKSON, Boynton, Okla., assignor of one-half to John McLemore, Haskell, Okla. Filed Nov. 2, 1922. Serial No. 598,633. 2 Claims. (Cl. 294—118.)

1. A pair of tongs comprising a pair of crossed levers pivoted together, a carrying handle, linkage connecting the ends of said carrying handle to said levers above their pivot, a tong-opening handle above said carrying handle, and tong-opening linkage extending from the ends of said tong-opening handle and pivoted to said levers above the aforesaid linkage.



1,480,821. OPERA-GLASS SUPPORT. JAMES H. HENRY, Baltimore, Md. Filed June 13, 1922. Serial No. 567,967. 2 Claims. (Cl. 88—41.)

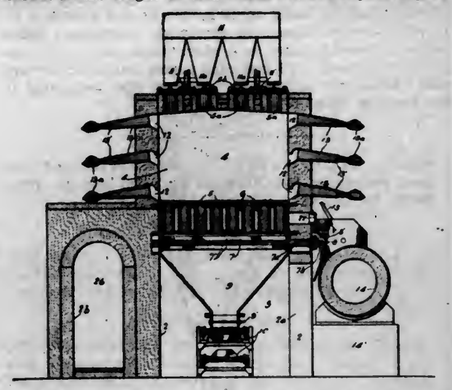
1. In an opera glass support, the combination of frame sections, a screw for securing said sections together and comprising a threaded hole, a nose guard having a stem threaded in said hole and temples secured to said sections.

1,480,822. AUTOMOBILE BRAKE. ARTHUR HUBALEK. Brooklyn, N. Y. Filed Mar. 19, 1923. Serial No. 626,085. 3 Claims. (Cl. 188—194.)

2. An automobile brake comprising a drum for attachment to a front wheel, a brake band surrounding said drum, and a carrier for said brake band comprising a horizontal member to be rigidly secured between its ends to a steering knuckle of the machine, the ends of said member having elongated sockets, a pair of rods received in and extending from said sockets, the projecting ends

of said rods having lateral arms at the outer side of said brake band formed with openings, rigid studs extending from said brake band and slidable in said openings, coiled springs surrounding said studs and bearing against the outer sides of said arms, and shoulders on the outer ends of said studs against which said springs thrust.

1,480,823. REENFORCE DEVICE FOR TOOL HANDLES AND PROCESS OF MAKING THE SAME. NILS GUSTAF LARSON, Attleboro, Mass., assignor to Ames Shovel & Tool Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 4, 1923. Serial No. 610,728. 8 Claims. (Cl. 113—116.)



1. A reenforce device for tool handles of that type having diverging side members spaced at their ends by an interposed grip bar comprising a seamless sheet metal ferrule for the reception of the end of the grip bar, and an elongate attaching bracket integrally united to the ferrule and shaped to fit against the side member of the handle.

1,480,824. ORE-ROASTING FURNACE. AVERY T. LEAVITT and CHARLES H. HUGHES, Syracuse, N. Y. Filed Nov. 22, 1920. Serial No. 425,809. 15 Claims. (Cl. 263—18.)

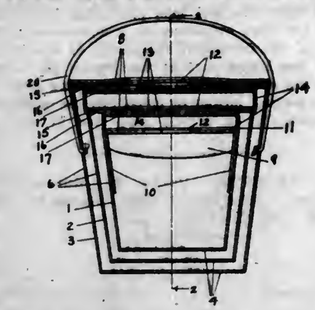
1. In a furnace, a casing formed with a plurality of upright roasting chambers, and horizontal flues in which gas is burned for heating said chambers by means of radiated heat, said flues disposed at the opposite sides of each chamber but not communicating therewith, means

for drawing off the vapor and gases at different elevations in the height of said chambers, and a plurality of

recuperating tubes communicating with the bottom of each chamber for discharging the refuse and for preheating air to be mixed with the gas.

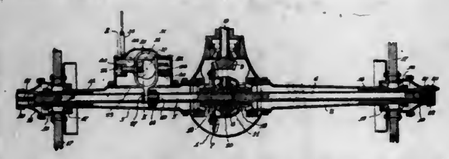
1,480,825. FRUIT PICKER. CYRIL W. LE NOVE, Kent, Minn. Filed Apr. 4, 1922. Serial No. 549,649. 3 Claims. (Cl. 56—339.)

3. A fruit picker comprising a cup provided with diametrically opposite open spaces at its upper end, and a stripper extending across one of said spaces and consisting of a resilient strand forming parallel sided bights between its ends and diverging ways at the upper ends of each bight, the ends of the strand and the bights being secured to the cup and the intermediate portions of the bights being inclined inwardly over the edge of the cup.



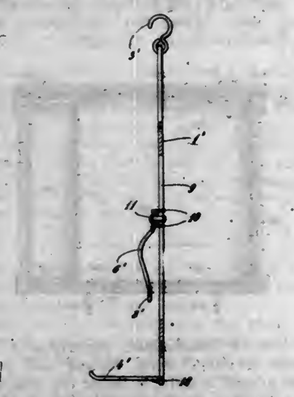
1,480,826. MILK-BOTTLE CLOSURE. JOHN PATRICK MAHONEY, Amsterdam, N. Y. Filed Dec. 19, 1922. Serial No. 607,874. 5 Claims. (Cl. 215—63.)

1. In a closure device, an attaching clip, a supporting arm extending upwardly therefrom, an arm pivoted to the first-mentioned arm and having a depending terminal portion, and a closure pivotally supported from the said terminal portion of the second-mentioned arm.



1,480,827. RECEPTACLE OR PACKAGE. IRVINE MCCOLL, Grand Rapids, Mich. Filed Aug. 28, 1922. Serial No. 584,801. 5 Claims. (Cl. 217—14.)

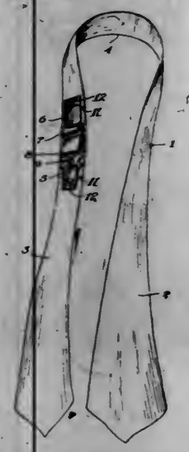
1. A package comprising a plurality of receptacles disposed one within another, the inner receptacle being adapted to receive the material to be packaged, the receptacles each being provided with coacting cover flaps on one pair of opposed walls thereof and the enclosed receptacles with upwardly projecting hanger extensions on their other opposed walls, the enclosing receptacles being shouldered within said closure flaps, and supporting



plates resting upon said shoulders and having holders on their under sides with which said hanger extensions may be engaged.

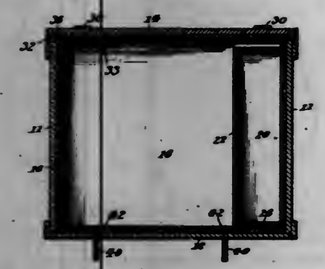
1,480,828. DIFFERENTIAL MECHANISM. AUGUST MILLER, Detroit, Mich. Filed Jan. 18, 1923. Serial No. 613,391. 2 Claims. (Cl. 74—100.)

1. In a vehicle having drive wheels driven through a differential mechanism and shafts, which differential mechanism permits one wheel to revolve at a different rate of speed than the other wheel;—means for causing said wheels to be driven at the same rate of speed, said means including an arrangement of said shafts for bodily movement so that one of said shafts will extend from one differential gear into another and articulate said differential gears for rotation as one, means at the outer ends of said shafts for centralizing said shafts relative to said differential mechanism, and means engaging one of said shafts for bodily shifting said shafts.



1,480,829. APPAREL HANGER. LAWRENCE JOSEPH MORAN, Brooklyn, N. Y. Filed May 31, 1922. Serial No. 564,733. 5 Claims. (Cl. 45—13.)

1. In a device of the class described, a frame having a body portion provided with a hinged relatively horizon-

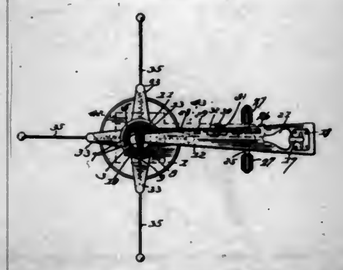


tally disposed lower part to support an article, a shiftable arm having a body portion adapted to slide on the said frame body, the said arm projecting laterally from the frame and then extending in a downward direction, the extent of the downward movement of the arm being limited by the lower part of the frame, the lower extremity of the arm and the said projecting part of the frame body having means to co-operate to constitute retaining means for an article supported by the device.

1,480,830. NECKTIE. FRANK M. MULRONEY, Fort Dodge, Iowa. Filed Oct. 7, 1922. Serial No. 592,978. 3 Claims. (Cl. 2—11.)

1. As a new article of manufacture, a necktie comprising tying end portions and an intermediate neck encircling portion integrally connected together, and a detachable assembly embodying an elastic member and a tab each stitched to the neck portion near one of the tying ends and provided with complemental separable fasteners whereby the wearer may either remove or detach the assembly and use the tie as a single piece ordinary tie or may sever the neck encircling portion between the attached ends of said assembly and use the necktie as a two-piece tie, hereinbefore described.

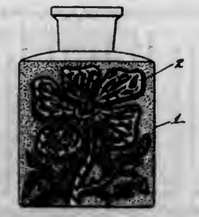
1,480,831. ICE BOX FOR AUTOS. ARTHUR G. MURPHEY, Meridian, Miss. Filed Oct. 11, 1921. Serial No. 507,022. 1 Claim. (Cl. 220—16.)



An ice box for automobiles, comprising a receptacle having heat insulated walls, bottom and cover, said cover being hinged, a metallic lining for said receptacle, a partition dividing said receptacle into a plurality of compartments for holding respectively a quantity of ice and edibles, commodities and drinking water, a false inclined bottom for said drinking water compartment, a separate cover for said drinking water compartment provided with a filling opening therein and having a removable closure associated therewith, reinforcing metal plates disposed between said inner lining and the bottom of said receptacle, and fastening means extending through said plates and bottom for securing said receptacle to the running board of an automobile.

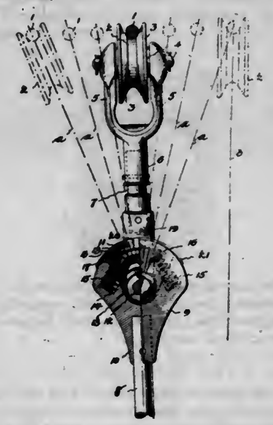
1,480,832. HAIR WAVER. HARRY NATKIEL and ISADORE FREEDMAN, New York, N. Y. Filed Mar. 15, 1922. Serial No. 543,827. 2 Claims. (Cl. 132—41.)

1. A hair waver comprising a leg having formed on the free end thereof a round edged cup constituting an engaging member, the other leg having formed at its free end a hook co-operating with the cup, said co-operating members being dependable for their action upon a relative lateral movement between the ends of the legs, and means formed on the legs adjacent to the free ends to prevent slippage of the operator's fingers while causing said lateral movement, said anti-slipping means on the leg having the cup consisting of a concavity formed in such leg adjacent to but distinct from the cup and having an oval outline narrower than the main part of the leg.



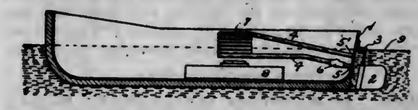
1,480,833. SKIPPING MACHINE. PATRICK J. NEILON, Cleveland, Ohio. Filed May 6, 1922. Serial No. 558,954. 6 Claims. (Cl. 46—69.)

1. In a skipping machine, a revoluble table, a supporting base therefor, arms universally connected to outer portions of the table and yieldable resilient means for normally holding the arms radially positioned and constructed to permit the arms to yield in all directions, in case the arms are struck by the person skipping over the arms.



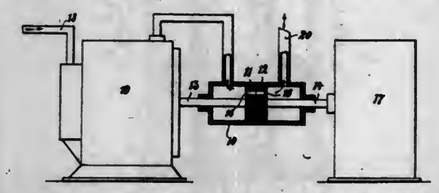
1,480,834. METHOD OF ORNAMENTING GLASS ARTICLES. LOUIS B. NEWELL, Baltimore, Md. Filed Dec. 16, 1921. Serial No. 522,918. 1 Claim. (Cl. 41—39.)

The herein described method of ornamenting glass articles which consists in forming on a surface of the article projecting portions forming a design, subsequently frosting both the raised and sunken portions



of said surface at one operation, and finally buffing the projecting portions of the surface to render the design transparent and leave a frosted background.

1,480,835. TROLLEY HEAD AND SUPPORT THEREFOR. GEORGE ELDRIDGE PRICE, New Haven, Conn. Filed Feb. 17, 1922. Serial No. 537,149. 1 Claim. (Cl. 191—60.2.)

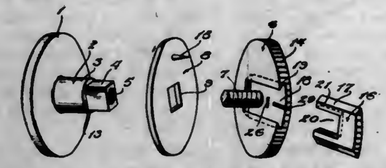


In combination with a trolley pole carrying a trolley harp at the free end thereof, an intermediate support and connection for said harp providing for radial movement of said harp independently of said pole, and said support and connection comprising a head capable of being secured to said pole, said head having a recess therein, a pivoted member mounted within said recess, said member having means for securing said harp thereto, a dust cover or plate carried by said pivoted member moving therewith and serving to constantly cover said recess, and springs located within said recess for controlling the movement of said member.

1,480,836. PROPELLING DEVICE. WILLIAM F. PURCELL, Hoboken, N. J., assignor to Hydromotor Company, Inc., a Corporation of New York. Filed Mar. 1, 1920. Serial No. 362,209. 5 Claims. (Cl. 115—14.)

1. In combination with a boat, a continuous conduit, the extremities of which are in vertical alignment with each other and open into and below the surface of a liquid body upon which the boat is floated and means for heating a portion of the conduit whereby a succession of impacts of the conduit contents will be produced against the liquid body through one extremity of the conduit.

1,480,837. REGULATION OF PRESSURE. JOSEF HEINZ REINEKE, Bochum, Germany. Filed June 28, 1920. Serial No. 392,536. 15 Claims. (Cl. 137—111.)

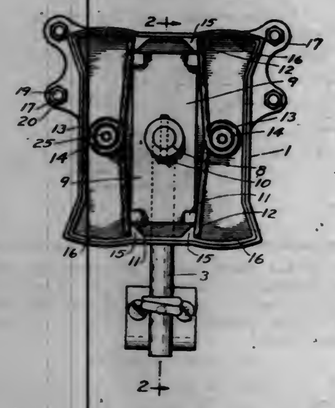


1. The method which consists in utilizing the variable pressure prevailing in a gas or liquid current for influencing the speed of a rotary device adapted to throttle the flow of said current in proportion as the speed of said device varies.

1,480,838. CIGARETTE HOLDER. CAXTON P. RHODES, San Francisco, and ARNOLD F. WILLAT, San Rafael, Calif. Filed June 16, 1921. Serial No. 477,882. 8 Claims. (Cl. 131—10.)

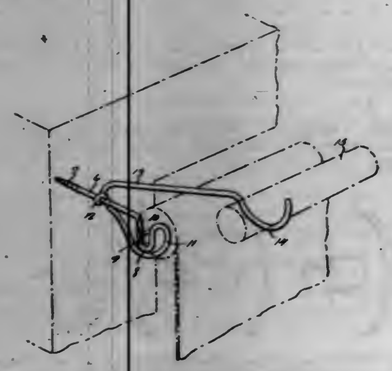
1. In a holder for a cigarette or the like, a longitudinal slot extending through the wall of the holder, a trackway on each side of and opening into said slot, a slide movably mounted in said trackway and carrying an inward extending ejector, and a finger member extending through the slot and mounted on the rear end of said slide.

1,480,839. BUTTON. MAJOR M. ROBINSON, Jackson, Tenn. Filed Nov. 22, 1922. Serial No. 602,575. 3 Claims. (Cl. 24—105.)



1. A button comprising a head having a shank formed with a reduced squared end portion, a washer fitted thereon against the shoulder provided by the formation of said portion and thus held in spaced relation to the back of the head, the shank having a threaded bore, a back having a threaded stud fitting the said bore, and means upon the back coacting with the squared portion of the shank and locking the back against rotation in a direction to unthread the stud from the bore.

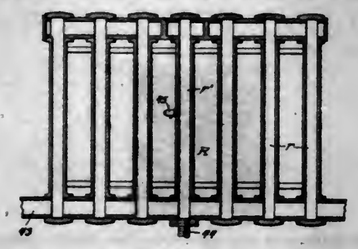
1,480,840. STEERING DEVICE. WILLIAM F. ROTERMUND, Seattle, Wash. Filed Dec. 12, 1921. Serial No. 521,909. 3 Claims. (Cl. 280—94.)



1. A steering attachment having a flat plate with a hub in its center, and lugs on each corner, an L-shaped arm with its short end held in the hub of the plate by a pin, and its long end being provided with a clamp for slidably attaching it to the tie rod of a vehicle; a suitable casing having a hole in it in which the short end of the L-shaped arm is pivotally mounted in such a manner that the plate will be on the inside of the casing and

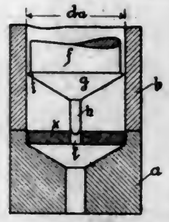
the long end of the arm will project on the outside, said casing being provided with lugs and U-bolts for attaching it to the front axle of a motor vehicle; and coil

springs mounted upon round lugs in the casing and at each side of the flat plate, and said springs having extended ends that bear against the lugs on the flat plate.



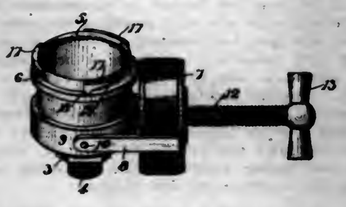
1,480,841. COMBINED SHADE AND CURTAIN BRACKET. WILLIAM H. SIMMONS, Cleveland, Ohio. Filed May 15, 1922. Serial No. 561,009. 1 Claim. (Cl. 156—24.)

A combined shade and curtain bracket comprising a piece of wire bent to form a shank having a threaded rear end, a shade roller bearing at the front end of said shank, a backwardly curved loop, a coil around the shank, and a forwardly extending arm provided at its front end with a hook to hold a curtain pole, the shade roller bearing portion, and the arm, extending from the coil at an acute angle to the shank.



1,480,842. RADIATOR FOR HEATING AND VENTILATING UNITS. WILFRED SHURTLEFF, Moline, Ill., assignor to Moline Heat, Moline, Ill., a Corporation of Illinois. Original application filed Mar. 10, 1919, Serial No. 281,790. Divided and this application filed Oct. 29, 1920. Serial No. 420,332. 2 Claims. (Cl. 257—137.)

2. A radiator structure comprising a plurality of sections connected together for the rapid circulation of hot steam therethrough, one of said radiator sections being disconnected at its top from the others to form a dead

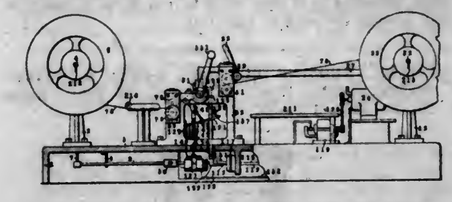


space for the condensation for separating the condensed steam and air, said section having an air vent.

1,480,843. METHOD FOR THE COLD SPURTING OF TUBES AND THIN-WALLED METAL PIPES OF LEAD, TIN, AND ESPECIALLY ALUMINUM. FRITZ SINGER, Nuremberg, Germany, assignor to Fritz Neumeyer A-G., Nuremberg, Bavaria, Germany. Filed Feb. 21, 1922. Serial No. 538,349. 1 Claim. (Cl. 207—10.)

Method for the production of compressible tubes and other thin-walled tubes of lead, tin and especially aluminum consisting in moulding the tubes from square blanks by the cold extrusion process.

1,480,844. GREASE CUP. VERLE V. VAN NATTAN and WILLIAM W. DAVIS, San Francisco, Calif., said Van Nattan assignor to said Davis. Filed Nov. 21, 1922. Serial No. 602,352. 4 Claims. (Cl. 184—88.)

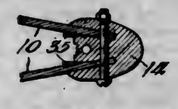


1. A grease cup comprising a cup open at one end and having a discharge opening formed in the opposite end, a cover for the cup, a floating ring vertically movable and turnably mounted on the exterior of the cup, said ring having a movement substantially from end to end of the cup, a ball rigidly connected to the cover and pivotally connected to the floating ring, said ball permitting tilting of the cover with relation to the cup and the ring, and means for securing the cover to the cup.

1,480,845. FILM-TESTING INSTRUMENT. MAXWELL VIDAVER, New York, N. Y., assignor to Film Inspection Machine Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 19, 1921. Serial No. 523,256. 88 Claims. (Cl. 73—51.)

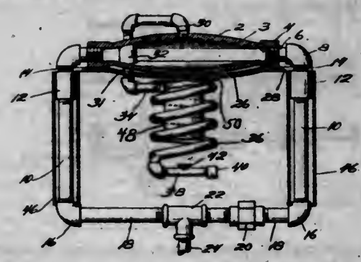
1. In a strip testing instrument, in combination, a feature detector adapted to move in the direction of feed

of the strip, means adapted to hold said detector against such movement pending detecting co-operation with the



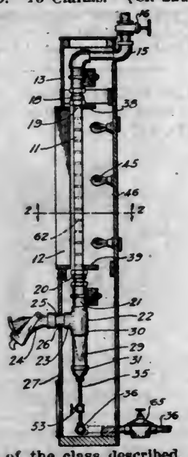
strip and means adapted to release said detector from said holding means upon said detecting co-operation.

1,480,846. ALUMINUM ALLOY. ALFRED VON ZEERLEDER, Neuhausen, Switzerland, assignor to Aluminium-Industrie-Aktiengesellschaft, Neuhausen, Switzerland, a Swiss Corporation. Filed Feb. 10, 1922. Serial No. 535,655. 2 Claims. (Cl. 75—1.)



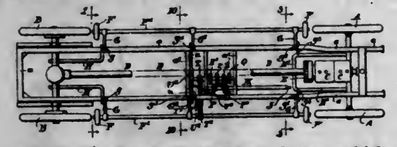
1. An aluminum-copper-iron alloy consisting of from 88% to 95% aluminum, the remaining 12% to 5% being made up of copper and iron in the relative proportions of two parts of copper to one part of iron, approximately.

1,480,847. STORAGE-BATTERY CLIP. HERBERT EDWARD WALKER, Chicago, Ill. Filed Oct. 27, 1919. Serial No. 333,500. 6 Claims. (Cl. 173—273.)



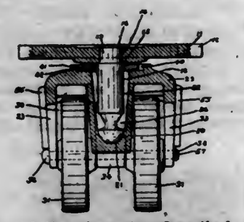
1. A spring clip for storage batteries and the like, comprising separate, resilient, diverging members provided at their forward ends with jaws, and obliquely crossing each other in rear of said jaws, said members being adapted to be normally urged away from each other to hold the jaws in gripping contact with a conductor element and, when pressed together, to separate the jaws to permit them to be freely passed over the conductor element, and rigid spacing and member connecting means located at the rear ends of said separate members and to constitute non-adjacent, independent fulcrums forwardly of the rear end of said clip about which said members flex.

1,480,848. OIL BURNER. GEORGE W. WALSH, Kansas City, Kans. Filed Jan. 9, 1922. Serial No. 527,997. 7 Claims. (Cl. 158—64.)



1. In an oil burner, the combination with a hollow generator formed with a series of flutes on the inner face of its top, a fuel supply pipe leading to said generator, a gas discharge pipe in communication with said generator, and a gas jet located centrally of said generator and below the same.

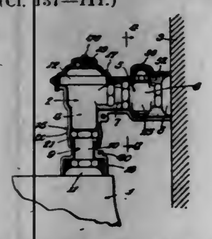
1,480,849. LUBRICATING-OIL DISPENSER. RALPH G. ADAMS, Fullerton, Calif. Filed Mar. 22, 1922. Serial No. 545,800. 15 Claims. (Cl. 221—67.)



1. In a device of the class described, the combination of: a sight column; means for introducing a liquid into one end of said sight column; means for drawing off said liquid from the opposite end of said sight column; and means for percolating a flow of air through the liquid contained in said sight column.

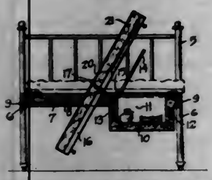
1,480,850. AUTOMOBILE JACK AND SHIFTER. ARTHUR W. ALLEN and ALEXANDER E. KOSHELL, Sacramento, Calif. Filed July 5, 1921. Serial No. 482,339. 8 Claims. (Cl. 180—1.)

1. The combination with a motor driven vehicle, of rollers carried thereby, means operated by the motor for moving the rollers to raise and lower the vehicle bodily, means operated by the motor to move the vehicle sidewise in either direction when raised and supported by said rollers, and a single operating lever controlling all of said movements.



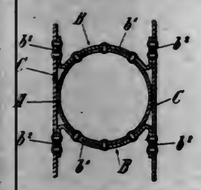
1,480,851. CASTER. FRANK A. BAUM, Hamilton, Ohio. Filed July 12, 1922. Serial No. 574,407. 5 Claims. (Cl. 16—47.)

1. A caster, of the character described, comprising a plate, constructed for attachment to a truck or the like, a depending stem rigidly secured to said plate; a wheel bearing housing having a pocket or cup therein receiving the said depending stem, means for locking the housing and depending stem rotatably together, a wheel rotatably mounted upon said housing; said housing having an oval socket or recess therein surrounding the upper end of the



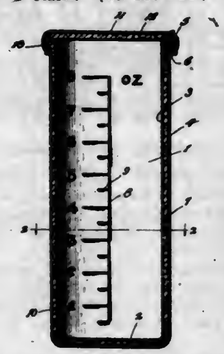
said pocket or cup, and a substantially circular disc within said socket or recess having an opening therethrough receiving the depending stem, said disc being of a diameter substantially the same as the shorter diameter of the said socket or recess but substantially greater than the diameter of the upper end of the said pocket.

1,480,852. VALVE SHIELD. THOMAS R. BURKE, Washington, D. C. Filed Sept. 9, 1922. Serial No. 587,173. 13 Claims. (Cl. 137—111.)



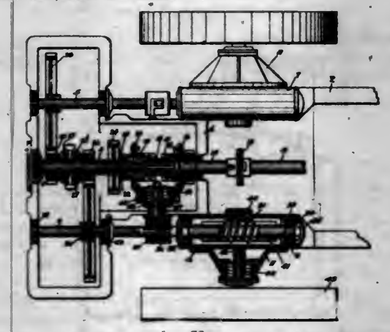
5. A valve shield for installation upon a flushing valve having an inlet and an outlet coupling connected with its casing, comprising sections to be fitted about one of said couplings and the valve casing in matched relation, said sections having extensions, a cap section to be fitted to the valve casing and engage the first-mentioned sections in a manner to maintain the same assembled, the said cap section having an extension for coaction with the first-mentioned extensions to enclose the said inlet coupling, and means for maintaining the cap section fixed with relation to the valve casing and thereby maintain the other said sections likewise in assembled relation.

1,480,853. COMBINATION BEDSPRING AND CABINET. LOUIS DIAMOND, New York, N. Y. Filed Oct. 28, 1922. Serial No. 597,465. 1 Claim. (Cl. 5—308.)



The combination with a bedstead, of a frame, a cabinet formed integrally with said frame, a cover for said cabinet, a spring member, a standard on said spring member, a saddle on said frame, a bolt held in said standard and adapted to be seated in said saddle to provide a pivot point for said spring member relative to said frame, and means for locking said spring to said frame on both sides of said bolt member whereby when the spring is in locked position on said frame, said cabinet is inaccessible.

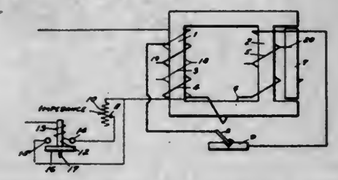
1,480,854. ASSEMBLAGE-POINT CONNECTION IN TUBULAR STRUCTURES. CLAUDIUS DORNIER, Friedrichshafen, Germany, assignor of one-half to Dornier-Metallbauten, Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Nov. 20, 1920. Serial No. 425,586. 2 Claims. (Cl. 287—54.)



1. In a structural connection of the kind described in combination, a tube, a plane-faced structural member and a sheet metal gusset plate connected by rivets to both said tube and said member, the portion of said gusset plate adjoining said tube being curved so as to apply itself against the wall of said tube.

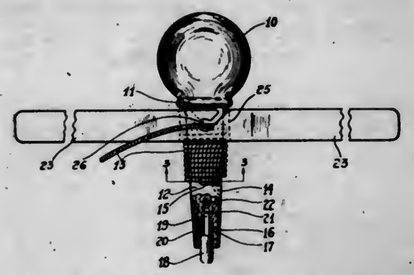
1,480,855. NURSING BOTTLE. GEORGE L. DUNKELBERGER, Billings, Mont. Filed Sept. 29, 1921. Serial No. 504,220. 1 Claim. (Cl. 215—11.)

A nursing bottle consisting of a cylindrical metallic container having a mouth of the same diameter as the bottom of the container and provided with inner and outer walls of aluminum intimately united at said mouth and being otherwise free throughout their entire extent, the outer wall having an external bead surrounding the mouth of the container and provided with a flat upper seating face and the inner wall having a longitudinal rib formed thereon with branch ribs extending circumferentially therefrom and constituting a scale of measurements visible from the inside of the container only, a heat insulating medium filling the entire space between said walls, and a sealing cap having a yieldable filler adapted to rest upon the flat upper seating face of the bead and entirely covering the mouth of the container and having a depending rim embracing the bead on the outer wall of said container.



1,480,856. GEAR TRANSMISSION MECHANISM. CLAUDE D. ENOCHS, Minneapolis, Minn. Original application filed June 15, 1921, Serial No. 477,706. Divided and this application filed Feb. 26, 1923. Serial No. 621,293. 4 Claims. (Cl. 74—57.)

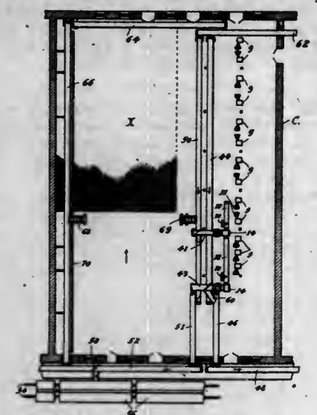
1. A power plant transmission comprising in combination a gear case having the upper face thereof in one plane, a forwardly extending engine mounting yoke forming an integral part of said gear case, a main drive shaft, a differential shaft and two worm shafts horizontally mounted in one plane in said gear case, two worm and worm gear casings formed integral with said gear case, the worm case portions thereof having their axes



lying in the plane of the face of said gear case, a gear housing having its lower face in one plane and forming a cover for said gear case, gears associated with said shafts for transmitting power from said main shaft to said worm shafts, worms driven by said worm shaft and mounted in said worm housings, worm gears driven by said worms and mounted in said worm gear housing, and drive wheel shafts driven by said worm gears.

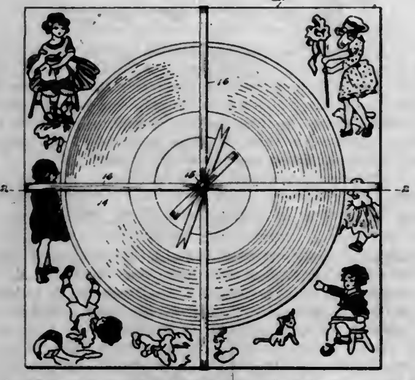
1,480,857. ELECTRIC-ARC-WELDING SYSTEM. WALTER HERBERT FLOOD, Tooting, London, and DONALD TRENTHAM SMCUT, West Dulwich, London, England, assignors to Electric Arc Cutting & Welding Company, Newark, N. J. Filed Sept. 2, 1920. Serial No. 407,771. 7 Claims. (Cl. 219—815.)

1. An arc welding system comprising a transformer having primary and secondary windings, an auxiliary winding connected in series relation to the secondary winding, a set of working electrodes connected to the secondary winding, an impedance device connected in series with the primary winding, and means for shunting the impedance from the primary circuit when current flows in the secondary winding.



1,480,858. TOY. WILLIAM GOETZ, Noroton Heights, Conn. Filed Apr. 1, 1922. Serial No. 548,577. 1 Claim. (Cl. 46—32.)

A spinning top comprising a spherical knob, a conical stem depending therefrom, a ferrule secured about the lower portion of said stem, a tip pin slidable axially in said stem, said pin having a reduced portion, reaching into the body of said stem, a spring encircling the reduced portion normally projecting the pin outwardly of the stem, means for limiting the relative movement of said pin and stem, and means for spinning the top.



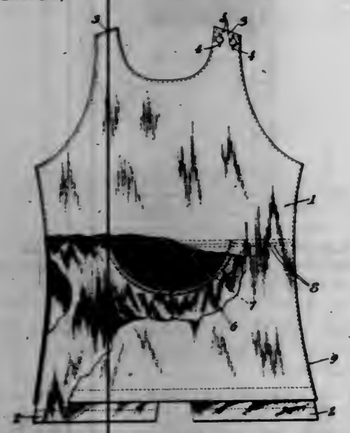
1,480,859. METHOD OF PACKING AND LOADING FLOUR. HENRY O'B. HARDING, Minneapolis, Minn., assignor to Washburn Crosby Company, Minneapolis, Minn., a Corporation. Filed Dec. 26, 1918. Serial No. 268,374. 1 Claim. (Cl. 214—152.)

The method of packing and loading flour which consists in continuously packing the flour into sacks, closing the filled sacks while conveying them in upright position and then when sufficient cars are available delivering all of the closed sacks directly to a carrier system for conveying the sacks to the cars, and when sufficient cars are not available handling a portion of the sacks coming from the packers in the manner just stated and storing the remainder of said sacks, and subsequently when sufficient cars are available delivering the stored sacks and

the sacks as they are filled and closed directly to the same carrier system for conveying said stored sacks and sacks as filled to the cars.

1,480,860. PACKAGE. JOSEPH NESS, East Lake, Ga. Filed Dec. 30, 1922. Serial No. 609,909. 2 Claims. (Cl. 206—46.)

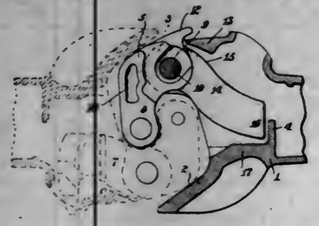
1. A container of the character described comprising a tray, a cover for the tray, a phonograph record secured to the cover exteriorly thereof, ribbon or cord means carried by the cover and extending through the aperture in the record for securing the same to the cover, said means also securing the cover to the tray.



1,480,861. SCREEN SHIELD. ARMAND E. NEWMAN, New York, N. Y. Filed July 16, 1919. Serial No. 311,236. 2 Claims. (Cl. 296—95.)

1. A screen shield comprising a netting, two stiff side frames, two pliable frames connecting the two side frames, said netting being rigidly set into all four frames, thus

forming a solid panel, expansible side clamps for gripping the stiff side frames, a hinge at one end of said clamps, locking means for setting said clamps to any desired position, means for rigidly attaching said clamps to a desired object at one end, and clips at the other end for holding the clamps in vertical position.

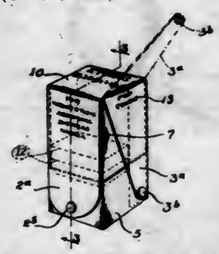


1,480,862. BATHING SUIT. EDWARD G. OSTERMAN, New York, N. Y., assignor to Long Island Knitting Mills Co., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 9, 1921. Serial No. 521,075. 2 Claims. (Cl. 2—144.)

1. A bathing suit having a body portion made up of a jersey, trunks joined thereto at both sides of the suit but with their upper middle front and rear portions cut away, said jersey and trunks being of horizontally elastic material, front and rear inserts of vertically elastic material disposed in said cut away portions of the trunks, and a flap extending down over the trunks,

2. The combination set forth in claim 1, wherein said body and trunks are made of vertically ribbed material, and the inserts of horizontally ribbed material.

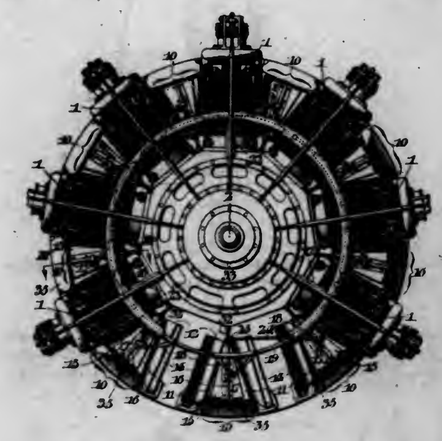
1,480,863. EMERGENCY KNUCKLE FOR CAR COUPLERS. EBEN RAY PACKER, New Rochelle, N. Y., assignor to Q. & C. Company, New York, N. Y., a Corporation of Maine. Filed Feb. 16, 1920. Serial No. 358,999. 2 Claims. (Cl. 213—111.)



1. An emergency knuckle adapted to take the place of the ordinary knuckle in a car coupling comprising a body provided with an aperture for receiving the pivot pin of the coupling for holding it in place, a coupling jaw and retaining means for retaining said jaw in locked position, said retaining means comprising external and internal shoulders positioned to engage the side wall of the coupler or draw bar head, said internal shoulder being formed by a comparatively short arm adapted by vertical engagement with the interior of the coupling head to retain the emergency knuckle in position and effective for locking when a pin lug of the coupler head is broken off and said arm being formed whereby its inner extremity is positioned to engage at opposite sides with an internal wall of the coupler head when rotated in either direction and of such length as to be contained wholly within the forward opening of the coupler head.

1,480,864. INTERMITTENT FEED MECHANISM FOR CINEMATOGRAPHIC APPARATUS. PERCY ALFRED REED, London, England, assignor to Cinechrome Instruments, Limited, London, England. Filed Jan. 10, 1921. Serial No. 436,323. 5 Claims. (Cl. 74—7.)

1. In a cinematographic apparatus, intermittent feed mechanism for accelerating the film shift period and lengthening its stationary period, said mechanism comprising a pair of shafts mounted parallel to but out of line with each other, a cross coupling having a floating member between the two shafts, means for engaging and moving the film, an operative connection between the said floating member of the cross coupling and the film engaging and moving means, and means to rotate one of said shafts, said floating member of said cross coupling transmitting an accelerated intermittent movement to the film.

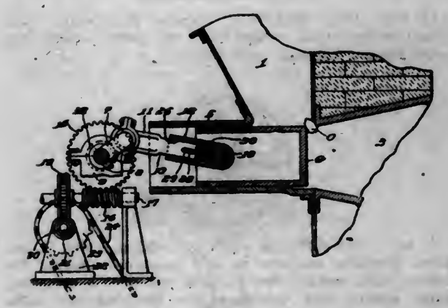


1,480,865. PROMPT-TREATMENT KIT. CHARLES B. SLADE, New York, N. Y., assignor to Ethicus Prompt Treatment Kit, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 7, 1922. Serial No. 599,531. 9 Claims. (Cl. 206—12.)

1. A multi-pocket kit comprising in combination a relatively large box, a relatively small box having one side held against what is ordinarily the bottom of said large box and opening in a direction at right angles to that in which said larger box opens, a second relatively small box also abutting against said large box, but facing in the direction opposite from said first small box, pieces fastened across the ends of said boxes, a band around said boxes at their one ends, flaps hinged to said boxes at their other ends, and means whereby said flaps may be releasably fastened over the openings of said boxes.

1,480,866. AIR COOLING OF INTERNAL-COMBUSTION ENGINES. JOHN W. SMITH, Philadelphia, Pa. Filed June 24, 1920. Serial No. 391,459. 7 Claims. (Cl. 123—171.)

1. In aircraft including an internal combustion engine, the combination with a cylinder of an air conducting means aligning longitudinally therewith comprising a portion directed forwardly with respect to the direction of flight to receive air therein by virtue of the movement of the craft, and a continuing portion located at the rear side of the cylinder and directed forwardly with respect to the direction of flight so as to pilot cool air for impingement directly radial against the back of said cylinder and in such a manner as to prevent external air, heated by



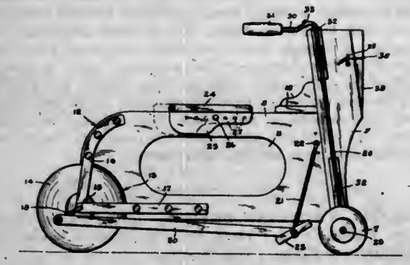
passage around the cylinder, from hugging the walls of the cylinder around the rear side, through opposition to the flow of such heated air effected by the flow of cool air issuing from the forwardly directed portion.

1,480,867. COMPOSITION. TONY SMITH, Cincinnati, Ohio. Filed Feb. 10, 1923. Serial No. 618,404. 1 Claim. (Cl. 106—34.)

In a composition of the class described including substantially 2% granite sand, 1% Portland cement, 50% lime, 32% plaster of Paris and 15% alum, the said ingredients being reduced to a plastic mass through the medium of a sufficient amount of water.

1,480,868. AUTOMATIC STOKER. WILLIAM C. STRIPE, Pittsburgh, Pa. Filed Feb. 25, 1922. Serial No. 539,109. 5 Claims. (Cl. 110—109.)

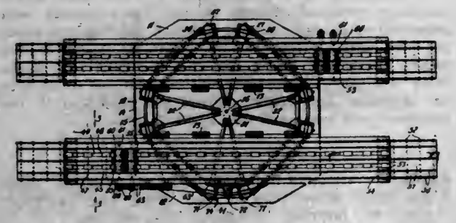
4. In an automatic stoker, the combination of a ram, means for reciprocating said ram comprising a connecting rod having relatively longitudinally movable sections, a crank and a train of gearing for rotating the crank, a frangible member interposed in said train and adapted to shear to relieve the train when said ram is incapable of movement in one position, and yielding means interposed between the sections of said rod adapted to yield to permit relative longitudinal movement of said sections when said ram is incapable of movement in another position.



1,480,869. METHOD OF COLORING MAGNESIUM AND MAGNESIUM ALLOYS BY ETCHING. FELIX THOMAS, Frankfort-on-the-Main, Germany, assignor to the Firm Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 24, 1921. Serial No. 494,948. 19 Claims. (Cl. 148—7.)

1. The method of coloring magnesium and magnesium alloys by etching, which comprises the simultaneous treatment of said metal with chromic acid and a solution of a salt of a heavy metal.

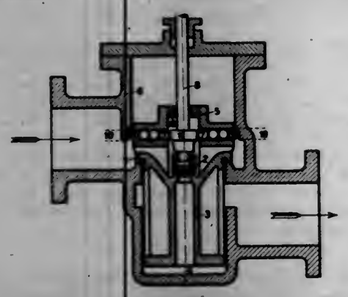
1,480,870. METHOD FOR ROLLING MAGNESIUM ALLOYS. FELIX THOMAS, Frankfort-on-the-Main, Germany, assignor to the Firm Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Aug. 24, 1921. Serial No. 494,949. 7 Claims. (Cl. 148—11.)



1. The method of rolling magnesium-zinc alloys which comprises submitting the alloy to be rolled to heat in such a way that its temperature right through is 220-250° C. and thereupon rolling said heated alloy at said temperature.

1,480,871. CHILD'S VEHICLE. VANDEVERE TIFFIN, Tacoma, Wash., assignor of nineteen-twentieths to Frank Kelble and one-twentieth to John G. Luhrman, both of Seattle, Wash. Filed Dec. 13, 1921. Serial No. 522,037. 5 Claims. (Cl. 208—118.)

1. In a vehicle of the class described, a frame having a relatively wide front frame portion, an upright steering rod pivotally mounted at each side of said front frame portion, outwardly bent trunnions at the bottom ends of said steering rods, wheels on said trunnions, rearwardly bent handle bars at the upper ends of said steering rods, a link connecting said two handle bars for holding said wheels in parallel relation, a body member rigidly secured to said front frame portion and extending rearwardly therefrom, a seat on said body member and a wheel at the rear end of said body member.



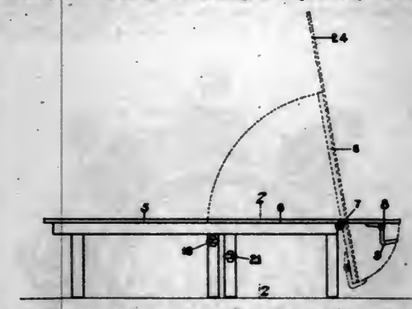
1,480,872. PORTABLE TURNTABLE. CHARLES T. TOPPING, Pittsburgh, Pa. Filed June 23, 1919, Serial No. 306,057. Renewed June 14, 1923. 15 Claims. (Cl. 104—44.)

1. A portable turntable comprising a base of thin flat material adapted to rest on the ground, a pivot pin

secured thereto and a circular track; a rotary frame having a part engaging said pivot pin, rollers journaled on the frame over the track and a platform resting upon the frame the base extending continuously beneath the track and rotary frame.

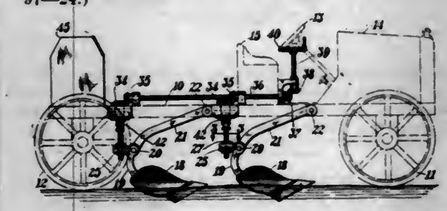
1,480,873. VALVE. FRITZ WAGNER, Berlin-Lichterfelde, Germany. Filed Apr. 21, 1921. Serial No. 463,343. 29 Claims. (Cl. 277—36.)

18. In combination, a main valve member having a passage therethrough, a radial passage and an abutment above the latter, an auxiliary valve for said first mentioned passage, a valve stem connected to said auxiliary valve and having a flange below said abutment and adapted to engage with the latter to open the main valve after the opening of the auxiliary valve, a locking member in said radial passage, and means for forcing said locking member into engagement with said stem after said auxiliary valve has been opened and said flange has engaged with said abutment to begin the opening movement of the main valve.



1,480,874. SWIMMING DEVICE. JOHN WEISS, Pompton Plains, N. J. Filed Mar. 19, 1923. Serial No. 626,013. 1 Claim. (Cl. 9—21.)

A swimming device comprising a waist belt, a gas generator attached thereto, means for supplying said generator with gas making material, said means being provided with a tight closure, inflatable floats, flexible means connecting the floats with the belt, said floats being removable and independent outlet tubes connecting the generator and floats whereby gas generated in the generator will enter and inflate the floats.



1,480,875. GLASS-CUTTING TABLE. SAMUEL JOHN BARTLETT, Barry Dock, Wales. Filed Dec. 14, 1922. Serial No. 607,010. 7 Claims. (Cl. 49—48.)

1. A glass cutting table comprising in combination a fixed part to said table, a pivotally mounted part to said table, both parts arranged normally to lie as one flat surface, and means for raising the pivotally mounted

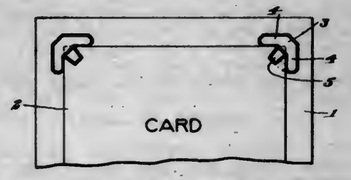
part of said table so that after the cutting operation the glass will be severed along the line of cut.

1,480,876. AGRICULTURAL IMPLEMENT. TERRIE BERRY, Mount Hope, N. J. Filed July 19, 1922, Serial No. 575,953. Renewed Dec. 6, 1923. 2 Claims. (Cl. 97—24.)

1. An agricultural implement comprising a frame, an arm hinged thereto, a plow element hinged in turn to the free end of the arm, said arm and plow element being each hinged for vertical adustment, and a unitary means for simultaneously swinging the arm and plow element on their respective hinge axes, said unitary means including a pair of screws of relatively varying pitch having threaded engagement with the arm and plow element respectively, and a common operating element adapted to rotate said screws in unison.

1,480,877. COIN HOLDER. ANDREW BLICKFELDT, Central Falls, R. I. Filed Sept. 8, 1923. Serial No. 661,641. 7 Claims. (Cl. 133—6.)

1. In a coin holder, a container having a slot, a follower pivotally mounted in said container adapted for forcing coins toward and through said slot, a discharge guide within said container for directing the coins through said slot, and means associated with said slot for controlling the discharge of coins.

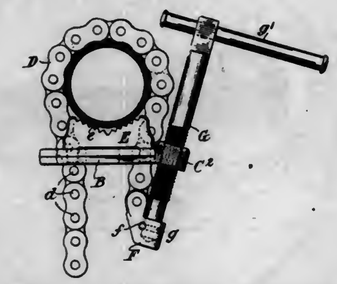


1,480,878. MEANS FOR AND METHOD OF PRODUCING CONCRETE PILES. MAURICE BLUMENTHAL, Brooklyn, N. Y. Filed Aug. 5, 1919. Serial No. 315,460. 8 Claims. (Cl. 61—57.)

1. A concrete pile comprising a hollow tubular shell, a body of concrete material within said shell, the shell having portions of its side walls at points spaced apart circumferentially of the shell bent outwardly providing

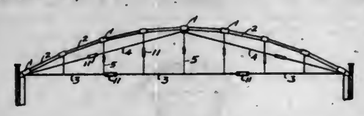
openings thru said side walls, and a portion of the body of cement projecting thru said openings providing integral extensions of the pile spaced apart circumferentially of the shell lying in engagement with the outwardly bent portions of said shell.

1,480,879. PHOTO MOUNT. WILLIAM J. BOWLER, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed Mar. 30, 1923. Serial No. 628,751. 5 Claims. (Cl. 40—156.)



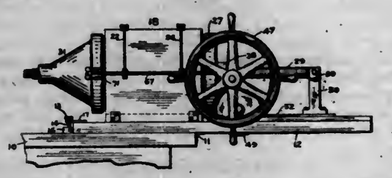
1. A mount for an article of the type described, having a portion shaped to extend around the corner of the article and a central tab dividing the angle of said portion and laterally free therefrom—adapted to overlap the corner of the article.

1,480,880. ORNAMENTAL CROSS. JAMES S. BRENNAN, Attleboro, Mass. Filed May 26, 1923. Serial No. 641,645. 8 Claims. (Cl. 41—10.)



1. An ornamental cross comprising a body portion and arms extending outwardly therefrom, the body portion and arms being provided upon one side thereof with a recess extending substantially throughout the length of said body portion and arms, and a plurality of ornamental stones secured in the recess.

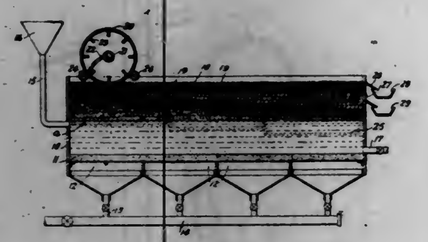
1,480,881. PIPE VISE. GEORGE W. BUFFORD, Buffalo, N. Y., assignor to J. H. Williams & Co., Brooklyn, N. Y., a Corporation of New York. Filed July 8, 1922. Serial No. 573,702. 2 Claims. (Cl. 81—19.)



1. A pipe vise comprising a bed plate having a screw threaded opening therein, an adjusting screw extending through said opening, a chain adapted to extend across the bed plate, one terminal link of said chain carrying a socket member and the adjusting screw being swiveled to the socket member.

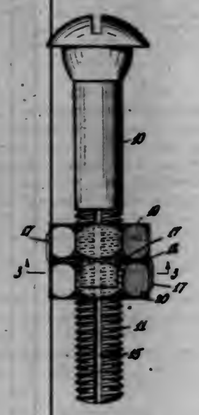
1,480,882. ARCH. LOUIS DAVIDSON, New York, N. Y. Filed June 2, 1921. Serial No. 474,505. 9 Claims. (Cl. 108—1.)

1. An arch or truss having a general curvilinear shaped upper chord comprising segments and shoes, sockets entirely closed in any cross section thereof in said shoes into which the ends of said segments or beams are adapted to be inserted, means whereby the compression load is transmitted from the end face of one segment to the end face of another without stressing the outer walls of the shoes, said sockets having connected walls for sustaining distortion strains in vertical and horizontal planes.



1,480,883. DEVICE FOR DISPENSING PASTE OR LIKE MATERIAL. HAROLD DE OLANETA, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed June 9, 1920. Serial No. 387,673. 8 Claims. (Cl. 221—78.)

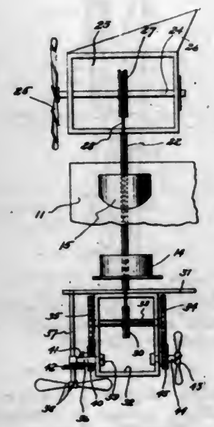
1. In a device of the character described, a support, a base plate normally resting thereon but hinged thereto to be swung into a vertical position relatively to the support, a container mounted on said base plate, a plunger disposed within the container for discharging



material therefrom, and means reciprocably mounted on said base plate and connected to said plunger to operate the same.

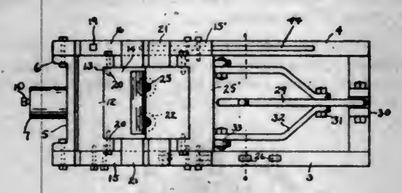
1,480,884. METHOD OF CONCENTRATING ORES. SAMUEL H. DOLBEAR, San Francisco, Calif., assignor to Pneumatic Process Flotation Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 15, 1920. Serial No. 431,024. 6 Claims. (Cl. 83—85.)

1. The method of concentrating ores which comprises distributing pulverized ore evenly and without agitation directly into contact with a substantially non-agitated body of froth having a selective retentive affinity for certain components of the ore, permitting other components to sink through the froth, and separating the components retained by the froth.



1,480,885. RAILROAD SAFETY BOLT LOCK. LUDWIG GROSSMANN, Camden, N. J. Filed Apr. 15, 1922, Serial No. 553,178. Renewed Dec. 6, 1923. 4 Claims. (Cl. 151—15.)

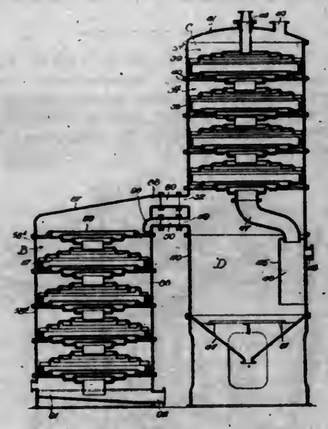
1. A nut-lock comprising an apertured disk having a lug on the wall of its aperture adapted to engage in a groove in a bolt, and an ear on its edge adapted to be bent into contact with a side of a nut, and means for rotatively varying the positions of the said lug and ear.



1,480,886. VENTILATING FAN. JOHN KOVACH, Tamaroa, Ill. Filed Nov. 13, 1922. Serial No. 600,533. 1 Claim. (Cl. 98—27.)

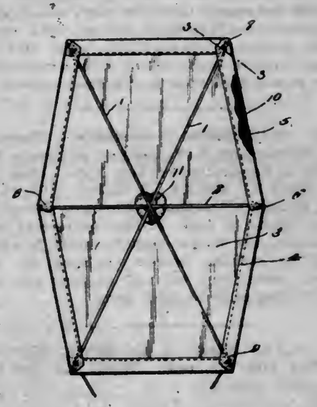
A ventilating apparatus comprising a pair of vertically alined casings, thrust bearings carried by said casings, a shaft supported thereby, frames attached to the ends of said shaft, one of said frames being above the roof of a supporting building, and the other in a compartment below, a fan driven by the wind, said fan being housed in the upper of said frames, said casings and bearings

constituting means for rotating said frames and shaft when actuated by the wind, whereby said fan is adjusted to receive the full force of the wind, a plurality of fans carried by the lower of said frames, and means for transmitting motion from the first named fan to the other fans.



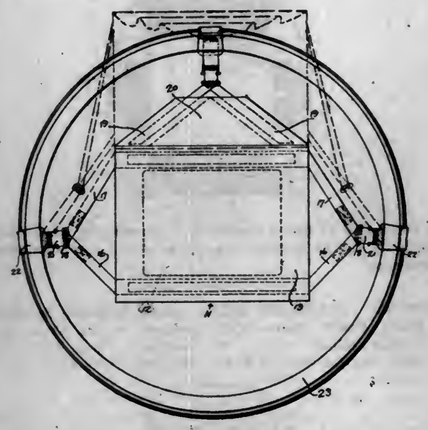
1,480,887. CASTING APPARATUS. WILLIAM W. MCCARTER, Houston, Tex. Filed Dec. 27, 1921. Serial No. 525,057. 3 Claims. (Cl. 22—153.)

1. In a casting apparatus, the combination of a mold having a slight play forwardly and backwardly, means to hold said mold resiliently forward, a slidable mold jaw, a guide track having a groove therein, a projection on said jaw slidable in said groove, and means to move said slidable jaw and to lock the same in operative position.



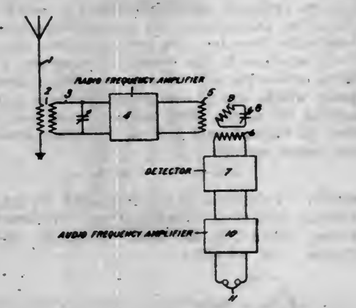
1,480,888. APPARATUS FOR PRODUCING INTERACTION BETWEEN GASES AND LIQUIDS. CHARLES H. MARSHALL, Crafton, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 21, 1919. Serial No. 339,673. 8 Claims. (Cl. 203—1.)

1. In an apparatus of the character described, in combination: a casing; and a series of continuous channel members for directing liquid flow, said channel members being of progressively varied dimensions peripherally and mounted within said casing in overlapping spaced relation with respect to each other and at progres-



sively lower levels, whereby liquid introduced through the top of the casing onto said channel will discharge from one channel to the next lower channel, thereby flowing through progressively lower levels to the bottom of the said casing; substantially as specified.

1,480,889. KITE CONSTRUCTION. EDWARD MASSA, Los Angeles, Calif. Filed Sept. 1, 1922. Serial No. 585,591. 1 Claim. (Cl. 244—22.)

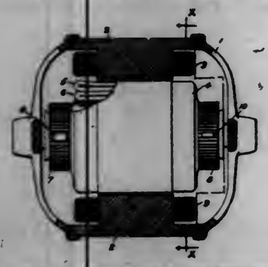


In kite construction, a frame comprising crossed sticks and a reinforcing stick intersecting said crossed sticks at the point where said crossed sticks intersect each other, a reinforcing cord extending around said frame and connected to the ends of said sticks, a fabric covering on said sticks having the edges thereof hemmed to provide a marginal pocket for said cord, the material forming said hem being in sections between the ends of said sticks and having the adjoining edges overlapped and stitched in such manner as to provide pockets for the respective ends of said sticks, and reinforcing tabs at the center of the fabric and at opposite sides thereof.

1,480,890. GUNNER'S CHAIR. LESSITER C. MILBURN, East Cleveland, Ohio, assignor to The Glenn L. Martin Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 7, 1923. Serial No. 643,885. 12 Claims. (Cl. 89—40.)

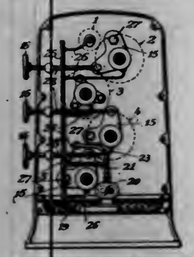
2. In combination, an airship, a gun carriage rotatably carried thereby, a gunner's seat, and means detachably suspending said seat from said carriage in such manner that said seat rotates with said carriage.

1,480,891. HIGH-FREQUENCY RECEIVING SYSTEM. HOWARD I. BECKER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 20, 1921. Serial No. 486,218. 4 Claims. (Cl. 250—20.)



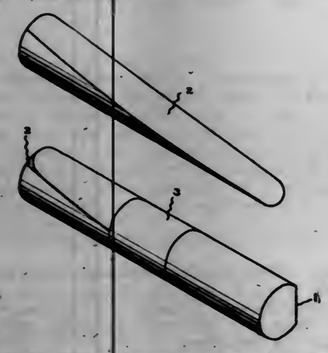
1. The combination in a high frequency signal receiving system of means for amplifying received signaling currents, means for detecting the amplified currents and a link circuit comprising a single inductance which is inductively connected between the amplifying means and the detecting means for supplying currents of signaling frequency to the detecting means and preventing the transfer to the detecting means of audio frequency currents.

1,480,892. COMMUTATOR DYNAMO-ELECTRIC MACHINE. SVEN R. BERGMAN, Nahant, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 15, 1921. Serial No. 515,403. 4 Claims. (Cl. 171—228.)



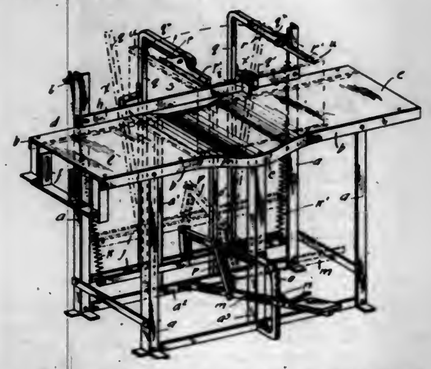
1. In combination an armature for a dynamo electric machine having a plurality of windings of different leak-

age reactance, commutators for said windings, and brushes on said commutators, the brushes on the respective commutators having a thickness, with respect



to the width of the corresponding commutator bars, proportional to the leakage reactance of the corresponding windings.

1,480,893. CYLINDER MILL. ADOLF BÜHLER, Sonnenhugel, Uzwil, Switzerland, assignor to the Firm Gebrüder, Bühler, Uzwil, Switzerland. Filed July 25, 1922. Serial No. 577,414. 2 Claims. (Cl. 184—6.)



1. In lubricating mechanism for cylinder mills, the combination with two hollow frame members between which the cylinders are mounted and in which the driving gears at the ends of said cylinders are arranged; of a removable cover for each frame member, oiling devices for the bearings in the respective members, a pipe extending across the mill between the frame members and a pump within one of said frame members and directly supplying oil to the oiling device therein and also supplying oil through said pipe to the oiling device in the other frame member.

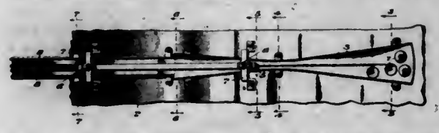
1,480,894. TAMPING PLUG FOR USE IN BLASTING. ARTHUR COCKBURN, Johannesburg, Transvaal, South Africa. Filed July 28, 1923. Serial No. 654,475. 2 Claims. (Cl. 86—21.)

1. A method of constructing tamping checks, comprising the steps of removing a portion of a cylindrical member longitudinally along a plane parallel with the axis of said member, and then splitting the resulting portion along its length in a plane at right angles to the first-mentioned plane and making an angle with the axis of the cylinder, thereby to form two complemental, reversely-arranged wedge-shaped members; substantially as described.

1,480,895. BOX PRESS. FRANK W. CUTLER, Portland, Oreg., assignor to Cutler Manufacturing Company, Portland, Oreg., a Partnership composed of Frank W. Cutler and Asa B. Cutler, both of Portland, Oreg. Filed Nov. 19, 1920. Serial No. 425,067. 2 Claims. (Cl. 100—57.)

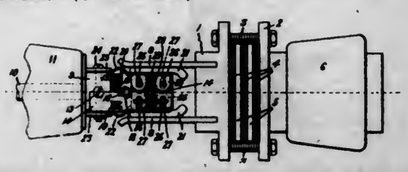
1. In a box press, a table, a pair of arms located at one side of the table, said arms being movable vertically, and also together and apart, the upper ends of the arms being provided with portions extending horizontally crosswise of, and above the table top, means normally holding the arms uplifted and spaced apart, means for pulling the arms downward, means moving the arms together while moved downward, said arms being so adapted that a box may be moved lengthwise over the table top under their said horizontal arm-portions, and also pushed across, and from the table between the arms, when the latter are arranged in their said normal position.

1,480,896. FLUORESCENT SCREEN. WHEELER P. DAVEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 2, 1921. Serial No. 466,278. 5 Claims. (Cl. 18—57.)



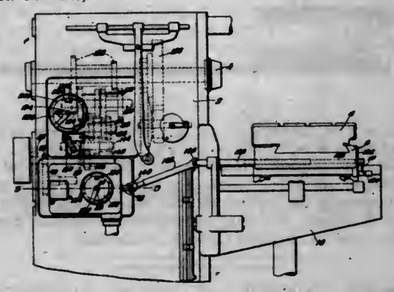
2. The process of making fluorescent screens which consists in mixing a finely divided fluorescent material with pyroxylin, the former material being in excess by weight adding sufficient solvent to bring the mixture to a plastic consistency too stiff to pour and shaping the same mechanically to sheet form.

1,480,897. CAN. FRANK B. DE MOTTE, Warrensburg, Ill. Filed May 15, 1920. Serial No. 381,740. 3 Claims. (Cl. 220—1.)



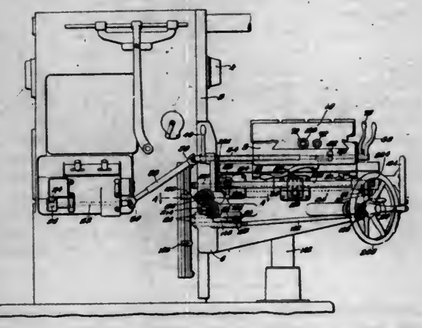
1. A metallic shipping and sterilizing can for packaging foods having an opening for the reception of the material to be sterilized, a closure for said opening permanently and hermetically sealed to said can, and a metallic conductor of heat within said can in contact with the material of the wall of said can and extending inwardly within the can, and constituting a transmitter of heat.

1,480,898. METHOD AND APPARATUS FOR SORTING WASHERS. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 27, 1922. Serial No. 532,246. 19 Claims. (Cl. 83—92.)



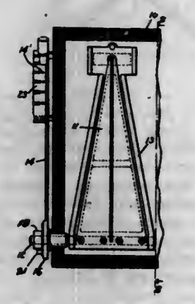
1. A process for handling cone shaped washers so that they will all lie in the same direction, comprising standing the washers on edge and then dividing them into two groups according to the direction in which they face, and then turning the washers of the two groups so that they all face in the same direction.

1,480,899. ELECTRIC SWITCH. HENRY G. FRENCH and HERMAN J. H. HUBER, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Oct. 10, 1922. Serial No. 593,606. 7 Claims. (Cl. 173—332.)



1. A contact device comprising a terminal member, supporting members pivotally associated therewith, resilient means for normally maintaining said supporting members in alignment with said terminal member and arranged to allow movement of said supporting members relatively to the terminal member, a plurality of contact fingers loosely mounted on said supporting members and independently movable relatively thereto, and resilient means arranged to spread said fingers apart.

1,480,900. MILLING MACHINE. BENJAMIN P. GRAVES, Providence, R. I., assignor to Brown and Sharpe Manufacturing Company, a Corporation of Rhode Island. Filed July 22, 1922. Serial No. 576,786. 19 Claims. (Cl. 90—21.)

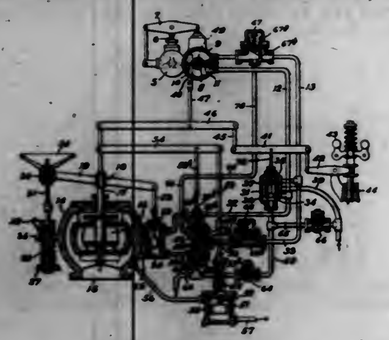


1. A milling machine having, in combination, a spindle, a work table, variable speed mechanism for relatively moving the spindle and work table, and adjusting means for said mechanism manually operable by the operator when stationed either at the rear or at the front of the table.

1,480,901. MILLING MACHINE. BENJAMIN P. GRAVES, Providence, R. I., assignor to Brown and Sharpe Manufacturing Company, a Corporation of Rhode Island. Filed July 22, 1922. Serial No. 576,787. 10 Claims. (Cl. 90—21.)

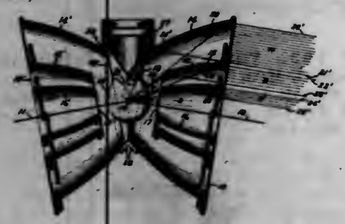
1. A milling machine having, in combination, a spindle, a work supporting table, a saddle, a knee, mechanisms for moving the table, saddle and knee, means operable by the operator when stationed at the front of the machine for manually actuating each of said mechanisms, and means operable by the operator when stationed at the rear of the table for manually actuating each of said mechanisms.

1,480,902. THERMOSTATIC CONTROL DEVICE. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Nov. 12, 1920. Serial No. 423,702. 5 Claims. (Cl. 297—15.)



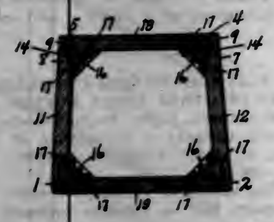
1. A temperature control comprising a thermostatic element, a support for said element, a control device operated by flexure of said element due to a predetermined change in temperature, and means whereby said support is released to relieve the element of strains due to changes in temperature in excess of said predetermined amount.

1,480,903. VALVE MECHANISM FOR ELASTIC-FLUID TURBINES OR OTHER PRIME MOVERS. REGINALD FRANCIS HALLIWELL, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed May 10, 1921. Serial No. 468,399. 17 Claims. (Cl. 137—158.)



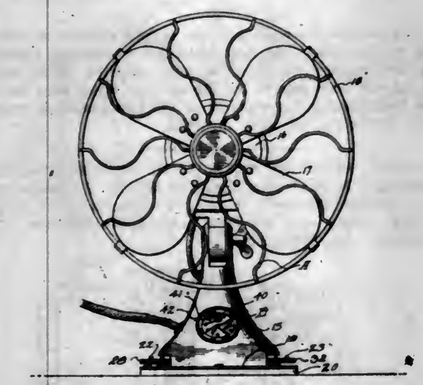
1. In a combination, a plurality of valve means for admitting elastic fluid of different pressures to a machine, a fluid actuated motor for each valve means, a single pilot valve connected to said motors in multiple, a governor connected to said pilot valve, means which

effects the operation of said motors in sequence, a movable abutment which is subjected to the pressure of the



elastic fluid supplied through one of said valve means, and means connecting such movable abutment to such valve means.

1,480,904. HIGHWAY ILLUMINATOR. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 19, 1921. Serial No. 516,288. 13 Claims. (Cl. 240—25.)



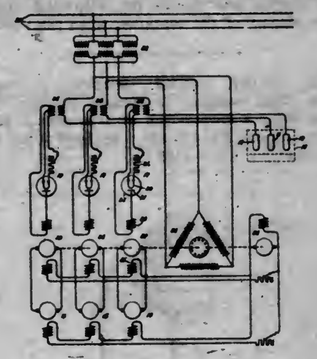
1. A lighting unit comprising a number of groups of spaced, nested paraboloidal reflecting frustra, the reflectors of each group having a common axis and different focal distances, the axes of the groups extending in different directions and all reflectors having a common focus, a casting connecting and supporting the groups of reflectors, a concentrated filament incandescent electric lamp removably seated in the casting with the filament in the focus, and openings in the lower faces of the reflectors for insertion and removal of the lamp and for the downward projection of light.

1,480,905. CHAIR. ISRAEL HERBERT, Syracuse, N. Y., assignor to The Elgin A. Simonds Company, Syracuse, N. Y., a Corporation of New York. Filed July 2, 1923. Serial No. 649,039. 5 Claims. (Cl. 155—196.)

3. In a chair, the combination with a pair of rear legs having grooves extending from front to rear thereof, and a plurality of recesses adjacent the grooves, of a seat frame having its side members formed with longitudinally extending flanges seated in said recesses of the legs respectively, and dowels projecting from the ends of the side members and extending substantially parallel with the flanges, and seated in the recesses in the legs respectively, and triangular bracing means within and secured to the seat frame at the junctures of the seat frame with the rear legs.

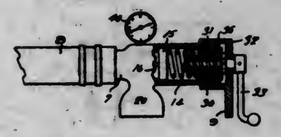
1,480,906. SELECTIVE AUTOMATIC ELECTRIC-FAN CONTROL. JEROME G. HEITZMAN, Fort Madison, Iowa. Filed Aug. 14, 1922. Serial No. 581,809. 5 Claims. (Cl. 161—1.)

1. In an electric fan control mechanism, an electric fan, a circuit therefor, an alarm clock mechanism incorporated with the fan including an alarm winding stem, a switch interposed in the circuit including a contact blade secured to the alarm winding stem, and a rigid contact point adapted to be engaged by the contact blade.



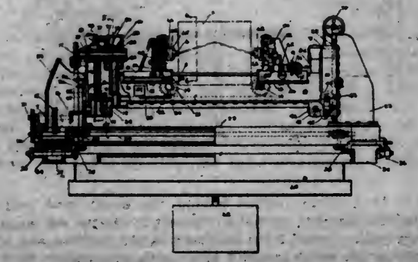
1,480,907. HEATING ELEMENT FOR FLUID CIRCULATORY SYSTEMS. FRANK W. HEWITT, Arlington, Mass., assignor to Simplex Electric Heating Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Dec. 1, 1922. Serial No. 604,151. 5 Claims. (Cl. 219—38.)

1. A heating element for a fluid circulatory system comprising a hose section insertable in the system, and an electric resistance coil supported concentrically of the section at its interior surface whereby, when the section is inserted in the system and the coil is interposed in an electric circuit, the fluid in the section will be heated and caused to circulate through the system.



1,480,908. CONTROL OF ARCING ELECTRODES. EDWARD H. HORSTKOTTE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 14, 1921. Serial No. 507,706. 15 Claims. (Cl. 204—64.)

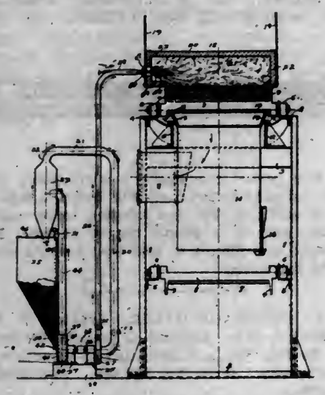
2. The combination with an electrode adapted to support an arc, of an electric valve connected to be responsive to an electrical condition of the arc supported by said electrode, and electro-responsive means controlled



by said valve for regulating the arcing relation of the said electrode.

1,480,909. PRESSURE-REGULATING DEVICE. FRANK W. JOHNSON, Redlands, Calif. Filed Aug. 28, 1922. Serial No. 584,607. 1 Claim. (Cl. 50—35.)

A pressure regulating device comprising a casing having an inlet adapted for connection to a source of pressure supply, and an outlet, a valve in the casing controlling the passage from the inlet to the outlet, a piston connected to said valve and movable in the casing and subject to the pressure therein, a spring resisting movement of the piston incident to the pressure, and means to adjust the resistance of the spring, said means including a dial plate supported on the end of the casing and having thereon a scale indicating pressure, a plug slidable in the casing and acting on the spring and a rotary operating device extending through the dial plate and bearing against the plug and having an external lever handle cooperating with the scale to indicate the pressure at which the device is set.

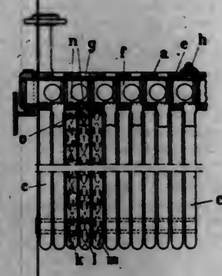


1,480,910. MACHINE FOR FORMING HELICAL GEARS. NIS LEERBERG, Edgewood, Pa. Filed Feb. 26, 1920. Serial No. 361,591. 24 Claims. (Cl. 90—10.)

1. In a gear cutting machine, means for holding a blank stationary during the tooth cutting operation, a cutting tool, a plurality of associated elements for supporting and impelling said tool in a helical path having an axis coincident with the axis of the blank, said elements including a pivoted tool support, trunnions on which said support is pivotally mounted, simultaneously acting means for moving said trunnions vertically with relation to a horizontal plane passing through the axis of the blank and the helix to be generated on the blank, and for moving the trunnions transversely toward the axis of the blank so that the pivotal axis of the support always falls within the radius vector of the helix, and for swinging the support about said trunnions.

10. In a gear planing machine, a cutting tool and a plurality of mechanisms adapted respectively to produce component movements of said tool parallel to the axis of a cylindrical blank, vertical to the horizontal plane of said axis, transverse to the vertical plane of said axis, towards said axis and angularly about said axis, the resultant of said movements being a helical movement of the cutting edge of said tool and a rotary movement of the body of said tool which maintains a constant angular relation between the axis of said tool and a radius vector extending from the blank axis to the cutting edge of said tool.

1,480,911. SINTERING MACHINE. RICHARD L. LLOYD, New York, N. Y., assignor to Dwight & Lloyd Sintering Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 13, 1919, Serial No. 330,482. Renewed June 19, 1923. 2 Claims. (Cl. 266—21.)

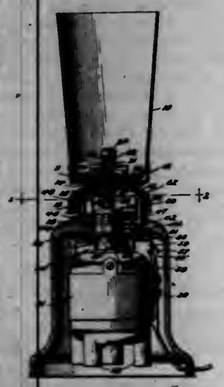


1. In an ore sintering apparatus, the combination of means for forcing air thru a predetermined area of an ore stratum, means for supporting a stratum of sinterable ore and for advancing it past and in operative relation with the said air forcing means, means for supplying ore to the supporting means and for forming a uniform stratum thereon while the supporting means are moving toward the air forcing means, means for supplying, in a stream, a combustible mixture of air and powdered solid carbon, and a holder adjacent the ore and arranged to receive said stream and direct the flames of combustion of the powdered solid carbon to the surface of the ore while it is moving from the ore supplying means to the air forcing means.

1,480,912. FEED-WATER HEATER. JOSEPH MARTIN, Munich, Germany. Filed Aug. 29, 1921. Serial No. 496,736. 6 Claims. (Cl. 122—426.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

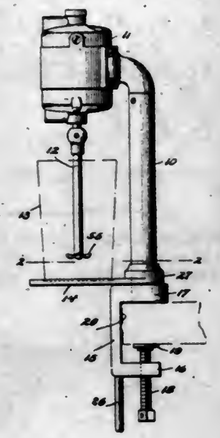
6. In a feed-water heater a plurality of wrought iron flattened tubes, a removable cell frame in each tube, a continuous small air passage between the cell frame and roof of the tube, a perforated plate between cell frame and bottom of the flattened tube, each cell in the one flattened tube communicating through a preheating tube with a cell in another flattened tube, the ends of said

preheating tubes entering into the holes in said perforated plate, twisted strips of sheet metal in those pre-



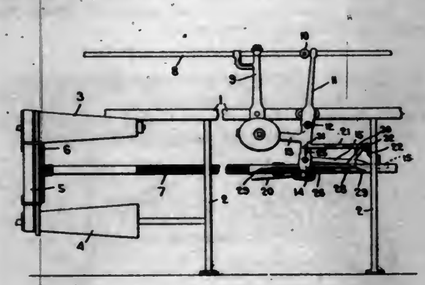
heating tubes in which, owing to their high temperature a high elimination of gas occurs, and longitudinal, rectangular slots in said sheet metal strips.

1,480,913. HAIR CURLER. MILTON D. MESEROLE, Milford, Conn., assignor to The Hayes-Meserole Mfg. Co., Inc., Milford, Conn., a Corporation. Filed Jan. 30, 1923. Serial No. 615,923. 2 Claims. (Cl. 132—41.)



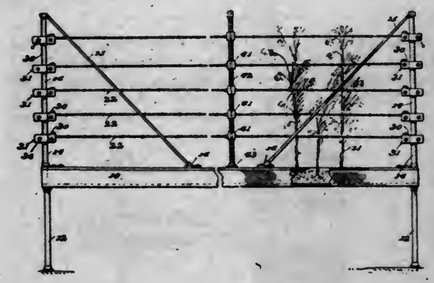
1. A hair curler, comprising a wire frame, having a rear bar and slide mounted on said frame, a main tongue hinged to said rear bar and adapted to be engaged by said slide, and an auxiliary tongue shorter than the main tongue also hinged to said rear bar and projecting forwardly therefrom.

1,480,914. BEVERAGE MIXER. STEPHEN J. POPLAWSKI, Racine, Wis., assignor to Arnold Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 18, 1922. Serial No. 537,439. 16 Claims. (Cl. 259—135.)



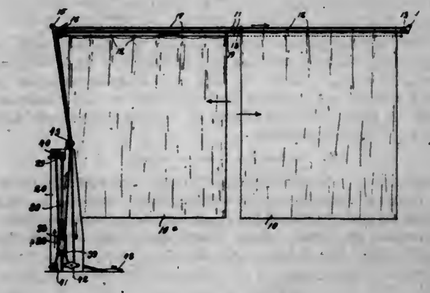
1. In a mixer, the combination with a stand, an electric motor inclosed by said stand and comprising a rotor having a shaft projecting from said stand, and a controlling switch within said stand, of a container adapted to be placed upon said stand and having therein an agitator comprising a shaft projecting from the bottom of said container, clutch connections between the rotor and agitator shafts, and means for actuating said switch upon the placing of the container upon the stand.

1,480,915. DRINK MIXER. STEPHEN J. POPLAWSKI, Racine, Wis., assignor to Arnold Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed July 18, 1921, Serial No. 485,440. Renewed June 15, 1923. 22 Claims. (Cl. 259—135.)



1. In a drink mixer, the combination with a motor-driven, vertically-disposed stirrer, of a container support in vertical alignment with said stirrer and movable horizontally to a container-releasing position, and means actuated by the movement of the support to control the motor drive.

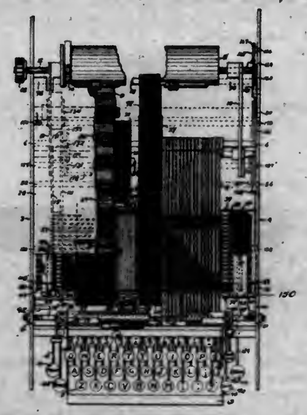
1,480,916. FLY FRAME. NOAVEN PROVENCHER, Lowell, Mass. Filed Oct. 11, 1921. Serial No. 507,046. 5 Claims. (Cl. 118—33.)



1. In a roving frame having the usual cone pulleys and the rack bar by which the belt is shifted on the pulleys as the thread mass increases on the bobbins, and also having the usual knockoff lever with connections leading to the tension gears, the combination with said rack bar and knockoff lever, of means to lock said knockoff lever from movement, and means associated with the rack bar positively to hold the locking means in operative position during the winding of the roving on the bobbins.

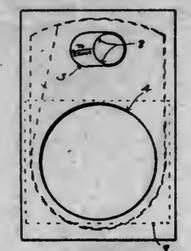
1,480,917. PLANT SUPPORT. WILLIAM H. ROBINSON, Maywood, Ill. Filed June 10, 1921. Serial No. 476,426. 2 Claims. (Cl. 47—12.)

1. A plant support comprising a bed having supporting legs at each corner, a standard mounted at each corner and on the sides and ends of same, each of said standards being provided on one side with rack teeth for its entire length, and a series of frames comprising longitudinal and transverse wires supported in spaced relation above the bed and by the standards.



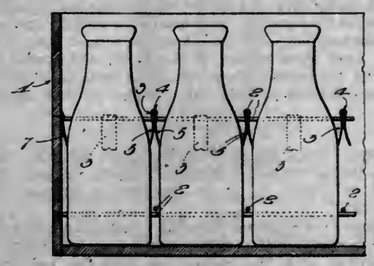
1,480,918. ELECTRIC SCREEN-CURTAIN CONTROL. CHARLES M. SZIRMAY, New York, N. Y., assignor, by direct and mesne assignments, to Electric Screen Curtain Controls, Inc., New York, N. Y., a Corporation of New York. Filed July 12, 1922. Serial No. 574,420. 11 Claims. (Cl. 156—46.)

3. In mechanism of the class set forth, the combination with a curtain adapted to move in opposite directions to closed and open positions respectively, a cable connected to the curtain for moving it, and a power member adapted for repeated rotation in the same direction, of a reciprocating member for actuating the cable in opposite directions in alternation, and connections between the power member and the reciprocating member.



1,480,919. TYPEWRITING MACHINE. CHARLES WELLINGTON WALKER, deceased, late of Stratford, and ARIO C. WALKER, Bridgeport, Conn., by Ario C. Walker, administrator, Bridgeport, Conn. Filed Nov. 11, 1922. Serial No. 600,365. 4 Claims. (Cl. 101—93.)

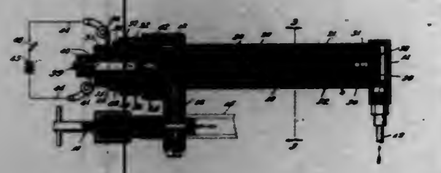
1. A typewriting machine involving a series of interengaging levers, soft means on which one lever of each series rests when in its normal position, a series of key levers, levers for transferring the effects of the key levers to the first mentioned levers, and yieldable means acting



constantly against said second mentioned levers in proximity to the center of motion thereof.

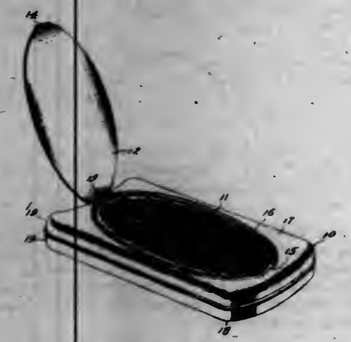
1,480,920. SELF-ERASING MEMORANDUM PAD. ARTHUR W. WEBDEN, Quincy, Mass., assignor of one-half to James D. McCoy, Beachmont, Revere, Mass. Filed Feb. 10, 1923. Serial No. 618,270. 6 Claims. (Cl. 35—10.)

1. A self-erasing memorandum pad, or the like, comprising recording and pigmented surfaces located in approximate parallelism and in close proximity with one another, and means for causing a relative movement between said surfaces in substantially parallel planes, substantially as described.



1,480,921. BOTTLE HOLDER. WILLIAM WEINMANN, Preakness, N. J., assignor of one-half to Benjamin Boonstra, Paterson, N. J. Filed Apr. 30, 1923. Serial No. 635,613. 3 Claims. (Cl. 217—19.)

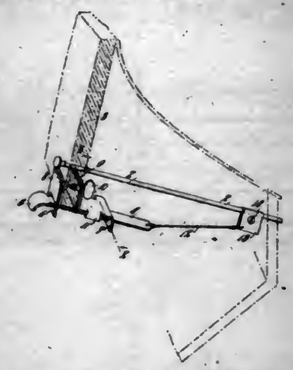
1. The combination with an article carrier having partition members dividing its interior into a plurality



of compartments of arched springs straddling said partition members and each having its two arms disposed in diverging relation whereby insertion of articles into the compartments will place said arms under tension to yieldably hold such articles.

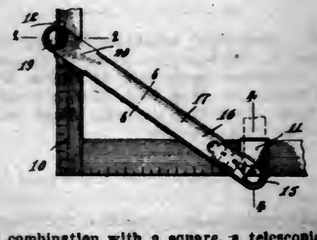
1,480,922. ELECTRIC HEATER. JARL M. WEYDELL, Indianapolis, Ind., assignor of one-half to Edward C. Stout. Filed Apr. 16, 1921. Serial No. 461,836. 15 Claims. (Cl. 219—38.)

1. A heating device for liquids, comprising an outer tube, an inner tube removably mounted within said outer tube by a screw joint so that a thin annular space for liquids is left between the two tubes, and a heating element removably mounted within said inner tube by a screw joint so that it may be removed therefrom without requiring the inner tube to be removed from the outer tube.



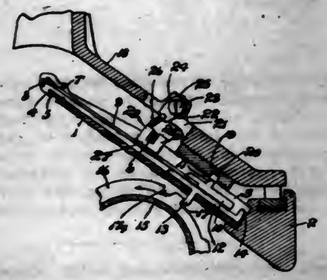
1,480,923. POCKET PACKAGE AND CONTAINER. JOSIAH T. WILCOX, Westfield, N. J., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed Mar. 7, 1921. Serial No. 450,236. 6 Claims. (Cl. 206—41.)

1. A pocket size metal container for tobacco, comprised of upper and lower sections each formed from a single sheet of metal and each including a major side of the container, one of the sections having a dispensing opening in said major side, a resilient cover attached thereto at one side of the opening, latch means for holding the cover in closed position, said cover being so formed that it will spring open upon release of the latch, and means permanently connecting the edges of the sections to form a shallow container entirely closed except for said opening.



1,480,924. CHOKER ROD RETAINING MEANS. WILLIAM WOOD, Vancouver, British Columbia, Canada. Filed July 16, 1923. Serial No. 651,999. 4 Claims. (Cl. 74—89.)

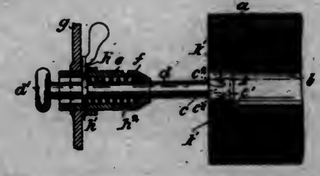
1. Means for retaining the choker rod of an automobile engine in any desired position, said means comprising the combination with the choker rod and the instrument board through which it is endwise movable, of a guide member removably clamped to the lower edge of the board, a retaining member endwise movable in the guide member and having releasable means for retaining it in



any desired position of endwise adjustment, and means for connecting the slidable retaining member to the choker rod.

1,480,925. ROOF-FRAMING DEVICE. ARTHUR E. WRIGHT, Gardner, Ill. Filed July 3, 1922. Serial No. 572,660. 4 Claims. (Cl. 33—92.)

1. The combination with a square, a telescopic arm, a hinge mounted on each end of said arm, lips made integral with the hinge to adapt the arm to be slidably mounted on said square, and a spring arm mounted on said telescopic arm to engage the hinge and to hold the telescopic arm in any desired position.

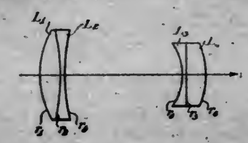


1,480,926. KNITTING-MACHINE CONSTRUCTION. OLLIE J. BERGER, Grand Rapids, Mich., assignor to Universal Knitting Machine Company, Lima, Ohio, a Corporation of Ohio. Filed June 26, 1922. Serial No. 570,863. 10 Claims. (Cl. 66—30.)

1. In a knitting machine, a needle bed including a plurality of vertically disposed parallel and spaced apart guides, needles between the guides, means for elevating the needles at different times in the operation of the machine, a carriage operable lengthwise of and over the needle bed to engage and operate the elevated needles, a device located above each needle between the guides and

elevated with the elevation of the needle, and means normally out of operative relation to said devices and attached to and movable with the carriage movable into alinement and over said devices to depress the same at the completion of a predetermined cycle of operation of the knitting machine.

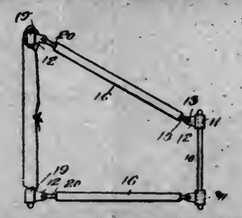
1,480,927. MOUNTING FOR PAPER ROLLERS OF COPYING MACHINES. RICHARD BERGER, Bonn-on-the-Rhine, Germany, assignor to the Firm F. Soennecken, Bonn-on-the-Rhine, Germany. Filed Feb. 26, 1923. Serial No. 621,489. 3 Claims. (Cl. 242—68.)



1. In a copying machine, a paper-supporting roller having a hollow end and a plurality of bayonet slots therein, each slot opening into the end of the roller, a plug adapted to fit into the said hollow end, projections on said plug for engaging said slots and an axially spring-controlled and rotatable support for said plug.

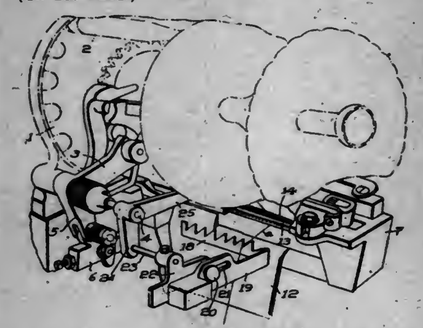
1,480,928. ALUMINUM COMPOUND. HOWARD B. BISHOP, Summit, N. J. Filed Mar. 7, 1921. Serial No. 450,409. 16 Claims. (Cl. 134—18.)

8. The process which consists in heating clay which is substantially undecomposable with sulphuric acid, with fluorspar and sulphuric acid, causing the formation of a fluorine acid which decomposes the clay, and the formation of aluminum sulphate and fluoride.



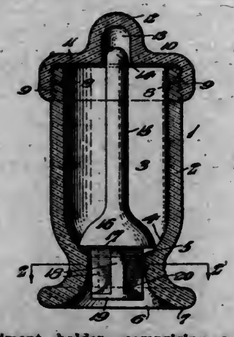
1,480,929. OBJECTIVE FOR PHOTOGRAPHIC AND LIKE PURPOSES. LIONEL B. BOOTH, Cambridge, England. Filed July 22, 1920. Serial No. 398,046. 6 Claims. (Cl. 88—57.)

1. In a telephoto objective corrected for spherical aberration, coma, astigmatism, curvature, and chromatic aberrations, having a large relative aperture and a large useful field, the combination with a front component comprising a biconvex first lens of glass having a refractive index for the D-line of the spectrum of at least 1.54 cemented to a biconcave second lens of glass of refractive index greater by at least 0.03 than that of said first mentioned glass, and a back component comprising a third lens cemented to a fourth lens of which third lens the surface nearest the front component is dispersive and the cemented surface is plane.



1,480,930. SUPPORT. MINNIE A. BULLARD, Waverley, Mass. Filed Jan. 14, 1922. Serial No. 529,122. 1 Claim. (Cl. 5—327.)

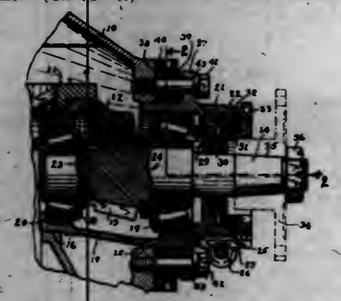
In a foot rest for invalids, a pair of symmetrical rectangular frames comprising four connected side members, collars fitted over said side members near the corners thereof, extensions on said collars to form jaws, a pin extending through said jaws, links fitting in said jaws and engaged by said pin, a tubular link for engaging the free end of each of a pair of links extending from the opposite frames to form spacer members, whereby the relative position of the frame may be adjusted, means for adjusting said spacer members, a cover for



one of said frames, and means for securing the foot rest to the frame of a bed whereby the foot rest may be secured at various positions.

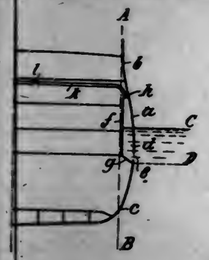
1,480,931. FILLING-REPLENISHING LOOM. THOMAS L. CHAPMAN, Bondsville, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 6, 1923. Serial No. 611,154. 9 Claims. (Cl. 139—261.)

1. In a filling replenishing loom, the combination of the lay, a shuttle box having an opening for the discharge of a filling carrier, a brush mounted on the lay and intersecting the path of the filling carrier as it is discharged from the shuttle to catch the filling and prevent it being drawn into the shed when the shuttle is again picked.



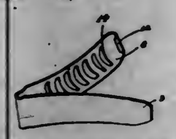
1,480,932. CONDIMENT HOLDER OR SALT SHAKER. ELBERT A. CORBIN, Jr., Swarthmore, Pa. Filed May 10, 1923. Serial No. 637,988. 5 Claims. (Cl. 65—57.)

1. A condiment holder, comprising a body, a top therefor having a central recess therein open at its bottom, a gravity seated valve contained in said body and having a pendant wing extending through the lower opening of said body, to guide the lower portion of said valve, and a valve stem for said valve having its upper



end extending into the recess in said cap, whereby the upper and lower portions of said valve are always centrally positioned and guided with respect to said body.

1,480,933. AXLE. ELI V. ELCONIN, Cleveland, Ohio, assignor, by mesne assignments, to The Eaton Axle & Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 2, 1922. Serial No. 579,110. 5 Claims. (Cl. 74—7.)

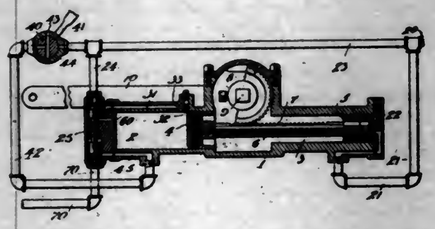


1. In axle construction, the combination of a housing having an opening for a pinion shaft, a cage for carrying said shaft and its bearings and having a shoulder arranged exteriorly of said housing, and a pair of members threaded together and cooperating with said shoulder and said housing for the purpose of adjustably locating said cage axially.

1,480,934. MARINE VESSEL. HERMANN GUSTAV CARL FRAHM, Hamburg, Germany. Filed Jan. 24, 1922. Serial No. 531,514. 3 Claims. (Cl. 114—125.)

1. A marine vessel having its main plating curved outwardly between the deck height and bilge, the centre of curvature being substantially on the normal water line of the vessel, a longitudinal bulkhead fitted internally to said main plating so as to enclose a space between the curved plating and bulkhead and apertures in said curved plating for the free ingress and egress of water to and from said space.

1,480,935. BARRETTE. DORA P. GLEASON, Cincinnati, Ohio. Filed Apr. 3, 1922. Serial No. 548,899. 3 Claims. (Cl. 232—48.)

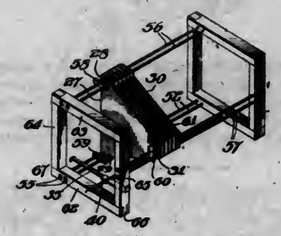


1. As a new article of manufacture, a flexible barrette having a front and a back adapted to be secured upon one another at their ends, the front having transverse slots, thereby being weakened in relation to the back, whereby the back is given the greater rigidity against flexing.

1,480,936. PUMP-VENT CONTROL. IVAN GONDER, Bendon, Mich. Filed Apr. 3, 1922. Serial No. 548,935. 3 Claims. (Cl. 137—34.)

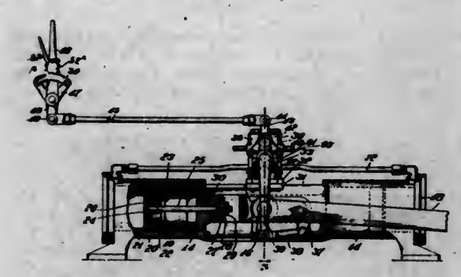
1. In combination a pipe having a vent opening in one side, a clamp surrounding the pipe at said opening, one side of the clamp having a relatively large recess therein at the vent opening and having an outlet opening in its side communicating with the recess, a pet cock attached to the clamp in said outlet opening, said pet cock including a rotatably mounted valve, a tube attached to the valve and extending upwardly therefrom, a rod telescoping into the upper end of the tube and provided with an operating handle at its upper end, and means for connecting the rod to the tube at a number of different places to thereby adjust the combined length of the tube and rod, substantially as described.

1,480,937. PNEUMATIC MOTOR. ALBERT GOTTSCHALK, New York, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Aug. 6, 1918. Serial No. 248,652. 7 Claims. (Cl. 121—44.)



1. A pneumatic motor comprising differential cylinders, a piston for each of said cylinders, a piston rod connecting said pistons, means for normally maintaining a supply of fluid pressure to both of said cylinders, a valve for controlling the supply of fluid pressure to, and the exhaust of the same from the cylinder of larger diameter for initiating the operation of said motor, and fluid pressure actuated means for shifting said valve.

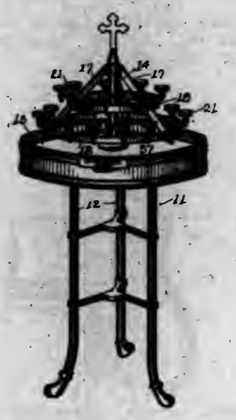
1,480,938. ADDRESS GUIDE FOR LETTERS. RICHARD F. HALLADAY, Newton Highlands, Mass., assignor of one-half to Arthur W. Harrison, Boston, Mass. Filed Mar. 9, 1922. Serial No. 542,314. 2 Claims. (Cl. 282—28.)



1. A guide sheet for use behind a sheet on which a letter is to be written to be enclosed in a window envelope, said guide sheet having an address-location indicator of contrasting color in a limited position relatively to an upper left-hand corner thereof, whereby the said sheet, when assembled with a letter sheet and with the upper left-hand corners of the two sheets in substantial registration, will indicate the correct location for an address on the letter sheet to enable said address to be read through the window of a window envelope.

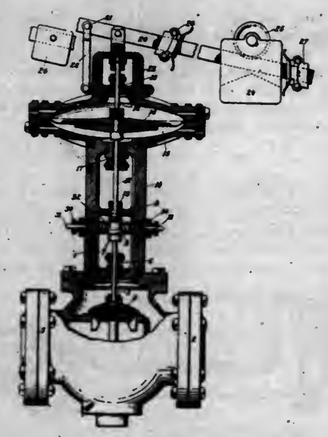
1,480,939. RECORD CONTAINER AND EJECTOR. EELE H. HAND, Stapleton, N. Y. Filed Nov. 29, 1921. Serial No. 518,568. 5 Claims. (Cl. 211—16.)

2. In a device of the character stated, a compartment for a record container and ejector having its walls formed by partitions, provided with upper and lower tongues, the rear top and bottom edges of said partitions converging rearwardly and meeting to form a rear tongue, fastening devices for said tongues and an ejector lever positioned in the bottom of said compartment and fulcrumed at a point at the rear of its center of gravity and adapted to support records during their insertion and ejection, said lever being widened at the rear of its fulcrum.



1,480,940. SERVO-MOTOR MECHANISM. LINCOLN A. LANG, Philadelphia, Pa., assignor to The Northern Trust Company, trustee, Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1919. Serial No. 282,611. 10 Claims. (Cl. 121—41.)

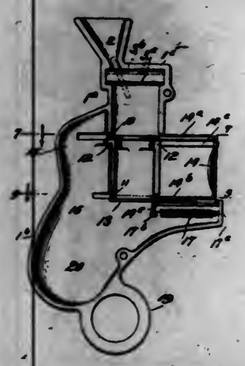
1. In a servo motor mechanism, a load-member, a source of power for moving said load-member, four links pivotally connected together to form the sides of a parallelogram, one of said links constituting an operating arm; power controlling mechanism operated by said arm, another of said links constituting a rocking arm operated by the load member, and a manually operated member suitably connected to said parallelogram to change the shape thereof and thereby rock said operating arm.



1,480,941. VOTING STAND. LEO R. LE TANG, Cincinnati, Ohio. Filed Aug. 21, 1922. Serial No. 583,449. 5 Claims. (Cl. 67—25.)

1. In a votive stand, the combination with a support, of a bracket comprising a shank, a flange at the upper end of said shank and a flange at the base of said shank, a candle holder secured to said upper flange, said second-named flange received across the bottom of said support,

a washer having sliding connection with said shank, and a screw clampingly connecting said washer and said second-named flange with said support between said washer and said second-named flange.



1,480,942. RELIEF VALVE. WILLIAM MCKEE, Pittsburgh, Pa., assignor to The Chaplin-Fulton Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1919. Serial No. 343,528. 5 Claims. (Cl. 137—139.)

1. Relief valve mechanism including a casing having an inlet and an outlet, a valve controlling such inlet and outlet, a diaphragm and a chamber therefor, said chamber being connected on the upper side of said diaphragm with the outlet of a main conduit and on the underside of said diaphragm with the inlet of a main conduit, a connection between said diaphragm and said valve for opening said valve when the differential pressure on said diaphragm has reached a maximum and for closing said valve when the differential pressure is at a minimum, and means cooperating with the maximum pressure on said diaphragm to permit a quick opening of the valve and for quickly closing said valve when the differential pressure is at a minimum, such means

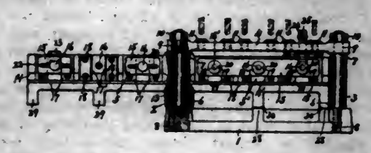
in part being adjustable to regulate the maximum and minimum differential pressures at which said valve shall open and close.

1,480,943. FARE REGISTER. SOREN MADSEN, Astoria, N. Y. Filed Feb. 25, 1922. Serial No. 539,144. 7 Claims. (Cl. 235—32.)

1. A fare register embodying, in combination, a casing provided with a cylindrical coin chamber having a transversely disposed shelf on which a coin dropping through said chamber is adapted to rest preparatory to registration, said casing also having a coin delivery opening adjacent to said shelf, means movable transversely of the axis of the chamber across said shelf to move a coin edgewise through said delivery opening and means for registering said coin during such edgewise movement thereof.

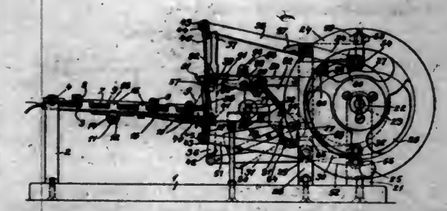
7. A fare register embodying, in combination, coin registering means and a fraud preventative device comprising a coin chute, a housing beneath said coin chute and having a communicating slot therebetween, a flat vertically movable plate seated in said housing and having a slot extending parallel to the said chute slot but out of alignment therewith.

1,480,944. BURNER. CHARLES D. MORGAN, Albany, N. Y., assignor to Rathbone, Sard & Co., Albany, N. Y., a Corporation of New York. Filed June 17, 1918. Serial No. 240,294. 2 Claims. (Cl. 158—117.)



1. A burner for a gas range consisting of an air mixing chamber comprising a tube shaped in elbow form with gas and air connections and controls at point of connection, and an outlet port having bevelled edges and having a lip constructed on the lower edges substantially as described; a burner head comprising a solid flat disc mounted above the outlet port and having its edges bevelled so as to make the lower surface of lesser diameter than the upper surface; a bolt adjustably mounted in base of mixing chamber and supporting the disc, the said disc forming a continuous orifice between the mixing chamber and the burner head for the ignition of the gas and air mixture.

1,480,945. SAFE-DEPOSIT-DOOR CONSTRUCTION. WILLIAM P. MOSELEY, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed July 9, 1923. Serial No. 650,877. 4 Claims. (Cl. 16—128.)

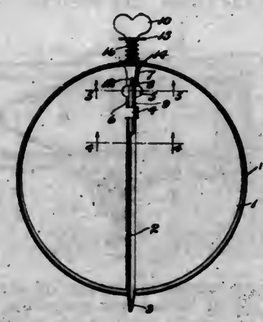


1. The combination with a door, of a hinge therefor, comprising a door-leaf having mortise connection with the door, and a jamb-leaf having hinge connection with the door-leaf and also having mortise connection with the door-leaf when the door is in closed position.

1,480,946. COMBINED JIG AND WORK SUPPORT. LLOYD W. MOULTON, Syracuse, N. Y., assignor of one-half to Oscar C. Kavle, Syracuse, N. Y. Filed Oct. 20, 1920. Serial No. 418,299. 5 Claims. (Cl. 77—62.)

1. The combination of a jig-frame having a jig-plate provided with a plurality of tool guides, and a plurality of work-supports hinged to said frame to swing to and from a position beneath the jig-plate, and each provided with means for holding the parts of the work to be operated upon in position to register with the tool guides when moved to a position beneath the jig-plate.

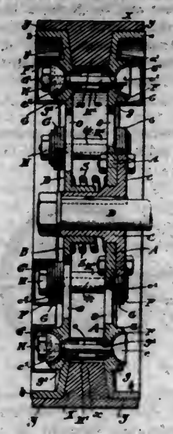
1,480,947. MACHINE FOR FOLDING PAPER OR OTHER MATERIAL. HEINRICH JULIUS MÜLLER, Schaffhausen, Switzerland. Filed Apr. 7, 1921. Serial No. 459,450. 24 Claims. (Cl. 270—79.)



1. In a machine for folding paper or other materials, in combination a hinged guide for the strip to be folded, a pair of reciprocating, spring pressed folding plates one alternately overlapping the other, a follower capable of being pushed backward by the bulk of folded strip and forward by a source of power, a jam arranged on the follower and adapted to grip the front end of the strip, a casing for the folded strip and the follower, a door permitting removal of the folded strip from the casing and means operable by the door to release the strip and the follower of the pressure of the source of power when the door is opened, to allow removal of the strip, and to restore the action of the source of power and to push forward the follower when the door is closed.

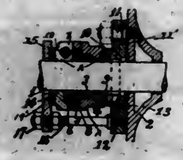
1,480,948. ATTACHING MEANS FOR PULLEYS OR THE LIKE. THOMAS OLINGER, Holland, Mich., assignor, by mesne assignments, to Federal Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed Sept. 28, 1922. Serial No. 591,197. 3 Claims. (Cl. 254—195.)

2. In a construction of the class described, a housing formed from a single piece of sheet metal, bent between its ends into a cylindrical loop having an opening in its upper side, the metal from which the loop is formed being continued at the lower side of the loop in two downwardly extending parts located side by side, thence each being bent outwardly for a distance and then downwardly to make two spaced apart parallel sides, a pulley rotatably mounted between said sides, and a T-head element having a head located within the loop and a shank passing through said opening in the loop.



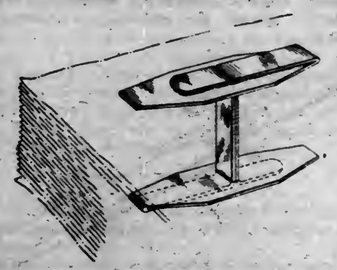
1,480,949. DAMPER. THOMAS OLINGER, Holland, Mich., assignor, by mesne assignments, to Federal Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed May 6, 1922. Serial No. 558,870. 3 Claims. (Cl. 126—292.)

1. A damper comprising a flat circular member of sheet metal having a rib pressed therefrom across and on a diameter of the member, said rib being extended beyond the edge of the member at one end to make a short projection, and integrally formed means stamped from the member at the side thereof diametrically opposite said projection for the detachable reception and connection of an operating member to said member.



1,480,950. GRIP PULLEY. OSCAR STYLES PENN, London, England, assignor to Roadless Traction, Limited, London, England. Filed Dec. 11, 1922. Serial No. 606,193. 13 Claims. (Cl. 64—40.)

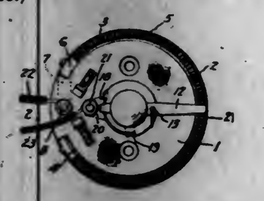
1. A grip pulley adapted to be associated with a belt having a part to be gripped, and comprising a plurality of members having belt gripping parts at least one of which is mounted to revolve at all times with a centrally



arranged axle, and another member mounted to turn about a fixed axis independently of the axle, and link connections between the two members.

1,480,951. PACKING. WILLIAM EDGAR PLUMMER, WILLIAM MARSDEN KERMODE, and CHARLES ST. CLAIR PLUMMER, Bradford, England. Filed Aug. 28, 1920. Serial No. 406,543. 3 Claims. (Cl. 286—7.)

1. A packing comprising a gland housing, a shaft, means to connect said gland housing to the shaft to rotate with it, a packing within said gland housing, a stationary casing, an element having a spherical surface and also a surface radial to the shaft, a ring having parallel surfaces radial to the shaft, one surface co-operating with the similar radial surface on the said element whilst the other radial surface and the spherical surface on said element co-operate respectively with similar surfaces on said gland housing and stationary casing.

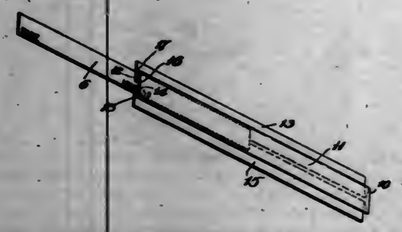


1,480,952. PAPER FASTENER. FRANCIS JOHN POTTER, London, England. Filed Nov. 16, 1920. Serial No. 424,426. 2 Claims. (Cl. 24—153.)

2. In a two-part paper fastener whereof each part comprises a head and a straight, pliable tongue extending therefrom, the head of one part being apertured to

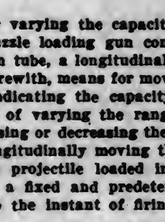
receive the tongue of the other part, a blank forming one part thereof comprising a straight metal strip which is broadened at one end to form a head, the broadened portion being provided with an aperture adapted to permit the passage therethrough, both of the straight portion of said blank and of the similar portion of the other part of the fastener.

1,480,953. RHEOSTAT. GORDON A. REAM, Detroit, Mich. Filed Mar. 5, 1921. Serial No. 449,645. 5 Claims. (Cl. 219—55.)



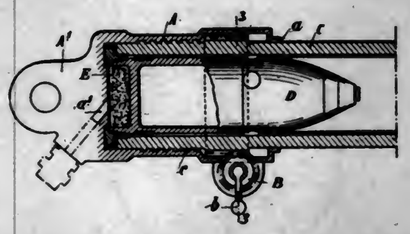
1. In a rheostat, a main resistance element, a secondary resistance element, an insulator block on which the secondary resistance element is carried, a contact member for the main resistance element carried on the said block, a shaft on which the block is mounted, a contact member for the secondary resistance element supported on the said shaft.

1,480,954. COOLING DEVICE FOR OILS. CHARLES E. RICE, Sanford, Fla. Filed Nov. 14, 1922. Serial No. 600,981. 2 Claims. (Cl. 257—192.)



2. In combination, a jacket having a flange at one end, a coil disposed within the jacket, a drum having a flange at one end opposite the flange on the jacket, said drum disposed within the coil and the jacket, means for engaging the flanges so as to hold the jacket and drum together, and form a compartment therebetween, a plurality of tubes extending transversely of the drum and communicating with said compartment and an extension at one end of the drum.

1,480,955. VISIBLE INDEX. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to Globe Wernicke Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 14, 1923. Serial No. 632,097. 1 Claim. (Cl. 40—64.)

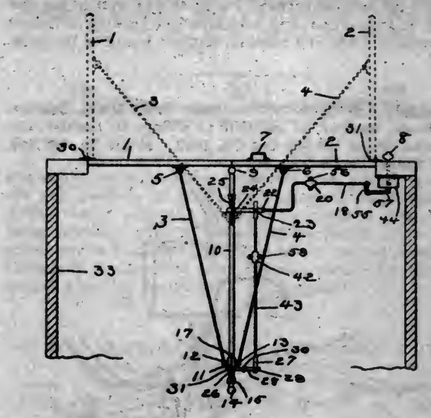


An index support for a visible inedx, comprising a strip of transparent material folded to form a pocket to receive the index and deflected in opposite directions to extend above and below said pocket to thereby form an upper and a lower locking flap.

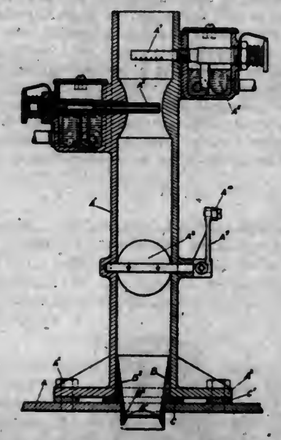
1,480,956. LATCH FOR GATES. VERN F. ROBINSON, Cope, Colo. Filed May 9, 1922. Serial No. 559,540. 1 Claim. (Cl. 292—87.)

In combination, a door having a notch in one edge, a bracket disposed on the door adjacent the notch and provided with a pair of spaced aligned sleeves, a latch mechanism including a spring bar flat in formation fixed to the door and provided with an extension circular in cross section passing through one of the sleeves, a U-shaped latch formed by the extension and passing through the notch of the door, a second extension formed on the latch and passing through the other sleeve, and operating means formed on the second mentioned extension so as to rotate the latch in the manner and for the purpose specified.

1,480,957. DEVICE FOR PERMITTING VARIATION OF THE CAPACITY OF EXPLOSION CHAMBERS IN GUNS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed June 29, 1923. Serial No. 648,555. 10 Claims. (Cl. 89—1.)



2. A device for varying the capacity of the explosion chamber of a muzzle loading gun comprising, in combination with a gun tube, a longitudinally movable obturator associated therewith, means for moving said obturator, and means for indicating the capacity of said chamber.

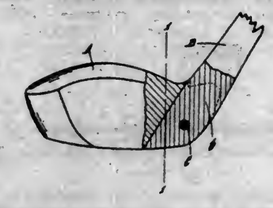


5. The method of varying the range of a gun which consists in increasing or decreasing the explosion chamber of the gun by longitudinally moving the obturator thereof, relative to a projectile loaded into said gun, said projectile having a fixed and predetermined position in said gun prior to the instant of firing.

1,480,958. LOCKING DEVICE FOR GARAGE DOORS. JOHN SCHNEIDER, Cleveland, Ohio, assignor of one-twentieth to Christ Saussier, Cleveland, Ohio. Filed June 20, 1922. Serial No. 569,588. 2 Claims. (Cl. 70—14.)

1. In a device of the class described, the combination of a double door, a rod attached to each door, a center rod upon which said door rods slide, two locking devices mounted upon said center rod, one of said locking devices serving to lock the doors when closed and the other serving to lock the doors when open.

1,480,959. REATOMIZER. JOHN A. SECOR, Laporte, Ind., assignor to Advance-Rumely Company, Laporte, Ind., a Corporation of Indiana. Filed June 30, 1919. Serial No. 307,682. 5 Claims. (Cl. 48—180.)



5. An atomizer and mixer comprising a Venturi tube formed within the mixture passage of an internal combustion engine, having an annular channel in the interior wall thereof, said channel being closed at its bottom and being situated at the smallest diameter of the venturi, and opening towards the incoming mixture.

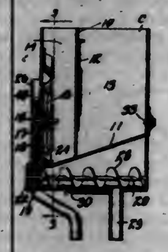
1,480,960. WHEELED RIDING HARROW. GEORGE H. SHANE, Denver, Colo., assignor of one-half to Lot P. Breen, Denver, Colo. Filed Aug. 27, 1921. Serial No. 495,879. 1 Claim. (Cl. 55—89.)

A harrow comprising a plurality of sections, a frame of substantially rectangular shape, an axle extending longitudinally of said frame, wheels on the ends of said axle, a tubular roller on said axle corresponding to each harrow section, a toothed wheel on each of said tubular rollers, a handle pivotally connected to the rollers near said wheel whereby a movement of the handle will rotate the roller, a pawl secured to said frame and adapted to engage the toothed wheel to hold the roller from rotating, means comprising a spring for holding said pawl against said toothed wheel, a handle secured to said pawl and adapted to be engaged by the foot for moving the pawl out of engagement with said wheel, flexible means connected to the harrow sections and wrapped about the rollers whereby when said flexible means are wrapped about the roller, the sections will be raised, a tongue secured to the frame, a draft bar secured to the tongue, and means for connecting the harrow sections to the draft bar.

1,480,961. GOLF CLUB. WILLIAM PERCY SMITH, Southwark, London, England, assignor to W. P. Smith Sports Company Limited, Holborn, London, England. Filed Oct. 12, 1920. Serial No. 416,468. 1 Claim. (Cl. 46—4.)

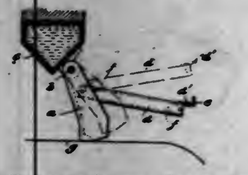
A golf club consisting in the combination of a wooden head having an open ended slotted recess in the heel thereof extending from top to bottom, a wooden shaft shaped to fit and completely fill said recess which has substantially the same width and depth in a direction measured from the heel towards the toe of the head as the diameter of said shaft and means for securing the head and shaft together.

1,480,962. WINDOW-SHADE ROLLER. ADDISON J. SOUDERS, East Akron, Ohio. Filed Oct. 28, 1922. Serial No. 596,825. 2 Claims. (Cl. 156—36.)



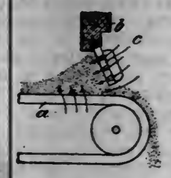
2. The combination with a curtain roll having a central bore, a rod located in the bore and a spring carried by the rod, one end of the spring being anchored to the rod, of a cap having a central opening, a plate spaced from the cap, tongues formed on the cap for connecting the cap and plate, pawls mounted on the tongues between the cap and plate, and oppositely disposed members formed from the metal of the plate for anchoring the other end of the spring, each of said members comprising a tongue reversely bent longitudinally of the axis of the roll to form a hook, and bent circumferentially of the roll to conform to the shape of the springs.

1,480,963. SEED PLANTER. GEORGE F. SPROULL, Montgomery, Ala. Filed Nov. 18, 1920. Serial No. 424,953. 4 Claims. (Cl. 221—122.)



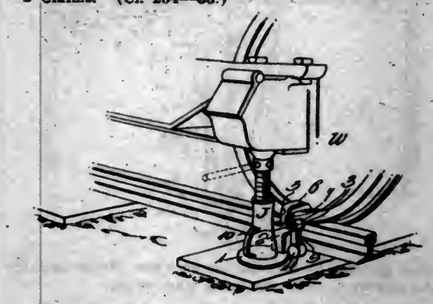
1. A seed dispenser comprising a hopper, parallel vertically spaced shafts in the hopper, a feed wheel on the upper shaft adapted to feed to a discharge opening in the wall, a screw conveyor on the lower shaft adapted to

feed to another discharge opening, gearing connecting said shafts for driving one from the other, and means



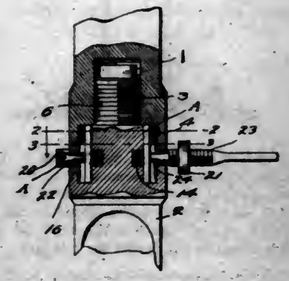
whereby said devices are adapted to feed seeds of different character alternatively to the respective discharge openings, substantially as set forth.

1,480,964. TRAVELING-GRATE FURNACE. LEBRECHT STEINMÜLLER, Gummersbach, Germany. Filed Feb. 11, 1921. Serial No. 444,226. 4 Claims. (Cl. 110—40.)



4. In a traveling grate furnace, the combination of the traveling grate, and a fire bridge above the same adjacent its discharge end, the lower edge of the bridge being spaced above the grate to provide ample opening for the passage of clinkers, of means for maintaining a bank of fuel on the grate adjacent said wall, said means including a plurality of aligned and relatively movable suspended gate members, which means, together with the bank of fuel substantially closes the said opening against the ingress of free oxygen into the combustion space, gravity actuated means connected to each gate member and designed and constructed to cause said gate member to resist the passage of ashes with a variable force, and manually operable means for simultaneously moving all of said gate members either to closed or opened position.

1,480,965. TRAVELING-GRATE FURNACE. LEBRECHT STEINMÜLLER and MAX GENSCH, deceased, Gummersbach, Germany, by Else Gensch, born Seeger, executrix, Gummersbach, Rhine, Germany. Filed Feb. 11, 1921. Serial No. 444,227. 3 Claims. (Cl. 110—40.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

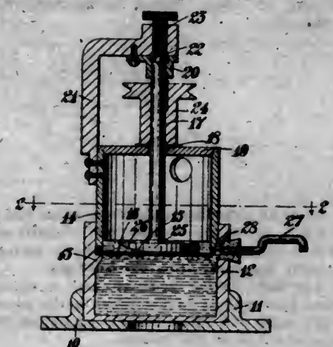


1. In a traveling grate furnace, the combination with the traveling grate, of a wall overhanging the discharge end thereof and having its lower edge so spaced therefrom that ample opening is provided for the egress of ashes and clinkers, a plurality of members supported adjacent said wall each extending into the body of fuel on the grate and each independently yieldingly opposing movement of fuel towards the discharge end thereof, said members being designed and constructed to cooperate in maintaining a bank of fuel on said grate beneath said wall which, together with said members, substantially closes the opening between the grate and wall to the passage of free oxygen and said members yielding to permit passage of ashes and clinkers, without releasing the bank.

1,480,966. WHEEL DOG. BERT STOCKWELL, Tacoma, Wash., assignor of one-half to George H. Garrish, Tacoma, Wash. Filed Oct. 26, 1922. Serial No. 597,156. 2 Claims. (Cl. 254—33.)

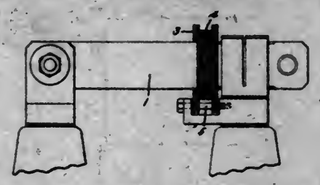
1. A device of the class described comprising a base-plate to support a lifting jack, a hollow vertical post integral with and rising from said base-plate, the upper end of said post having a pair of spaced parallel laterally extending ears, a vertical shank slidable in said hollow post and having a laterally extending jaw at its upper end, one side of said shank having upwardly facing ratchet teeth at the side of the post provided with said ears, an upright arm having its upper end received between said ears and provided with a downwardly beveled lateral nose engaging said ratchet teeth, and a pivot pin passing through said ears and arm to pivotally mount the latter, the lower end of said arm being weighted to normally hang vertically against said post, positively preventing swinging of said arm when an upward pull is exerted on said shank.

1,480,967. WELL-DRILL COUPLING. WALTER STOFFEL, Greenleaf, Kans. Filed Feb. 28, 1923. Serial No. 621,888. 4 Claims. (Cl. 287—125.)



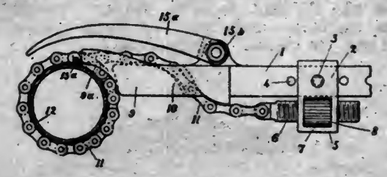
1. In combination, a pair of members associated in rotatable relation with each other, one of said members provided with a ratchet structure, a pawl associated with the other member for engagement with the ratchet structure, said latter mentioned member provided with a pair of recesses, said pawl provided with a stem disposed in one recess and a pintle disposed in the other recess, a spring disposed in the recess containing the stem and normally urging the pawl in engagement with the ratchet structure, and means for engaging the stem for moving it and actuating the pawl from engagement with the ratchet structure so that the members may be rotated.

1,480,968. ELECTRICAL CONTACT DEVICE. SAMUEL S. STOLP, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Dec. 26, 1922. Serial No. 608,820. 11 Claims. (Cl. 246—254.)



3. A contact device comprising a pair of adjacently disposed contact members insulated and spaced apart, the end portions of the contact members being spaced farther apart than the intermediate portions and each being provided with a vertical flange which as it approaches the intermediate portion of the contact member changes from a vertical to an obliquely disposed flange to receive a moving contactor.

1,480,969. DISINTEGRATING SOLID SUBSTANCES. DAVID THOMSON, London, England, assignor to Nutriment Limited, London, England, a British Company. Filed July 27, 1923. Serial No. 654,236. 4 Claims. (Cl. 146—175.)

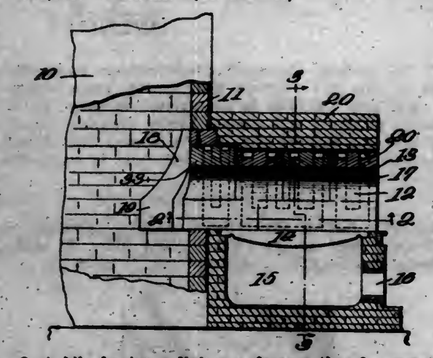


1. The method of disintegrating solid substances consisting in grinding the substance against a plate that is perforated with small holes and is immersed in a fluid, and withdrawing the disintegrated substance in suspension in the fluid after it has passed through the perforations in the plate.

1,480,970. ELECTRIC SWITCH. HENRY TRENCHAM, Ruislip, and EDMUND BASIL WEDMORE, London, England, assignors to General Electric Company, a Corporation of New York. Filed Oct. 4, 1921. Serial No. 505,306. 3 Claims. (Cl. 200—169.)

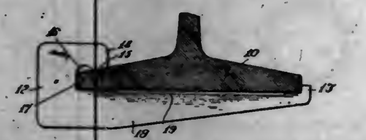
1. The combination in an electric switch of a switch blade, and a shoe of magnetic material at least partially surrounding the switch blade through which a magnetic flux is set up varying in value with the value of the current through the switch blade, the interaction of the current through the said blade and the flux set up in said shoe providing a magnetic force varying with the value of current through the said blade for holding the switch blade in closed circuit position.

1,480,971. WRENCH. ARCHIBALD L. WALLACE, New York, N. Y. Filed July 21, 1921. Serial No. 486,487. 7 Claims. (Cl. 81—66.)



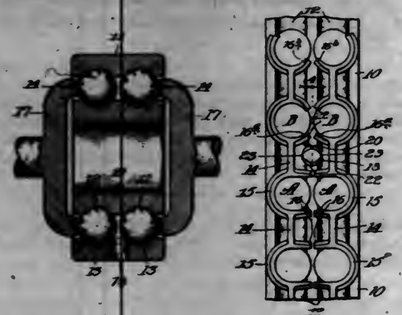
1. A wrench comprising a flexible member capable of embracing a work object, a lever, longitudinally adjustable means upon said lever to engage said flexible member at one end thereof, and fixed means upon said lever to engage the other end of said flexible member, with said member extended in a straight line from said fixed means for a portion of its length, whereby the opposed pull and thrust forces are exerted tangentially in the same plane with respect to the peripheral surface of said work object.

1,480,972. WRENCH. ARCHIBALD L. WALLACE, New York, N. Y. Filed Nov. 21, 1922. Serial No. 602,381. 7 Claims. (Cl. 81—66.)



3. The combination, in a wrench having a hollow handle, of a block, having guide means, fixed within said handle, a bar slidable through the guide means, a flexible member engaged with said bar and extended beyond the handle, and a spring operable between the block and bar to extensibly retain the flexible member partly within the handle.

1,480,973. KILN-HEATING DEVICE. WILBURT WARD, Trident, Mont. Filed June 29, 1923. Serial No. 648,448. 3 Claims. (Cl. 222—3.)

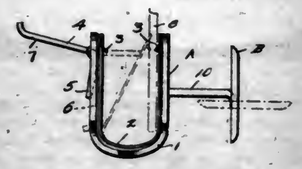


3. A kiln having a lining, a furnace therefor comprising a chamber, an arch for said chamber, air channels in said arch extending transversely thereof, certain of said channels communicating adjacent to the spring of the arch to provide a tortuous passage through said channels, means for admitting air to said channels at one end of the arch, means for admitting steam to said channels at an intermediate portion of the arch to provide a forced feed of a mixture of steam and air, means for conducting the air from the channels adjacent the remaining end of the arch to the burning fuel in the furnace and a supplemental arch above said first named arch acting as a support for the lining of the kiln when the first named arch is removed for repairs.

1,480,974. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 17, 1922, Serial No. 561,603. Divided and this application filed Mar. 14, 1923. Serial No. 624,930. 16 Claims. (Cl. 238—330.)

1. A rail anchor comprising a sheet metal member provided at one end with a jaw portion for engaging one edge of a rail base, and at the other end with means for engaging the other edge of said rail base; a portion of the member intermediate said jaw and said means being resilient and adapted to be flexed downwardly during the application of the anchor to a rail.

1,480,975. METHOD OF ASSEMBLING BALL BEARINGS. HARRY WICKLAND, Philadelphia, Pa., assignor to U. S. Ball Bearing Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1923. Serial No. 631,144. 6 Claims. (Cl. 29—84.)



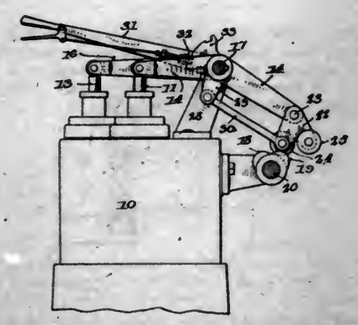
1. The method of assembling ball retainers on parallel sets of balls in a two row ball bearing, which consists in assembling the balls in the parallel raceways of the bearing, placing a ball retainer having inwardly projecting ears over each set of balls, and bending ears of both retainers simultaneously around the balls to retain the retainer thereon.

1,480,976. PATCH FOR INNER TUBES. CHARLES C. WIGHT, San Antonio, Tex. Filed Mar. 30, 1922. Serial No. 548,099. 2 Claims. (Cl. 152—26.)

2. A cementless patch for inner tubes comprising an outer layer of cured rubber, an adjacent layer of raw gum or rubber, a layer of adhesive or cushioning rubber adjacent said layer of raw or gum rubber, and a protecting layer of glazed canvas, the layers of cured rubber and raw gum or rubber being vulcanized together.

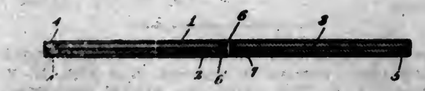
1,480,977. COLLAR FASTENER. CHARLES D. WILKINS, Wheeling, W. Va. Filed Apr. 19, 1923. Serial No. 633,217. 2 Claims. (Cl. 24—80.)

1. A fastener of the class described including a clamp member comprising an outer U-shaped rigid frame, an inner U-shaped resilient frame disposed in the outer frame, and means on the outer frame for engaging the inner frame so as to force one of its legs toward the other, a bar projecting rigidly from one leg of the outer frame, and a button hinged to the terminal of said bar.



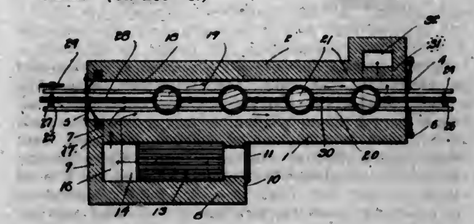
1,480,978. MOCCASIN. DONALD B. ABBOTT, Auburn, Me. Filed Aug. 18, 1922. Serial No. 582,576. 8 Claims. (Cl. 36—11.)

1. A moccasin including a tongue, a vamp and quarters and in which the tongue member has laterally extending parts which extend downwardly under the instep section and separate the vamp from the quarters.



8. A moccasin having quarters and a vamp and a continuous bandage-like part stitched to the quarters and also to the vamp and which entirely surrounds the instep section of the foot of the wearer.

1,480,979. REVERSING GEAR FOR INTERNAL-COMBUSTION ENGINES. OTTO A. BANNER, Milwaukee, Wis. Filed June 26, 1920. Serial No. 391,971. 9 Claims. (Cl. 123—41.)



1. In an internal combustion engine a reversing gear having a rotatable shaft, a valve actuating rocker element mounted thereon for rocking movement about a fixed axis, forward and reverse cams for selectively actuating said element, and means responsive to a rotation of said shaft for placing said rocker element under the influence of either of said cams.

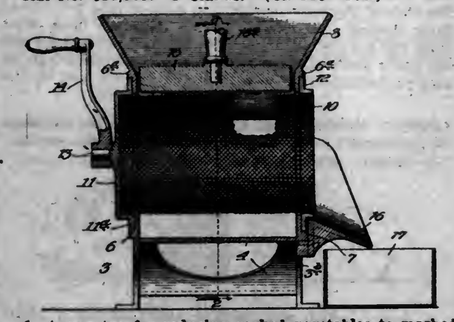
1,480,980. DISK SOUND RECORD. LESTER P. BARLOW, New Haven, Conn., assignor to Samuel Owen Edmonds, New York, N. Y. Filed Aug. 19, 1918. Serial No. 250,452. 4 Claims. (Cl. 274—41.)

1. As a new article of manufacture, a sound record comprising two separate complete relatively thin disks connected back to back.

1,480,981. BARREL HEATER. WILLIAM H. BARTON, Springfield, Mo., assignor to Ash Grove Lime & Portland Cement Co., Kansas City, Mo., a Corporation of Maine. Filed Mar. 6, 1922. Serial No. 541,460. 1 Claim. (Cl. 263—8.)

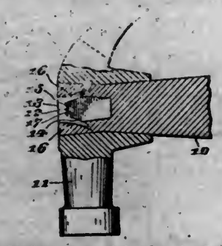
In a barrel heater, an elongated heating chamber having openings in its opposite ends and having ports in its opposite sides adjacent opposite ends of the chamber and below the level of the end openings, a combustion chamber in communication with one of said ports, a flue in communication with the other of said ports, automatically closing, swinging doors for the end openings, spaced rails extending through said chamber above the level of said ports, means at the ends of the chamber for supporting a conveyor belt, and a conveyor belt supported by said means and extending through the chamber between said rails.

1,480,982. GARDEN-HOSE SUPPORT. CLARENCE M. BEARD, Berkeley, Calif. Filed July 15, 1922. Serial No. 575,258. 1 Claim. (Cl. 248—29.)



A stake, a flat flexible member pivoted at the upper end of the stake at one end, the other end of said member being readily adjustable relative to said stake in order to support hose of different diameters between said member and the stake, said member being formed with a plurality of notches for receiving the stake therein, the hose when supoprted thusly being pressed against the stake on one side.

1,480,983. AUXILIARY COIN SUPPORT FOR COIN TUBES. ALBERT BECK, Chicago, Ill., assignor to McGill Metal Products Company, a Corporation of Illinois. Filed Oct. 13, 1921. Serial No. 507,580. 6 Claims. (Cl. 133—1.)



3. A longitudinally slotted coin tube, and coin supporting members distributed in said tube, said member having resilient arms adapted to spring against the inner peripheral surface of said tube to support stacks of coins in said tube independently of one another.

1,480,984. APPARATUS FOR AND METHOD OF REDUCING BOILED VEGETABLES TO MASHED FORM. ROBERT BELL, Chicago, Ill. Filed Jan. 24, 1923. Serial No. 614,585. 3 Claims. (Cl. 146—174.)

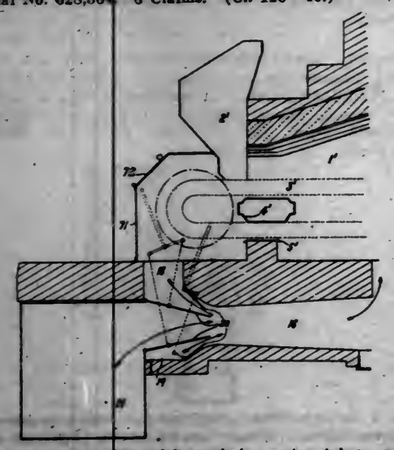
1. Apparatus for reducing cooked vegetables to mashed form, comprising a movably supported hollow cylinder having an unobstructed discharge end and formed from rounded wire-cloth having a substantially uniform vegetable mashing surface and presenting no sharp surfaces and of such fineness as to prevent the passing therethrough of particles of the peeling, eyes, or other unedible substances of the vegetables under treatment, the interior of said cylinder forming a receptacle for the edible portions of the vegetables, and means for feeding under pressure the boiled vegetables against the surface of said cylinder to reduce them to the smooth consistency of ordinary mashed potatoes and to pass the resultant product into the cylinder to accumulate therein in said form.

1,480,985. SPREADER STRUCTURE. JOSEPH R. BITTNER, Philadelphia, Pa., assignor to Griffith Tool Works, a Firm, Philadelphia, Pa., composed of Paul A. Griffith, William K. Wilson, Edward J. Griffith, and Charles F. Griffith. Filed Nov. 21, 1922. Serial No. 602,337. 3 Claims. (Cl. 306—33.)

1. A locking device comprising a wedge member, a separate locking element overlying the head of said wedge member and provided with flared portions dis-

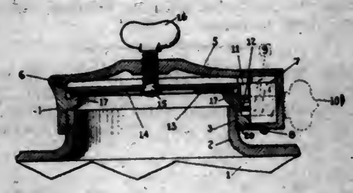
posed over the edges of such wedge member, and with an engaging surface that abuts against the head of the member, whereby the wedge member may be driven through the instrumentality of blows upon said locking element.

1,480,986. CONCRETE BUILDING BLOCK. DORRELL D. BRIGGS, Los Angeles, Calif. Filed Jan. 22, 1923. Serial No. 614,083. 2 Claims. (Cl. 72—41.)



1. A building block including a rectangular molded hollow body portion, projectings extending from opposite side walls thereof, having the ends offset inwardly from the ends of the body portion, the ends of said projections being formed with recesses having the inner faces offset from but parallel with the sides of the body portion and the outer walls inclined outwardly to the outer ends of said projections.

1,480,987. TOOL HOLDER. GEORGE Q. BRITT, Memphis, Tenn. Filed Mar. 17, 1923. Serial No. 625,765. 2 Claims. (Cl. 29—96.)



1. A tool-holder comprising a shank having a bifurcated extremity forming a head for reception of a bit, a bearing surface for the support of said bit, a removable jaw positioned within the head adapted to engage said bit, a shoulder projecting from said shank affording a fulcrum for said jaw, and a rotatable bolt extending through said head provided with a cam adapted to bear against said jaw to force the latter against said bit.

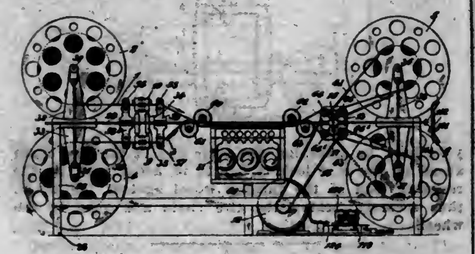
1,480,988. MECHANICAL STOKER FOR FORCED-DRAFT FURNACES. JOHANNES BRONOLD, Stelermuhle, Germany, assignor to The Babcock & Wilcox Company, New York, N. Y. Filed Mar. 28, 1923. Serial No. 628,364. 6 Claims. (Cl. 110—40.)

1. In combination with a chain grate stoker, means for supplying forced draft to the rear part of the grate, sealing means between said rear part and the front part of the grate, an enclosure for said front part, said enclosure, together with the sealing means, defining in part a chamber enclosing the end of the grate, and means for maintaining said chamber under diminishing pressure.

1,480,989. LOCK FOR GASOLINE TANKS FOR AUTOMOBILES. HOWARD H. BROOKER, New York, N. Y. Filed Feb. 9, 1923. Serial No. 617,936. 3 Claims. (Cl. 70—90.)

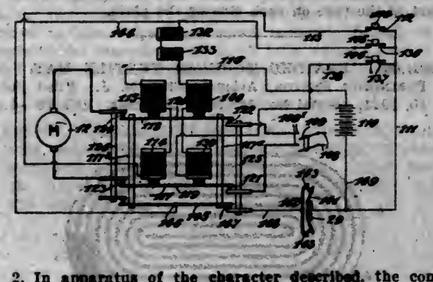
1. The combination with a gas tank of a cap suitably secured to said tank, said cap having a cover comprising a lower portion and a cover therefor, said cover being hinged to the lower portion, a lock mounted in said cover, a lock bolt operated by a key in said lock, there being a slot formed in said lower portion which permits the cover to be raised when the key is turned and a cross tongue on said bolt which prevents the withdrawal of the key except when the lock bolt is in locking position.

1,480,990. ADJUSTING MECHANISM. THEODORE M. BRUSCK, Rochester, N. Y., assignor to Ilex Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 7, 1922. Serial No. 541,886. 5 Claims. (Cl. 88—39.)



2. The combination with two members, one of which has the other operating therein and is provided with a longitudinally extending slot, of spaced projections on the inner member extending through said slot, and a disk-like gear mounted on the outer member to turn about an axis intersecting said outer member and having teeth cooperating with the projections to move the inner member longitudinally of the outer member.

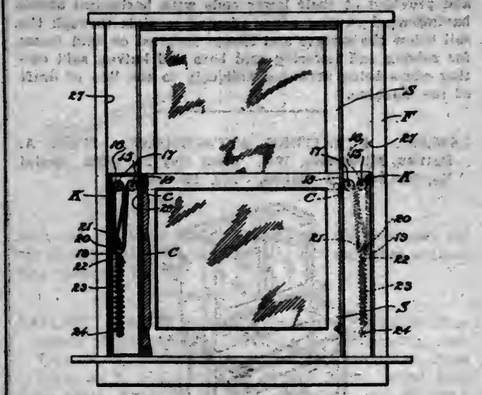
1,480,991. PLUG FOR GLASS MACHINES. CHARLES W. CASTO, Washington, Pa. Filed Nov. 7, 1922. Serial No. 599,507. 1 Claim. (Cl. 49—14.)



A plug for glass-machines, consisting of a metallic reinforcement provided with a series of perforations or openings, said reinforcement being filled with fire-clay which projects through the perforations or openings and adheres with the outside coating or covering, forming a smooth round plug proper, all substantially as shown and described.

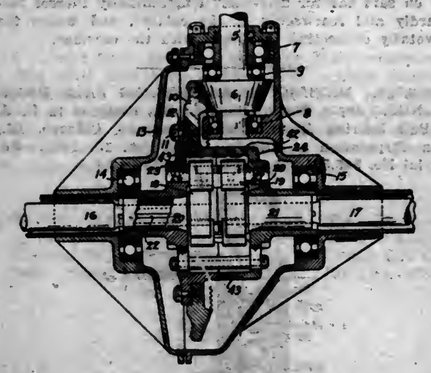
1,480,992. TALKING-PICTURE TRANSFER MECHANISM. HARRY E. CHIPMAN, New Haven, Conn., assignor, by direct and mesne assignments, to William A. Chipman and Howard H. Chipman, both of New York, N. Y. Filed Jan. 26, 1921. Serial No. 439,913. 4 Claims. (Cl. 88—16.2.)

1. In an apparatus for reproducing film carrying synchronized and registering sound and light records, the combination of means for continuously progressing a film having negative pictures thereon and also a magnetic sound record thereon, means for progressing at the same rate a positive film having a strip of magnetizable material thereon, means for printing positive pictures from said negative pictures on said positive film, and means for reproducing said magnetic sound record on said strip of magnetizable material, during the progress of said films.



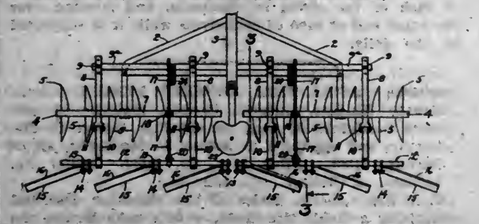
1,480,993. ELECTRIC-MOTOR-CIRCUIT CONTROL. HARRY E. CHIPMAN, New Haven, Conn., assignor to William A. Chipman and Howard H. Chipman, both of New York, N. Y. Original application filed Jan. 26, 1921, Serial No. 439,913. Divided and this application filed Mar. 1, 1922. Serial No. 540,124. 4 Claims. (Cl. 172—179.)

2. In apparatus of the character described, the combination of a motor, an electro-magnet having a pivoted armature, a source of power, a switch-controlled circuit for energizing said electro-magnet, means, including a spring-pressed pin, for latching said armature in its attracted position, a second electro-magnet having an armature secured to said pin, a power circuit for said motor including said first armature and a normally open contact which is closed when said armature is swung into its attracted position, and a switch-controlled circuit for energizing said second electro-magnet to retract said pin from latched position.



1,480,994. WINDOW-SASH BALANCE. IRA A. CHURCH, Long Beach, Calif., assignor to L. H. Smith and Daniel Smith, both of Fullerton, Calif. Filed Jan. 21, 1922. Serial No. 530,886. 3 Claims. (Cl. 16—198.)

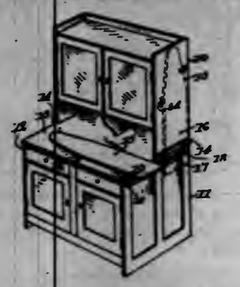
1. A sash balance, comprising a casing, pulleys mounted in the casing, a yoke within the casing, pulleys on the yoke, a flexible member trained about the first and second pulleys with the ends thereof adapted for connection with the sashes of a window, and a resilient member associated with the yoke for urging the pulleys



carried thereby to a position in which the flexible member is maintained under tension irrespective of the position of said pulleys.

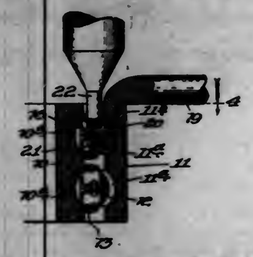
1,480,995. DIFFERENTIAL MECHANISM. HARRY WESTCOTT CONNELL, Lowville, N. Y. Filed Aug. 26, 1921. Serial No. 495,459. 16 Claims. (Cl. 74—7.)

1. A driving gear and means for rotating it and a driven gear, a plurality of pinions operated by said driving gear and in mesh with said driven gear though rotatable thereon and means within said pinion for preventing the rotation of said pinions.



1,480,996. WEED-CUTTING MACHINE. JOHN COPPINGER, Broadview, Mont. Filed Apr. 3, 1922. Serial No. 549,073. 2 Claims. (Cl. 97—144.1.)

1. The combination, with a frame and ground working implements mounted therein, of horizontal draft links pivotally connected at their forward ends with



said frame, transverse bars connected with the rear ends of said links, upright shanks mounted in said bars and provided at their lower ends with horizontal blades having weed cutting edges adapted to slide through the soil below the surface and means mounted on said frame for raising and lowering said bars and knives, said cutting edges being arranged obliquely to the line of draft of the machine.

1,480,997. FURNITURE ATTACHMENT. JAMES A. DAILEY, Milwaukee, Wis. Filed May 24, 1922. Serial No. 563,363. 6 Claims. (Cl. 68—10.)

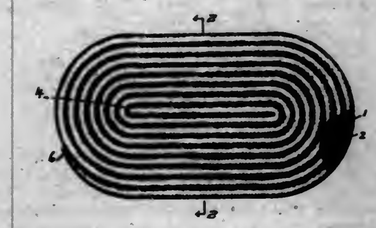
1. An attachment for kitchen cabinets, including an ironing board, a bar for mounting in fixed horizontal position adjacent the end of the cabinet, a carriage mounted on said bar for movement longitudinally thereof forwardly and rearwardly of the cabinet, and means for pivotally connecting the board with the carriage.

1,480,998. METHOD OF ASSEMBLING BALL BEARINGS. JOHN DARSE, Berwyn, Ill., assignor to U. S. Ball Bearing Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 10, 1922. Serial No. 535,581. 1 Claim. (Cl. 78—46.)

The method of assembling riveted retainers on the balls of two-row radial ball bearings having filling notches in the race members, said method consisting of placing the two halves of said retainer on the balls in one of the races with rivets extending outwardly through openings in the outer half of the retainer, inserting a dolly through the filling notch and up under the lower end of each of the rivets in succession and riveting over the upper end of each of said rivets while it is supported by the dolly.

1,480,999. AUTO TIRE NONSKID DEVICE. JOHN EARLE, Windsor, Ontario, Canada, assignor of one-third to Robert Y. Ogg, one-third to Robert O. McCarthy, and one-third to Arthur C. McCarthy, all of Detroit, Mich. Filed Mar. 22, 1922. Serial No. 545,893. 2 Claims. (Cl. 152—14.)

2. A tire non-skid device of the character described comprising a single tire chain, a felly yoke having one end of the chain permanently attached thereto, and provided with a closed ring at one end of the yoke and a hook at the other end thereof, a locking bar hinged to the closed end of the yoke, means for attaching the loose end of the locking bar to the hook end of the yoke, a covering for both yoke and locking bar to prevent marring the felly, means for locking said bar in the

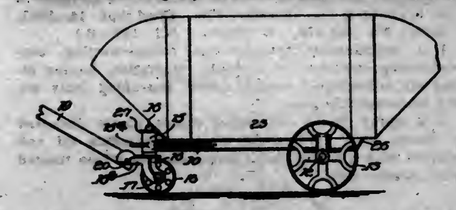


yoke hook by attaching the loose end of the tire chain ahead of the said locking bar to be acted upon by the resisting load of the turning wheel against the chain, thus securely locking the tire chain and yoke to the wheel.

1,481,000. METHOD OF MAKING BALL RETAINERS AND THE LIKE. PETRUS ERICKSON, Chicago, Ill., assignor to U. S. Ball Bearing Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 14, 1922. Serial No. 606,851. 7 Claims. (Cl. 29—148.4.)

1. The method of making ball retainers consisting of punching a series of holes in a metal plate, enlarging said holes to substantially the diameter of the balls, drawing the metal about said holes into tubular form, and forcing said tube through the plate so as to leave part of the tube on each side of the plate.

1,481,001. BRAIDED TUBULAR TEXTILE MAT. J. PURINGTON FENTON, Atlantic City, N. J. Filed Feb. 10, 1921. Serial No. 443,760. 2 Claims. (Cl. 28—1.)

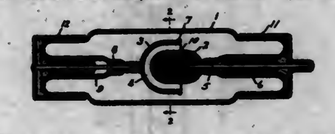


1. As a new article of manufacture, a table mat composed wholly of a strand of tubular textile braid having therein a non-integral core or filling consisting of longitudinally-disposed asbestos thread; and a series of transversely disposed connecting stitches, each of which engages the two opposite and vertically abutting edges of adjacent tubular members of the strand, in succession, in the series, and without substantial engagement with the core or filling therein.

1,481,002. TRUCK. HENRY L. FERRIS, Harvard, Ill., assignor to Hunt, Helm, Ferris & Co., a Corporation of Illinois. Filed Oct. 31, 1919. Serial No. 334,766. 3 Claims. (Cl. 280—49.)

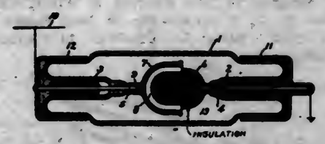
1. In a truck, a frame, two rear ground engaging wheels carried by said frame, a front wheel carried by

a member having a vertical journal in said frame and a removable box hingedly and detachably secured by lugs



at the rear end of the frame and having a member engaging said first mentioned member at the front end of the frame.

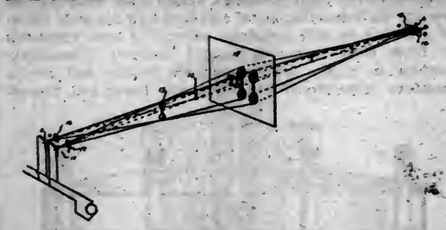
1,481,003. HYPOCHLORITE COMPOSITION. RALPH E. GRUENHEIMER, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed July 12, 1922, Serial No. 574,554. Renewed Aug. 8, 1923. 4 Claims. (Cl. 23—11.)



1. A composition comprising stable calcium hypochlorite and sodium carbonate admixed in reacting proportions.

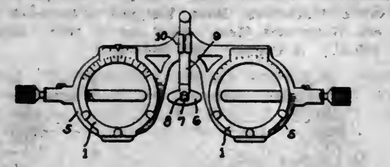
1,481,004. PROTECTIVE DEVICE. VICTOR E. GOODWIN, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 18, 1918. Serial No. 240,647. 6 Claims. (Cl. 175—30.)

1. The combination of a transparent evacuated container and cooperating electrodes within said container spaced to form a spark gap which is visible through the walls of the container and which is so formed that the said walls are protected from a discharge across the gap.



1,481,005. PROTECTIVE DEVICE. GEORGE B. PHILLIPS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 18, 1918. Serial No. 240,664. 9 Claims. (Cl. 175—30.)

1. In combination with a line to be protected, a protective device connected in circuit between said line and ground comprising an evacuated vessel, a cup-shaped electrode connected to the positive side of said circuit, and a cooperating electrode extending within the enclosure of said cup-shaped electrode and adapted to be connected to the negative side of said circuit, said electrodes being separated to form a spark gap.



1,481,006. PROCESS OF AND APPARATUS FOR STEREOSCOPIC SHADOWGRAPHS. LAURENS HAMMOND, New York, N. Y. Filed Jan. 23, 1923. Serial No. 614,354. 16 Claims. (Cl. 46—70.)

1. The process of exhibiting to an observer a stereoscopic shadowgraph of an actual object which consists in throwing on a screen by means of light emanating from two sources two different shadows of the same ob-

ject, and providing means whereby the observer may see one shadow only with the right eye and the other shadow only with the left eye.

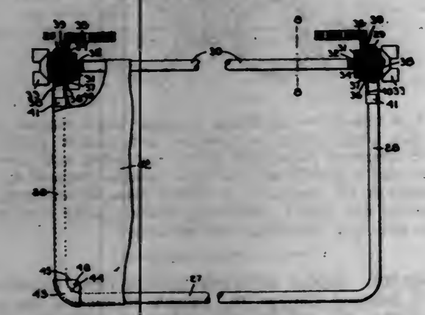
1,481,007. TRIAL FRAME. HARRY G. HESOLD, Harbrouck Heights, N. J., and EMIL B. MEYROWITZ, New York, N. Y., assignors to E. B. Meyrowitz, Inc., New York, N. Y., a Corporation of New York. Filed July 15, 1921. Serial No. 484,918. 2 Claims. (Cl. 88—20.)

1. A trial frame for fitting eye glass lenses comprising a face plate having an aperture and parallel guiding slots arranged respectively above and below said aperture and a lens holder having a member disposed forwardly of the face plate, a member disposed rearwardly thereof, and holder supporting means passing through the slots and connecting said members.

1,481,008. NASAL SUCTION APPARATUS. CHARLES E. HODLICK, Chicago, Ill., assignor to Sharp & Smith, Chicago, Ill., a Corporation of Illinois. Filed May 17, 1922. Serial No. 561,657. 8 Claims. (Cl. 128—276.)

8. In a device of the character described, a tip having a mouth to be applied to the nostril, a tube arranged within the tip with its end projecting beyond the mouth thereof, a port through the tube, and means for producing a suction in the tube.

1,481,009. ELASTIC SUPPORT FOR TROUSERS. FRANK HOHMANN, Chicago, Ill. Filed Dec. 13, 1922. Serial No. 606,726. 2 Claims. (Cl. 241—9.)



1. In an elastic support for trousers, a plurality of metal standards, bars offset from said standards at

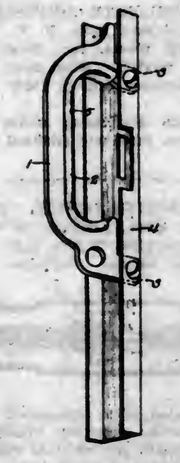
the upper ends thereof, coverings of textile material on said standards, said coverings respectively extended below the corresponding metal standard and the ends thereof attached to said coverings midway of said standards to form loops, triangular metal members respectively adapted to engage with a trousers button, and elastic members respectively secured at the lower end thereof

to a corresponding covering and at the upper end extending over said bar corresponding therewith and attached to a corresponding one of said triangular members, in combination with a belt arranged to extend through said loops, to movably mount said elastic supports thereon.

1,481,010. WINDSHIELD VISOR. CHARLES F. HOPEWELL, Watertown, Mass., assignor to Hopewell Brothers, Watertown, Mass. Filed Apr. 7, 1921. Serial No. 459,213. 4 Claims. (Cl. 296—95.)

1. A device of the class described comprising a frame having a front bar and side bars, the free ends of the side bars being bent to present eyes, the ends of the eye portions of said side bars being spaced apart from the adjacent portions of said side bars to provide slots, supporting brackets having apertures, a supporting bar having screw threaded outer ends passing through the apertures in said brackets and said eyes, abutments on said supporting bar to engage one side of the bracket, means rigid with said supporting bar located in said slots and nuts upon the screw threaded ends of said supporting rods operable to clamp the side bars against the brackets.

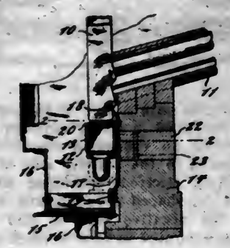
1,481,011. FLOATING PISTON. BRYAN P. JOYCE, Davenport, Iowa. Filed May 7, 1923. Serial No. 637,242. 3 Claims. (Cl. 74—109.)



3. A floating piston, embodying a stem, packing associated with said stem, a grease chamber formed about said stem and between the packing and a resilient element connected to the stem outside of said grease chamber and means for tensioning the resilient element to control the pressure within the grease chamber.

1,481,012. MATERIAL FOR SPRAYING VEGETATION. HENRY E. KALUSOWSKI, Washington, D. C., assignor to J. Schnarr & Co., Orlando, Fla. Filed Apr. 14, 1921. Serial No. 461,378. 4 Claims. (Cl. 167—6.)

1. A permanently homogeneous, foliage-wetting, copper-bearing emulsion for spraying vegetation, having intimately commingled copper oleate, saponified fatty oil, and water-soluble gum.

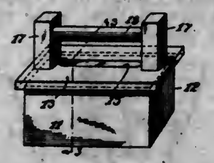


3. A spray liquid containing copper oleate dissolved in cresol, oleic acid, resin oil, and paraffine oil and mingled with a mucilaginous liquid and the whole treated with caustic soda.

1,481,013. HANDLE. EVERETT DEB KASER, Aurora, Ill., assignor to Durabilt Steel Locker Co., Aurora, Ill., a Corporation of Illinois. Filed Sept. 14, 1922. Serial No. 588,180. 3 Claims. (Cl. 16—125.)

1. A handle comprising a substantially flat plate having one edge cut to C-shape, and a sheet metal strip having its medial longitudinal portion extending along said one edge and having its longitudinal margins curled inwardly upon themselves and bearing against the opposite faces of said plate.

1,481,014. STEAM BOILER. HOWARD J. KERR, Bayonne, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 7, 1922. Serial No. 579,981. 11 Claims. (Cl. 122—235.)



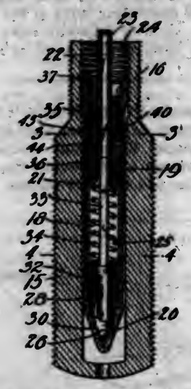
1. In a steam boiler, a water chamber, a wall extending upwardly between the water chamber and the boiler furnace, a plate connected to the wall and having a sliding contact with the water chamber, and a connection between the plate and the water chamber arranged to prevent relative horizontal motion and to permit relative vertical motion between the plate and the water chamber.

1,481,015. TREE HOLDER. JOHN W. KLEIN, Wilkinsburg, Pa. Filed June 3, 1921. Serial No. 474,622. 2 Claims. (Cl. 248—38.)

1. A tree holder comprising a base member, a plurality of equally spaced supports pivoted to the base member for engaging the tree at a relatively great distance from its butt and a plurality of relatively short equally spaced positioning members pivoted to the base for engaging the tree at a relatively short distance from its butt.

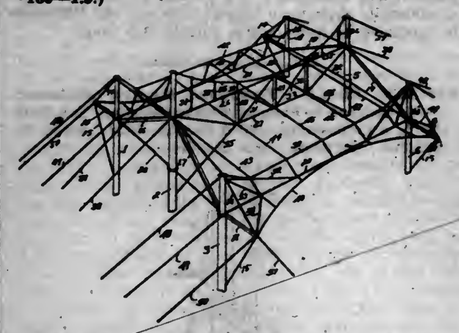
1,481,016. CONTAINER-LINING FORMING DEVICE. HERMANN R. LEONHARD, Haledon, Paterson, N. J. Filed July 20, 1922. Serial No. 576,226. 2 Claims. (Cl. 92—36.)

1. In a container-lining forming device, in combination, a container, a hollow forming device of the same shape as the container and capable of close insertion therein, an outwardly extended flange carried by the former capable of abutment upon the top edges of the container when the former is inserted therein and a handle carried by the upepr portion of the former.



1,481,017. EMBELLISHMENT OF TEXTILE FABRICS, ETC. JOSEPH LIPOTT, Jersey City, N. J. Filed June 1, 1923. Serial No. 642,826. 6 Claims. (Cl. 41—26.)

1. The method herein described of transferring patterns in color to cloth, consisting in superposing thereon a color-pigment sheet with a pattern sheet thereon, and then puncturing all three sheets, in accordance with the pattern, substantially in the manner and for the purpose set forth.



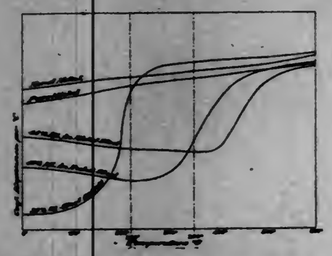
1,481,018. PNEUMATIC-TIRE VALVE. ZEV J LITTMAN, New York, N. Y. Filed Jan. 10, 1923. Serial No. 611,715. 9 Claims. (Cl. 152—12.)

7. In a valve structure, a tubular valve chamber adapted to be mounted in a standard tire valve shell, a valve seat at each end of the chamber, a valve for each seat, the outer valve opening inwardly and having a stem extending outwardly to a point adjacent the open end of the shell, said valve and stem being provided with an axially disposed opening, said inner valve having a screw-threaded connection with the inner wall of the chamber, said inner valve having a stem extending into the opening in the outer valve and stem, said valve stems being longitudinally slidable but non-rotatable with relation to each other

whereby the outer valve stem can be moved longitudinally to manipulate the outer valve and rotated to manipulate the inner valve.

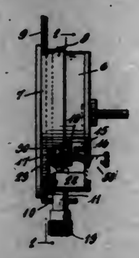
1,481,019. HANGAR FOR AERIAL VEHICLES. FREDERICK J. LUBBERT, San Francisco, Calif. Filed Jan. 26, 1922. Serial No. 531,873. 2 Claims. (Cl. 189—1.5.)

1. In a structure of the class described, comprising masts carrying a plurality of tension trusses supporting a plurality of intermediate cables, a plurality of overlapping metal sheets forming the roof and side walls of the hanger, U-clamps along the edges of the plates for securing the plates to the cables and a retaining plate through which the U-clamps pass and which bear on the side walls.



1,481,020. ANTISKID CHAIN. JOHN H. MCCORMICK, Jr., St. Louis, Mo. Filed Dec. 29, 1922. Serial No. 609,638. 3 Claims. (Cl. 152—14.)

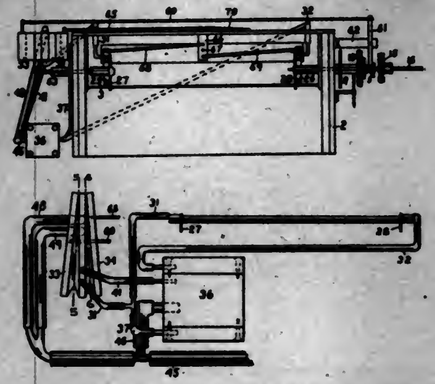
1. In an anti-skid chain, a plurality of channel-shaped links, each link having flanges of substantial depth ex-



tending from end to end of the link, the web of each link being provided with transverse slots spaced respectively from its ends, and connecting clips of flat material passed through adjacent slots of adjacent links and having return bends lying close to the webs of said links.

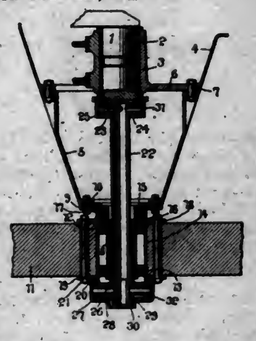
1,481,021. TEMPERATURE-CONTROLLED APPARATUS. LAURENCE K. MARSHALL, West Somerville, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 14, 1922. Serial No. 536,473. 20 Claims. (Cl. 297—12).

1. A high temperature thermostatic control composed of a combination of metallic constituents, said constituents having variable coefficients of expansion with the greatest differences in expansion over a working temperature range substantially above room temperatures and less differences in expansion at temperatures outside said range.



1,481,022. CLOCK. EMMANUEL MATHES, Englewood, N. J., assignor to Phinney Walker Company, New York, N. Y., a Corporation. Filed Dec. 21, 1922. Serial No. 608,173. 9 Claims. (Cl. 58—99.)

1. The combination with a clock casing and movement, of a detachable winding stem engageable with the winding train of the movement and extending thru the casing, a lever engageable with the stem and means mounted on the casing and operable from the exterior thereof to shift said lever and releasably lock said stem in engagement with the said train.

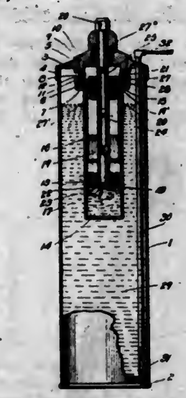


1,481,023. PNEUMATIC VALVE. HARRY PIERCE, San Diego, Calif. Filed June 27, 1922. Serial No. 571,524. 3 Claims. (Cl. 84—138.)

2. In combination, a valve chest having an air inlet chamber, an air outlet chamber, a pouch vacuum chamber, a pouch air chamber, a port leading from said air inlet chamber into said air outlet chamber, a valve controlling said port, a pouch between said pouch vacuum chamber and said pouch air chamber for engaging said valve and opening said port when said pouch air chamber is filled with air, means whereby said pouch air chamber may be exhausted through said vacuum chamber to permit closing of the valve, an air inlet tube communicating with said pouch air chamber, a valve controlling said air inlet tube, a second air inlet tube, communicating with said air inlet chamber, a valve controlling said second air inlet

tube, an air outlet tube leading from said air outlet chamber, and a source of exhaust communicating with said vacuum chamber.

1,481,024. FLYING MACHINE. FINLEY R. PORTER, Port Jefferson, N. Y., assignor to Knight American Patents Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 19, 1916. Serial No. 121,053. 26 Claims. (Cl. 244—25.)



1. In a flying machine, a motor shaft, a hollow axle, a propeller journaled on said hollow axle, a driven shaft within said hollow axle and connected to said propeller, and a flexible connection between said motor and driven shafts.

1,481,025. BUCKLE. GEORGE E. PRENTICE, New Britain, Conn., assignor to Treo Company, Inc., a Corporation of New York. Filed Mar. 10, 1923. Serial No. 624,180. 1 Claim. (Cl. 24—196.)

A buckle comprising an apertured blank of sheet metal with two opposite side edges doubled back toward one another on the same face of the blank to form with the face of the blank two opposing guide grooves, and an I-shaped stamping of sheet metal bridging the aperture between the guides with the ends of the I sliding in the guides, the ends of the doubled back edges being pinched toward the body of the blank to close the grooves and limit the sliding movement of the I stamping.

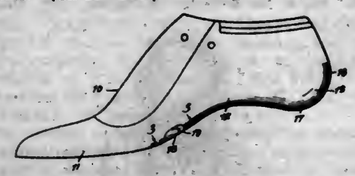
1,481,026. PORTABLE FIRE EXTINGUISHER. JOHN G. ROBINSON and LEO J. SCHLITTER, Eldorado, Kans. Filed Jan. 7, 1922. Serial No. 527,684. 2 Claims. (Cl. 169—82.)

1. A fire extinguisher comprising a liquid container having a top opening, a depending cup suspended from the top and surrounding the opening, the cup consisting of a rim having openings and an inwardly turned flange at its lower edge, a plug threaded in the edge of the opening in the top of the container, two nested chemical containers, the inner one of which is shorter than the outer one, the outer container having a top flange resting upon the flange of the cup, a plug supporting the inner container, the plug having a flange supported above the flange of the outer chemical container, the lower ends of the first plug bearing against the flange of the second plug to hold it and the chemical containers rigid with the cup, an open discharge pipe leading through the top of the liquid container, a hollow plunger guided in the two plugs and movable to break the bottom of the inner container, the hollow plunger having openings communicating with the containers and having openings communicating with a space between the first and second plugs so that gas can pass from the inner containers through the opening in the rim of the cup into the liquid container to apply pressure upon the liquid in the liquid container, and a discharge pipe leading from the liquid container to atmosphere.

1,481,027. SHOE SOLE. BENJAMIN ROSS, Brooklyn, N. Y. Filed Aug. 30, 1922. Serial No. 585,225. 2 Claims. (Cl. 36—76.)

1. A shoe sole having in combination, a flexible sole member with a shank portion and a concaved heel portion, an elastic inlay in the concavity of the sole member, a stiffener on the shank portion of the member, said stiffener including a slotted bearing plate held in proximity to the concavity of the member, and a yielding strip extending lengthwise over the shank portion of the member, the strip having one of its ends secured to the sole member and having its other end movably contacting with the bearing plate as well as having depending hook members movably disposed through the slot of the bearing plate.

2. A shoe sole having in combination, a flexible outer sole member with a shank portion and a concaved heel portion, an inner sole member on the upper surface of the outer sole member and having a concaved heel portion disposed in the concavity of the outer sole member, an elastic inlay in the concavity of the inner sole member, and a stiffener on the shank portion of the outer member under the inner sole member, said stiffener including a bearing plate held in proximity to the concavity of both sole members, a yielding strip extending lengthwise over the shank portion of the outer sole member, the strip having one of its ends secured to the outer sole member and having its other end movably contacting with the bearing plate, and means connecting the contacting parts of the plate and strip whereby the strip may move toward and from the heel portion of the sole, but will be prevented from transverse movement.



1,481,028. SOLE STRUCTURE FOR BOOTS AND SHOES. BENJAMIN ROSS, Brooklyn, N. Y. Filed Aug. 30, 1922. Serial No. 585,226. 3 Claims. (Cl. 36—76.)

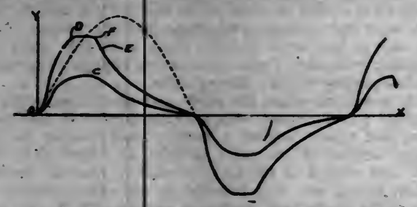
1. A sole structure for shoes and boots, comprising a flexible outer member with a shank portion, a foot portion and a heel portion, a metallic bearing plate having one part fastened to the outer member in proximity to the heel portion and having in opposite parts of the edges of its second part two notches, and a metallic spring strip extending lengthwise on the shank portion of the outer member, one end of the strip being rigidly held to the outer member at its foot portion and having its other end movably contacting with the bearing plate as well as having on opposite parts of its side edges depending hook-shaped members slidably engaging the edges of the notches of said bearing plate.

3. A sole structure for shoes and boots, comprising a flexible outer member with a shank portion, a foot portion and a heel portion, a flexible inner member on the upper surface of the outer member, an elastic inlay on the heel portion of the inner member, a metallic bearing plate having one part fastened to the outer member in proximity to its heel portion, a metallic spring strip extending lengthwise on the shank portion of the outer member under the inner member, one end of the strip being rigidly held to the outer member at its foot portion and having its other end movably contacting with the bearing plate, and means movably fastening the side edges of the bearing plate and said strip together.

1,481,029. SHOE LAST. BENJAMIN ROSS, Brooklyn, N. Y. Filed Aug. 30, 1922. Serial No. 585,227. 2 Claims. (Cl. 12—183.)

1. A shoe last having a body with a foot portion, a shank portion and a heel portion, and a flat plate element on the curved underside of last at the juncture of its shank portion with the sole portion thereof.

1,481,030. CULINARY CHOPPING BLOCK. ALFRED SCHICKERLING, Scarsdale, N. Y. Filed Apr. 30, 1923. Serial No. 635,546. 4 Claims. (Cl. 146—215.)



1. In a culinary chopping block of the character designated, the combination with a reversible anvil plate formed on one side with a flat surface and on the other

side with a convex surface, of a supporting base formed with a peripheral flange on its upper edge for contactual

engagement with said anvil plate, and with air passages below its top surface, substantially in the manner and for the purpose set forth.

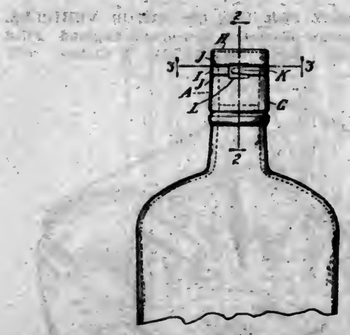
1,481,031. ELECTRIC FURNACE AND METHOD OF OPERATING THE SAME. GEORGE H. SUTHMAN, Denver, Colo., assignor, by direct and mesne assignments, to The Electric Research Company, Denver, Colo., a Common Law Trust. Filed Jan. 30, 1922. Serial No. 532,787. 7 Claims. (Cl. 204—64.)

2. The method of smelting highly refractory metalliferous ores, which comprises subjecting the same to the heating effect of an arc between a plurality of electrodes, supplying a multiphase electric current to said electrodes, said current having a potential whose wave form is such that its front face is comparatively steep, its top is substantially flat, and whose rear is upwardly concave.

1,481,032. MEANS FOR LOCKING AUTOMOBILE TIRES. KENT SWAFFER, Denver, Colo. Filed July 1, 1922. Serial No. 572,342. 3 Claims. (Cl. 70—122.)

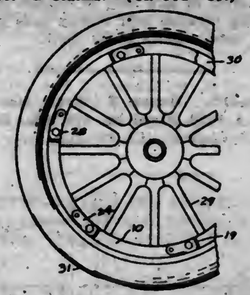
1. A device for locking a spare tire to an automobile comprising a rim non-removably secured to the automobile, said rim having a hole therein adapted to receive a valve stem, a tire assembly, comprising a rim, an outer casing, an inner tube and a valve stem, mounted on said first mentioned rim in such a manner that the valve stem extends through the hole therein, a member provided with an opening for the reception of the valve stem, a lug on said member for engaging the rim, a nut for holding said member in place, and means for locking said nut and member against relative rotation.

1,481,033. LOCK FOR GEAR-SHIFT LEVERS AND THE LIKE. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed Nov. 21, 1919. Serial No. 339,538. 13 Claims. (Cl. 70—128.)



11. In combination with a lever fulcrumed in a supporting bracket, means for locking said lever against movement including a swinging member pivoted to said lever, a rotatable rod mounted in the lever, and projections upon said rod to actuate said member in opposite directions upon rotation of said rod.

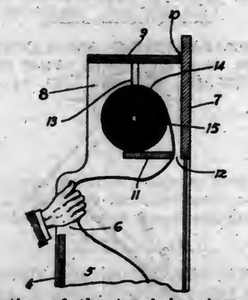
1,481,034. BOTTLE. WALTER A. STATTMANN, Chicago, Ill., assignor to Hugh R. Adams, Chicago, Ill. Filed Dec. 18, 1922. Serial No. 607,556. 1 Claim. (Cl. 215—46.)



A bottle cap having a skirt portion adapted to be formed to conform to and engage formations on the bottle neck to thereby secure said cap, the latter provided between its ends with a pair of continuous annular weakening incisions bordering a severable strip, said incisions extending a part completely through the cap and said strip laterally severed by an incision communicating with said last named portions of said annular incisions to thereby provide a free end portion at one end of the severable strip to constitute a tongue integral with said strip and folded to provide an outwardly projecting portion adapted for engagement to effect severance of said strip from said cap, whereby the latter is divided into two parts, the upper of which is removable for access to the bottle.

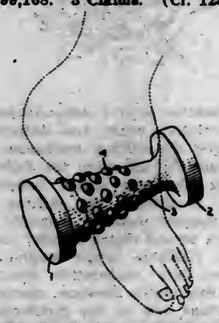
1,481,035. SAFETY SEAL FOR BOTTLES AND THE LIKE. WALTER A. STATTMANN, Chicago, Ill., assignor to Public Safety Cap Company, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1923. Serial No. 644,334. 4 Claims. (Cl. 215—46.)

1. A bottle seal comprising a sheet metal cap adapted to cover the mouth portion of the bottle and secured thereto for preventing access to the cork or other hermetic closure of the bottle, said cap provided between its ends with a substantially annular strip integral therewith and bordered by substantially parallel incisions for rendering said ribbon easily severable from the cap to thereby divide the latter into two parts, one thereof removable to expose and provide access to the hermetic closure thereof, there being an opening in the cap in the plane of said ribbon, the latter terminating at one end in a tongue projecting into said opening.



1,481,036. VEHICLE WHEEL RIM. BENJAMIN F. STAUBER, Spokane, Wash. Filed Nov. 20, 1922. Serial No. 601,986. 2 Claims. (Cl. 301—35.)

2. A demountable rim comprising two annular members adapted to be joined together, each member having an inwardly projecting annular flange, corresponding lugs formed at spaced distances in said flanges, pivotally mounted latches connected with one of said flanges, adapted for engagement with said lugs to hold said flanges in rigid relation with each other and an inwardly projecting annular depression on one of said annular members for engagement with the periphery of the felly of the vehicle wheel for aiding in securing a rigid fit of the rim with the wheel.



1,481,037. TOWEL CABINET. GEORGE A. STEINER, Salt Lake City, Utah, assignor, by mesne assignments, to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Feb. 21, 1921. Serial No. 446,915. 3 Claims. (Cl. 45—32.)

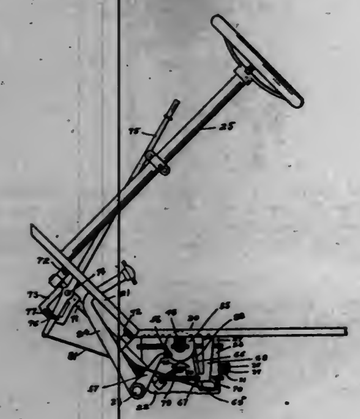
1. A towel cabinet comprising a casing having rear and end walls and guideways in said end walls and a floor near the lower ends of said guideways, a clean towel roll having a shaft adapted to fit and slide in said guideways and said roll contacting with the rear wall of the cabinet during the initial unwinding of the toweling, the lower portion of said guideways having an offset section therein to receive said roll shaft when a con-

siderable portion of the towel has been unrolled and direct the roll against said floor as well as the rear wall, and a gap being provided between said floor and rear wall through which the clean towel may be drawn by the user.

1,481,038. FOOT-MASSAGING DEVICE. MILTON E. STEPHENSON, Boston, Mass. Filed May 23, 1919. Serial No. 299,168. 3 Claims. (Cl. 128—57.)

1. A foot massaging device comprising a rigid member having a curved portion adapted to rest upon a flat supporting surface, and a conoidal massaging surface, shaped to conform to the plantar arch of the foot, provided with a plurality of resilient convex protuberances adapted, when engaged under pressure by the foot and the base rocked upon its supporting surface, to manipulate, knead, and exercise the plantar fascia and muscles of the foot.

1,481,039. MANUFACTURE OF HYPOCHLORITES. MAURICE C. TAYLOR, CHARLES A. GAMMAL, and RALPH E. GROSSHEIMER, Niagara Falls, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Mar. 25, 1922. Serial No. 546,864. 18 Claims. (Cl. 23—13.)



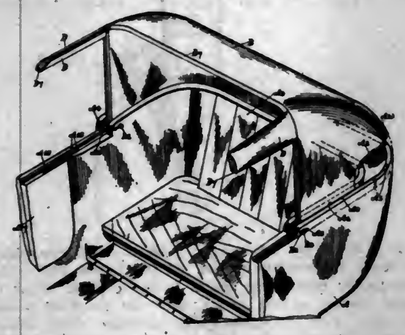
1. The method of producing hypochlorites which comprises extracting hypochlorous acid from its aqueous solutions with a reagent which will not extract chlorides, and causing the extracted hypochlorous acid to react with an alkaline substance to form the corresponding hypochlorite.

1,481,040. MANUFACTUURE OF HYPOCHLORITES. MAURICE C. TAYLOR, ROBERT B. MACMULLIN, and RALPH E. GROSSHEIMER, Niagara Falls, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed June 27, 1923. Serial No. 648,125. 10 Claims. (Cl. 23—13.)

1. The method of producing hypochlorites of alkali and alkali-earth metals which comprises causing an

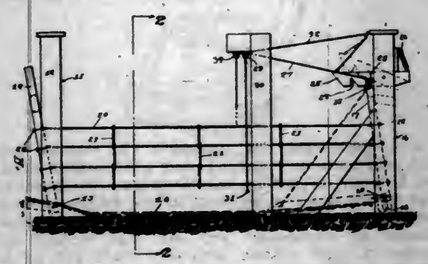
extract of hypochlorous acid in an organic solvent to react with the hydroxide of the metal, the amount of available chlorine being in excess of that theoretically required to react with the hydroxide.

1,481,041. GEAR-SHIFTING MECHANISM. BURTON A. WALRATH, Sioux City, Iowa. Filed Dec. 30, 1921. Serial No. 525,919. 8 Claims. (Cl. 74—58.)



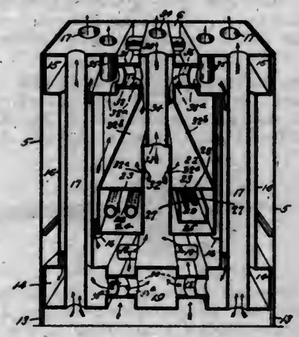
1. The combination with a motor-vehicle including its main clutch-controlling shaft, and shiftable power-transmission elements, of shifting mechanism for said elements, and means for actuating the shifting mechanism and controlling the main clutch comprising a single rotating shaft to actuate the shifting mechanism, a driven clutch member mounted coaxially with the said rotating shaft, a second clutch member fixed on the said rotating shaft, yieldable means tending to force said clutch members into cooperative relation, releasable means holding said clutch members normally disengaged, an operating crank arm on the clutch-controlling shaft, and a cam fixed on the said rotating shaft directly co-acting with the crank-arm to operate the clutch-controlling shaft.

1,481,042. AUTOMATIC FIREARM. FRITS WALTHER and GEORG WALTHER, Zella-Mehlis, Germany. Filed Aug. 29, 1921. Serial No. 496,756. 7 Claims. (Cl. 42—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



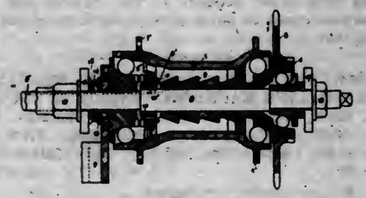
1. In an automatic fire arm as described comprising in combination a magazine in the front of the stock, a breech block, a breech casing having straight guide grooves, a feed lever, a grooved slide block coupled with said breech block, a lug on said breech block designed to retain the rearmost cartridge of said magazine in the front of the stock, a pivotally mounted locking hook for retaining said feed lever in its lowest position and designed to be acted upon by the cartridge for releasing the feed lever, a lateral pin on said feed lever guided in the grooves of said slide block, designed to be raised to its highest possible position together with said feed lever by the action of the advancing slide block.

1,481,043. BODY FOR USE ON MOTOR VEHICLES. CHARLES BENSON WARDMAN, Southport, England. Filed Jan. 10, 1923. Serial No. 611,734. 2 Claims. (Cl. 296—45.)



1. In a body for a motor vehicle, the combination of a non-collapsible rear quarter pivoted to the sides of said body and adapted to be swung into a recess in the back thereof, windscreen pillars at the front of said body, canopy rails formed in sections collapsibly connected together and extending forwardly to said windscreen pillars, a transverse rail uniting the forward parts of said canopy rails, a roll-up canopy also carried by said rear quarter, a detachably mounted bow supporting said canopy when extended, telescopically jointed bow sticks carried by said body to support said bow, and windows fitting between said canopy rails and the sides of said body, substantially as set forth.

1,481,044. GATE. HENRY E. WARE, Moorcroft, Wyo. Filed Dec. 4, 1920, Serial No. 428,338. Renewed June 21, 1923. 5 Claims. (Cl. 39—5.)



1. In a device of the type described, a pair of supports adapted to be arranged upon opposite sides of a right of way, end posts pivotally connected at their lower ends to said supports, horizontal members connected at their ends to said end posts and adapted to extend transversely of the right of way and bar passage thereon when said end posts are vertically arranged, means for locking said end posts in vertical position, means for releasing said locking means and means for imparting an initial swinging movement to said end posts when said locking means is released, said horizontal members forming a compact mass upon the surface of the right of way when said end posts are approximately horizontally disposed.

1,481,045. GAS AND OIL BURNING HEATER. JOHN WEIGEL, Cincinnati, Ohio. Filed June 22, 1921. Serial No. 479,646. 2 Claims. (Cl. 126—116.)

1. In a hot-air gas-and-oil-using furnace, the combination of a pair of spaced lower longitudinal air drums or chambers, a similar pair of spaced upper longitudinal air drums or chambers in vertical alinement with said lower drums, an intermediate central lower draft-tube or exit-duct horisontally-alined with said lower air-drums, horisontal branch-pipes connecting said lower air-drums with said central draft-tube or exit-duct, upright inner air ducts or pipes leading from the bottoms of the said lower air-drums to the tops of the said upper air-drums, jackets or spaced tubes or pipes surrounding the said last-named inner air ducts or pipes between the upper and lower air-drums, a centrally-disposed longitudinal upper air-chamber between the pair of upper air-drums and in horisontal-alinement therewith, horisontal branch-pipes connecting said central upper air-chamber with the said pair of upper air-drums, an inverted hopper or a central funnel-shape upper air-chamber, a twin pair of open-ended burner boxes arranged beneath the said central funnel-shape upper air-chamber and adapted to contain fuel burners, means for controlling said gas and oil burners, and heat-radiating plates or partitions forming the tops of and leading from the twin burner-boxes to the said centrally-disposed longitudinal upper air-chamber, substantially as herein shown and described.

1,481,046. FREE-WHEEL AND BRAKE HUB FOR BICYCLES. PROSPER BOURGARD, Dolhain, Belgium. Filed Apr. 5, 1923. Serial No. 630,177. 2 Claims. (Cl. 192—6.)

1. In a free-wheel and brake hub for bicycles, the combination of a hub-casing; a sleeve provided externally with screw threads of triangular section, mounted on the axle and having one end fitted with a chain pinion; a segmentary nut within aforesaid casing having a plurality of longitudinal slots at intervals on its circumference extending along the greater portion of its length starting alternately from one end and the other, and provided internally with screw-threads of triangular section engaging those of the aforesaid sleeve, substantially as described.

1,481,047. CHART-HOLDING DEVICE FOR RECORDERS. EDGAR H. BRISTOL, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Sept. 7, 1922. Serial No. 586,702. 15 Claims. (Cl. 234—1.)

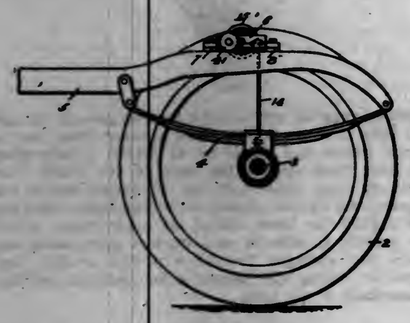
1. A chart hub having a rebate to receive the chart, a clamping sleeve, a cap for attachment to the hub and a spring interposed between sleeve and cap.

1,481,048. BODY FOR MOTOR VEHICLES. MAX ALVINUS BUCH, Coventry, England. Filed Feb. 27, 1923. Serial No. 621,609. 1 Claim. (Cl. 296—49.)

The combination with a door forming part of the side of a body, a recess in said door, a lower frame part of channel section and hinged to the bottom of said recess and lying flush against the back of the recess when closed, an upper frame part also of channel section and hinged at the bottom to said lower frame part and lying flush against the inner side of the lower frame, a window adapted to slide in said channel parts when said frames are arranged in line with one another, and means for locking said frames in line with one another, substantially as set forth.

1,481,049. TRAILER. HENRY CASON, St. Louis, Mo. Filed Nov. 2, 1922. Serial No. 598,570. 1 Claim. (Cl. 212—142.)

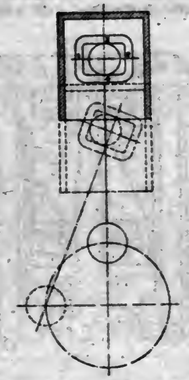
In a device of the class described, a wheel-mounted vehicle comprising front and rear axles, side beams connected at their outer ends to the axles, means for uniting the inner ends of the side beams detachably, pairs



of drums, the drums of one pair being located at a higher elevation than the side beams, in front of the front axle and closely adjacent to the side beams, the drums of the other pair being located at a higher elevation than the side beams, to the rear of the rear axle and closely adjacent to the side beams, and means on the axles for supporting the drums for rotation in the locations specified.

1,481,050. SAFETY-RAZOR-BLADE HOLDER. MICHAEL CROUGH, Ilion, N. Y. Filed May 3, 1923. Serial No. 636,453. 3 Claims. (Cl. 30—25.)

1. A safety razor blade holder comprising two loosely connected plates having instruck contacting portions on which the plates are adapted to rock on a longitudinal axis, said plates being provided with blade clamping jaws in advance of such axis, and means movable into and out of the space between the plates in rear of said axis for rocking the plates to close the jaws and for holding said jaws in clamping position.

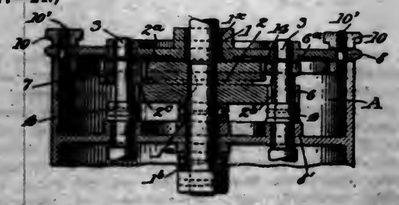


1,481,051. SHOCK ABSORBER. HARLAND A. DANFORTH, Lynn, Mass. Filed Sept. 18, 1920. Serial No. 411,060. 7 Claims. (Cl. 267—10.)

1. A shock absorber secured to a body and to a flexible support comprising a frame, a rotatable wheel mounted in the frame, a windable belt connected to the body and to the flexible support permitting a free movement of the flexible support in one direction and a centrifugal regulating means for controlling the upward movement of the body in accordance with the speed of movement of the said body.

1,481,052. CONNECTION BETWEEN PISTONS AND THEIR CONNECTING RODS. JOHAN HENDRIK DE IONGH, Bergen, Netherlands, assignor of one-half to Naamloose Vennootschap Kromhout Motoren Fabriek D. Goedkoop, jr., Amsterdam, Netherlands, a Dutch Limited Company. Filed Aug. 20, 1923. Serial No. 658,267. 1 Claim. (Cl. 74—106.)

In an engine the combination of a piston, a connecting rod and a pin pivotally connecting the connecting rod to the piston, one of the first mentioned two elements having means to permit movement of the pivotal pin and



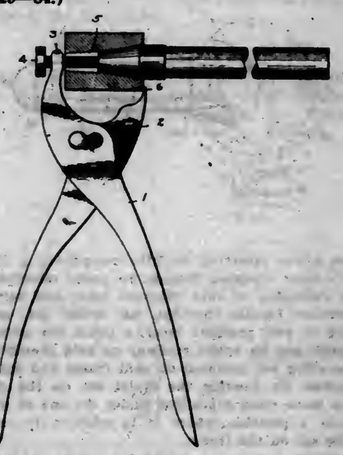
therefore of the inner end of the connecting rod transversely of the piston and at an angle to the axis of the piston.

1,481,053. TIRE CLAMPING AND TURNING DEVICE. LEO M. EVANS, Salt Lake City, Utah. Filed July 2, 1921. Serial No. 482,184. 8 Claims. (Cl. 154—9.)

1. A device of the class described including a base member, a cylinder mounted thereon, a piston for reciprocation within the cylinder, a rod connected with the piston, a supporting block at the outer end of the piston, a supporting bar on the cylinder, means for admitting fluid under pressure to the cylinder and hook members arranged in pairs at opposite ends of the supporting bar.

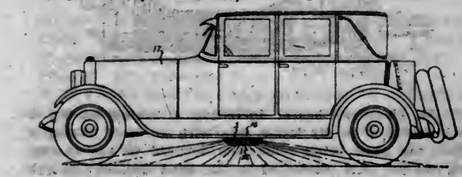
1,481,054. MULTIPLE-SPEED DRIVING MECHANISM FOR DRILLING MACHINES. WILLIAM R. FOX, Jackson, Mich., assignor to Fox Machine Company, Jackson, Mich., a Corporation of Michigan. Filed Apr. 29, 1922. Serial No. 557,327. 16 Claims. (Cl. 77—24.)

1. In a drilling machine a drill spindle, a main driving shaft, a master gear thereon having multiple rings



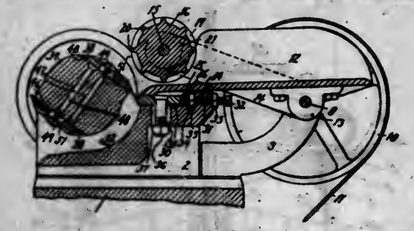
of gear teeth of different diameters with that of the larger diameter lowermost, and pinions of different diameters to be slipped vertically onto or off from the spindle at its upper end, the downward movement of the pinions being limited to mesh with their respective master gear ring when dropped freely along said spindle, only one pinion occupying a spindle at the same time.

1,481,055. MEAT-CUTTING IMPLEMENT OR TOOL. THOMAS FULLBRIGHT, St. Louis, Mo., assignor to George Sampt, St. Louis, Mo. Filed Sept. 27, 1922. Serial No. 590,823. 6 Claims. (Cl. 146—77.)



1. A tool of the class described including, in combination, a pair of cutting-members, and means comprising a pair of gears and a shiftable clutch-member adapted for driving engagement with one or the other of said gears for selectively rotarily actuating one of said members or reciprocatorily actuating the other of said members.

1,481,056. PLIERS. PERCY T. GILBERT, Duluth, Minn. Filed June 5, 1922. Serial No. 565,833. 1 Claim. (Cl. 29—84.)

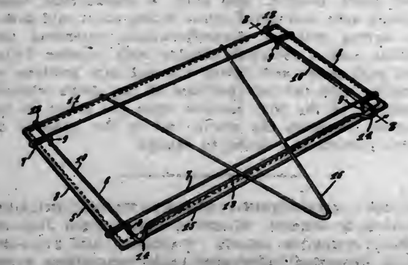


A pair of pliers of the character described having jaws of unequal length and an adjustable thumbscrew within the extreme outer lip of the longer jaw, whereby an object may be engaged by the thumbscrew beyond the limits of the shorter jaw.

1,481,057. AUTOMOBILE LIGHT. ROY GOTT, Centralia, Ill. Filed Jan. 23, 1923. Serial No. 614,438. 5 Claims. (Cl. 240—7.)

1. An automobile side light of the character described comprising an elongated casing having a front transparent panel, and illuminating means in said casing for projecting rays of light through the panel said panel being provided with a straight central surface for projecting the light rays straight out laterally from the casing and front and rear inclined surfaces for projecting the light rays laterally and respectively in a forward and rearward direction from the casing, all of said panel surfaces being also inclined at a single continuous downward and inward angle between its top and bottom edges so as to throw unbroken light rays therefrom down against the road surface.

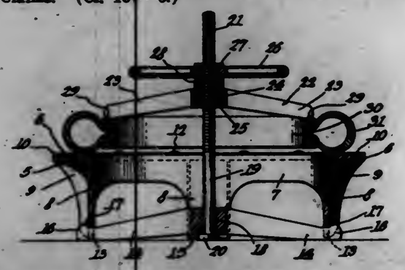
1,481,058. WASTE-PAPER SHREDDER. CHARLES W. GRIFFIN, Riegelsville, N. J. Filed Sept. 20, 1923. Serial No. 663,832. 4 Claims. (Cl. 146—120.)



1. The combination, in a shredder, with a revoluble knife-head, of a bed-knife support having an open-top and open-end integral trough with its bottom beneath said head, and consisting of a part which is approximately concentric with said head, and of a part which is straight and unbroken, tangential to said first-named part, and has a downward pitch.

1,481,059. MOUTHPIECE. GEORGE A. HIGHFIELD, Scranton, Pa. Filed Oct. 26, 1921. Serial No. 510,483. 4 Claims. (Cl. 131—12.)

1. A mouth-piece having a nipple defining the outer end of its bore, a member co-acting with the nipple to prevent inward flow through the bore of the mouth-piece, and a cap overlying the outer end of the mouth-piece and provided with a socket to receive the nipple, said outer end of the mouth-piece being provided with bypasses for communication with the atmosphere, the cap having ports communicating with the socket outwardly of the nipple and with the bypasses.



1,481,060. WIRE HOLDER FOR FLY PAPER. SAMUEL A. HOLMES, Storm Lake, Iowa. Filed Apr. 4, 1922. Serial No. 549,580. 1 Claim. (Cl. 43—115.)

A supporting device comprising pivotally connected sections, lengths of wire connecting the ends of one

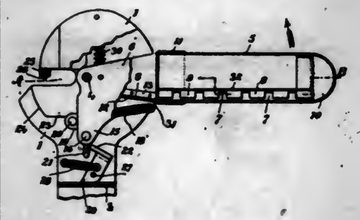
of the sections, said lengths of wire having portions thereof, extending around the opposed section and having right angled ends providing supports for the sections, extensions formed on one section, the section having the extensions adapted to engage the lengths of wire, and the extensions adapted to move over the adjacent sections to set up a binding action, and grip an article between the sections, and a handle for supporting the device.

1,481,061. MACHINE FOR REMOVING TIRES FROM RIMS. WILLIAM K. HUNTER, Copperhill, Tenn., assignor of one-half to Alfred W. Taylor, Johnson City, Tenn. Filed July 20, 1922. Serial No. 576,344. 2 Claims. (Cl. 157—6.)

1. A machine for removing tires from rims, comprising a table structure including a top and legs depending therefrom, said legs being provided at their lower ends with notches, a spider arranged within the lower portion of the table structure and including arms having their outer ends received within said notches, said arms being provided at their outer ends with upwardly projecting heads adapted to engage the outer walls of said legs, an upstanding shaft secured to the spider and extending above the table structure, a removing spider slidable upon the shaft and having arms to engage the rim to force the same from the tire while the tire is supported upon said table top, and an operating element screw threaded upon the upper portion of the shaft and engaging the removing spider.

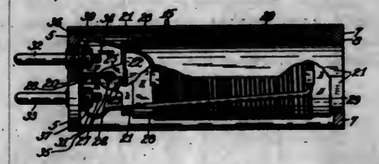
1,481,062. PIPE COUPLING. LLOYD JOHNSON, Uhrichsville, Ohio. Filed Aug. 15, 1921. Serial No. 492,827. 1 Claim. (Cl. 285—180.)

A pipe coupling comprising a tubular gasket to be fitted about meeting pipe ends, a contractible longitudinally split corrugated sleeve fitting about said gasket and having external circumferentially extending cam portions, and a rotatable tubular body member fitting about said sleeve and having internal cam portions cooperating with the cam portions of the sleeve whereby a rotation of the body member upon the sleeve in one direction contracts the sleeve and in the opposite direction permits the sleeve to expand.



1,481,063. DISPENSING TOILET-PAPER HOLDER. JOSEPH S. O'BRIEN, Westfield, Mass. Filed June 10, 1922. Serial No. 567,479. 7 Claims. (Cl. 211—29.)

1. A dispensing toilet-paper holder comprising a perforated backing, a perforated flap having a feeding part, a foldable connection between said backing and said flap, the arrangement of parts being such that said flap can be moved up and down and swung forward and back, and a supporting member receivable in the perforation in said backing and in the eye of the binder wire of a package of toilet-paper, and adapted to support said

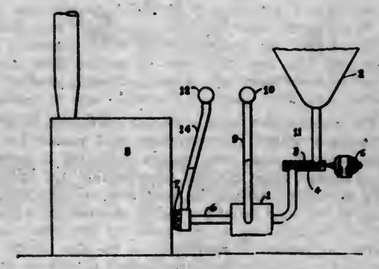


wire at the terminal opposite to said eye, said supporting member and said wire both being receivable in the perforation in said flap, whereby said flap is permitted to be operated and by gravity normally to contact with the toilet-paper regardless of the thickness of the package.

1,481,064. EYELET-INSERTING MACHINE. WERNER OCKS, Bad Liebenstein, Germany. Filed Jan. 16, 1923. Serial No. 613,057. 3 Claims. (Cl. 218—15.)

1. An eyelet inserting machine comprising a frame, a pressure lever mounted therein, an eyelet reservoir forming an extension of said pressure lever and serving as an operator handle therefor, an eyelet set oscillably mounted on said pressure lever, a catch pin mounted in said eyelet set, an eyelet raceway on said pressure lever, a cooperating set mounted on said frame and stationary cam means for causing the eyelet set on the pressure lever to move from a position under the end of the raceway into a position where it is adapted to cooperate with the set on the frame.

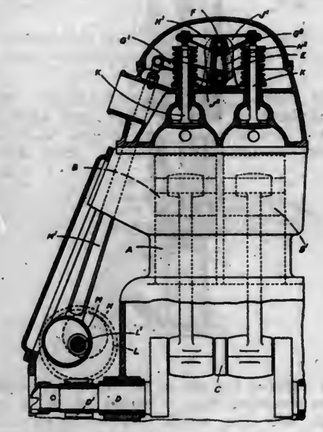
1,481,065. ELECTRICAL CURLING-IRON HEATER. AUGUST H. OPPERMAN, Indianapolis, Ind. Filed Aug. 31, 1921. Serial No. 497,333. 6 Claims. (Cl. 219—22.)



1. An electrical heater including a casing having a head provided on its inner side with an arm having a pivot, the head being removably secured to the casing, two contact pins connected to the head adjacent to the arm, a hollow core having an ear connected to the pivot, and a heating coil on the core and connected with the contact pins.

1,481,066. PHONOGRAPH-RECORD HOLDER. CARL W. PIERSON, Rockford, Ill. Filed Dec. 8, 1920. Serial No. 429,200. 5 Claims. (Cl. 211—16.)

1. A disk record holder comprising a case having an open side providing a passageway through which the records are adapted to be passed, a pair of stringer rods within the case reaching across and in proximity to said open side at the ends of the record passageway, flexible record partitions supported wholly at their front ends on said rods, spacers on the rods between the partitions, the rear ends of the partitions within the case being free to swing and flex laterally, and means for supporting records in the case with one edge projecting beyond the front ends of the partitions.



1,481,067. COMBUSTION OF PULVERIZED FUEL. RALPH E. H. POMEROY, Canton, Ohio, assignor to George J. Hagan, trustee, Perrysville, Pa. Filed Nov. 19, 1921. Serial No. 516,379. 4 Claims. (Cl. 110—28.)

1. The combination of a furnace, a pulverizer connected to the furnace, means for feeding fuel to the pulverizer and means for forcing air under pressure higher than atmospheric pressure into and through the pulverizer and into the furnace.

1,481,068. VALVE GEAR FOR INTERNAL-COMBUSTION ENGINES. HARRY RALPH RICARDO, London, England. Filed Apr. 1, 1919. Serial No. 286,693. 3 Claims. (Cl. 123—60.)

3. In a valve gear for a high speed internal combustion engine having overhead valves the combination of two cylinders, a crank shaft on which act the pistons in these two cylinders, inlet and exhaust valves in the heads of these cylinders, four tappet levers mounted on the cylinder heads so as to rock about a common axis and adapted to operate respectively both inlet and both exhaust valves, a wiper arm formed integral with each tappet lever, two levers mounted on the cylinder heads so as to rock about a common axis which is parallel to the fulcrum axis of the tappet levers each of these rocking levers having a wiper arm adapted to engage the wiper arms of two tappet levers, one pair of said tappet

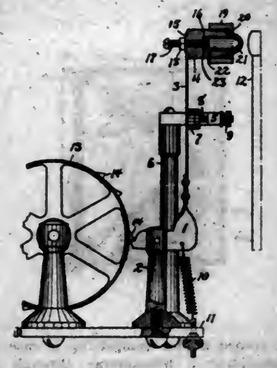
levers operating both inlet valves and the other pair both outlet valves, two eccentrics mounted on a shaft which is disposed transversely to the engine crank shaft, rods connecting these eccentrics respectively to the two rocking levers, and gearing between the crank shaft and the transverse shaft as set forth.

1,481,069. FLY SWATTER. OSCAR A. SCHNEIDER, Random Lake, Wis. Filed Apr. 22, 1922. Serial No. 556,029. 2 Claims. (Cl. 43—137.)

1. A device of the character described comprising an elongated supporting member, an arm engaged therewith for swinging movement, means carried by the supporting member and engageable with the arm to impart swinging movement to the arm, and a swatter detachably engaged with the arm.

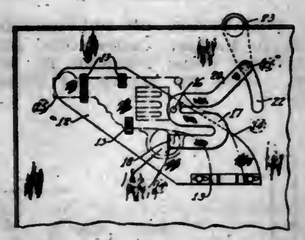
1,481,070. AIR PUMP. JOSEPH P. SHEVLIN, Denver, Colo. Filed July 10, 1922. Serial No. 574,051. 1 Claim. (Cl. 230—27.)

A valve adapted for use in an air pump, comprising an annular mounting ring, a leather cup valve member mounted in said ring, means cooperating with the annular mounting ring for permitting the free passage of air therethrough in one direction, and for preventing the flow of air therethrough in the opposite direction, said means comprising a member having a flange on one end thereof, a boss extending through said mounting ring, shoulders on said flange for preventing the ring from contacting with the flange, a sealing washer secured to the end of the boss opposite from the flange, and a nut for holding said washer in place.



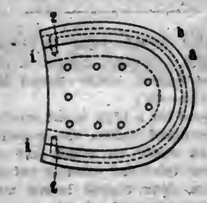
1,481,071. AUTOMATIC WELDING DEVICE. THOMAS A. SINDELAR and SPENSLEY S. DAYKIN, Cleveland, Ohio, assignors to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 2, 1921. Serial No. 466,209. 16 Claims. (Cl. 219—8.)

1. A welding machine for welding an article along a seam, portions of which lie in different horizontal planes, comprising a welding device, means for presenting portions of the seam progressively to said device while maintaining the relative position of the seam with respect to said welding device and means for maintaining a substantially constant rate of movement of the seam with respect to the welding device.



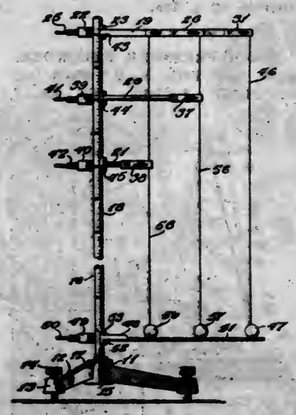
1,481,072. HAMMERS FOR CHIMES. GEORGE L. SMITH, Fort Wayne, Ind., assignor to The Smith Chimes Clock Company, a Corporation of Indiana. Filed Nov. 23, 1921. Serial No. 517,192. 2 Claims. (Cl. 84—404.)

1. In apparatus of the class described, a hammer head; a spring shank having pivotal support at one end and secured at its other end to said head; a movable plug in the head; an adjusting means for sustaining the plug;



a collar secured on the outer end of the head; and a pliant impact member extending over the plug and secured by said collar to the head.

1,481,073. BURGLARPROOF CONTAINER. WILLIAM W. SPURRIER, St. Louis, Mo., assignor of thirty-eight per cent to Ben F. Schuetz, Jefferson City, Mo. Filed June 30, 1922. Serial No. 571,987. 4 Claims. (Cl. 116—99.)



3. The combination with a slotted container, of a fire-arm disposed within the container, and means for discharging the fire-arm, said means including a substantially S-shaped lever pivoted intermediate its ends for rocking movement within the container, an extension on one end of the lever having tripping engagement with the trigger of the fire-arm, an extension on the other end of the lever projecting for movement in the slot of the container, and a gripping-member disposed exteriorly of the container and having engagement with the second lever-extension for actuating the lever.

1,481,074. HEEL. WILLIAM DAVID STEENBERG, London, England. Filed June 8, 1923. Serial No. 644,234. 5 Claims. (Cl. 36—36.)

1. A heel for boots and shoes including a carrier element, a wearing member of substantially horse-shoe shape extending around the sides and the outer end of said carrier element, the carrier element being recessed, a resilient horse-shoe shaped core member embedded in said wearing member, and lugs at the ends of one of said members extending into the carrier element recesses, said core and lugs detachably locking the wearing member and the carrier element together.

1,481,075. PENDULUM-DEMONSTRATING APPARATUS. GEORGE C. STROUSE, Sebring, Ohio. Filed Mar. 14, 1923. Serial No. 625,063. 4 Claims. (Cl. 35—16.)

1. A pendulum demonstrating apparatus comprising a vertically positioned post, an arm slidably mounted upon said post and adjustable at different heights thereon, a pendulum including a bob and a line suspended from said arm, a transverse bar carried by the post and provided with a contacting surface for said bob, means for securing said arm and said bar in a horizontal plane on said post; said means including a V-shaped bearing portion on said arm adapted to engage with the side of said post, a thumb screw for tightening the bearing portion thereon, and indices on said arm and said bar, one of said indices coinciding with the suspension point and the other of said indices coinciding with the center of gravity of said bob.

1,481,076. WINDOW SHADE AND CURTAIN SUPPORT. JOHN WŁOSZEK, Donora, Pa. Filed May 5, 1922. Serial No. 558,757. 1 Claim. (Cl. 156—23.)

In a device of the class described, a curtain pole having laterally projected ends notched on their upper sides, and socket elements receiving said notched ends, said socket elements having respectively upwardly and downwardly projected lower and upper lips forming diminished mouths, the lower lips being projected laterally beyond the upper lips to support the pole, the upwardly projecting lower lips forming cavities in the sockets below the extremities of the lips adapted to receive the ends of the pole as the latter are being inserted diagonally downward into the said sockets.

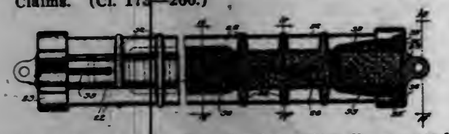
1,481,077. CLOTHESLINE. JOHN ADAMS, New York, N. Y. Filed Sept. 20, 1922. Serial No. 589,292. 3 Claims. (Cl. 68—3.)

1. In a clothesline, an outer pulley, means mounting said pulley for rotation and for bodily adjustment, means for locking said pulley against rotation when adjusted bodily to one position, and a rope for supporting clothes

passed around said pulley and adapted to move the latter bodily from one position to another.

1,481,078. FLEXIBLE SHAFTING. FRANS O. ALBERTSON, Sioux City, Iowa, assignor to Albertson & Company, Sioux City, Iowa, a Corporation of Iowa. Filed Nov. 24, 1922. Serial No. 603,089. 3 Claims. (Cl. 64—30.)

1. The combination of a flexible metallic tubing, a continuous flexible shaft, said tubing constituting a casing within which said shaft rotates, rollers encircling said shaft and loosely mounted thereon, said rollers being spaced at intervals along said shaft, a pair of collars suitably secured to said shaft adjacent each of said rollers and serving to limit longitudinal movement of said roller, and washers interposed between said rollers and said adjacent collars.



1,481,079. ACETYLENE GENERATOR. DOMINGO ANGLADA, New York, N. Y., assignor to Wolf Safety Lamp Co. of America, Inc., Brooklyn, N. Y., a Corporation of New York. Filed May 5, 1920. Serial No. 379,015. 1 Claim. (Cl. 48—4.)

In an acetylene lamp, in combination, a carbide chamber, a water reservoir, a partition secured to said reservoir and separating the reservoir and chamber, a portion of said partition being shaped to form spaced inner and outer walls, an annular groove between the walls, a washer at the base of said groove, an annular shoulder extending horizontally from said outer wall, screw threads on the inner of said walls, an annular screw

threaded flange extending upwardly from the top surface of the carbide chamber, and spaced inwardly from the outer edge thereof and inwardly from the said outer wall, a horizontal annular shoulder extending from the base of said flange, a washer on the last mentioned shoulder, the said screw threads being adapted to secure the reservoir and chamber together, the upper edge of the flange being adapted to seat on the washer in said groove and the last mentioned washer being adapted to be held between said shoulders.

1,481,080. INSULATOR. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Apr. 10, 1919. Serial No. 289,090. 19 Claims. (Cl. 173—266.)

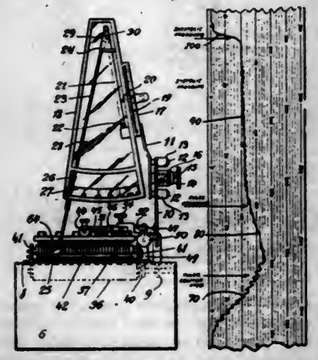
1. An elongated insulator having externally arranged interlinking reenforcing members connected therewith and insulated from one another, each of said members being insulated from one of the attaching portions of said insulator.

1,481,081. INSULATOR. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Apr. 10, 1919. Serial No. 289,091. 12 Claims. (Cl. 173—318.)

1. An insulator comprising a tube of insulating material having an open end and a pair of connecting members secured to the outer surface of said tube adjacent the opposite ends thereof and insulated from one another, one of said members being arranged to engage said tube only at points adjacent to and spaced from said open end.

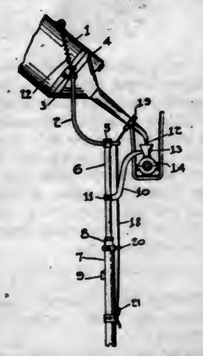
1,481,082. CONTAINER FOR PHONOGRAPHIC NEEDLES. STEPHEN BENNIS, East Williston, N. Y. Filed May 3, 1923. Serial No. 636,412. 5 Claims. (Cl. 15—210.)

1. A device of the character set forth comprising a cylindrical receptacle element having a closed bottom and a circumferential groove around the exterior thereof, a hollow circular shaped base having a central opening in its top and fitting over said bottom, and provided with an internal bead fitting into said groove, and a soft fabric covering on said base extending between said bead and groove to hold it in place, said base being spaced from said bottom.



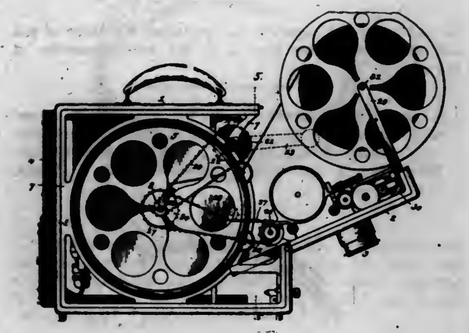
1,481,083. CUFF BUTTON. PAUL SIMPSON CARRIER, Edgewood, R. I., assignor to Grafton H. Willey, Providence, R. I. Filed Feb. 24, 1923. Serial No. 621,040. 4 Claims. (Cl. 24—102.)

1. A flexible separable cuff link comprising a pair of inner head members one having a socket and the other a short complemental stud to snap into the socket of the other to closely connect them together, an outer head



member spaced from each inner head member and loosely connected thereto by a link.

1,481,084. BLOOD-PRESSURE RECORDER. CHARLES E. DRESSLER, New York, N. Y. Filed Dec. 24, 1921. Serial No. 524,567. 1 Claim. (Cl. 234—1.)



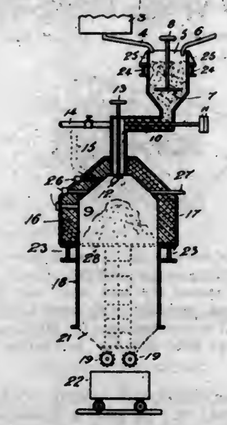
The combination of blood pressure reproducing means, a strip of paper, a pen, means for operating said pen to trace the operations of said reproducing means on the said paper, a vertically disposed casing for supporting and enclosing said pressure reproducing means, the said pen and the operating means therefor, a visible scale carried by said casing, means for observing the operations of the said pen on said scale, a box, means in said box for printing a standard blood pressure scale on said paper in advance of the tracings of the pen, means in said box for feeding said paper at right angles to the movement of the pen, and means on said box and said casing for operatively and detachably connecting the same together.

1,481,085. OILING DEVICE. OVIDE DUCHATELET, Montreal, Quebec, Canada. Filed July 6, 1922. Serial No. 573,160. 1 Claim. (Cl. 221—54.)

An extensible rod having a rearwardly offset pivot bearing and an oil can pivoted therein and a spring member projecting laterally and upwardly from said rod and terminating adjacent to the top thereof and having an outwardly bent end adapted to engage the outside of the bearing funnel and regulate the distance for the can spout.

1,481,086. FILM-REELING MECHANISM. CHARLES LEO FITZ, Fond du Lac, Wis., assignor to Drop Head Projector Company, Fond du Lac, Wis., a Corporation of Wisconsin. Filed Nov. 3, 1922. Serial No. 598,865. 12 Claims. (Cl. 242—55.)

2. In a motion picture machine having a drop front portion hinged at its lower end to the enclosing casing of the machine, the combination of a pair of reel carrying housings arranged in transverse spaced relation in said casing, a transverse reel carrying shaft common to said housings, a post hinged to said drop front portion and having a shaft at its free end adapted to support a film reel in line with one of said housings, a hinged brace attached to said post and adapted to hold the same in a raised position, and means for imparting rotation to the reel carrying shaft of said housings and to a reel carried thereon to attain a rewinding of the picture film from one reel to the other.

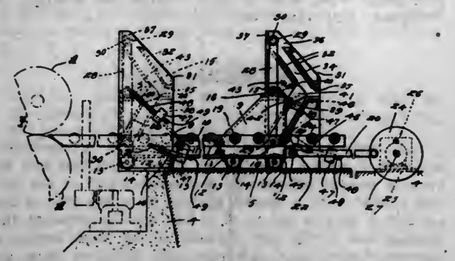


1,481,087. METHOD AND MOLD FOR MAKING CONCRETE BLOCKS. ANDREW B. FOANS, New York, N. Y. Filed May 16, 1923. Serial No. 639,258. 7 Claims. (Cl. 25—121.)

1. A mold for making concrete blocks comprising a box having an open top, bifurcated brackets secured in the box, and tie rods arranged to movably coact with the brackets projecting upwardly from the box.

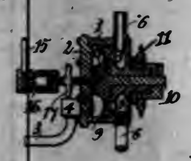
1,481,088. APPARATUS FOR AND PROCESS OF MANUFACTURING NITROGEN COMPOUNDS FROM CARBIDES. TSUNMICHI FUJIYAMA, Tokyo, Japan. Filed Dec. 12, 1918. Serial No. 266,421. 11 Claims. (Cl. 23—13.)

6. A furnace for manufacturing nitrogen compounds consisting of a reaction chamber having its lower end open, means to temporarily support a mass of raw material within such chamber, means for supplying nitrogen gas and fresh quantities of raw material through the upper end of said chamber, said temporary support being



gradually withdrawn to permit the body of formed nitrogen compounds to progress through the open end of such chamber.

1,481,089. FEED-CONTROLLING DEVICE. GEORGE H. GLASER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 15, 1919. Serial No. 277,348. 18 Claims. (Cl. 121—9.)

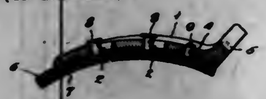


1. The combination with work performing means and feeding means therefor including a cylinder and piston, of feed controlling means movable with said piston and cooperating with said cylinder to restrain relative movements of cylinder and piston.

1,481,090. TRANSFER APPARATUS. JOHN J. HAZLEWOOD, Pittsburgh, Pa. Filed Oct. 1, 1921. Serial No. 504,820. 8 Claims. (Cl. 80—47.)

5. A transfer apparatus consisting of a transfer member, rolling stock, a pitman pivoted thereto, means to actuate the pitman, said rolling stock consisting of truck frames, means connecting the frames on said truck frames, axles journaled on said bearing frames, wheels on said axles, shafts, bearing members for said shaft on said bearing frames, cranks on said shafts journaled to said transfer member, levers on said shafts and stationary cam members associated with said levers to actuate the same.

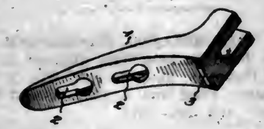
1,481,091. MEANS FOR STARTING INTERNAL-COMBUSTION ENGINES. CHARLES FREDERICK HEYWOOD, Buenos Aires, Argentina. Filed Aug. 27, 1921. Serial No. 495,916. 12 Claims. (Cl. 60—16.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a device for starting internal combustion engines, means for supplying compressed fluid, means for supplying fuel, receiving means for said fluid and fuel, said last mentioned means provided with means for distributing compressed fluid to one cylinder for starting and a carburetted mixture of fluid and fuel to another cylinder.

1,481,092. TRANSMISSION BAND. GLENN R. HOFFMAN, Springfield, Ill., assignor to Hoffman Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 5, 1923. Serial No. 622,911. 2 Claims. (Cl. 188—249.)

2. A transmission band provided with a removable ear formed with a slot having an enlarged portion and with a socket in its under face having front and rear walls, and a band provided with a headed stud to fit in the slot of the ear and a stud positioned to fit in the socket of the ear and bear against the front and rear walls thereof to prevent longitudinal movement and with an upturned flange to bear against the end of the ear.

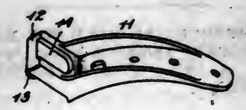


1,481,093. TRANSMISSION BAND. GLENN R. HOFFMAN, Springfield, Ill., assignor to Hoffman Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 5, 1923. Serial No. 622,912. 2 Claims. (Cl. 188—249.)

2. A transmission band provided with a removable ear formed with a slot having an enlarged end and an opening located adjacent to the notched end of the ear, and a band with a headed stud to fit in the slot of the ear and a stud or pin to fit in the opening adjacent the notched end of the ear, the end of the band having a portion thereof bent upwardly and folded to form an abutment for the end of the ear.

1,481,094. TRANSMISSION BAND. GLENN R. HOFFMAN, Springfield, Ill., assignor to Hoffman Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 5, 1923. Serial No. 622,913. 2 Claims. (Cl. 188—249.)

2. A transmission band provided with a removable ear formed with a slot having an enlarged end and on its under face next to the notched end of the ear with a depending shoulder, and a band provided with a headed stud to fit in the slot of the ear and having a recess in

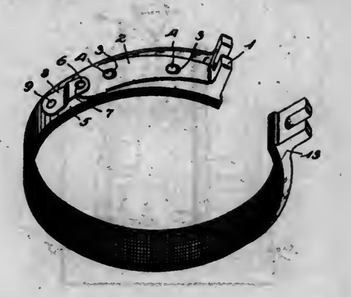


its end adapted to receive the depending shoulder of the ear when the headed stud is in the narrow portion of the slot.

1,481,095. TRANSMISSION BAND. GLENN R. HOFFMAN, Springfield, Ill., assignor to Hoffman Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 5, 1923. Serial No. 622,914. 2 Claims. (Cl. 188—249.)

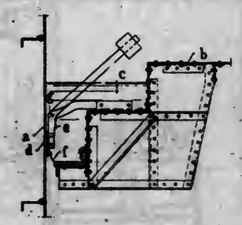
2. A transmission band provided with a removable ear formed with slots having enlarged ends and provided at one end with a spring plate projecting beyond the end of the ear and having a depending lip, and a band provided with headed studs to fit in the slots of the ear and formed with a slot to receive the lip of the spring plate.

1,481,096. TRANSMISSION BAND. GLENN R. HOFFMAN, Springfield, Ill., assignor to Hoffman Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 9, 1923. Serial No. 624,011. 4 Claims. (Cl. 188—249.)



4. An ear for a transmission band having an upwardly extending end formed with a stem projecting from one face to receive a spring and having a socket formed in the other face to receive the end of an adjusting screw.

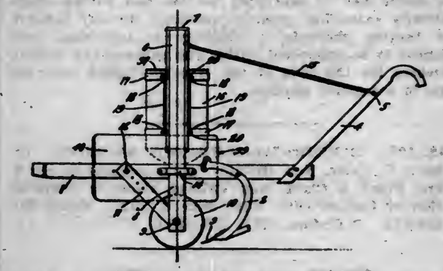
1,481,097. TRANSMISSION BAND. GLENN R. HOFFMAN, Springfield, Ill., assignor to Hoffman Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 19, 1923. Serial No. 626,086. 4 Claims. (Cl. 188—249.)



3. A transmission band provided with ears having out-turned ends formed on their adjacent faces with projecting stems adapted to receive an expansion spring, and with means on their other faces adapted to receive band contracting means.

1,481,098. TRANSMISSION BAND. GLENN R. HOFFMAN, Springfield, Ill., assignor to Hoffman Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Oct. 10, 1923. Serial No. 667,751. 6 Claims. (Cl. 188—249.)

5. A removable ear for transmission bands formed with an opening to receive a stud attached to the band, and a resilient locking means attached to the band adjacent to the rear end of the ear to overlap the end of the ear and exert a downward pressure thereon.

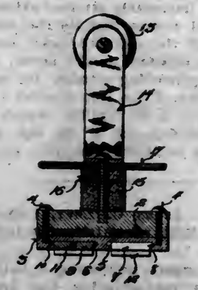


1,481,099. SEALING MEANS FOR GAS HOLDERS. KONRAD JAGSCHITZ, Mains, Germany, assignor to Maschinenfabrik Augsburg-Nürnberg A. G., Nuremberg, Bavaria, Germany, a Corporation of Germany. Filed Apr. 19, 1921. Serial No. 462,739. 3 Claims. (Cl. 48—176.)

1. The combination of a gas holder, a closure member movable therein, an annular peripheral trough carried by said closure member and slidable along the inner surface of said gas holder, said trough being adapted to contain a sealing fluid, a sealing member impervious to liquids located in said trough and slidable along said inner surface of said gas holder, a packing supporting member having its inner edge connected with said closure member in a fluid-tight manner and its outer edge connected with said sealing member in a fluid-tight manner, and mechanical means carried by said closure member and exerting a force in a direction solely transverse to the direction of movement of said closure member for automatically pressing said sealing member into close contact with said inner surface of the gas holder to thereby provide a fluid-tight joint without obstructing the sliding movements of said sealing member.

1,481,100. POISON DISTRIBUTOR. ROSSER GIBSON KILLINGSWORTH, McCormick, S. C. Filed Sept. 26, 1922. Serial No. 590,702. 6 Claims. (Cl. 43—145.)

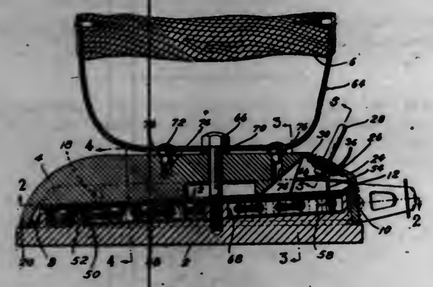
1. In a device of the class described, a frame; a post mounted on the frame for vertical movement; a ground wheel on the lower end of the post; a receptacle located at one side of the post and carried thereby; an agitator



in the receptacle; and means for connecting the agitator operatively with the ground wheel.

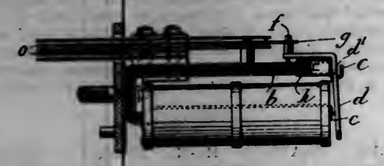
1,481,101. AUTO SIGNALING DEVICE. LEON KOWALAK, Buffalo, N. Y. Filed Feb. 14, 1918. Serial No. 217,276. 1 Claim. (Cl. 177—329.)

As an article of manufacture, an auto signaling box adapted for the reception of lamps, comprising a shell having a flat face with apertures forming signal characters, two opposite side faces, a bottom apertured face, for the reception of a lamp, and a top curved face, a plate fitting the open side of said shell, with means for attaching said plate to said shell, said plate having integral therewith, in its central portion, a square box having vertical and horizontal sides, the two vertical sides extending below the lower of the horizontal side, two inclined walls projecting divergently from the upper corners of said square box, the sides of said box and the said inclined walls dividing said shell into lamp compartments, a reflector hood mounted upon the under side of said shell, and means for attaching a name or number plate to the rear of said hood, upon said first mentioned plate.



1,481,102. BRANDING IRON. WILLIAM C. KRAUSE, Milwaukee, Wis. Filed May 7, 1923. Serial No. 637,071. 4 Claims. (Cl. 101—27.)

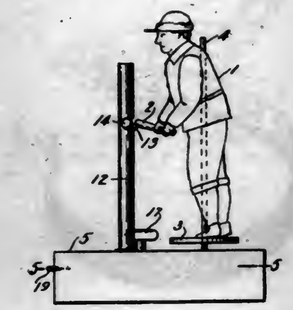
1. A branding machine comprising a channeled body portion, heating elements positioned within the channels



of said body portion, means for exerting pressure upon the upper side of said body portion, a platen secured to the under side of said body portion and having longitudinally extending grooves positioned directly beneath the heating elements, a plurality of individual type adapted to be assembled within the grooves and locking members for the ends of the type to thereby hold the type in assembled position.

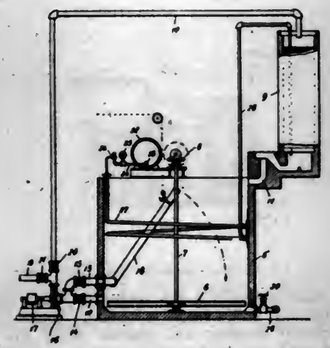
1,481,103. ELECTRICALLY-HEATED SADIRON. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed June 6, 1922. Serial No. 566,272. 7 Claims. (Cl. 219—25.)

1. A sad iron having, in combination, a base part having an upwardly extending marginal flange spaced from the edge thereof, a top part covering the flange and having a depending lip surrounding and spaced from the flange and engaging the margin of the base part with its lower edge bevelled inwardly and upwardly from said margin, an electrical heating element interposed between the top and base parts within said flange, and means for detachably securing the top and base parts together.



1,481,104. ELECTROMAGNETIC RELAY. THOMAS LERAGHAN, Croydon, England. Filed July 7, 1921. Serial No. 482,982. 5 Claims. (Cl. 175—336.)

1. An electromagnetic relay, comprising a coil, a core therein having an immovable external extension arranged parallel to the coil and so that its free end is adjacent to the free end of the coil and hence occupies a constant position in relation to the latter, a knife-edged armature and a supporting member for such armature entirely independent of the coil adapted to fit frictionally tight upon and to be forcibly moved into different positions along the free end of the core extension said member being thus self-holding on such extension.

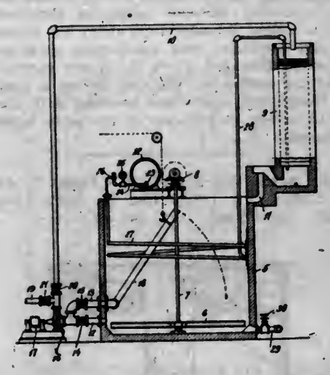


1,481,105. TOY. JULES G. LEVY, Cedarhurst, N. Y. Filed Sept. 12, 1921. Serial No. 500,103. 11 Claims. (Cl. 46—61.)

1. In a toy, a figure simulating a ball player holding a bat, means for swinging the figure and bat through a ball striking position, and a ball holder having an opening through which the extremity of the bat may be swung to engage and propel a ball, said holder being adapted to contain a vertical series of balls with

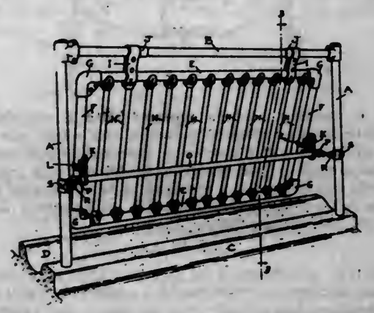
the lowermost ball held in said opening whereby balls will be fed successively from the vertical series into position to be engaged by the bat.

1,481,106. PREPARATION OF LIQUID-BLEACH SOLUTIONS. JAMES H. MACMAHON, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Filed Sept. 20, 1922. Serial No. 589,328. 8 Claims. (Cl. 23—18.)



1. The method of preparing bleach solutions by subjecting an alkaline solution to the action of chlorine, which comprises vaporizing liquid chlorine by heat exchange relation with a body of the alkaline solution and causing the gaseous chlorine to contact with another body in which a large surface of the solution is exposed to the gas.

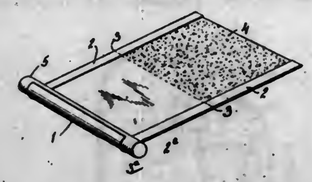
1,481,107. LIQUID-BLEACH APPARATUS. JAMES H. MACMAHON, Niagara Falls, N. Y., assignor to Mathieson Alkali Works, Inc., New York, N. Y., a Corporation of Virginia. Original application filed Sept. 20, 1922, Serial No. 589,328. Divided and this application filed Sept. 21, 1923. Serial No. 664,031. 6 Claims. (Cl. 23—18.)



1. An apparatus for vaporising liqefied gas and for absorbing the vaporized gas in a liquid, comprising a container for the liquid, a source of liquefied gas, means

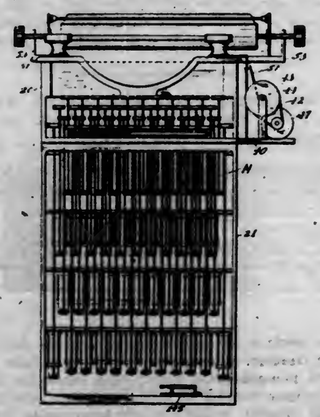
for passing the liquefied gas in heat-interchanging relation with the liquid in said container to vaporise the

gas, a tower, means for introducing the vaporized gas into the tower, and means for circulating the liquid from the container to the tower.



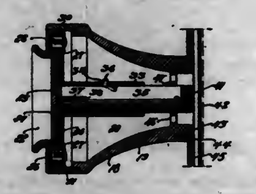
1,481,108. ANIMAL PEN. ALBERT H. NELLER, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed July 30, 1923. Serial No. 654,744. 4 Claims. (Cl. 119—63.)

4. In a panel for animal pens having at each end an upright post connected together at their upper ends by a top rail, a movable section located between said posts and hinged at its upper side to said top rail, a pair of connecting members having vertically disposed openings therein, said connecting members being adjustably attached to the movable section near the ends thereof. An elongated horizontally disposed operating member placed in the openings in the connecting members, laterally disposed arms secured to the ends of the operating member outside of the connecting members, and pivots adjustably secured to the end posts adjacent to said arms, and in line with the operating member, and the outer ends of said arms being pivoted thereon, substantially as and for the purpose set forth.



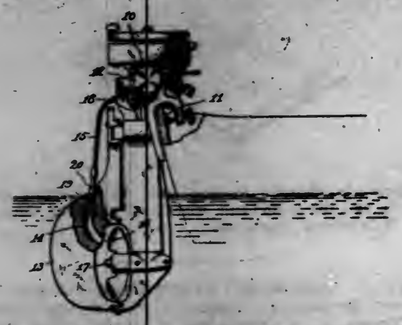
1,481,109. HAIR-WAVING APPLIANCE AND METHOD OF USING THE SAME. CHARLES NESSLER, New York, N. Y., assignor to Nestle Patent Holding Co. Inc., Hornell, N. Y., a Corporation of New York. Filed Feb. 12, 1923. Serial No. 618,657. 13 Claims. (Cl. 132—31.)

1. In a hair-waving appliance of the class described, means provided with media of hair treating substance and also media of fatty or oily material, said parts being constructed and arranged so that the said fatty



material is disposed between said hair treating substance and the wound-hair when applied to the same in the hair-waving operation.

1,481,110. AUTOMATIC TYPEWRITER. GILBERT A. POND, Evanston, Ill., assignor to Pond Electric Writer, Chicago, Ill., a Corporation of Illinois. Filed Sept. 11, 1919. Serial No. 323,195. 58 Claims. (Cl. 197—20.)

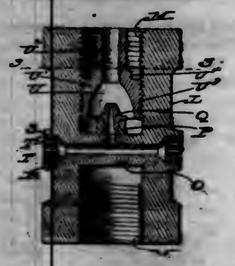


1. In a device of the class described, the combination of a feeding roller for receiving a perforated record strip, a motor, gearing continuously connecting said roller with said motor, a switch for controlling the operation of said motor, a first electromagnet for moving said switch to its closed position, and a second electromagnet for moving said switch to its open position.

1,481,111. TELEPHONE-TRANSMITTER CONSTRUCTION. THEODORE F. ROSE, Jr., Collingswood, N. J. Filed June 30, 1921. Serial No. 481,497. 6 Claims. (Cl. 179—188.)

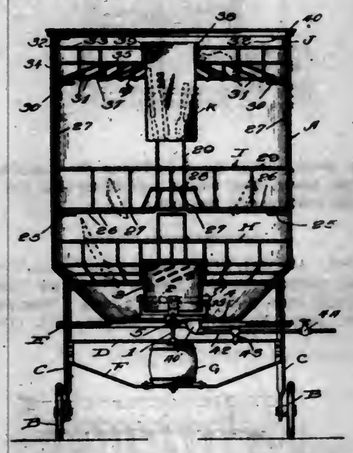
1. A device of the character described including a sleeve having a helical slot; a silencing plunger having a portion engaging in said slot; and means for effecting a rotatable movement to said plunger whereby said portion will follow said slot and the plunger will be moved lengthwise.

1,481,112. COOLING DEVICE FOR MARINE ENGINES. RUDOLPH TORNOW, Boscoville, Mo. Filed Oct. 6, 1922. Serial No. 667,036. 4 Claims. (Cl. 115—17.)



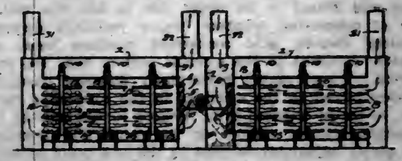
1. A cooling device for outboard marine engines comprising a rudder provided with a water-intake having its mouth adjacent to and to the rear of the boat propeller, and a flexible pipe connection between the discharge end of said intake and the water jacket of the engine.

1,481,113. ELECTRIC HEATER. LOREN S. WELLS, New York, N. Y. Filed Apr. 10, 1922. Serial No. 550,996. 4 Claims. (Cl. 219—64.)



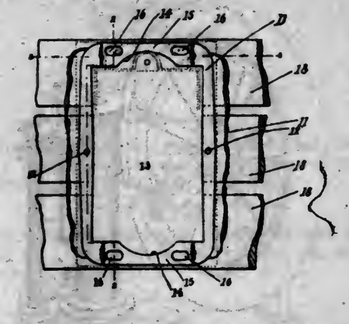
1. An electric heater comprising a body having a resistance conductor embedded therein, said body being an electrical non-conductor and a heat conductor not liable to injury from contact of water, moisture, snow, and ice, the ends of said resistance conductor being within the body, and insulated conductors having bare ends embedded within said body, said bare ends being connected with the corresponding ends of the resistance conductor within the body and the junctions embedded therein.

1,481,114. OIL-WELL APPARATUS. THEODORE J. ASHBY, Perryville, Ark. Filed Oct. 30, 1922. Serial No. 597,854. 1 Claim. (Cl. 103—232.)



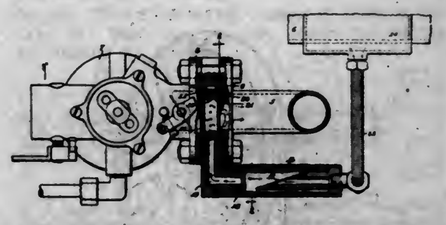
An oil apparatus consisting of a casing adapted to be submerged in the well, means for supplying gas or air under pressure to said casing to act upon the body of liquid, a pipe disposed in said casing having a discharge element, a series of main injector and ejector nozzles connecting the end of said pipe to act successively to lift and force the liquid through the main pipe to the discharge thereof, said nozzle members consisting each of an interiorly threaded coupling sleeve, of cylindrical form, a horizontal tube arranged intermediate of said tube having each end leading to a threaded flaring outlet, having an upward extending threaded nipple, a threaded nozzle fitting said nipple, threaded caps fitting the threaded outlets of said horizontal tube and having openings, a discharge nozzle arranged above the nozzle carried by the nipple of the horizontal tube and having a cupped portion to receive said nozzle and provided with threads on its rim to engage the threads of the main injector and ejector nozzles.

1,481,115. WASHING MACHINE. JAMES T. ANTHONY, New York, N. Y. Filed Oct. 19, 1922. Serial No. 595,560. 10 Claims. (Cl. 141—9.)



1. A washing machine provided with a container, a rotative impeller adapted to throw the water upwardly into said container, a distributor surrounding said impeller and supported by said container, said distributor being interiorly provided with a plurality of fins extending at an angle to the body of the distributor, substantially as and for the purpose set forth.

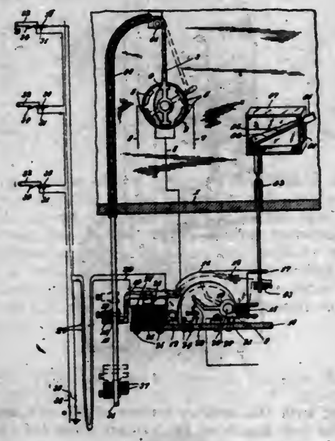
1,481,116. MACHINE FOR DRYING AND CONDITIONING MATERIAL. ELWOOD B. AYRES and THOMAS H. RHOADS, Philadelphia, Pa., assignors to Proctor & Schwartz, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 26, 1923. Serial No. 634,765. 7 Claims. (Cl. 34—46.)



1. The combination in a machine for drying and conditioning material, of a casing; a longitudinal partition dividing the casing into two sections; a longitudinal partition in each section having fan openings; fans in said openings; means for driving the fans; horizontal partitions extending part way across the upper portion of each section and another horizontal partition extending part way across the sections near the lower ends thereof so as to cause the air to circulate; a series of rails extending longitudinally in each section; carriers suspended from the rails, said carriers having arms; and cylinders, mounted on the arms, carrying the material to be dried and conditioned.

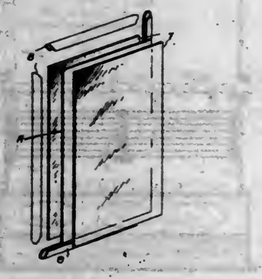
1,481,117. REINFORCING PLATE AND TEMPLATE FOR SWITCH BOXES. EGAR-HADDON BALL, St. Paul, Minn. Filed Aug. 16, 1920. Serial No. 404,002. 2 Claims. (Cl. 247—21.)

1. The combination with a switch box adapted to be projected into an opening in a wall, said box carrying flanges overlapping the edges of the opening, a template frame secured to the wall around said opening, said template frame being formed with a central opening to receive said switch box, the inner edges of the frame constituting said opening being directed inwardly toward the center of the frame to centrally narrow the width of the opening, for the purpose set forth.



1,481,118. FUEL MIXER. ROBERT L. BENNETT, New York, N. Y. Filed Jan. 17, 1923. Serial No. 613,189. 3 Claims. (Cl. 48—180.)

3. A mixer, including a gasket formed with a channel in its inner face, a cap plate carried by said gasket and having its side walls covering said channel, said side walls being covered with a series of perforations in line with said channel, the head of said cap being formed with a plurality of cutout deflector blades within said cutout portions, a housing in communication with said channel, means for introducing heated air into said housing, a valve co-operating with a valve seat also within said housing, and a screen arranged in advance of said valve.

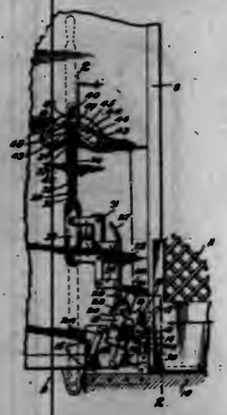


1,481,119. SYSTEM FOR CONTROLLING THE OPERATION OF ELEVATORS. FRANZ A. BOSDICHER, Bergenfield, N. J. Filed May 25, 1920. Serial No. 384,117. 26 Claims. (Cl. 187—31.)

15. In a system of the class described, an elevator car provided with a controller, an electric circuit associated with the car, a switch in the car circuit, mechanical connections between the controller and the switch for automatically effecting the closing of the switch when the controller is in neutral position and the car at rest, a lock associated with the shaft door of each floor of the building in which the elevator is installed, and electrical means controlled by all of said locks for maintaining the car circuit switch in closed condition, when the controller is shifted from neutral position to start the car, provided that all of the locks are in locked condition, in combination with manually operable mechanical emergency means for

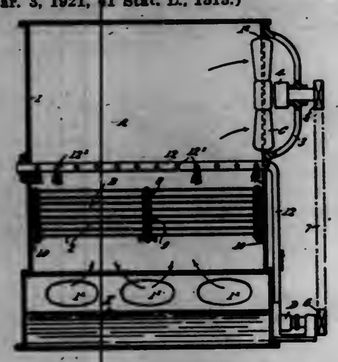
temporarily closing said switch to allow of movement of the car, even though the electrical switch maintaining means is ineffective.

1,481,120. IDENTIFICATION CARD AND HOLDER. FRANK BROMBOSZ, Buffalo, N. Y. Filed Oct. 13, 1921. Serial No. 507,539. 2 Claims. (Cl. 40—155.)



1. A device of the class described consisting of a card, a transparent panel to cover and protect the same, clasp strips of U-shaped form end to end adapted of themselves to secure the card and panel together, said clasp strips being detachably engageable with the card and panel along edges thereof, and said clasp strips being of a length whereby one end of a strip at each corner of the device will slip over the adjacent corner of the adjacent strip.

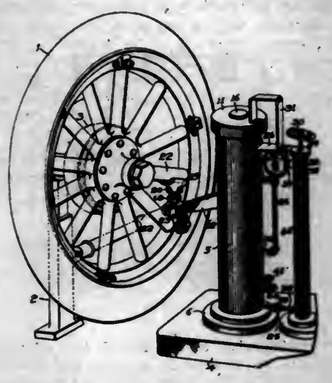
1,481,121. ENTER LOCK FOR ELEVATORS. EDWIN CARLSON, Minneapolis, Minn. Filed Aug. 30, 1922. Serial No. 585,297. 21 Claims. (Cl. 187—49.)



9. In a lock of the kind described, the combination with an elevator car having an operating lever and a shaft closure gate, of a rocker operated by the movement of the gate, a ratchet, a lock dog having an offset striking surface, said lock dog being pivoted to the rocker and normally engaging the ratchet to hold the rocker in a position to lock the gate closed, a cam bar carried by

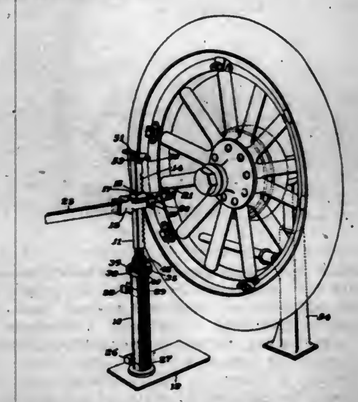
the elevator car, and means for actuating the cam bar from the operating lever to position the same for en-

gagement with the striking surface of the lock dog to release said lock dog from the ratchet when the operating lever is moved to neutral position.



1,481,122. APPARATUS FOR TREATING GASES WITH LIQUIDS. ALFRED B. CLEWORTH, Hollinwood, England. Filed Aug. 6, 1924. Serial No. 401,762. 1 Claim. (Cl. 261—113.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

An apparatus for treating air or gas with liquid comprising walls enclosing a chamber, said chamber being provided with air or gas inlet and outlet openings, means for causing a current of air or gas to traverse said chamber from said inlet to said outlet opening, a screen unit fixed within said chamber and in the path of said air or gas current, said screen unit being formed from a sheet of metal provided with openings, the strips of metal between said openings being inclined to the plane of the face of said sheet in the same direction, and means for distributing liquid upon one face of said sheet.

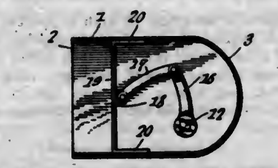


1,481,123. BRAKE TESTER FOR VEHICLE WHEELS. CHARLES F. COWDREY, Fitchburg, Mass. Filed Apr. 6, 1921. Serial No. 458,968. 14 Claims. (Cl. 265—47.)

1. A brake tester for vehicle wheels, comprising, in combination, means for applying force to a wheel of a vehicle sufficient to turn the wheel under brake resistance and while the wheel is relieved from the weight of the vehicle, including a support, means guided by said support to move along a vertical path, mechanism for imparting movement to the guided means, means carried by the guided means to engage the wheel and impart the move-

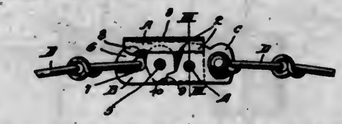
ment of the guided means thereto, and means for indicating the force exerted upon the wheel when the wheel responds to the turning movement.

1,481,124. BRAKE-TESTING DEVICE FOR VEHICLE WHEELS. CHARLES F. COWDREY, Fitchburg, Mass. Filed Oct. 24, 1922. Serial No. 596,584. 10 Claims. (Cl. 265—1.)



1. A brake tester for testing the brake resistance to the turning movement of vehicle wheels, comprising, in combination, a support, a post mounted upon the support for yielding downward movement, a bracket adjustably mounted upon the post and constructed to be supported thereby at different elevations from the ground, a lever pivotally mounted upon the bracket and operable to exert a turning force upon a wheel to turn the wheel under brake resistance, and means actuated by the yielding downward movement of the post to indicate the force required to effect turning movement of the wheel.

1,481,125. ICE-CREAM DIPPER. STEPHEN CUPER, ANTHONY DANIELS, and FRANK KLENS, Scranton, Pa. Filed Aug. 30, 1922. Serial No. 585,216. 3 Claims. (Cl. 107—48.)



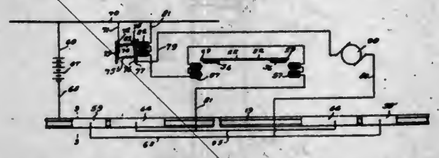
1. The combination with a scoop constituting a mold, and an ejecting follower in the scoop, of a crank arm

mounted to swing within the scoop about an axis extending across the interior of the scoop, a link connection

within the scoop between the crank arm and the follower, a handle, and means movably mounted relative to the handle for actuating the crank arm.

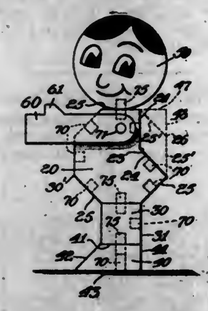
1,481,126. CHAIN COUPLING. DANIEL M. CUPP, Mount Solon, Va. Filed July 7, 1923. Serial No. 650,041. 4 Claims. (Cl. 24—242.)

1. In a coupling, the combination of an intermediate supporting member, a hook pivoted to one end thereof, and a link pivoted to the other end, the inner heel ends of the said hook and link members being arranged to come into engagement and serve as abutments to hold these parts in line, when the coupling is in working position, and said hook and link members being arranged to have attached to them respectively the ends of the members the coupling unites.



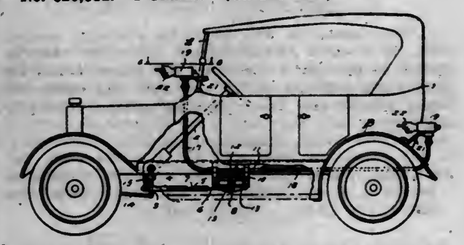
1,481,127. PRINT MACHINE. HENRY H. DOERING, Chicago, Ill. Filed Aug. 15, 1921. Serial No. 492,252. 13 Claims. (Cl. 31—65.)

1. A machine of the character described, comprising a butter-receiving housing having screw-worm receiving grooves and a butter-introducing opening in the top, the top wall of the housing being formed in vertically disposed sections, the bottoms whereof have surfaces conforming with the grooves in the bottom of the housing to subject the butter passing therethrough to pressure, said sections being removably secured in place in order that the length of the pressure-applying portions of the housing may be regulated, means whereby said sections may be held in place against movement, a chambered moulding head secured to the delivery end of said housing, and means whereby a heating medium may be circulated through the chamber of said head.



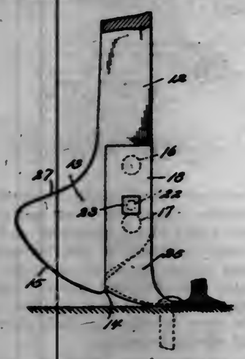
8. A machine of the character described, comprising a butter working portion provided with a moulding-head whereby the butter is formed into strips or ribbons of predetermined compactness and rectangular in cross section, in combination with cutting mechanism disposed beyond the discharge end of said moulding-head, said cutting mechanism comprising rotatably mounted means provided with a plurality of cutting wires disposed transversely, and an endless element provided with a plurality of prongs or fingers arranged at predetermined distances apart commensurate with the distance intermediate of the cutting wires of said mechanism, said prongs or fingers being adapted to engage with said rotatably mounted means whereby the latter is caused to rotate when said endless element is actuated through the movement of the ribbon or strip of butter issuing from the moulding-head.

1,481,128. MINE-DOOR-OPERATING APPARATUS. HARRY FRANK and JOHN LEWIS, Fork Ridge, Tenn. Filed Apr. 13, 1922. Serial No. 552,119. 5 Claims. (Cl. 246—125.)



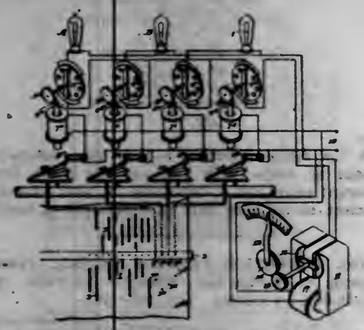
1. In apparatus of the character described, a track, a mine door extending across the track and adapted to be shifted to opened and closed positions, electrical means to move the door to the opened position including a car wheel completed circuit closed at one point by the passage of a train, and electrical means including a car wheel completed circuit closed at another point by the passage of the train to open the first circuit and hold the door in the opened position.

1,481,129. TOY. GEORGE W. FRENCH, Chicago, Ill. Filed Feb. 12, 1921. Serial No. 444,315. 3 Claims. (Cl. 46—40.)



1. A toy figure including a body part substantially octagonal in shape with two adjacent sides forming a reentrant angle and a detachable leg part adapted for attachment to the body part in a plurality of positions.

1,481,130. DIRECTION VEHICLE SIGNAL. JAMES R. GIDDENS, Jr., Mobile, Ala. Filed Feb. 23, 1923. Serial No. 620,682. 4 Claims. (Cl. 116—46.)



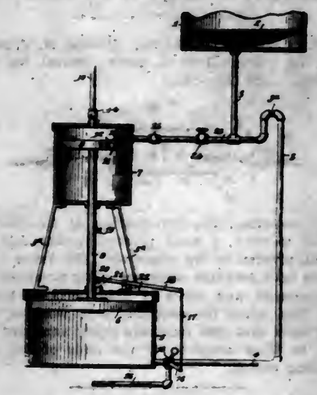
1. Traffic signal means for motor vehicles comprising similar front and rear signal devices each including a casing, a direction indicator carried by the casing, a lamp within the casing for illuminating the indicator, a crank arm having a limited sliding connection with the steering gear for movement therewith, a vertical shaft carrying the crank arm, a longitudinal shaft geared to the vertical shaft, and an independent flexible shaft connection between the longitudinal shaft and the casings of the signal devices to effect simultaneous movement thereof.

1,481,121. SPIKE PULLER. EDWARD FISHER GOSEN, Muskogee, Okla. Filed June 16, 1922. Serial No. 568,753. 3 Claims. (Cl. 254—25.)

1. A spike puller comprising a handle having claws detachably secured to one end thereof, lugs on said claws, said handle having depressions therein corresponding to said lugs whereby the claws may be attached to the handle with a single bolt, and a fulcrum member extending rearwardly from said claws and having a curved fulcrum surface at the end thereof.

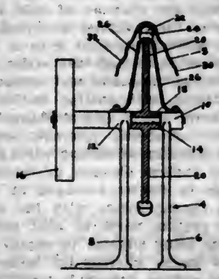
1,481,132. METHOD OF AND MEANS FOR ASSOCIATING LIGHT AND MUSIC. MARY HALLOCK GREENEWALT, Philadelphia, Pa. Filed Aug. 30, 1918. Serial No. 252,133. 7 Claims. (Cl. 84—464.)

2. The combination with means for producing musical notes, of a source of illumination, means for effecting changes in the light produced by said source, means for varying the intensity of the said light and means for timing both of said means with the musical notes produced.



1,481,133. ARCH SUPPORTER. FRANK GROSSMAN, Brooklyn, N. Y. Filed Dec. 19, 1921. Serial No. 523,272. 4 Claims. (Cl. 12—142.)

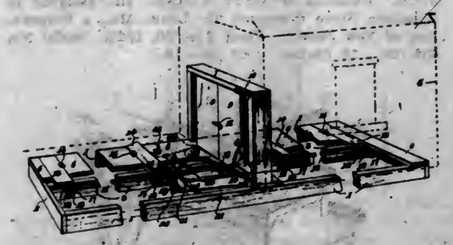
1. In boots and shoes the combination of an insole formed of a single piece of material, an opening in the shank of said insole to lie beneath the arch of the foot, a resilient pad slightly larger than and protruding through said opening and held in place between the inner and outer soles, both soles lying in contact throughout substantially all their areas save for those parts separated by the pad.



4. The method of securing an arch supporter in a boot or shoe which consists in forming an opening in the inner sole and a cavity in the last, then after the upper, welt and inner sole are sewed together, placing a pad in the opening, and sewing the outer sole to the welt, the inner sole engaging the outer sole throughout its entire periphery.

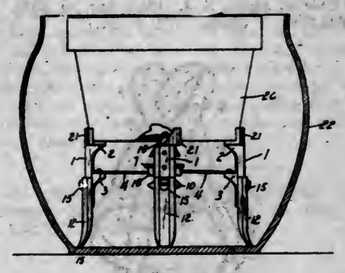
1,481,134. HYDRAULIC PUMP. JAMES G. HAMPTON, Lafontaine, Kans. Filed June 26, 1922. Serial No. 570,920. 2 Claims. (Cl. 103—50.)

1. A hydraulic pump comprising, a pair of spaced vertically positioned aligned piston chambers, the upper of less capacity than the lower, a piston head in each chamber, the head in said upper chamber having a passage therethrough, a piston rod connecting said heads, a liquid supply pipe connected to each chamber, a lead-off pipe in said upper chamber, said supply and lead-off pipe entering said upper chamber above the piston head, a three way valve and supply pipe leading to the lower chamber, a drain-off pipe from said valve, said supply pipe entering the lower chamber below the piston head, a spring pressed flap valve upon the top of said upper piston head, and normally closing the passage therethrough, spaced stops upon said piston rod, and pivoted means connected with said three way valve and intermittently operating said valve through the action of said stops.



1,481,135. STAKING MACHINE. ALEXANDER H. KEHRHAHN, Frankfort-on-the-Main, Germany, assignor to The Turner Tanning Machinery Company, Peabody, Mass., a Corporation of Maine. Filed Aug. 30, 1923. Serial No. 660,232. 4 Claims. (Cl. 149—15.)

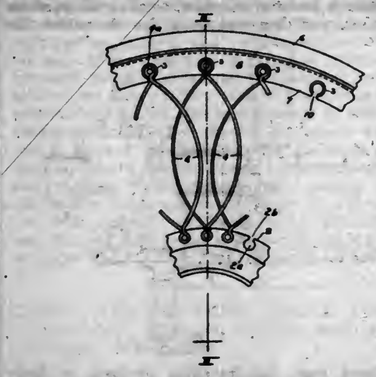
4. In a machine of the character described, a rotatable wheel, and a plurality of blades mounted on the periphery



of the wheel and having working edges pointing in a direction parallel to the axis of the wheel, said blades projecting laterally from each side face of the wheel, and a stationary guard member having an upper curved edge just below the lower edges of the blades and adapted to support the hand of the operator employed in pressing the work against said working edges of the blades.

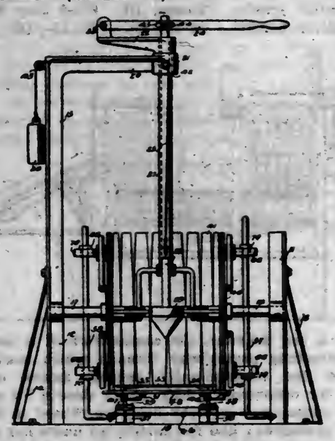
1,481,136. AUTOMATIC GATE OR DOOR. JOHN KOSTIL, Ashley, Pa. Filed Dec. 19, 1922. Serial No. 607,809. 2 Claims. (Cl. 268—9.)

1. In automatic door opening and closing mechanism, a base frame, hinged doors mounted thereon, trip devices carried by the base frame, operative connections between the trip devices and hinged doors, said operative connections including a rod longitudinally shiftable on the base frame, bell-crank levers, each positioned beneath a trip device, pivotally mounted on the base frame and connected to said trip devices, rod levers hinged to the base frame and slidably associated with said rod, and operative connections between said levers and hinged doors.



1,481,137. SUPPORT FOR FLOWERPOTS. FRED B. LEMKE, Milwaukee, and CHARLES R. DRAEGER, Waukesha, Wis.; said Draeger assignor to said Lemke. Filed June 18, 1921. Serial No. 477,201. 3 Claims. (Cl. 248—41.)

1. A support for flower pots having a hole in the bottom thereof, said support comprising a plurality of members for adjustably engaging the sides and bottom of said flower pot, legs adjustably related to said members for varying the height of said support, and a spring-pressed stopper for closing the hole in the bottom of said flower pot.

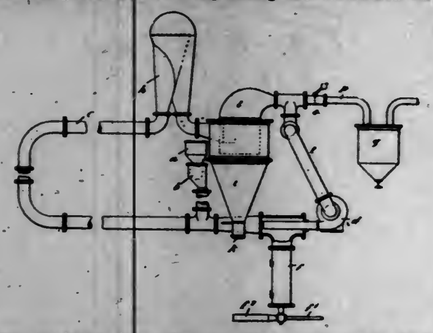


1,481,138. RESILIENT WHEEL. JOSEPH L. LUCE and RAYMOND P. LUCE, Belle Vernon, Pa. Filed Mar. 7, 1923. Serial No. 623,863. 4 Claims. (Cl. 152—50.)

1. In a resilient wheel of the character described, the combination with a socketed hub, of an outer annular rim having inwardly extending flanges each provided with annular series of inwardly open circular sockets, inward-

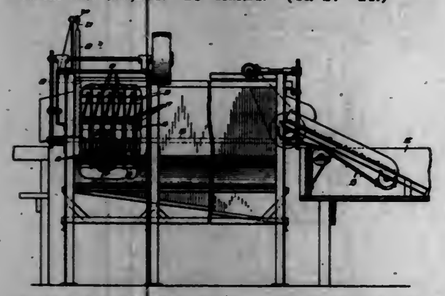
ly open cylindrical bearing thimbles in said sockets, and corresponding series of spokes having rounded terminals seated in said thimbles.

1,481,139. BARREL-MAKING MACHINE. ROBERT J. MCCLENNY, East Palatka, and DAVID B. BARDIN, Palatka, Fla. Filed June 20, 1922. Serial No. 569,694. 11 Claims. (Cl. 147—3.)



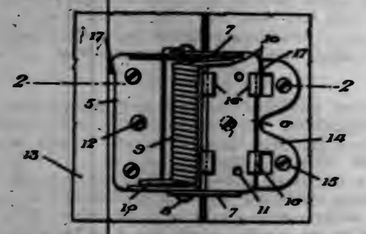
1. A machine for making barrels from staves, comprising means for supporting the staves in barrel formation, means for forcing the ends of the barrel staves inward to receive hoops, means for engaging the barrel staves along circumferential lines extending transversely of the middle parts of the staves to retain them in position while the ends are being pressed inward; and a balanced cone for operating the means for engaging the barrel staves along the circumferential lines.

1,481,140. METHOD OF AND APPARATUS FOR CARBONIZATION OR DESTRUCTIVE DISTILLATION. SAMUEL MCEWEN, London, England. Filed June 16, 1920. Serial No. 389,399. 5 Claims. (Cl. 202—8.)



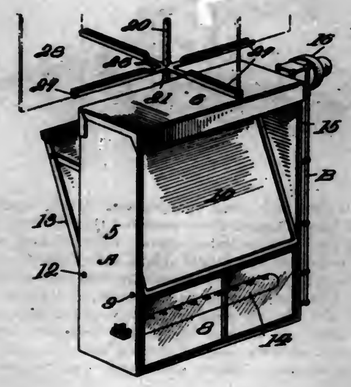
5. A process of carbonizing finely subdivided fuel consisting in suspending the finely sub-divided fuel in a gas at a temperature necessary for carbonization of the fuel, which process consists in removing a portion of the gases from the carbonising chamber, burning the said portion in close proximity to the zone of carbonization, introducing the hot products of combustion into the said zone

so that they travel in such manner as to delay the settling of the particles by gravitation and in such a manner that there is reactive movement between the particles and the gases, and then separating the carbonised fuel



thus produced from the travelling products in finely subdivided state and causing the said products to continue to travel in a closed circuit to receive fresh fuel, the condensible products of carbonization being removed from the apparatus.

1,481,141. HOG DEHAIRER AND METHOD OF DEHAIRING HOGS. GEORGE W. MARTIN, Chicago, Ill., assignor, by direct and mesne assignments, to Charles L. Byron, trustee, Chicago, Ill. Filed July 9, 1923. Serial No. 650,214. 18 Claims. (Cl. 17—16.)

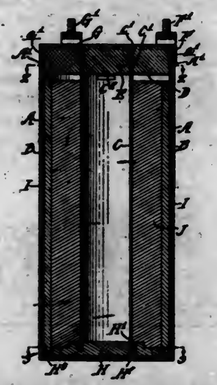


1. In a hog dehairer, the combination of a longitudinally extending passageway through which hogs to be dehaired are longitudinally passed, means operable therein for removing the hair, and a closure for one end of said passageway whereby hogs are caused to be piled in said passageway and for holding an under hog against said means for substantially dehairing said hog.

1,481,142. DEMOUNTABLE HINGE. CALVIN J. MINTON and CHARLES H. HOLMES, Gage, Okla. Filed Apr. 5, 1920. Serial No. 371,327. 2 Claims. (Cl. 16—149.)

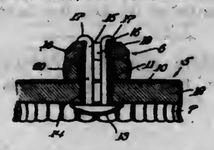
1. A demountable right and left hand hinge comprising a pair of leaves having outstanding ears at their upper and lower ends overlapping and hingedly connected, each leaf being flat and having apertures for securing it to a door so that either leaf can be secured flatly against the door with the leaves in the same upright position, and a keeper having outstruck lugs projecting toward one another for slidably receiving the edge portions of said leaves, said keeper being reversible for use at either side of the door frame and to receive either leaf, and the ears of said leaves at one end being located between and spaced from the edges of the leaves in order to pass between said lugs.

1,481,143. DEMONSTRATING OR ADVERTISING DEVICE. CHARLES MUNZNER, Chicago, Ill., assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Apr. 30, 1923. Serial No. 635,759. 11 Claims. (Cl. 35—16.)



1. A demonstrating or advertising device for fuel regulators or the like, comprising a housing having a burner therein, a fuel regulator for the burner, and means to automatically periodically cool the housing.

1,481,144. LIFE-SAVING BELT OR PRESERVER. ALBERT PASTOR, Alpha, N. J. Filed Apr. 30, 1923. Serial No. 635,578. 1 Claim. (Cl. 9—17.)



In a life belt or preserver, a series of independent air compartments adapted for engaging the shoulders and waist of the user, a filler stem for one compartment, means of communication therefrom to the remaining compartment, and means for securing said compartments to the user, said compartments each consisting of a tube member, a flexible reinforcing layer formed from a spirally wound strand of wire encircling said tube, and a casing enclosing said reinforcing layer.

1,481,145. ELECTRIC BATTERY. DAVID PEPPER, Philadelphia, Pa. Filed Aug. 7, 1922. Serial No. 580,071. 8 Claims. (Cl. 204—53.)

7. An electric battery having a cup shaped container, an inner electrode of tubular form having a closed bottom, unperforated side walls extending from the closed bottom to a point above the level of the electrolyte, and an opening in its upper portion located below the sealing plug and above the level of the electrolyte, a sealing plug surrounding the upper end of the tubular electrode and fitting in the top of the container and an electrolyte contained in the space between the container and tubular electrode.

1,481,146. MEANS FOR DECANTING LIQUIDS. GEORGE ELLIOT PERRY, Chicago, Ill. Filed May 16, 1921. Serial No. 470,066. 3 Claims. (Cl. 215—74.)

1. A closure for a bottle comprising a perforated cap having a skirt for extending around the neck of the bottle; means associated with said skirt to hold the cap sealed on a bottle; a valve for normally closing said perforation, having a stem extending therethru; a yielding disk inside the cap to provide a seat for a bottle mouth and for said valve, and a yielding disk outside the cap associated with the valve stem and said cap to yieldingly hold the valve on its seat.

1,481,147. WATERPROOF LABEL HOLDER. CAROLINE L. PIERCE, Miami, Fla. Filed Apr. 19, 1923. Serial No. 633,167. 1 Claim. (Cl. 40—10.)

A holder for the purpose set forth comprising a rectangular body portion having its lower end formed with an inturned flange and each of its sides provided with an inturned flange, a tapering breast portion integral with the top of said body portion and having each side thereof provided with an inturned flange, a rectangular neck portion integral with said breast portion and having each of its sides and its free end provided with an inturned flange, an indicia carrying means positioned against the forward face of said body, breast and neck portions and having its edges inclosed by said flanges, a transparent protecting member positioned against said indicia carryng means and having its edges inclosed by said flanges and further having its outer face overlapped and engaged by said flanges, said member and means conforming in contour to the shape of said body, breast and neck portions, said neck portion provided with an opening, and said means and member having registering openings aligning with the opening in said neck portion.

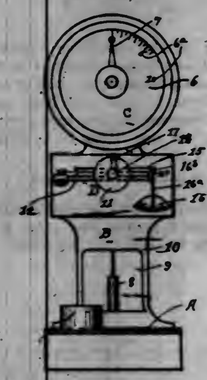
1,481,148. HOOKED FORK. FRED A. PREUSS, Humphrey, Nebr. Filed Dec. 5, 1922. Serial No. 605,038. 1 Claim. (Cl. 55—10.)

An implement of the character described comprising a channel-shaped bar having openings in its flanges, and prongs inserted longitudinally in said openings and having oblique surfaces to bear and bind against the web of the bar between said flanges, said prongs having portions bearing against one flange to hold said surfaces of the prongs tightly against said web.

1,481,149. REPAIRING OR ASSEMBLING METAL POLES. WALTER J. QUINN, New York, N. Y. Filed May 12, 1922. Serial No. 560,418. 9 Claims. (Cl. 29—155.)

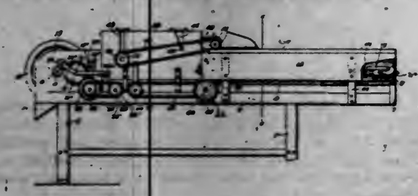
1. The method of assembling hollow metallic poles comprising the steps of applying a slotted external tubular member over an internal tubular member and welding the two together along the slotted portion to contract the outer member upon the inner member and integrally unite the same.

7. A pole construction unit comprising an inner section and an outer section, the latter having a slotted portion



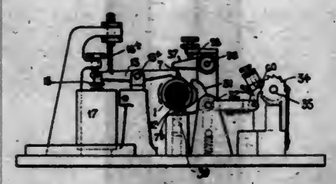
of a diameter enabling it to slip over the inner section to which it is to be applied, the two sections being welded together along the lines of said slots.

1,481,150. CAST-METAL ANNEALING BOX. EMIL C. RAUSCHENBERG, Wheeling, W. Va., assignor to Wheeling Mold & Foundry Co., Wheeling, W. Va. Filed Dec. 28, 1922. Serial No. 609,416. 6 Claims. (Cl. 263—49.)



1. A cast metal annealing box having an external continuous rib extending around its sides and ends, said rib having a zig-zag shape.

1,481,151. SCALE. JOHN J. REDDICK and ROY CHAPMAN, Los Angeles, Calif., assignors to William W. Colwell, Los Angeles, Calif. Filed July 16, 1919. Serial No. 311,133. 4 Claims. (Cl. 265—57.)



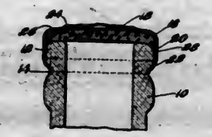
1. The combination with a scale having automatic counterbalancing means, of a dial and pointer indicating the weight, a fixed index arranged adjacent to said dial, a rotary supplemental dial with indicia thereon co-operating with said fixed index to show the number or mass of similar articles on the scale, and means for operating said supplemental dial by the weighting mechanism of the scale.

1,481,152. FORCE-FEED CUTTING MECHANISM. HERMAN REHBEIN, Mishicot, Wis. Filed Aug. 27, 1921. Serial No. 496,143. 14 Claims. (Cl. 198—164.)

1. A device of the class described comprising a support, a feed table and flare boards attached thereto mounted on said support and endless conveying chains operable over the feed table and flare boards for conveying material to a cutting mechanism.

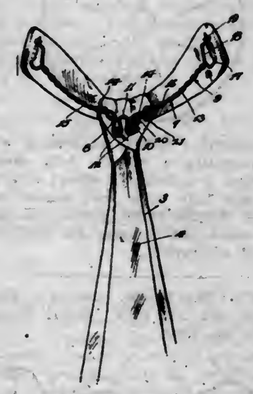
1,481,153. MEANS FOR PRODUCING A PERFORATED TAPE BY ELECTRIC-CURRENT IMPULSES. GUNNER JULIUS JOHANNES ROSENDAHL, Newcastle-on-Tyne, England. Filed Apr. 10, 1922. Serial No. 551,280. 4 Claims. (Cl. 164—113.)

1. In a device of the character described the combination of punches adapted to produce series of perforations in an associated tape, a continuously rotating shaft, two clutches mounted in series on said shaft, an electromagnetic device energized by impulses of one polarity adapted to control one of said clutches, a second electro-magnetic device energized by impulses of opposite polarity adapted to control the other clutch, means for normally restraining said clutches against rotation with the shaft, means for rendering the clutches operative to rotate with said shaft upon energization of the respective electro-magnetic device, tape feeding means, a third clutch also mounted on said shaft for controlling said tape feeding means, means for normally connecting said clutch operatively with the shaft to feed the tape and means for stopping said feed during the operation of the first two mentioned clutches.



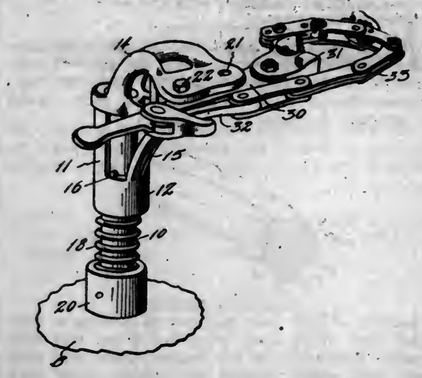
1,481,154. MEANS FOR LAUNCHING LIFEBOATS. ANDRIES P. SCHAT, The Hague, Netherlands. Filed Feb. 8, 1921. Serial No. 442,032. 11 Claims. (Cl. 9—22.)

1. In a device of the character described, the combination with a davit having a top block over which the boatfall is led, of an independent flexible member with said block suspended therefrom; and mechanism indirectly associated with the davit, to which mechanism said



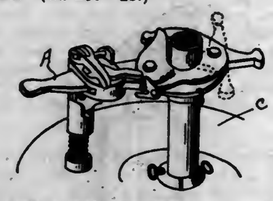
flexible member is secured, said mechanism being adapted to be operated by the tension in the flexible member, whereby the tensional force applied to said mechanism is proportionate to the weight of the suspended load.

1,481,155. BOTTLE CLOSURE. FREDERICK G. SHULL, New Haven, Conn., assignor to Aluminum Seal Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1922. Serial No. 601,273. 2 Claims. (Cl. 215—38.)



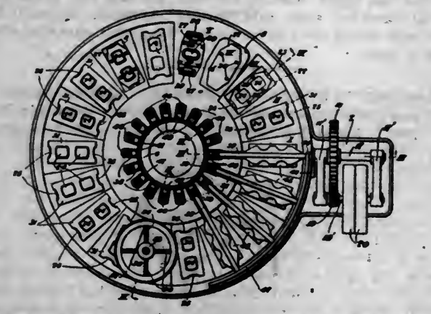
1. The combination with a receptacle of glass or similar material provided with an annular bead adjacent the mouth, of inner and outer sealing capsules of thin sheet material, the outer capsule having a rupturing tongue and a sealing flange of sufficient depth to extend completely about the bead and be forced into a recess at the bottom thereof and the inner capsule having a straight sided annular flange of less depth fitting substantially closely about the bead and terminating short of the lower edge of the outer sealing flange, whereby the inner capsule is held onto the bottle irrespective of whether the outer capsule is applied or removed from the bottle, and a sealing disk of compressible material received and fitting within the inner capsule and compressed thereby against the edge of the bead surrounding the month of the receptacle.

1,481,156. NECKTIE HOLDER. GILES H. SLOCUM, Baldwinsville, N. Y. Filed Dec. 19, 1922. Serial No. 607,885. 6 Claims. (Cl. 24—54.)



3. A neck tie holder comprising a wire strand formed at its intermediate portion for engagement with a collar button and having strand portions extending in opposite directions from its said intermediate portion, other wire strands intertwisted with the said strand portions and providing, in connection therewith, arms, the outer extremities of the strands of each arm being formed one to provide a piercing pin and the other to provide a keeper for said pin.

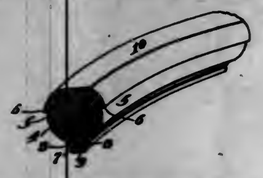
1,481,157. ROTARY WRENCH CARRIAGE. NELSON K. SMITH, Dallas, Tex., assignor of one-half to George W. Hoffman, Houston, Tex. Filed Sept. 30, 1921. Serial No. 504,452. 17 Claims. (Cl. 255—23.)



1. In a rotary well carriage, the combination of a post, a carriage member slidable vertically on the post and resiliently sustained, and means for mounting a pipe wrench on the carriage member.

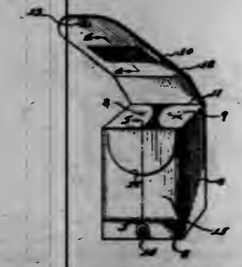
1,481,158. WRENCH CARRIAGE. NELSON K. SMITH, Dallas, Tex. Filed Sept. 5, 1922. Serial No. 586,121. 11 Claims. (Cl. 255—23.)

1. In a rotary well carriage, the combination of a post, a carriage member slidable vertically on the post and resiliently sustained, means for fastening a pipe wrench to the carriage member, and a latch for holding the fastening means.



1,481,159. MACHINE FOR MAKING BUILDING BLOCKS. FRANCIS J. STRAUB, New Kensington, Pa., assignor to Crozier-Straub, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 30, 1920. Serial No. 427,288. 8 Claims. (Cl. 25—65.)

1. A block pressing machine comprising a continuous traveling mold carrier, molds secured thereon and stationary with relation thereto, bottom members for the molds slidable in the molds, pivotally supported covers for the molds movable with relation thereto, and means

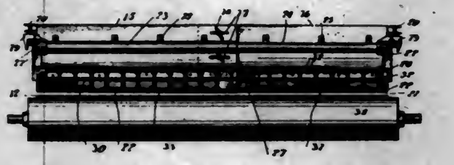


for moving the bottom members and covers in proper sequence to effect the steps of filling, pressing, and ejecting, said cover moving means including the continuous cam track and a roller engaging in said track, which roller is operatively connected with the cover.

1,481,160. HYDRAULIC PACKING. ELMER E. SWITZER, Beaumont, Tex., assignor, by direct and mesne assignments, to Switzer Packing Company, Beaumont, Tex., a Corporation of Texas. Filed Jan. 31, 1922. Serial No. 533,094. 1 Claim. (Cl. 288—1.)

A packing of the class described comprising a body provided with an integral, projecting flange, said body and flange provided with flat bearing edges, said body between said edges provided on opposite sides with outwardly extending flanges from the body, and said projecting flange provided on its sides with longitudinally-extending grooves.

1,481,161. CIGARETTE CASE. DAVID B. TASLER, Chicago, Ill. Filed Oct. 1, 1921. Serial No. 504,559. 1 Claim. (Cl. 206—38.)

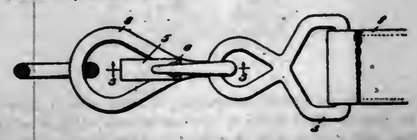


In a cigarette case, a body including sides and edges, an extension flap formed along the upper edge of one of said sides and folded downwardly to engage the side, said extension flap being stitched to the side against which it engages for forming a match carrying pocket, said extension flap being cut in semicircle to permit access to the interior of the pocket and form a closure for the opening in the pocket, a closing extension for the case formed upon the upper edge of the side opposite the extension flap carrying side, said closure extension adapted to extend across one end and along the pocket carrying side of a case.

1,481,162. AUTOMOBILE SIGNAL. EDWARD THEMAK and JOHN VITAGLIONE, New York, N. Y. Filed Apr. 18, 1922. Serial No. 554,880. 2 Claims. (Cl. 116—45.)

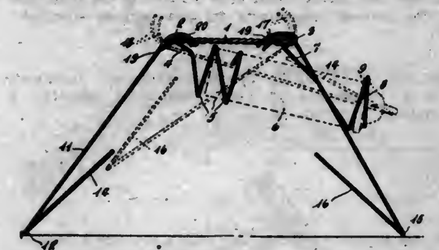
1. In a signal, a cylindrical casing having a window therein, a translucent plate positioned adjacent said window, a supporting member at each end of said casing and pivotally mounted therein, a signal secured to the outer ends of said supporting members and normally in an unexposed position and movable into an exposed position between said window and plate, a pinion on one of the pivots of said members, a gear wheel meshing with the pinion, a lever secured to said gear wheel, a link having a yielding connection with said lever, and means for operating said link to impart movement to said lever through said yielding connection to operate said gearing.

1,481,163. PULP-SHEET-LEVELING ATTACHMENT FOR PAPER-MAKING MACHINES. CHARLES R. VAN DE CARR, Jr., Grand Mere, Quebec, Canada. Filed Feb. 3, 1920. Serial No. 355,917. 2 Claims. (Cl. 92—44.)



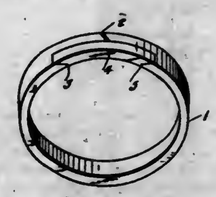
1. The combination with the Fourdrinier type of paper making machines including the pulp distributing head box and the endless wire, of a pulp sheet levelling device associated with said head box and comprising a plate adapted to extend across one side of said head box and having its lower end spaced from said wire to form a pulp feeding orifice, brackets for supporting said plate, a transverse bar connected to said brackets, screws arranged on said brackets and adapted for actuation to elevate and lower said plate with respect to said wire, and screws mounted in said transverse bar adapted for warping said plate to increase or decrease the thickness of the pulp sheet at different points on said wire.

1,481,164. METHOD OF MAKING WHEELS. JAMES H. WAGENHORST, Akron, Ohio. Filed Dec. 26, 1918. Serial No. 268,244. 1 Claim. (Cl. 157—1.)



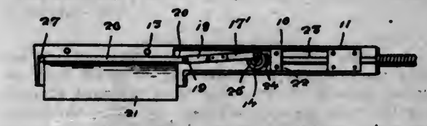
The hereindescribed method of making wheels which consists in providing a metallic felly divided at one point, assembling a plurality of spokes within said felly, contracting said felly upon said spokes, bringing the felly into true circular shape, placing the spokes under radial compression and securing the felly ends against circumferential separation.

1,481,165. WHIFFLE HOOK. LESLIE L. WELLS, Pilger, Nebr. Filed Oct. 23, 1922. Serial No. 596,381. 1 Claim. (Cl. 24—236.)



In combination with a loop and a hook carried thereby, of a resilient strip of metal looped above itself and arranged upon the shank of the hook in proximity to the extremity of the hook, and capable of movement within the loop when flexed, a rivet passing through the end of the strip and the shank.

1,481,166. NURSING-BOTTLE HOLDER. ALLEN HAMMOND WHISNER, Fairview, N. C. Filed Feb. 20, 1923. Serial No. 620,225. 5 Claims. (Cl. 248—65.)



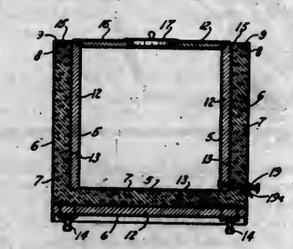
1. A nursing bottle holder comprising a body portion, legs at opposite ends thereof and means movable with the legs and engageable with the body portion to hold the legs in extended position.

1,481,167. PISTON RING. MALCOLM M. WHITE, Appleton, Tenn. Filed Mar. 30, 1922. Serial No. 548,085. 1 Claim. (Cl. 74—109.)

A piston ring provided with a split and having a portion cut away from a side thereof opposite the split, said cut away portion extending an equal distance beyond each side of the split, the ends of the cut away portion conforming to a chordal line of the ring to provide flat outwardly facing surfaces at each end of the cut away portion, said flat surfaces having their ends adjacent the inner peripheries of the ring cut away to provide shoulders, a section snugly fitting and conforming to the cut away portion of the ring and having shoulders at its opposite ends to engage the shoulders formed at the ends of the cut away portion of the ring, whereby to prevent any longitudinal movement of the section to cause unequal wear of the ends thereof.

1,481,168. RAZOR. JAMES S. WILSON, Jamestown, Ohio. Filed Mar. 28, 1922. Serial No. 547,420. 1 Claim. (Cl. 30—12.)

A razor comprising a hollow tubular handle, spaced plates extending from one end of the handle to receive a blade, said plates having opposed longitudinal grooves to provide a guide, a blade positioned between the plates, a rotatable shaft extending into the opposite end of the handle, means connecting the shaft and blade, whereby the latter may be longitudinally reciprocated and longitudinally disposed ribs extending along opposite faces of the blade for sliding engagement within the guide grooves.

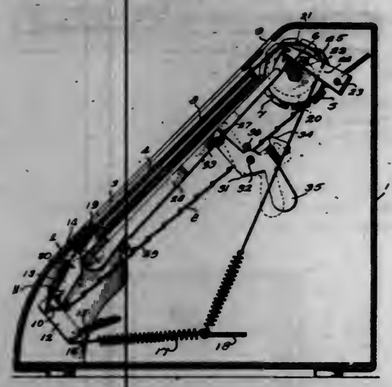


1,481,169. RADIATOR-CORE-ASSEMBLING MACHINE. MEINHARD WITTE, Minneapolis, Minn. Filed Apr. 24, 1922. Serial No. 556,285. 6 Claims. (Cl. 29—84.)

1. A machine for assembling the tubes and fins of a radiator core, comprising means for spacing and holding the fins properly aligned in parallel arrangement, a group of parallel tube-spacing plungers, a support for said plungers mounted for oscillatory movement to carry

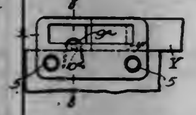
said plungers into and out of alignment with the fins, and means for reciprocating the support to cause said plungers to carry the tubes through the assembled fins.

1,481,170. COOLING BOX. JOHN J. WOMPEY, Denver, Colo. Filed May 12, 1922. Serial No. 560,515. 7 Claims. (Cl. 220—9.)



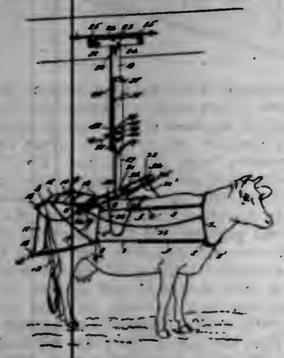
1. A cooling box of the character described comprising inner and outer box-shaped members made of sheet metal and spaced from each other at their sides and bottoms, a sheet metal plate connecting said members at their upper edges, a movable cover closing the inner member at the top of the box, and a filling of insulating material in the space between the members.

1,481,171. ADVERTISING DEVICE. MILTON RUSLING WOOD, New York, N. Y. Filed Nov. 4, 1920. Serial No. 421,670. 1 Claim. (Cl. 211—34.)



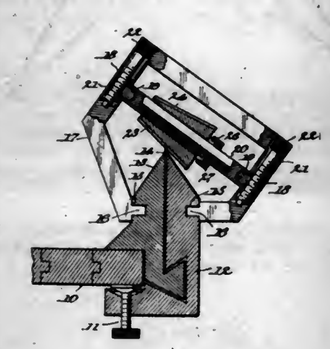
An advertising device comprising a panel member and a base member united along a foldable line whereby the members may be disposed at an angle to each other in substantially vertical and horizontal planes respectively, the panel member being cut out upon three lines, one line being coincident with the foldable line uniting the two members, another line being parallel therewith and at a distance therefrom corresponding to the height of the commercial package, and the other line joining the first two lines at one end, thus forming an opening to receive a commercial package of substantially the size and shape in cross section of said opening, and a panel support connected by a vertically disposed foldable line along one of the vertical edges of the opening extending rearwardly from the back of the panel and held extended by contact with the commercial package when inserted in the opening.

1,481,172. CALCULATING MACHINE. HERBERT A. WRENN, Washington, D. C., assignor, by mesne assignments, to The Wrenn Adding Machine Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 16, 1921. Serial No. 492,761. 6 Claims. (Cl. 235—134.)



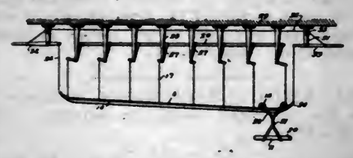
1. A transfer mechanism for calculating machines comprising a transfer bar, means for actuating said bar, and a pivoted lever mounted in the path of the transfer bar, said lever being adapted to be engaged by the transfer bar and swung on its pivot to engage a portion of the calculating mechanism.

1,481,173. LABEL HOLDER. CHARLES A. WRIGHT, Riverton, N. J. Filed Jan. 25, 1922. Serial No. 531,639. 5 Claims. (Cl. 129—16.8.)



5. The combination of a card; a label holder engaging opposite sides of and fixed to said card, having openings for the introduction and display of a label; with a spring member mounted to project into the hollow of said holder to removably engage and normally retain a label in the same.

1,481,174. RESTRAINING DEVICE. FRED G. ZIMMERMAN, Cloverdale, Calif. Filed Sept. 8, 1922. Serial No. 586,923. 4 Claims. (Cl. 119—27.)

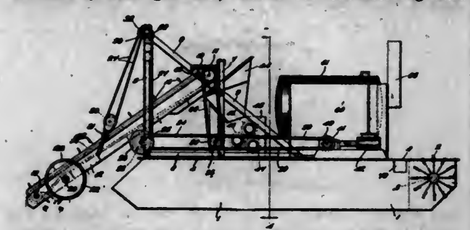


1. A restraining device comprising a harness, an adjustable slide suspended from a ceiling and centered upon the back of an animal, a grooved plate carried by the rear end of the harness, and ropes passing through the slide and having their ends secured to the plate and to the harness respectively for the purpose specified.

1,481,175. SAW SET. THEIMAN ANDERSON, Demarest, N. J. Filed May 13, 1922. Serial No. 560,643. 5 Claims. (Cl. 76—50.)

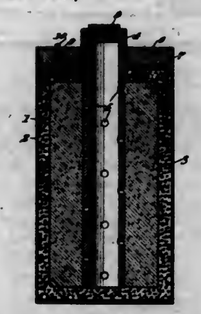
1. In a device of the class described, the combination of a saw holding device, a frame movable therealong, a saw set member, and means for adjusting said saw setting member in accordance with the size of teeth to be operated upon and the degree of set to be imparted thereby, said means including adjustable bearing members supported by said frame and a shaft rotatably mounted on said bearing members for supporting said saw set member.

1,481,176. GRAVITY CONVEYER. WILLIAM R. BANKSON, Ross Township, Allegheny County, Pa. Filed Mar. 29, 1923. Serial No. 628,619. 4 Claims. (Cl. 186—6.)



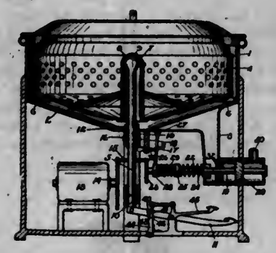
1. A gravity conveyer comprising a longitudinally extending track, means for suspending the track from an overhead support, an operating lever arranged at each end of the track, means operatively connecting the levers to the track, means for operatively connecting the levers together for changing the inclination of the track, and a wheeled carrier arranged for movement over the track from one end thereof to the other according to the inclination of said track.

1,481,177. APPARATUS FOR DESTROYING WATER LILIES OR LIKE MARINE GROWTHS. LAURENCE BAYARD and WILLIAM JOSEPH BAYARD, New Iberia, La. Filed Nov. 25, 1921. Serial No. 517,645. 9 Claims. (Cl. 56—9.)



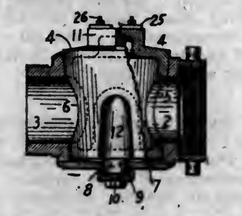
1. In a device of the class described the combination of means for removing floating marine growths from the surface of the water; means for separating from said growths a substantial portion of the water associated therewith; means for conducting said growths from said

first named to said second named means; means adapted to destroy said growths; means for transferring said



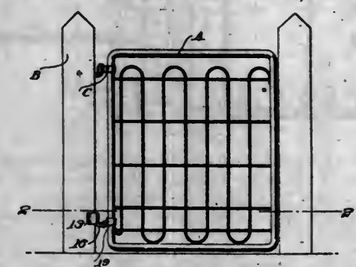
growths from said separating means to said destroying means; and means whereby said growths may be conveyed away from said destroying means.

1,481,178. ELECTRIC BATTERY. RAYMOND C. BENNER and HARRY F. FRENCH, Fremont, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed Feb. 5, 1920. Serial No. 356,496. 10 Claims. (Cl. 204—38.)



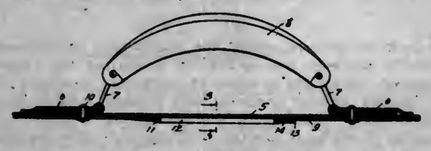
7. In cells of the type described, a depolarizing mix, a zinc container electrode and a readily permeable mass comprising particles of gelatinizable material intermediate to the zinc electrode and depolarizing mix, said cell having an opening for applying an activating material to the permeable mass.

1,481,179. LAUNDRY MACHINE. SOLON J. BOUGHTON, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Oct. 21, 1920. Serial No. 418,571. 9 Claims. (Cl. 68—18.)



1. In a laundry machine, in combination, a container, a shaft for supporting and driving said container, a power source, means for transmitting power from said power source to said shaft, and means for moving said shaft for making driving connection to said container and placing said container in operative position and simultaneously and progressively increasing the speed of rotation of said shaft.

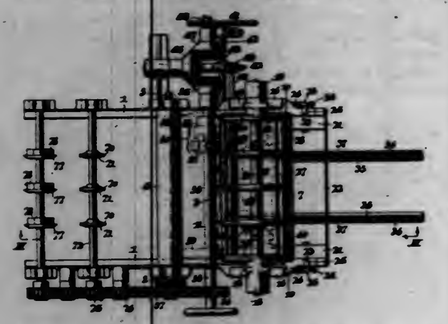
1,481,180. STOP AND DRAIN VALVE FOR HOSE LINES OR THE LIKE. HENRY C. BOWLUS, Springfield, Ohio. Filed June 7, 1921. Serial No. 475,828. 11 Claims. (Cl. 251—110.)



1. A device to connect a single hose line with a plurality of branch hose lines and having means to disconnect one or more of said branch lines from said single line and to drain the water from the branch line or lines so disconnected.

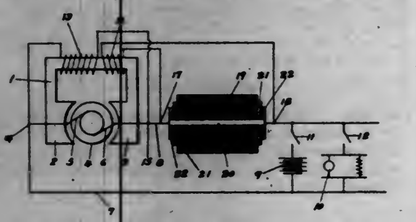
1,481,181. GATE-CLOSING DEVICE. CLINTON H. BROOKS, Nickerson, Kans. Filed Oct. 8, 1921. Serial No. 506,403. 2 Claims. (Cl. 16—156.)

1. In combination with a swingably mounted gate and its jamb, the gate having its upper portion pivoted on the jamb by an ordinary connection; a pivotal support for the lower portion of the gate consisting of an elongated metallic strip secured against the inner face of the jamb transversely thereof and formed at its ends with concavities facing away from the jamb, and a substantially triangular plate member secured to the lower portion of the gate and having its wider edge formed with an upstanding flange of an elongated nature corresponding to said strip and formed at its ends with convex portions facing toward the jamb and fitting within the concavities of said strip.



1,481,182. BRIEF BAGS. MORRIS BROOKS, New York, N. Y., assignor to The Lifton Mfg. Co., New York, N. Y., a Copartnership composed of Maurice Lifton and Aaron Lifton. Filed Sept. 18, 1922. Serial No. 588,870. 2 Claims. (Cl. 40—16.)

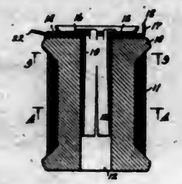
1. As a new article of manufacture, a re-enforcing strip for location on the inside of the cover flap of a brief bag and opposite the points of attachment of the handle for the brief bag, such re-enforcing strip including intermediate its edges and substantially midway between its opposite ends a pair of slits, one being an elongated slit with removed strip material between its sides to constitute an elongated window-slit running longitudinally of the strip, and the other slit being arranged in close adjacency to the window slit, and being



cut transverse to the strip to establish a tongue directed away from the adjacent end of the window-slit, there being provided a secondary metallic re-enforcing member permanently secured to the strip adjacent to the window-slit and having smooth parallel portions exposed along the line of extension of the window-slit and on opposite sides thereof and on the underside of the strip to constitute gliding ways.

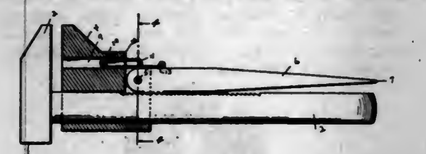
1,481,183. PRODUCING BITUMINOUS SHINGLES AND THE LIKE. FRANK A. BROWNE, Wayne, Pa., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Jan. 3, 1920. Serial No. 349,309. 17 Claims. (Cl. 164—68.)

1. In an apparatus of the character described, the combination of means for feeding a continuous sheet of material; means for cutting the sheet into strips; a movable support adapted to receive the severed strips; and mechanism for causing the gradual recession of said support until a stack of a predetermined number of the strips is formed, and the instantaneous return of the support to starting position after the removal of a completed stack.



1,481,184. CURRENT REGULATION. ALVIN E. BUCHENBERG, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Sept. 9, 1918. Serial No. 253,261. Renewed May 25, 1923. 9 Claims. (Cl. 171—229.)

5. In an electric system, the combination of a dynamo electric machine, and means for regulating the current thereof, comprising a series of contacting members, and a binding member therefor, said binding member being in electrical circuit with said contacting members, and having a relatively greater co-efficient of expansion than said contacting members.

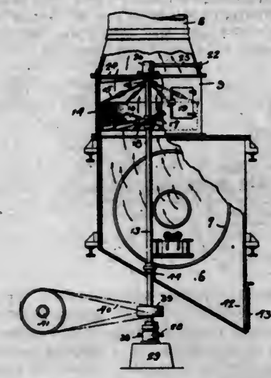


1,481,185. THREAD HOLDER AND CUTTER. JANE H. BURNS and JOHN ANDERSON, Middletown, Conn. Filed July 20, 1921. Serial No. 486,199. 1 Claim. (Cl. 30—14.)

A thread holder and cutter for use with spools, comprising a flat disk, perforated at its centre, said disk having a projection extending outward from one side and an upturned portion on the opposite side forming a cutter, a hollow cylindrical spring member provided with means on its upper end for clamping the disks together,

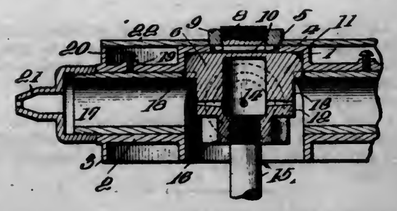
and spring members on its lower end for engaging the spool to retain the thread holder and cutter in position on the same.

1,481,186. COMBINATION TOOL. MATHIAS C. BUSCH and CARL E. THOMMES, St. Paul, Minn. Filed June 29, 1922. Serial No. 571,700. 3 Claims. (Cl. 81—134.)



1. In a tool of the above indicated character comprising a stationary jaw mounted on one end of a handle, a movable jaw positioned on said handle, an operating handle pivotally connected to said movable jaw, rack teeth formed on the opposing edges of the stationary jaw handle and the operating handle, and means slidably positioned within the movable jaw for forcing the rack tooth of the operating handle into engagement with the teeth of the stationary jaw handle for holding the movable jaw in any desired adjustment.

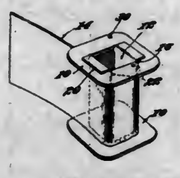
1,481,187. POST-RETAINING MEMBER. JAMES S. CLAY, Indianapolis, Ind., assignor to Caldwell & Drake Iron Works, Columbus, Ind., a Corporation of Indiana. Filed Dec. 19, 1921. Serial No. 523,441. 2 Claims. (Cl. 189—29.)



1. The combination with a hollow post and means for anchoring the same in an upright position, of a retaining member within said post, means for supporting the retaining member said retaining member holding said post in substantially upright position only upon fracture of said anchoring means for the post, substantially as set forth.

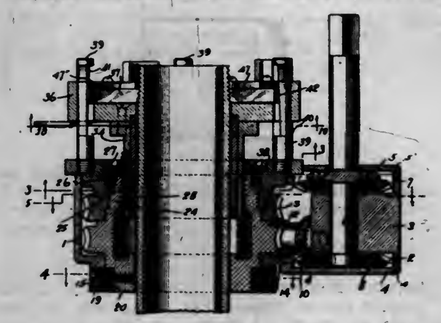
1,481,188. STACK FAN. GEORGE B. DAMON, Belvidere, N. J., assignor to Vulcan Iron Works, Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1921. Serial No. 505,435. 7 Claims. (Cl. 230—11.)

1. In a stack fan, a cylindrical fan chamber, a spindle substantially coaxial therewith, a fan-supporting ring spaced from the spindle, a hanger secured to the spindle above the ring, inclined struts extending between said hanger and ring, a hub on the spindle in the plane of the ring, horizontal spindles extending between said hub and ring, and fan blades pivotally mounted on said horizontal spindles.



1,481,189. GAS BURNER. EUGENE ORA DANIELS, Toledo, Ohio. Filed Mar. 8, 1923. Serial No. 623,716. 3 Claims. (Cl. 158—99.)

1. A gas burner comprising a hollow hub provided with radial tubular arms carrying a ring at their outer ends, said hub being provided with an annular flange at its upper end, the inner wall of which is provided with oppositely disposed notches, a hollow cap arranged within said hub having a threaded stem provided with oppositely disposed projections fitting in the notches of said hub, a nut working on said stem for securing said cap within said hub, said cap being provided with radial web portions and intermediate projections provided with bores, a supply pipe connected to said cap for supplying fuel thereto, tubular nipples mounted in said arms having notched inner ends to receive the projections of said cap, flame spreaders carried by said nipples and means for locking said nipples within said arms.



1,481,190. SPOOL. VERNON DURBIN, Newton, and GEORGE H. BICKELL, Brookline, Mass., assignors to The Holtzer-Cabot Electric Company, Roxbury, Mass., a Corporation of Massachusetts. Filed May 31, 1921. Serial No. 473,750. 1 Claim. (Cl. 175—21.)

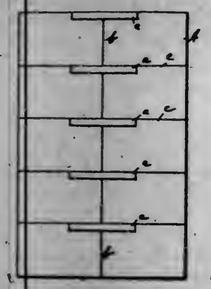
A spool comprising two end members for heads, two spacer bars and a spacer strip, the heads having rectangular openings, two opposite sides of the opening having locking notches located adjacent to the ends of such sides, the other two sides of the opening being plain sides, the spacer bars having a width equal to the length of the plain sides and being provided with end flanges to engage the heads and hold them from outward movement on the bars, said bars being also provided on each

edge adjacent to the flange with locking lugs adapted to be received in the locking notches of the heads, the spacer strip acting to hold the heads against the flanges of the spacer bars and thereby to hold the locking lugs in the locking notches so that the bars cannot collapse by movement toward each other.

1,481,191. MACHINE FOR CUTTING OFF AND THREADING PIPES. THADDIOUS V. ELLIOTT and CHARLES SCHAEFER, New Brunswick, N. J. Filed Sept. 28, 1921. Serial No. 503,716. 20 Claims. (Cl. 10—90.)

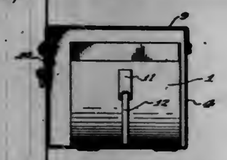
16. In a thread cutting machine of the character described a driving mechanism, a head rotated by said driving mechanism, a plurality of cutting members carried by said head and arranged to be adjusted radially, a cam for varying the position of said cutting members, a ring secured to said cam for adjusting the same, and an auxiliary cam rotatably mounted between the first mentioned cam and the cutting members.

1,481,192. FOLDING PAINTBRUSH. HAROLD FEUERSTEIN, Great Neck, N. Y. Filed July 20, 1922. Serial No. 576,347. 1 Claim. (Cl. 15—184.)



A brush head comprising a handle, an open ended liquid container detachably secured to one end of the handle and having a fluid tight connection therewith, and a reversible brush head detachably carried by the forward end of the container and having fluid tight connection therewith.

1,481,193. METHOD OF PRODUCING SELF-SPACING SHINGLES. ALBERT C. FISCHER, Chicago, Ill. Filed Sept. 6, 1921. Serial No. 498,862. 4 Claims. (Cl. 164—19.)

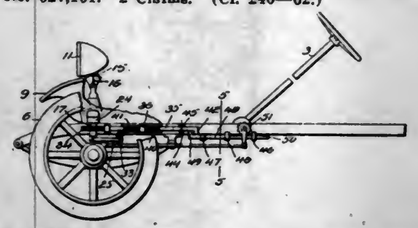


1. The method of producing shingles from sheets, which consists in punching a sheet at intervals corresponding

substantially to the width of shingles to be produced, severing said sheet on a line extending transversely of

a series of apertures so formed to produce reduced shingle ends, and also severing said sheet on lines producing side edges which meet said apertures.

1,481,194. POWDER BOX. JOHN W. FISCHER, Chatham, Ill. Filed Aug. 19, 1922. Serial No. 583,007. 4 Claims. (Cl. 220—20.)

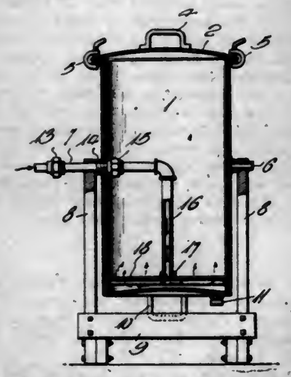


1. In a powder container, a chest, a box hingedly connected thereto and opening out through one end of the chest, and locking means releasable from the interior of the chest for locking the box in position in the chest.

1,481,195. POWER-STICK ADJUSTER FOR LOOMS. EUGENE GADUE, Winooski, Vt. Filed May 31, 1921. Serial No. 473,587. 1 Claim. (Cl. 139—152).

A power stick adjuster for looms, comprising a picker stick, a sweep stick having a lug strap surrounding said picker stick, a plate adapted to be secured to the sweep stick over the lug strap having an enlargement at its free end provided with a threaded bore, a sectional power stick having its upper section provided with an opening through which passes a bolt secured in the threaded bore of the plate for pivotally connecting said section to the enlarged portion of said plate, a bolt carried by the lower end of said section, the lower section being provided with a slot through which extends said bolt for adjusting said sections in respect to one another, a member having a slotted portion and a lug carried by the free end of the lower section extending through the slot of said member for loosely connecting said section to said member.

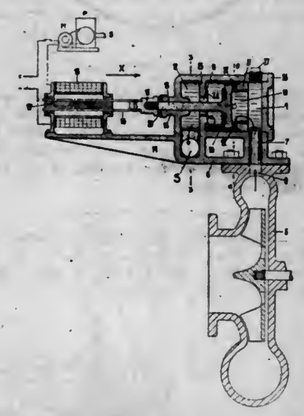
1,481,196. HEADLIGHT-SHIFTING MECHANISM FOR MOTOR VEHICLES. WILLIAM F. GODAR and HENRY F. MILLER, St. Louis, Mo. Filed Mar. 23, 1923. Serial No. 627,101. 2 Claims. (Cl. 240—62.)



1. A headlight shifting mechanism for motor vehicles comprising vertically disposed synchronously shiftable lamp supporting elements connected together, a pinion fixed to one of said elements, a slidably mounted spring controlled lengthwise shiftable toothed rod engaging with said pinion for actuating it to shift said elements synchronously, said rod having its rear terminal portion provided with a depending abutment and a depending arm spaced from each other, a slidably mounted toothed actuating member operated from the steering gear of the vehicle for shifting said rod forwardly or rearwardly, said member provided at its forward terminus with an upwardly extending arm interposed between said abutment and the arm of the rod and cooperating therewith to shift the rod, the arm of said member normally spaced from the arm and abutment of the rod, whereby the rod will be actuated after said member has been shifted a predetermined distance by the steering gear of the vehicle.

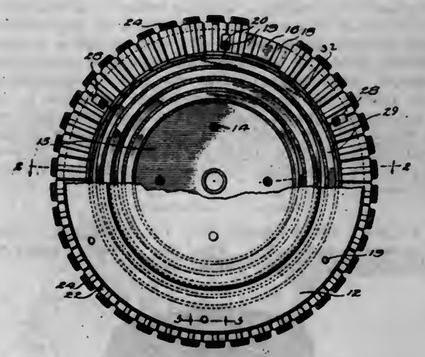
1,481,197. PURIFICATION OF HYDROCARBONS. DAVID F. GOULD, Cornwells, Pa., assignor to The Barrett Company, a Corporation of New Jersey. Filed Nov. 3, 1922. Serial No. 598,926. 5 Claims. (Cl. 260—168.)

1. The process of purifying hydrocarbons which comprises washing the molten hydrocarbon and crystallizing the hydrocarbon in the presence of an aqueous alkali solution.



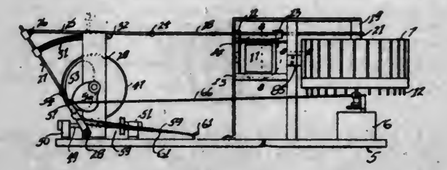
1,481,198. FOOD COOKER. AMEL HACKBARTH, Zion, Ill. Filed Nov. 6, 1922. Serial No. 599,479. 1 Claim. (Cl. 126—249.)

A steam cooker comprising a cooking receptacle having a false perforated bottom therein spaced above its main bottom, a trunnion extending from one side of said



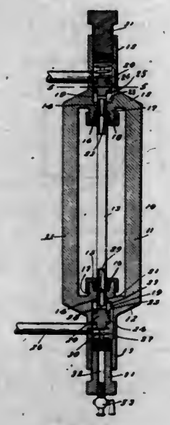
receptacle, a steam supply pipe extending through the other side of the receptacle in axial alinement with said trunnion, the inner end of said pipe being turned downwardly into the receptacle and connected with the false bottom to supply steam to the space between the latter and said main bottom, said pipe having sections connected by unions to permit relative turning of said sections to permit tilting of the receptacle, and a supporting frame with which said trunnion and one section of said pipe are rockably engaged to jointly support said receptacle and permit tilting thereof for discharging its contents.

1,481,199. PUMP SYSTEM. OTTO HAENTJENS, Hazleton, Pa. Filed Mar. 6, 1923. Serial No. 623,211. 11 Claims. (Cl. 103—113.)



1. In a priming system for centrifugal pumps, a suction line connected to the pump casing, a check valve arranged in the suction line, and electromagnetic means for holding said valve open during the priming operation.

1,481,200. VEHICLE WHEEL. KARL P. HANGL, New York, N. Y. Filed June 19, 1922. Serial No. 569,517. 10 Claims. (Cl. 152—29.)



1. In a vehicle wheel including a wheel casing, a plurality of split rings mounted in the wheel casing, packing and lubricating means interposed between the split rings, and a plurality of shock blocks slidably mounted in the casing and seated on the split rings, transmitting impulses received directly to the split rings.

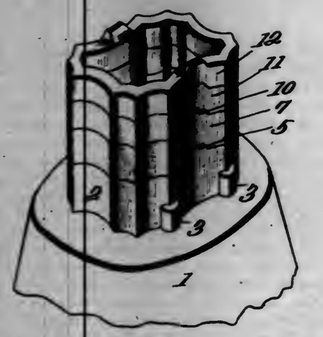
1,481,201. STEREOPTICON LANTERN-SLIDE-FEED DEVICE. CLAY NORRIS HEADDING and FRANCIS MITCHEL KENT, Chehalis, Wash. Filed Jan. 13, 1922. Serial No. 528,920. 5 Claims. (Cl. 88—27.)

1. In a projecting mechanism, the combination of a projector, gearing mounted adjacent said projector, cams rotated by said gearing, a rocker arm actuated by one of said cams, means for holding said rocker arm out of the path of movement of said cam, means for moving said rocker arm into the path of said cam at pre-determined intervals, a slide-holding magazine adjacent said projector, and means associated with said rocker arm for moving slides into and out of said magazine.

1,481,202. GAUGE. DENNIS E. HILDRETH, East Akron, Ohio. Filed Mar. 13, 1920. Serial No. 365,681. 1 Claim. (Cl. 73—54.)

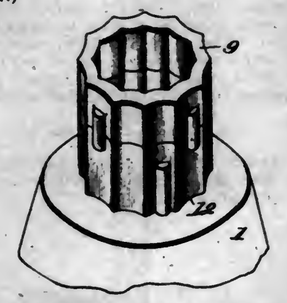
A device of the class described comprising a frame provided with restricted openings in the opposite ends thereof, a glass sight tube engaging said openings, sleeves projecting outwardly from the opposite ends of said frame and provided with longitudinal passages, circular extensions projecting inwardly from the opposite ends of said frame and surrounding said tube, packing surrounding said tube in and being arranged in the recess, caps removably secured to said extensions and engaging said packing, means for supplying a liquid to one of said sleeves, means for conveying the liquid from the other sleeve, plugs removably secured to the outer ends of said sleeves, coiled springs located in said sleeves and engaging said plugs, valves engaging the springs in said sleeves and normally arranged between the ends of the longitudinal passages therein, reduced extensions formed on said valves and engaging said sight tube and being provided with transverse and longitudinal passages formed therein adapted to normally communicate with the longitudinal passages of the sleeve and means carried by the frame to prevent particles of glass flying in the event of the tube breaking.

1,481,203. SNAP FASTENER. GEORGE A. HOLMES, Newton Center, Mass., assignor to United States Fastener Company, a Corporation of Maine. Filed June 3, 1921. Serial No. 474,817. 2 Claims. (Cl. 24—218.)



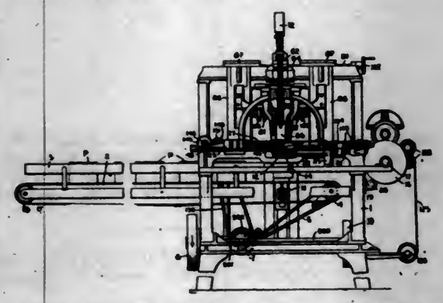
1. A stud and socket fastener comprising a stud member having a convex head and an annular shoulder at the base thereof; and a socket member comprising a spring chamber composed of front and rear plates having apertures constituting a passage for the reception of the stud, and a side wall inclosing the space between said plates, combined with a spring comprising a bridge portion extending across the upper part of the spring chamber the middle part of which projects into said stud passage, and two holding branches extending across said stud passage substantially at right angles to the bridge portion; adapted to engage under the stud head at diametrically opposite points, said holding branches only, being adapted to yield in the unfastening operation.

1,481,204. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Original application filed Feb. 12, 1923, Serial No. 618,545. Divided and this application filed May 12, 1923. Serial No. 638,582. 3 Claims. (Cl. 22—147.)



3. A feeder for ingot molds comprising a body portion and a series of integral narrow ribs vertically disposed and arranged in horizontal rows and having a cross-cut intermediate the ends whereby a portion of the ribs may be broken off.

1,481,205. FEEDER FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed June 18, 1923. Serial No. 646,086. 12 Claims. (Cl. 22—147.)



8. A feeder for ingot molds, comprising a body portion, a series of horizontal sections adapted to be stacked one upon the other and having interlocking means for holding the lower section to the body portion and the other sections to each other.

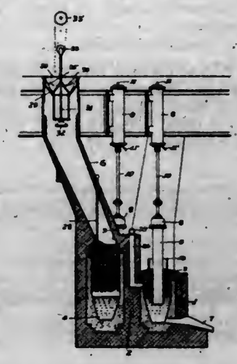
1,481,206. ATTACHMENT FOR FEEDERS FOR INGOT MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed June 29, 1923. Serial No. 648,538. 8 Claims. (Cl. 22—147.)

4. An attachment for feeders for ingot molds, comprising a section of substantially the same cross sectional area as the feeder and having means extending below the lower end thereof and engaging the outer periphery of the feeder for holding it on the feeder against lateral movement.

1,481,207. WRAPPING MACHINE. HARRY L. JOHNSON, Boston, Mass., assignor to Percy E. Ginn, Jamaica Plain, Mass. Filed Aug. 1, 1919. Serial No. 314,592. 34 Claims. (Cl. 93—2.)

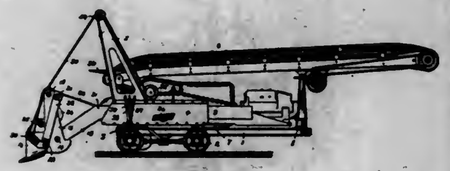
1. In a wrapping machine, the combination with folding means for folding a wrapper about a package, of a continuously reciprocating feed plunger to deliver packages to said folding means, a feeding-in belt a transfer plunger to deliver packages from said belt to said feed plunger, paper-feeding means for feeding wrappers to the folding means, means to deliver wrappers to the paper-feeding means, and means for rendering both the wrapper delivery mechanism and the transfer plunger inoperative whenever there are no packages on the feeding-in belt in position to be delivered by the transfer plunger.

1,481,208. HEAT-PRODUCING COMPOSITION. LUKE JOHNSON, Dallas, Tex. Filed May 1, 1923. Serial No. 636,026. 3 Claims. (Cl. 44—3.)



1. A heating composition comprising heat producing materials consisting of oxide of iron, sodium acetate, calcium chloride, muriate of ammonia, and odor preventing material, and a flexible water absorbent housing inclosing said ingredients.

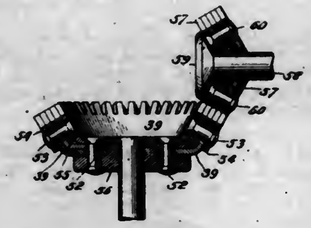
1,481,209. BRIDGE TOOTH AND LOCK-IN BACKING. ABBOTT A. KAUFFMAN, Brooklyn, N. Y. Filed June 21, 1923. Serial No. 646,862. 3 Claims. (Cl. 32—12.)



2. A bridge tooth having intersecting vertical and horizontal bores and a bridge member countersunk in the rear and side portions of the periphery of the tooth, said bridge member provided with a tongue extending into the horizontal bore, and means extending into the vertical bore and interengaging the tongue.

1,481,210. ELECTRIC SMELTING FURNACE. TOKUJI KAWAI, Kokura, Japan. Filed July 23, 1919. Serial No. 312,785. 2 Claims. (Cl. 204—64.)

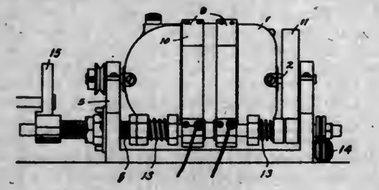
1. An electric smelting furnace having a feeding passage, provided with an inclined portion immediately rising from the reducing chamber and a vertical upper portion, a funnel case vertically slidably fitted at the upper end of the passage, a conical cover in the funnel case and arranged for limited vertical movement independently thereof, an inlet cover at the lower end of the funnel case, a rod connecting said conical cover and said inlet cover, and means to raise or lower said rod and said covers.



1,481,211. MECHANICAL SHOVEL. VERNON L. KEECH and EMIL A. HURTLEY, Duluth, Minn., assignors to Robert S. Walker, Cleveland, Ohio. Filed Dec. 16, 1921. Serial No. 522,949. 8 Claims. (Cl. 214—90.)

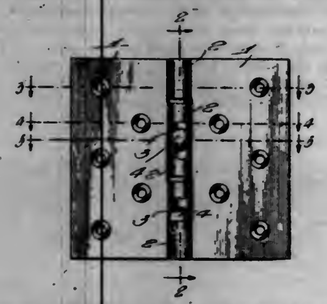
1. The combination with a mechanical shovel having means for conveying the material being shoveled longitudinally thereof, and horizontally reciprocal crowder arms, of a dipper pivotally mounted upon the forward end of the crowder arms, means for operating the dipper independently of the crowder arms and discharging the contents thereof on said conveying means, and means whereby reciprocal motion of the crowder arms will operate the lip of the dipper substantially vertically.

2. The combination with a mechanical shovel having dipper carrying arms, horizontally reciprocal only, of a pivotal support upon said arms for the dipper, means for operating the dipper pivotally upon the support simultaneously with the pivotal operation of the latter, either with or independently of the action of the dipper carrying arms.



1,481,212. METHOD OF FORMING LAMINATED STEPPED GEARS. JOSEPH F. KELLER, New York, N. Y., assignor to Keller Mechanical Engineering Corporation, Brooklyn, N. Y., a Corporation of New York. Filed July 22, 1920. Serial No. 398,164. 5 Claims. (Cl. 29—159.)

1. The method of forming laminated stepped bevel gears which comprises punching the successive gear laminæ with aligning holes therein, forming the successive gear laminæ to nest so that the teeth thereof are disposed at the proper bevel angle with respect to the axis of the gear, the aligning holes in successive gear laminæ being advanced a predetermined amount with respect to the gear teeth, whereby when the gear laminæ are assembled, the teeth of successive laminæ are advanced uniformly to produce a stepped bevel gear.

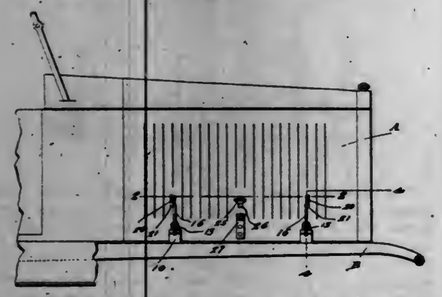


4. In a three-step punch and die, for punching gear laminæ, from sheet material, the combination of punches and dies for progressively forming the aligning holes and gear teeth, and means for changing the position of the aligning hole punches and dies, whereby the relative position of the aligning holes may be uniformly and progressively varied with respect to the teeth of the gears punched.

1,481,213. ELECTRIC MOTOR. PERCY T. KING, Luton, England. Filed Apr. 30, 1923. Serial No. 635,708. 5 Claims. (Cl. 172—36.)

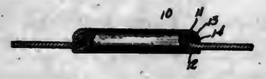
1. A variable speed control for electric motors, comprising a framework, bearings therein carrying the whole motor, slip rings on the field magnet, brushes carried in said framework co-acting with said slip rings, a brake co-acting with said field magnet and adapted when disengaged to lift said brushes out of contact with said slip rings, a brake co-acting with the armature of said motor, and a single arm operating both said brakes so that the brake tension of one of said brakes is dependent on the amount of brake tension of the other brake and consequently as the braking force of one brake is increased that of the other is decreased.

1,481,214. BALL-BEARING HINGE. MARTIN S. KISSEL, Ambridge, Pa. Filed Oct. 16, 1922. Serial No. 594,822. 1 Claim. (Cl. 16—136.)



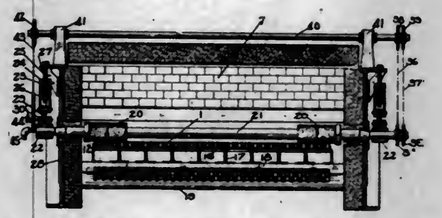
A hinge comprising a pair of leaves having rolled tubular knuckles intermeshed with each other and having their opposed ends internally bevelled, and bearing balls between the knuckles of the two leaves seated in said opposed bevelled knuckle ends.

1,481,215. APPARATUS FOR REPAIRING ICE CANS. SAMUEL C. MCCLURE, Canton, Ohio. Filed Mar. 23, 1921. Serial No. 454,812. 5 Claims. (Cl. 29—80.)



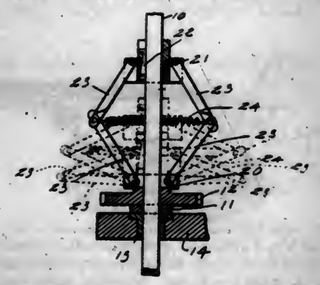
1. An apparatus for repairing ice cans and similar receptacles including a rack comprising four uprights joined together in pairs at their upper ends by V-shaped members, horizontal bars connecting the upper ends of each pair of uprights, a horizontal bar being provided upon one side of the frame intermediate the top and bottom thereof, and a horizontal bar being provided at the bottom of the other side of the frame.

1,481,216. HOOD FASTENER. BUFORD M. MCMILLION, Rogers, Tex. Filed Apr. 14, 1922. Serial No. 552,675. 2 Claims. (Cl. 292—113.)



1. A hood fastening device comprising flanged brackets secured upon the frame bar of an automobile chassis adjacent the lower edge of the hood, brackets secured upon the hood near the lower edge thereof, a rock shaft journaled upon the inner side of the hood and having crank arms operating through slots in the hood, means normally holding the rock shaft at one limit of its movement, latch rods pivoted upon said crank arms and slidable through said second named brackets with their lower ends terminating in hooks engaging said flanges, a handle on the outside of the hood and a thumb piece carried by the rock shaft and projecting through a slot in the hood with its outer end located adjacent said handle.

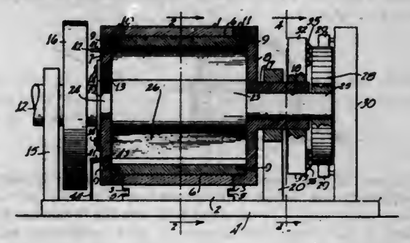
1,481,217. GROMMET. RICHARD E. MALOY, Brooklyn, N. Y. Filed Nov. 21, 1921. Serial No. 516,687. 1 Claim. (Cl. 24—141.)



A grommet, comprising an elongated hollow body having concave sides, an outwardly flared outer end and a flanged inner end, in combination with a piece of material having an opening of less diameter than the smallest diameter of the body and through which the body of the grommet is passed and upset, whereby the edge of the material defining the opening will be formed into a bead and an annular channel formed by the body and flange to enclose the beaded edge and the portion of the material adjacent said edge.

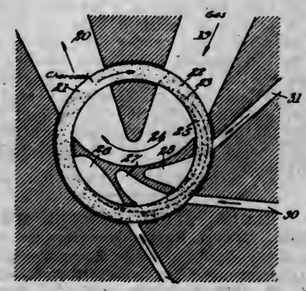
1,481,218. APPARATUS FOR DRAWING SHEET GLASS. OTTO C. MILLER, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 10, 1921. Serial No. 514,129. 10 Claims. (Cl. 47—17.)

6. In a machine for drawing sheet glass, a source of molten glass, and means for drawing a sheet of glass therefrom, comprising an endless carrier and flattening table for the sheet, means for driving the carrier, a plurality of cross-shafts above the sheet and table, asbestos rollers carried by the shafts engaging the edge portions only of the sheet, means at either end of the shafts for yieldingly supporting a portion of the weight thereof, means for driving the shafts in unison, and means for internally cooling the shafts and rollers.



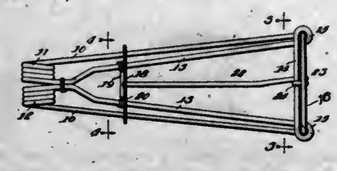
1,481,219. WELL-DRILLING MACHINE. OSCAR E. MILLER, Stratton, Nebr. Filed Apr. 18, 1922. Serial No. 554,642. 8 Claims. (Cl. 255—22.)

1. A rotary drill having a drill rod, a driving member for said rod and relatively to which the rod is slidable,



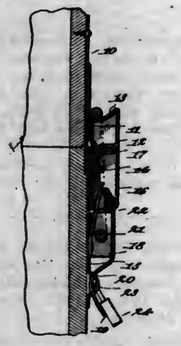
clutch means engageable with the rod to cause the rod to feed with respect to said member, said clutch means being normally disposed and movable of itself out of clutch engagement with the rod, and the clutch means including a device centrifugally operable by the driving member to cause the said clutch engagement of the clutch means and rod.

1,481,220. ROTARY GAS ENGINE. ERNEST R. NICHOLS, Chicago, Ill. Filed Aug. 19, 1921. Serial No. 493,558. 1 Claim. (Cl. 123—43.)



In a rotary internal combustion engine of the type described, a stationary cylindrical sleeve, a combination working cylinder and primary piston revolvable in said sleeve, said combination working cylinder and piston having a pair of diametrically opposed inwardly extending abutment pieces located on the interior wall of said primary piston, a secondary piston rotatably disposed within said working cylinder and primary piston, said secondary piston comprising a solid cylindrical member having diametrically opposed radially extending vanes arranged to engage with the inner side walls of said working cylinder and primary piston, the inwardly extending abutment pieces on said working cylinder being arranged to contact the outer wall of said cylindrical member of said secondary piston, a ratchet wheel carried by said secondary piston exteriorly of said cylindrical sleeve, a cross arm carried by said working cylinder exteriorly of said sleeve, resilient means for connecting said cross arm with said ratchet wheel, whereby said ratchet wheel may yieldably follow the movement of said cross arm, and pawls for permitting the movement of said ratchet wheel in one direction.

1,481,221. PROCESS FOR SEPARATING GAS AND VAPOR MIXTURES. MAX NUSS, Hochst-on-the-Main, Germany, assignor to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-Main, Germany, a Corporation of Germany. Filed Mar. 21, 1923. Serial No. 620,631. 8 Claims. (Cl. 183—4.)



1. In the process for the separation of gas and vapor mixtures by absorption by means of charcoal, the step which consists in arranging the charcoal in a band in which the parts are relatively stationary and moving said band through a stream of the mixture to be separated.

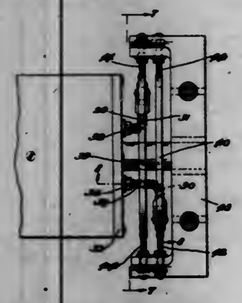
1,481,222. TRAP. WILLIAM G. ODATEY, Inglewood, Calif. Filed Sept 15, 1922 Serial No. 588,447. 1 Claim. (Cl. 43—85.)

A trap of the character described comprising a base formed from a single length of wire and including spaced side members arranged in divergent relation, an arch shaped member rising from the base at one end thereof and disposed at a right angle thereto, said arch shaped member constituting a fixed jaw, the other end of said base terminating to provide resilient coils, the adjacent convolutions of which are extended to provide the movable jaw, said movable jaw including spaced members terminating at their forward ends to provide eyes slidably mounted on the parallel portions of the fixed jaw, said eyes being extended to provide a transverse member to connect the spaced members of the movable jaw at one end thereof, and tripping means for holding the movable jaw in a set position.

1,481,223. COMBINATION DRAWBOLT AND LOCK FOR TRUNKS. PATRICK J. GORMAN and ANTHONY J. PALUMBO, Bloomfield, N. J. Filed Sept. 17, 1921. Serial No. 501,225. 1 Claim. (Cl. 292—247.)

A trunk fastener comprising super-posed plates, a dowel carried by the upper plate and provided with a depending tongue and a hook portion, a housing carried by the lower plate, a lever pivoted upon the housing and provided with a bail adapted to coact with the hook of the dowel to draw the plates together, the housing co-acting with the tongue to receive the latter when the plates are drawn together, a U-shaped tongue pressed from the lower plate beneath the housing and disposed in a fixed vertical plane with the tongue of said dowel, and a finger piece carried by the lever below the housing and provided with a vertical slot to permit the U-shaped tongue of said lower plate to pass therethrough and protrude therefrom when the lever is closed, the dowel tongue co-acting with the housing to secure registration of the slot with said U-shaped tongue when closing the bail against the hook of the dowel.

1,481,224. HOODED EXAMINING LAMP. ALFREDO PIMIENTA, New York, N. Y. Filed Nov. 16, 1922. Serial No. 601,334. 5 Claims. (Cl. 240—2.)



1. An examining lamp, comprising a pair of concave reflectors, means for holding the same in position when in use, each of said reflectors having an opening therein

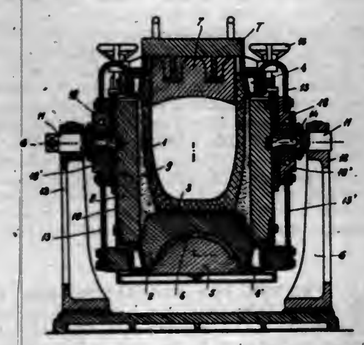
spaced from the center thereof, and an electric bulb arranged substantially centrally of each reflector whereby

when said bulbs are lighted, a person may look through said openings without the light from the bulbs being projected into the eyes.

1,481,225. ELECTRIC IRON. ANTON M. RASMUSSEN, Rockford, Ill. Filed Oct. 25, 1921. Serial No. 510,262 4 Claims. (Cl. 219—37.)

1. In an ironing machine, an ironing roller comprising an inner core, electric heating elements about said core, and a removable metal sheet enclosing said heating elements, binding posts carried by said shell and having connection with said heating elements, contact rollers connected to said binding posts, conducting rings adapted to have communication with an exciting source, said rollers engaging said rings to permit energising of said heating elements during rotation of the ironing roller.

1,481,226. STORAGE BATTERY OR ACCUMULATOR. HAMPTON P. RHODES, Chicago, Ill., assignor to Rholite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 5, 1922. Serial No. 592,566. 9 Claims. (Cl. 204—29.)

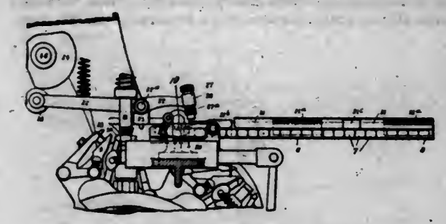


7. In a battery of the kind described and in combination, a casing provided with end closures, battery plates in said casing, having contact terminals extending therebeyond, retainer plates intermediate the ends of said plates and their adjacent end closures for holding said battery plates spaced apart and spaced away from the casing wall, a chamber provided between the opposed surfaces of one of said retaining plates and its adjacent end closure, said last-mentioned retaining plate provided with openings therethrough on opposite sides of said battery plates, and means opening into said chamber from the exterior of the battery for permitting the filling of the spaces between said casing and battery plates with an electrolyte.

1,481,227. TOY. CORNEIL RIDDERHOF, New York, N. Y. Filed July 29, 1922. Serial No. 578,480. 6 Claims. (Cl. 46—48.)

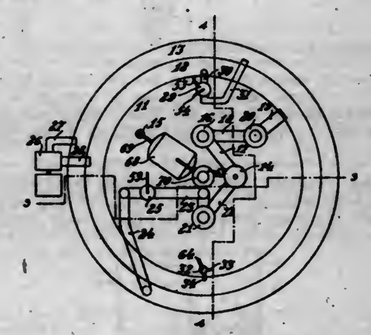
1. A toy of the character described, comprising a body, a propelling ball in the body and adapted to engage the surface over which it is moved, a flexible member attached to the body for moving it and imparting momentum to the ball to cause it to propel the body when the pull on the member is released, and means for checking the momentum of the ball when the body is tilted.

1,481,228. ELECTRIC FURNACE. TITO RONDELLI, London, England. Filed June 22, 1920. Serial No. 390,970. 2 Claims. (Cl. 204—64.)



1. In an electric resistance furnace comprising a main resistant body providing the furnace chamber or crucible; a member of large size made of a material of the same character as said main resistant body for feeding the current to said body, said member being provided with a recess on its side opposed to its face adjacent to said main resistant body, refractory material located in said recess, a layer of high resistance material located between said member and the facing portion of said main resistant body and conductors contacting with the peripheral surface of said member and connected with a pole of a current supply.

1,481,229. FEEDING APPARATUS FOR WRAPPING MACHINES. HENRY ROSE, deceased, late of Gainsborough, England; by William Henry Rose, administrator, Gainsborough, England. Original application filed Jan. 13, 1921, Serial No. 437,025. Now Patent No. 1,434,152, dated Oct. 31, 1922. Divided and this application filed Mar. 10, 1922. Serial No. 542,806. 1 Claim. (Cl. 93—2.)

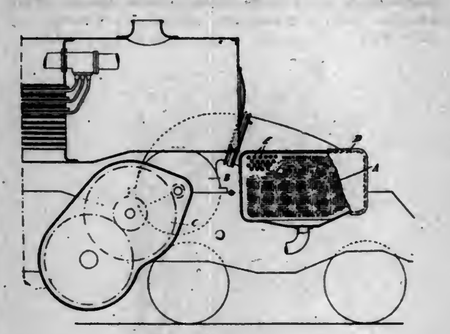


In apparatus for feeding blocks to wrapping machines, a feed trough in combination with hinged guards for

retaining and rerarding the blocks being fed, said guards including a pivoted arm, a resilient bearing face on said

pivoted arm, a cam operating said arm, and an element arranged to bear upon the blocks as they are pushed from said trough, substantially as described.

1.481,230. SUBMARINE. FRANCESCO ROVETTO, Spezia, Italy. Filed Dec. 13, 1922. Serial No. 606,670. 9 Claims. (Cl. 114—16.)



1. A method for maintaining a submarine in equilibrium between two water levels, while the driving motors are stopped, comprising causing admission of water into the submarine as soon as the latter commences to rise and continuing during the entire space covered during upward motion, and causing discharges of water from the submarine as soon as it commences to descend and continuing during the entire space covered during downward motion, the quantity of the water that enters and the quantity of water that leaves the submarine, being, in their totality, a function of the spaces covered during upward and downward motions.

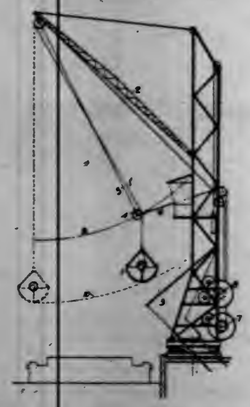
2. An apparatus for maintaining a submarine in equilibrium between two water levels, while the driving motors are stopped, comprising, a controlling device, including a pipe which communicates with the sea, a float therein which is caused to move, directly through the action of the water of the sea said float carrying an electric switch, admission and outlet valves, solenoids for controlling the valves, said switch permitting electric current to pass at intervals through said solenoids for opening said valves in proportion to the space covered by the float and thus by the submarine.

1,481,231. CONDENSING INSTALLATION FOR LOCOMOTIVES. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Nov. 3, 1923. Serial No. 672,575. 5 Claims. (Cl. 257—25.)

1. A condensing installation for a locomotive having fire-tubes and a smoke-box comprising a condenser casing positioned on said locomotive between the smoke-box and the adjacent end of said locomotive, the upper surface of said casing being below said fire-tubes to permit ready access to the latter, and a bundle of condenser tubes in

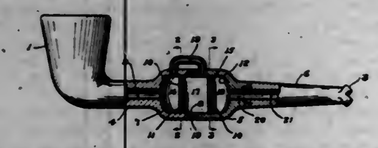
said casing, said tubes being so arranged within the casing as to be accessible from both sides of the locomotive.

1,481,232. NONSKID CHAIN FOR AUTO WHEELS. WILLIAM F. SCHWIESOW, Ripon, Wis. Filed Feb. 9, 1923. Serial No. 617,927. 1 Claim. (Cl. 152—14.)



A non-skid tire chain, comprising a pair of side chains adapted to be positioned upon opposite sides of a tire, and a series of lags joining said side chains and passing transversely over said tire, said side chains each comprising a series of links having flat eyelets at one end adapted to roughly parallel the sides of the tire and each being slightly spaced from the plane of the body portion of the corresponding link and having smaller eyelets at the other end turned at right angles to the plane of said flat eyelets and interlinked therewith and projecting outwardly from the plane of said links.

1,481,233. PLUG CONNECTER. HENRY SIEBEN, Kansas City, Mo., assignor to Charles C. Hoefer, Kansas City, Mo. Filed Feb. 9, 1920. Serial No. 357,169. 4 Claims. (Cl. 200—137.)

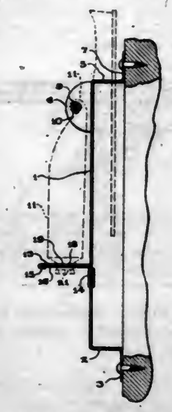


1. A plug connecter comprising a casing, electric contacts in said casing, a shaft, fingers on said shaft engaging said contacts, a ratchet on said shaft, a bowed spring lever in the casing, a detent on said bowed spring lever for engagement with the ratchet, a thermostat bar and a connection between the thermostat bar and the bowed spring lever.

1,481,234. DIGGING APPARATUS. AUGUSTUS SMITH, Roselle, N. J., assignor to Bergen Point Iron Works, Bayonne, N. J., a Corporation of New Jersey. Filed Jan. 14, 1922. Serial No. 530,497. 1 Claim. (Cl. 212—76.)

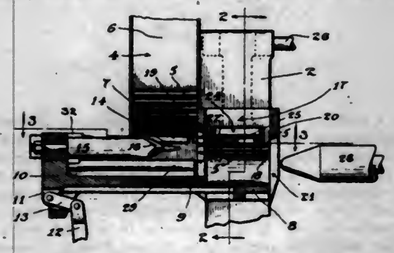
In apparatus of the type described, a tower, a boom thereon, a pendulum trolley suspended from the outer end of the boom, a sheave on the boom, a bucket operating rope engaging said pendulum trolley and boom sheave, a sheave on the tower, inhaul rope means extending directly from the pendulum trolley to the tower sheave, and means for operating the trolley inhaul and the bucket operating ropes.

1,481,235. TOBACCO PIPE. GEORGE SMITH, Philadelphia, Pa. Filed Mar. 31, 1922. Serial No. 548,396. 2 Claims. (Cl. 131—12.)



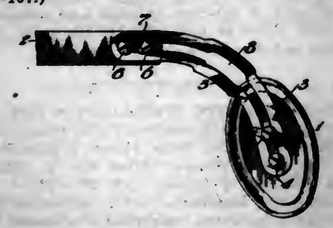
2. A smoking pipe comprising a bowl having an integral stem, the outer end whereof is cup-shaped, a mouth-piece, the outer end whereof is correspondingly cup-shaped, means for connecting together said cup-shaped portions to complete the pipe as a unit, a partition in each of the aforesaid cup-shaped portions, the forward one of which is provided with an aperture at its lower part and the rear one with an aperture at its upper part, and a by-pass connection on the upper part of the cup-shaped portion of the pipe stem which serves as a locking means for securing the opposed cup-shaped portions of the stem in operative connection.

1,481,236. HOLDER. CHARLES R. SPINE and SAMUEL MCMAHON, Somerville, N. J. Filed Dec. 8, 1922. Serial No. 605,676. 3 Claims. (Cl. 221—60.)



1. The combination with a compressible paste containing tube, of a holder therefor, comprising a metal strip having angle ends attached to a support, a follower plate on the holder to receive the threaded neck portion of the compressible tube therethrough, means locking said tube to said plate, a shaft journaled transversely of the support having a slot therein to receive the closed end of the tube, and an operating handle for the shaft.

2. The combination with a paste containing tube, of a holder therefor, including a strip having an angle lower end secured to a support, its upper end widened and also arranged at an angle and likewise secured to the support, the inturned portion of the last mentioned end providing a shelf which is slotted, outstanding ears on the ends of the widened portion in a line with the edges of the shelf, a follower plate slidable on the body



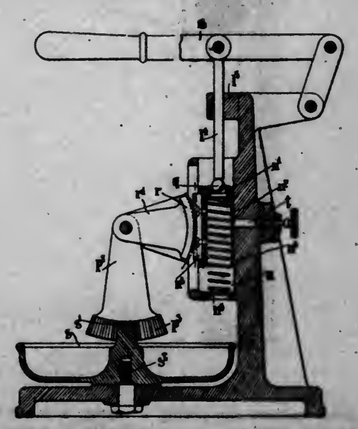
of the holder to receive the threaded mouth of the tube therethrough, means for locking the tube to the follower member, a slotted shaft journaled in bearings in the ears, and receiving in the slot therethrough the closed end of the tube, and an operating handle for the shaft.

1,481,237. MEANS FOR RE-FORMING CAN BODIES. SELAH E. WALKER, Wrangell, Alaska. Filed Oct. 5, 1920. Serial No. 414,845. 12 Claims. (Cl. 153—32.)

1. In an apparatus for the described purpose, the combination with a reciprocating horn for spreading deformed can bodies prior to the reforming thereof, of opening rods connected with and pivotally mounted relative to said horn and means for pressing said rods away from each other.

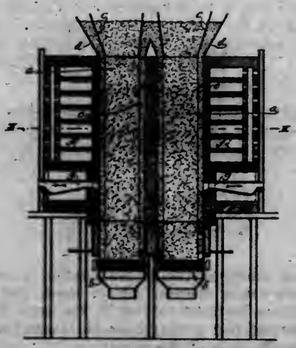
1,481,238. HERNIAL TRUSS. DANA L. CHESTERMAN and FRANK E. CHESTERMAN, Philadelphia, Pa. Filed Nov. 18, 1921. Serial No. 516,043. 1 Claim. (Cl. 128—107.)

In a truss, a pad, a body band, a reversible plate and securing and adjusting screws, said plate having



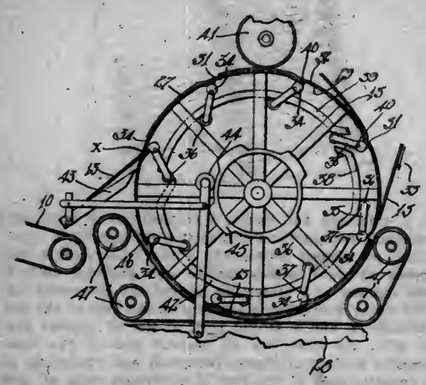
therein a slot continuous from end to end of the plate, the portion of said slot intermediate of the end portions thereof being of greater width than the widths of said end portions and being a communicating continuity of the latter.

1,481,239. DOOR. SIDNEY JAMES FOLLAND, Malad City, Idaho. Filed July 22, 1922. Serial No. 576,842. 2 Claims. (Cl. 20—20.)



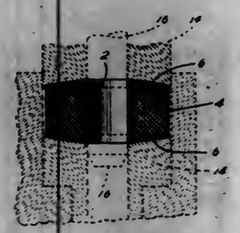
2. In combination with a door formed of separate sections hingedly connected together at their abutting edges, a bracket secured to each of the door sections upon opposite sides of the hinged connection and including outwardly extending legs connected at their outer ends, an offset arm extending from the point of connection of the legs and springs extending across the hinged connection and having their opposite ends secured to the opposite arms.

1,481,240. METHOD OF AND MEANS FOR GAUGING METAL OR OTHER ARTICLES. HENRY LEONARD HEATHCOTE, Coventry, England, assignor to Rudge-Whitworth, Limited, Coventry, England. Filed Feb. 10, 1920. Serial No. 357,731. 11 Claims. (Cl. 83—92.)



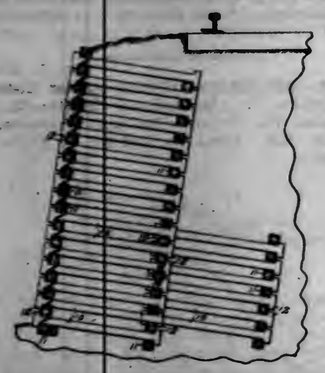
1. The method of gauging articles which consists in applying said articles to a gauging opening and indicating the differences between said articles by the differences in resistance afforded by a wall of said opening to the articles.

1,481,241. DISTILLATION OF ZINC. HEINRICH KOPPERS, Essen-Ruhr, Germany, assignor to The Koppers Development Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 31, 1921. Serial No. 497,358. 13 Claims. (Cl. 75—153.)



1. A process for the distillation of zinc from a mixture of zinc and carbon, consisting in continuously feeding said mixture through a heating retort, simultaneously feeding through said retort and around said mixture a layer of carbon, causing the heating of the contents of the retort to distill the zinc, withdrawing from said retort the gases of distillation containing the zinc, and withdrawing from the retort progressively the reside of its contents.

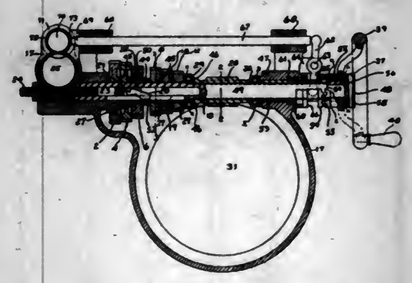
1,481,242. POLISHING DEVICE. JOHN J. MUELLER, Jr., Ottawa, Ill., assignor to Superior Metal Co., Bethlehem, Pa., a Corporation of Pennsylvania. Filed Oct. 23, 1922. Serial No. 596,283. 2 Claims. (Cl. 51—105.)



1. A device of the character described comprising a polishing and grinding wheel, a rotatably mounted drum having its peripheral walls closely adjacent the peripheral edge of said grinding wheel, clamps associated with said drum for clamping metal plates or the like thereto, and means associated with said clamping members for releasing certain of said clamping members on a portion of the circumference of said drum as said drum is rotated, whereby certain of said plates may remain in said clamping members for a complete revolution of said drum and the remainder of said plates may remain in said clamping members for a complete revolution of said drum.

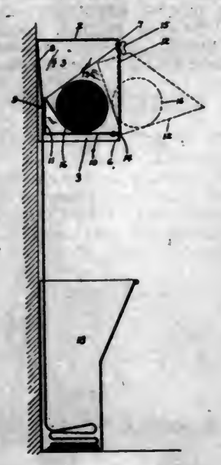
1,481,243. BOBBIN AND METHOD OF PRODUCING THE SAME. REE V. SNYDER, St. Louis, Mo., and MALCOLM CURRY, Scarsdale, N. Y., assignors to The American Thread Company, New York, N. Y., a Corporation of New Jersey. Filed June 23, 1923. Serial No. 647,244. 8 Claims. (Cl. 242—161.)

2. A filled bobbin having, in combination, a core having thread cross-wound thereon into a mass, and disks of resilient fibrous material secured on the ends of the core and constructed and arranged so as to exert a yielding pressure on the ends of the mass.



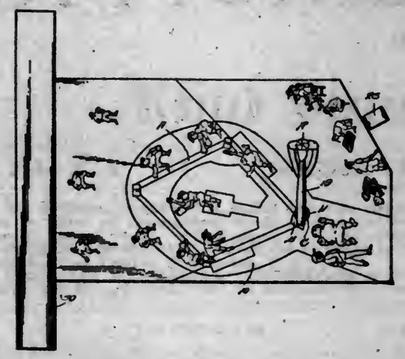
1,481,244. CRIBBING. JOHN S. HUNTOON, Detroit, Mich., assignor to Massey Concrete Products Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 27, 1922. Serial No. 564,082. 4 Claims. (Cl. 61—47.)

1. A retaining wall having a vertical tier of stretchers of constant rectangular cross section throughout, a vertical tier of headers alternating with the stretchers and disposed at right angles thereto and provided with T heads lapping and projecting beyond the respective adjacent upper and lower stretchers at one side of the tier of stretchers, and a second vertical tier of headers parallel with the first tier of headers and in the same respective horizontal planes therewith and projecting at the opposite side of the tier of stretchers, each of said second headers having an end portion lying between successive stretchers and provided with a T head lapping and projecting beyond said successive stretchers at the side of the tier opposite the heads of the first mentioned headers.



1,481,245. SAFETY HAND FEED. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 8, 1923. Serial No. 637,497. 5 Claims. (Cl. 74—7.)

1. A safety control for drilling machines; combining a spindle-feeding mechanism including a driven shaft; a plurality of gears arranged for actuation by power; means to connect said gears selectively with said driven-shaft, for power actuation thereof, said means including a shift-rod provided with a key and having a circular rack, and a rotatable pinion meshing with said rack; a hand-wheel journalled adjacent to said driven-shaft; means to couple said hand-wheel operatively with said



driven shaft at times; and a safety interlock comprising connections between said pinion and coupling-means, said safety interlock operating to disconnect said handwheel from said driven-shaft when any of said gears are connected thereto, and to connect said hand-wheel with said driven-shaft when said gears are disconnected therefrom.

1,481,246. TOWEL CABINET. FRANK M. STEINER, Minneapolis, Minn., assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Oct. 16, 1920. Serial No. 417,466. 6 Claims. (Cl. 211—31.)

1. A towel cabinet comprising a casing, a towel container therein adapted to move outwardly to expose the container, a space being provided in the casing in the rear of the container to allow the feed of the towel, the loose end of the towel passing over the rear wall of the container and sliding thereon downwardly in said space when pulled by the user, and a tension device between which and said rear wall the towel is gripped.

1,481,247. BASEBALL GAME. HERVY P. WICKES, Charleroi, Pa. Filed May 14, 1921, Serial No. 469,474. Renewed June 16, 1923. 8 Claims. (Cl. 46—59.)

1. A game apparatus of the character described comprising a playing board having thereon an upright figure holding a bat, the bat being oscillatable in an approximately horizontal plane, resilient means urging the bat to a normal position, manually operable means for retracting the bat against the action of the resilient means and releasing the bat, means for simultaneously projecting a ball in a direction parallel to the figure and across the path of movement of the bat as it is acted on by the resilient means, and a support on the board, the ball projecting means being between said support and the bat when the bat is retracted, said support having a series of members mounted thereon in a line transverse to the path of movement of the ball when projected by the bat and constituting targets against which the ball may be projected when struck by the bat.

1,481,248. AUTOMATIC SIGHTING MECHANISM FOR AIRCRAFT GUNS. ELMER A. SPERRY, Brooklyn, N. Y. Filed Dec. 22, 1917. Serial No. 208,390. 24 Claims. (Cl. 33—47.)

1. In combination, a gun sight, a support therefor, means adapted to be set in accordance with the range of a target, means actuated in accordance with the angular velocity of said sight relative to said support and means controlled by said two first-named means for moving said sight.

Patents Nos. 1,481,249 to 1,481,784.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 318—No. 4. TUESDAY, JANUARY 22, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notice—Application Drawings.

The following requirements concerning unnecessary drawings are still in force:

It has been observed that there is an increasing tendency to provide unnecessarily large illustrations which are longer than the width of the standard sheet. This in many instances necessitates the filing of additional sheets of drawing to accommodate the remaining figures. Rule 52, section 5, provides that "the scale to which a drawing is made ought to be large enough to show the mechanism without crowding, and two or more sheets should be used if one does not give sufficient room to accomplish this end; but the number of sheets must never be more than is absolutely necessary."

It was not intended by the first clause of this rule to authorize unnecessarily large illustrations. In all instances where it is possible the figures and reference letters or numerals must be so placed that the drawing may be read in an upright position. Placing the figures so that the sheet must be turned on its side in order that the drawing may be read not only adds to the difficulty in reading the specification in connection with the drawing, but where the illustration is so large as to require an additional sheet it imposes unnecessary expense upon the applicant.

In the future applicants will be required to limit the number of sheets to those which are *absolutely necessary* for the proper illustration of the invention described and claimed. If because of unnecessarily large illustrations or for other reasons an undue number of sheets are filed, a requirement will be made that the illustration be condensed upon a single or a reasonable number of sheets. 172 O. G. 835.

There are two principal reasons for the rule requiring drawings to be limited to as few sheets as possible consistent with a clear showing of the invention; one is that it has now come to be a serious problem to find space for the storage of drawings, whether they form a part of a patent or of an abandoned application, and the other is that it is a useless expense to photolithograph an unnecessary number of sheets of drawings for the purpose of attaching the same to patents. *Ex parte Pfaulz*, 159 O. G. 480.

To file unnecessary sheets of drawings is to increase the cost of photolithographing and to multiply the records, thereby delaying the Office [and attorneys] in making searches and placing an unnecessary burden upon applicants. *Ex parte Arndt*, 93 O. G. 751.

Notice of Cancellation.

U. S. Patent Office, *Washington, Jan. 10, 1924.*

Austin, Poor & Co., their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Ireland Bros. Inc., of 102 Franklin Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Austin, Poor & Co., of 72 Leonard Street, New York, N. Y., No. 54,319, dated June 26, 1906, and the notice of such proceeding sent by registered mail to the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Austin, Poor & Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

CLASSIFICATION MANUAL.

A Manual of Classification of Patents in the United States Patent Office has been published, indicating the classes and subclasses as of January 1, 1924, on sheets about 6 inches by 9 inches, punched for insertion in a loose-leaf binder. An index is being prepared for publication. It is proposed to keep the Classification Manual current by reprinting necessary pages from time to time as changes in classification are made. While this is done primarily for the use of the Office, the Superintendent of Documents, Government Printing Office, Washington, D. C., on receipt of $1.00 will furnish a copy of the Manual of Classification at once, and for the same price will send, on publication, a copy of the index and copies of such pages as may be reprinted during the calendar years 1924 and 1925.

Condition of Applications Under Examination at Close of Business January 11, 1924.

Room No.	Divisions, Examiners, and subjects of inventions. (Total number of applications awaiting action, embodying Trade-Mark Division, 66,209; Trade-Mark Division, 2,212. Oldest new case: Apr. 9, 1923; oldest amended, Apr. 9, 1923. The dates given are 1923, with the exception of Printz and Lobain, which is 1924 (amended case).)	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	Number of applications awaiting action.
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	May 10	May 9	1,200
128	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tents, Canopies, Umbrellas, and Canes; Tobacco.	May 15	May 17	1,224
175	3. RICH, W. J., Electric Heating and Rheostats; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	July 28	Aug. 20	1,067
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Drives; Excavating; Handling—Head and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Railway Mail Delivery; Traversing Hoists.	May 2	June 7	1,353
167	5. MACNAB, J. F., Bookmaking; Books, Strips, and Leaves; Harvesters; Jewelry; Manifolding; Music; Printed Matter; Tying Cords or Strands.	Apr. 16	Apr. 20	1,446
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Liquid Coating Compositions; Plastic Compositions; Substance Preparation.	Apr. 13	June 14	1,837
312	7. JARBOE, D. G., Games and Toys; Optics; Photography	June 4	June 7	2,526
133	8. CLIFT, J. W., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture; Supports.	July 13	Sept. 4	1,061
221	9. TEYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	May 17	Dec. 22	724
235	10. BARTHOLOMEW, J. A., Motor Vehicles; Land Vehicles—Animal Draft Appliances, Bodies and Tops, Draperies, Wheel Substitutes.	May 28	June 18	1,476
154	11. ARMSTRONG, E. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Hides, Skin, and Leather; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus.	Aug. 10	Aug. 23	813
222	12. PIERCE, J. P., Machine Elements	May 25	June 13	1,173
220	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Drives, Headed, and Screw-Threaded Fastenings; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	May 9	July 24	1,203
223	14. BRUMBAUGH, N. J., Compound Tools; Cutting and Punching Sheets and Bars; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	Apr. 18	Nov. 21	1,056
308	15. REDROW, W. L., Glass; Laminated Fabric and Analogous Manufactures; Paper Making and Fiber Utilization; Plastic Block and Earthenware Apparatus; Plastics.	Apr. 16	May 2	1,901
112	16. BACKUS, C. D., Radiant Energy; Telegraphy; Telephony	Apr. 13	Apr. 14	2,721
307	17. RAFTER, G. S., Coating, Label Pasting, and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Association or Folding; Sheet or Web Feeding or Delivering; Type Setting.	May 8	Aug. 2	1,365
229	18. PORTER, M. H., Liquid Heaters and Vaporizers; Motors, Expansible-Chamber Type; Power Plants; Valves and Valve Devices.	Apr. 12	Apr. 12	2,053
236	19. GLASCOCK, E. S., Automatic Temperature and Humidity Regulation; Furnaces; Heating Systems; Stoves and Furnaces; Thermostats and Humidostats.	Aug. 7	Sept. 15	1,185
179	20. WRIGHT, H., Artificial Body Members; Miscellaneous Hardware; Closure Fasteners; Dentistry; Locks and Latches; Safes; Undertaking.	July 5	June 6	1,330
212	21. THURBER, W. L., Winding and Reeling; Textiles—Braiding, Netting, or Lace Making, Cloth Finishing, Fiber Preparation, Knitting, Spinning, Twisting or Twining, Weaving.	Apr. 25	Nov. 7	914
249	22. COLWELL, J. H., Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	May 21	July 19	474
217	23. GROSBECK, W. D., Acoustics; Coin Handling; Recorders; Registers; Sound Recording and Reproducing.	Apr. 26	May 5	656
144	24. DURAS, G. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Apr. 11	June 27	1,101
315	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Cutlery; Mills; Threshing; Vegetable and Meat Cutters and Comminuters; Gas Separation.	Aug. 20	Sept. 22	873
105	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dynamo Plants	May 9	May 4	973
214	27. ANDERSON, L. S., Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	May 16	May 26	1,224
226	28. BENSON, A. R., Internal-Combustion Engines	June 22	July 2	1,318
147	29. MORRIS, R. N., Abrading; Boring and Drilling; Button Making; Chucks or Sockets; Cooperage; Tool-Handle Fastenings; Wheelwright Machines; Wood Sawing; Wood Turning; Woodworking; Wood-working Tools.	Apr. 21	June 4	1,240
182	30. SULLIVAN, M. B., Illuminating Burners; Illumination; Liquid and Gaseous Fuel Burners; Type-setting.	May 24	Oct. 20	1,108
172	31. HOLMES, W. M., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Gas, Heating and Illuminating; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue; Sugar, Starch, and Carbohydrates; Concentrating Evaporators.	May 21	June 14	1,401
129	32. BANCROFT, J. F., Gas and Liquid Contact Apparatus; Heat Exchange	Apr. 9	Apr. 9	1,325
70	33. WYMAN, W. J., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs; Rod Joints or Couplings; Pipe Joints or Couplings; Valved Pipe Joints or Couplings.	May 23	May 28	1,422
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Dispatch; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track Sanders; Vehicle Fenders.	June 20	July 9	941
32	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	Sept. 8	Sept. 4	842
265	36. MORTON, G. L., Automatic Weighers; Driers; Geometrical Instruments; Measuring Instruments; Force Measuring.	June 26	June 26	1,526
107	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers	May 9	May 8	1,787
378	38. IDE, G. R., Animal Husbandry; Earth Boring; Fishing, Trapping, and Vermin Destroying; Mining, Quarrying, and Ice Harvesting; Stationary; Stoneworking; Wells.	Apr. 20	Apr. 21	1,610
220	39. COWLES, A. W., Fluid-Pressure Regulators; Multiple Valves; Valves; Water Distribution	Apr. 19	Apr. 18	1,125
271	40. OBERLIN, J. J., Baggage; Bottles and Jars; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	May 2	Oct. 1	1,936
125	41. BROWN, J. L., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels	May 7	June 27	957
114	42. CUTTING, H. O., Electrical Conduits and Housings; Electric Signaling; Electric Lamps	May 19	May 26	1,750
362	43. HOPKINS, F. M., Baths, Closets, Sinks, and Spittoons; Electricity, Medical and Surgical; Fire Extinguishing; Medicines; Beverage; Surgery; Liquid Separation or Purification.	May 16	May 1	1,724
263	44. SHAFFER, C. H., Bread, Pastry, and Confection Making; Dispensing; Dispensing Beverages; Filling and Closing Perishable Receptacles; Railway Draft Appliances; Refrigeration.	Apr. 23	Aug. 15	1,067
270	45. GILES, A. H., Journal Boxes, Pulleys, and Shafting; Lubrication; Motors; Spring Devices	July 6	June 27	1,400

DECISIONS IN PATENT AND TRADE-MARK CASES.

U. S. Circuit Court of Appeals—Second Circuit.

THOMAS A. EDISON, INC., *v.* WATERBURY BATTERY CO.

Decided January 5, 1923.

[287 Fed. Rep., 320.]

1. PATENTS—1,167,499, CLAIM 1, FOR IMPROVEMENT IN PRIMARY BATTERIES, HELD NOT ANTICIPATED AND INFRINGED.

The Holland patent, No. 1,167,499, claim 1, for an improvement in primary batteries the novel feature of which is a ribbed zinc plate constructed so as to maintain its shape while a greater proportion of the metal is consumed than in ordinary batteries, *Held* not anticipated by prior patents or by defendant's prior plate, and also *Held* infringed by defendant's later plate, although circular and not flat in form.

2. SAME—1,061,541, CLAIMS 1 AND 5, FOR IMPROVEMENTS IN PRIMARY BATTERIES, HELD INVALID.

The Hudson and Elmes patent, No. 1,061,541, claims 1 and 5, for improvement in primary batteries the distinguishing feature of which is a thin place in the plate which will become a hole in the plate as the latter is eaten away, so as to give warning of the necessity of renewing the plate in a short time, with a raised rim around the thin spot, so that an observer will know where to look for the expected hole, *Held* invalid, the means disclosed being so obvious as to show no more than the exercise of mechanical skill.

APPEAL from the District Court of the United States for the District of Connecticut.

Suit by Thomas A. Edison, Inc., against the Waterbury Battery Company, for infringement of two patents. From a decree for plaintiff as to the first patent, and in favor of defendant as to the second patent (281 Fed. 254), both parties appeal. Affirmed.

STATEMENT OF THE CASE.

Suit is for alleged infringement of two patents owned by plaintiff, viz one to Holland, 1,167,499, granted January 11, 1916 (claim 1), and that to Hudson and Elmes, 1,061,541, granted May 13, 1913 (claims 1 and 5).

The Holland claim in suit is as follows:

In a primary battery, a substantially homogeneous zinc electrode plate having its edges thickened to prevent reduction in effective area during the operation of the battery, and having strengthening ribs extending from said thickened edges across said plate integrally therewith, substantially as described.

Claim 1 of Hudson's patent states the invention most broadly, thus:

In a primary battery, a positive plate having a depression of small area on the side farthest away from the negative element with which it coacts, for indicating the approaching necessity for renewal, substantially as described.

Both inventors assert that their discoveries relate to improvements in primary batteries, such as show a negative electrode consisting of a plate of oxide of copper or other depolarizing agent, and as a positive electrode a plate or plates of zinc. In both specifications the battery of Dodge (No. 894,487, July 28, 1908) is referred to as the type on which both inventors propose improvements, without, of course, limiting themselves to Dodge's particular design.

The improvements claimed relate to the zinc plate in batteries of the class referred to. Holland's object is to so construct such plates that the battery tquipped with his improvement—

shall have a higher and more uniform voltage, and a higher discharge rate than have batteries as commonly constructed, without proportionate increase in the amount of material used in the construction of the plate, and shall have increased efficiency and life.

These desirable results Holland proposes to reach by using "a much smaller proportion of zinc in excess of the theoretical required amount," but forming the zinc plate "with an integral flange or rib, or a plurality of ribs upon its surface," and preferentially "with a flange adjacent to its edges on the side adjacent to the copper oxide plate"; the result of which structural method is to make it possible for the body of the plate to be "much thinner than it otherwise must be, to maintain its shape after it has been considerably consumed."

Hudson's specification proposes but one change in the admittedly flat unribbed plate of the prior art, viz to form "a small depression in the side * * * farthest away from" the copper oxide plate. The depression makes a thin or thinner place in the zinc plate, which will wear away under the expected electrolytic action of the battery before any other part does so, and thus by predetermined correlation of the battery parts, when the thin place is worn through and a hole shows in the zinc, there is afforded an—

advance indication to the user of the approaching exhaustion of the plate, so that he may be prepared to renew the same.

Hudson preferred and shows (without limiting himself to that construction)—

a small depression (in the zinc) of a circular shape, surrounded with a raised rim for locating the spot which the user should watch for signs of wear.

The usual defenses were interposed and the trial court held the Holland patent valid and infringed, but declared no infringement of that to Hudson. Both parties then appealed.

Mr. J. Edgar Bull and *Mr. George F. Scull* for the plaintiff.

Messrs. Dunn, Goodlett & Massie and *Mr. C. A. L. Massie* for the defendant.

Before HOUGH, MANTON, and MAYER, Circuit Judges.

HOUGH, *Cir. J.* (after stating the facts as above):

[1] In respect of the Holland patent, it is not necessary to go at length into the earlier art and its relation to this suit; that labor has been sufficiently performed by the district court. The question at bar may be thus stated. Recognizing the comparative antiquity of primary batteries having zinc and copper electrodes immersed in electrolyte, was it patentable invention to design, mold, or fashion the zinc electrode in the manner disclosed by the patentee?

Holland did not invent a battery. Admittedly he took Dodge's battery and refashioned its zinc in such wise as—

to prevent reduction in effective area during the operation of the battery.

That was the object of the means which he patented; it was the result of his refashioning. He attained this result for reasons to be briefly stated later, but we note now that his introduction of the above-quoted phrase in the claim does not make the claim any better; nor, on the other hand, does it invalidate. If these words of self-congratulation had been omitted, the result would have been reached just the same and the disclosure would have been just as meritorious.

Holland's concept of invention as fully disclosed is this: The zinc plate of Dodge, and generally speaking the zinc electrode of commerce was a smooth unribbed plane of zinc of uniform thickness when new. During battery service, zinc is, so to speak, the fuel of the battery; it is consumed by electrolytic action. For metallurgical reasons it wears away unevenly, and experience expects it in time to pit and develop holes. Thus the plate increasingly becomes structurally weaker and (as no current is propagated from a hole) it also decreases in effective area. Furthermore, for chemical or electrical reasons, obscure, but known by results, this wearing away is apt to be especially marked at the edges of the plate.

Theoretically it is possible to calculate with exactitude the amount of zinc that should be consumed during the predetermined life in ampere hours of any given battery, and theoretically, therefore, a battery maker should provide a zinc plate of just sufficient weight and substance to economically furnish fuel for the calculated battery life. Practically, however, owing to imperfections in metal, and to the fact that zinc is not consumed as if by pealing off layers of uniform thickness from the plate surface, it is always necessary to put in an electrode of that metal, far more material than is theoretically sufficient to furnish fuel during the battery life. It is testified that as much as from 60 to 70 per cent of excess metal is added.

As a partially-consumed plate does not furnish the same area for electrolytic action, it follows that in batteries which (during cold weather especially) may be called on for their extreme calculated current, the absence of "effective area" produces lack of effective or calculated power. Holland bettered this situation by making a plate that looks somewhat like a paneled door with a thickened exterior edge and interior ribs or strengthening bars, the panels being much thinner than in the smooth ribbed plate. By this means he produced a plate which, being flanged on its edges, would better withstand electrolytic wear in those parts which especially diminished effective area. His ribs gave structural strength, and therefore his panels could be thinned; the whole being in weight much nearer the theoretical zinc requirements for predetermined battery life.

In result, we find Holland's plate is economical in that the excess over theoretical zinc requirement is smaller, and the maintenance of effective area better than in the prior plain and unribbed zinc electrode. This was, we think, invention, and very plainly so.

As to the prior art, we think defendant's so-called "W. B. Co." plates so much the best reference that none other need be mentioned. We assume (but do not find) that before Holland's effective date this defendant (or its predecessors) made plates upon which were placed as a sort of trademark the letters (in a kind of monogram) "W. B. Co." This required additional zinc, and the formation of the letters produced what might have served as strengthening ribs, if any were needed; but we agree with the court below that the only purpose of this monogram addition was to identify or advertise defendant's wares. There was no reduction of zinc used; on the contrary, there was probably addition. Consequently what was done did not accomplish Holland's result. The "W. B. Co." plates do not infringe, and therefore would not have anticipated, if earlier. Nor did they so instruct the man skilled in the art as to leave no room for invention in respect of Holland's concept and accomplishment.

As to infringement, it is admittedly true that the article decreed to infringe is not a flat plate, but a circular one. It is, however, ribbed, strengthened, and flanged in the manner and for the purposes disclosed by Holland.

In this court especial emphasis is laid on the invention of Thomson (866,748) as showing, if not invalidity, certainly noninfringement. The use of Thomson's device on this appeal is a good example of the case with which mere form tends to assume undue importance. Thomson shows a circular plate somewhat like defendant's. He also discloses and claims what he calls a "lip" upon each of the vertical edges of his circular zinc; that is, he turned back the zinc plate upon itself, and he did it—

to preserve the life of battery zincs and to save at least half their value, which, as at present used, is wasted.

But examination of the patent shows that Thomson's sole concept, his desired result, was to prevent in a *partially* submerged zinc the more rapid wearing away of the plate at the surface of the electrolyte. Let it be assumed that Thomson prevented his plate from being eaten in two or severed at the electrolytic surface, as soon as it otherwise would have been, and that he did so by means of his turned-over lip. But this is a different thing from changing the structure of the entire plate in such wise as to present to electrolytic action an entire plate surface thickened and thinned at the places where each would be most serviceable for maintaining both effective area and structural strength.

[2] As to the Hudson patent, we entirely agree with the court below that no infringement is shown; but we are also of opinion that the patent itself is invalid. Starting with the knowledge that in any zinc plate holes would certainly appear in time, this patentee (at most and best) deliberately made a weak spot—i. e., a thin place—in the plate of the prior art. He thinks that zincs "wear away during electrolytic action quite evenly"; therefore he made a thin place, how thin he does not say, but thin enough so that, when it wore through, the user would be advised that the plate would "have to be removed shortly, say in from two or four weeks' time." He then put a raised rim around the thin spot, so that an observer would know where to look for the expected hole.

Assuming this method of observation as desirable, the means disclosed are so obvious that we hold them, as matter of fact, no more than the exercising of mechanical skill. As neither appellant has succeeded, the decree is affirmed, without costs.

Court of Appeals of the District of Columbia.

IN RE BUDD AND LEDWINKA.

No. 1588. Decided December 3, 1923.

ANTICIPATION—SUBSTITUTION OF EQUIVALENTS.

A two-part hub which includes an inner tapered part, polygonal in cross section, and an outer part having a cooperating seat of similar cross section is anticipated by a patent covering the same sort of a combination having a conical seat and which states in the specification that "various means are in use for locking the hub parts * * * against turning one on another," a patent in which ribs and grooves are used for this purpose, and another in which a tapered seat of polygonal cross section is shown.

Before SMYTH, Chief Justice, ROBB, Justice, and MARTIN, Presiding Judge, U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from a decision of the Patent Office refusing to allow claims 7, 8, 13 and 14 of appellant's application for a patent on a two-part hub structure for a demountable automobile wheel, in which the inner hub part is permanently mounted to rotate on a fixed axle. The outer hub part carries the wheel structure and is rigidly located upon the inner hub member, but capable of being unlocked and removed therefrom. Claim 8 is sufficiently illustrative and is here reproduced:

8. In a wheel structure, the combination of an inner hub member having a tapered seat of polygonal cross-section, an outer hub member having, near its inner end, a cooperating seat of similar cross-section and, adjacent its outer end, an internal conical surface, and a nut threaded on said inner hub member and exerting a thrust against the conical surface on the outer hub member.

It is sought to distinguish this claim from the patent to House (No. 1,166,130, Dec. 28, 1915), covering the same sort of a combination, because it calls for "a tapered seat of polygonal cross-section." In the House patent the corresponding seat is conical in shape, but in the specification House states that "various means are in use for locking the hub parts together against turning on one another." In the French patent to Gaillard (No. 457,693, Sept. 23, 1913), ribs and grooves are employed for this purpose, while in the French patent to Offrion (No. 452,312, May 14, 1913), "a tapered seat of polygonal cross section" is shown.

It was the view of the Patent Office that the slight change in appellant's structure did not rise to the dignity of invention, especially in view of the references; in other words, that the result might have been achieved by a skilled mechanic. After giving due weight to appellant's argument and brief, we are constrained to agree with the tribunals of the Patent Office, in whose decisions the question is fully and satisfactorily discussed. The decision therefore is affirmed.

Affirmed.

ADJUDICATED PATENTS.

(C. C. A. Ind.) The Schemmel patent, No. 51,804, for design for a finishing welt, *Held* invalid. *Backstay Machine & Leather Co.* v. *Zenite Metal Co.*, 293 Fed. Rep. 23.

REISSUES

JANUARY 22, 1924.

15,749. **FUEL-FEEDING DEVICE.** JOSEPH C. COULOMBE, Kokomo, Ind. Filed Sept. 20, 1923. Serial No. 663,928. Original No. 1,395,224, dated Oct. 25, 1921, Serial No. 72,198, filed Jan. 15, 1916. 30 Claims. (Cl. 158—36.)

1. In a fuel feeding device having a suction chamber, a distributing chamber, a connection from the suction chamber to a source of suction, a connection from the suction chamber to a source of liquid supply, said distributing chamber open to atmospheric pressure; of a valve opening between the two chambers, a primary valve and a secondary valve controlling said opening, and means dependent upon the rise of liquid in the suction chamber for opening said valves.

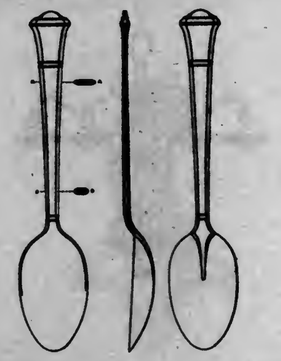
15,750. **REFINING LEAD.** HENRY HARRIS, London, England. Filed Sept. 27, 1923. Serial No. 665,235. Original No. 1,395,820, dated Nov. 1, 1921, Serial No. 354,851, filed Jan. 29, 1920. 12 Claims. (Cl. 75—15.) Division A.

1. Process of dezincing lead which comprises bringing the molten lead into intimate contact with a mixture comprising caustic alkali and alkali chlorid at a temperature below that where any appreciable amount of alkali metal passes permanently into the lead, and maintaining the mixture below said temperature.

15,751. **DEZINCING LEAD.** HENRY HARRIS, London, England. Filed Sept. 27, 1923. Serial No. 665,236. Original No. 1,395,820, dated Nov. 1, 1921, Serial No. 354,851, filed Jan. 29, 1920. 6 Claims. (Cl. 75—15.) Division B.

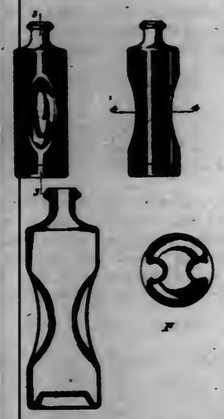
1. Process of dezincing lead which comprises bringing the molten lead into intimate contact with a mixture comprising alkali chlorid and a substance which lowers the melting point of the alkali chlorid so as not to exceed about 500° C., maintaining the mixture not to exceed said temperature and conducting the operation without the addition of lead oxide (or ore containing lead oxide) in such quantity that the contained lead is in amount chemically equivalent to the zinc in the metal to be purified.

DESIGNS



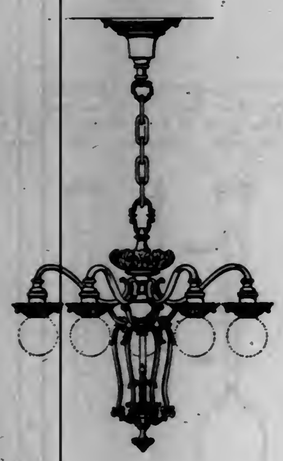
JANUARY 22, 1924.

63,814. **REFRIGERATOR.** LEN ALBERT BANTA, Clearfield, Pa. Filed Dec. 29, 1922. Serial No. 4,751. Term of patent 7 years.



The ornamental design for a refrigerator as shown.

63,815. **SPOON OR SIMILAR ARTICLE.** ARTHUR LE ROY BARNEY, New York, N. Y., assignor to Tiffany & Company, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1922. Serial No. 4,700. Term of patent 14 years.



The ornamental design for a spoon or similar article as shown.

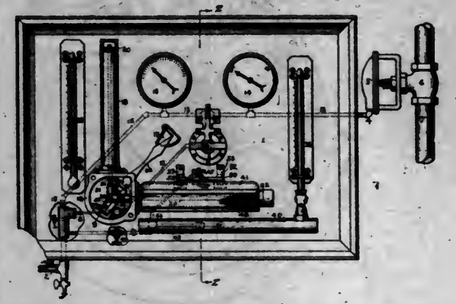
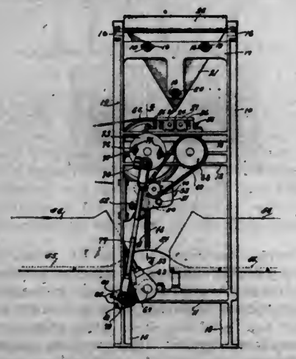
1,481,249. HOLLOW BUILDING TILE. EDWIN J. BEINECKE, New York, N. Y. Filed Feb. 23, 1922. Serial No. 538,480. 2 Claims. (Cl. 72—41.)



1. A wall structure, comprising superimposed courses of cellular tiles having front, back, and side outer walls, inner walls extending from front to back, and from side to side, forming front and back passages in said tiles, the front passages being of less area than the back passages, the opposite ends of the tile of one course lying in substantially parallel planes, the upper ends of the tile of an adjacent course having a front reduced portion, the front and back outer walls of the several courses of tile being arranged in alignment with each other, the inner front and back connecting walls of one course of tile being arranged in staggered relation to the corresponding walls of a vertically adjacent course, and a facing composed of courses of stringer bricks and an intermediate course of header bricks, the inner ends of the header bricks overlapping the reduced portion of the upper end of one course of tile and being bonded therewith on the upper end of the front wall of said tile and on an inner side connecting wall parallel therewith.

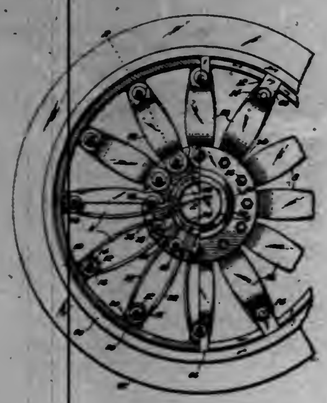
1,481,250. WRENCH. GEORGE J. BOHN and FRED W. WERNER, Milwaukee, Wis. Filed Nov. 25, 1921. Serial No. 517,667. 8 Claims. (Cl. 81—154.)



1. In a wrench, the combination of a handle, an arm rigid therewith having two faces inclined towards each other, one of said faces having a recess therein, a wedge-shaped member slidable on one of said faces and having a chamber therein, a collar enveloping said arm and said wedge, and a spring affixed to said wedge-shaped member and said arm for retracting said wedge-shaped member with respect to said arm, said spring being completely housed in said chamber and said recess.

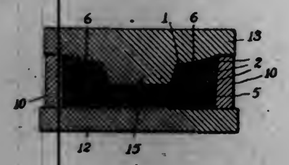
1,481,251. HUMIDITY CONTROLLER. WILLIAM G. R. BRAEMER, Cranston, R. I., and JOSEPH ARMSTRONG, Malden, Mass., assignors to American Moistening Company, a Corporation of Maine. Filed Jan. 24, 1923. Serial No. 614,547. 9 Claims. (Cl. 73—24.)

1. A hygrometer comprising dry and wet elements, means controlled by the conjoint operation of the expansion and contraction of said elements for controlling means adapted for putting a humidifier system into or out of operation in accordance with variations in atmospheric conditions, and means for supplying water to the wet element, said water supplying means comprising an inverted cap arranged longitudinally of the upper portion of the wet element, a source of water supply for feeding water to the interior of the cap, and a nozzle for supplying compressed air to the water for discharging it into the cap.



1,481,252. SHEET-FOLDING MACHINE. PETER J. CHRISTMAN, Jr., and JAMES DELOYE, Green Bay, Wis., assignors, by direct and mesne assignments, to Paper Converting Machine Company, Green Bay, Wis., a Corporation. Filed Feb. 20, 1922. Serial No. 537,934. 4 Claims. (Cl. 270—65.)

1. A carrier having cutting blades secured thereto, a plurality of tuckers semi-rotatable on said carrier, said carrier being cut away to receive said tuckers, a plurality of segmental gears pivoted to said carrier, a roller on



the end of each of said segmental gears, a stationary cam cooperating with said rollers to move segmental gears, and means cooperating with said segmental gears for moving said tuckers into tucking position.

1,481,253. VEHICLE WHEEL. JOSEPH L. COHEN, New York, N. Y. Filed Feb. 25, 1922. Serial No. 539,123. 8 Claims. (Cl. 152—51.)

1. In a vehicle wheel, a hub, a felly, a plurality of resilient spoke elements each consisting of a resilient spoke plate bent intermediate of its ends to provide oppositely bowed portions extending between the hub and felly, means for securing the intermediate portion of the spoke plate to the felly, and means mounted in the wheel hub between the ends of the spoke plate spacing said ends apart but permitting of their radial movement with respect to the hub in the flexing action of the bowed portions of the spoke plate.

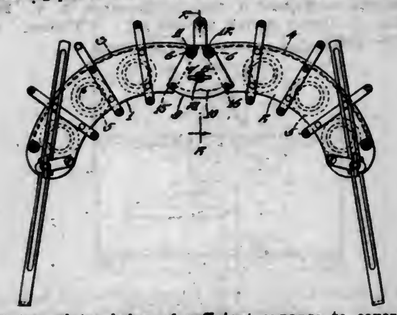
1,481,254. METHOD FOR PRODUCING HEELS. LEON B. CONANT, Cambridge, Mass., assignor to George W. Conant, Bridgewater, Mass. Filed Nov. 17, 1920, Serial No. 424,553. Renewed June 7, 1923. 2 Claims. (Cl. 18—59.)

1. The herein described process of producing heels and the like, which consists in placing within a mold a plurality of substantially duplicate perforated layers composed of fibrous material, and a biscuit of rubber composition, and applying heat and pressure thereto, the pressure being applied in a way to concave said plies and thereby to put said perforations in adjacent layers partly out of alinement, whereby the rubber composition forced into said perforations is given a staggered form and made more strongly to retain their place therein.

1,481,255. TRANSPORTING CONDUIT FOR VISCOUS SUBSTANCES AND PROCESS OF MAKING THE SAME. HARRY A. CUMPER, Chicago, Ill. Filed July 15, 1920. Serial No. 396,492. 5 Claims. (Cl. 29—157.)

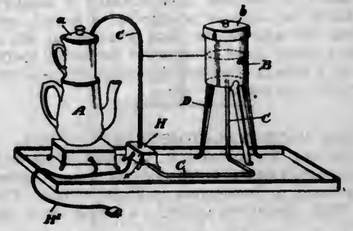
1. Jacketed conduits comprising inner product transporting pipes, circulating shells surrounding the transporting pipes, and connecting flanges having said pipes and shell portions rigidly fitted thereto.

1,481,256. MAGNETIC TOY. THEODORE DOLS, Hopkins, Minn. Filed Apr. 23, 1923. Serial No. 633,894. 2 Claims. (Cl. 46—49.)



1. A device of the kind described, comprising two horse shoe magnets set one within the other and at right angles to each other; and a flat and rayed magnetized armature having a central spinning point on its under side.

1,481,257. HINGE. WALTER S. EDMANDS, Boston, Mass. Filed Feb. 11, 1922. Serial No. 535,909. 3 Claims. (Cl. 16—163.)

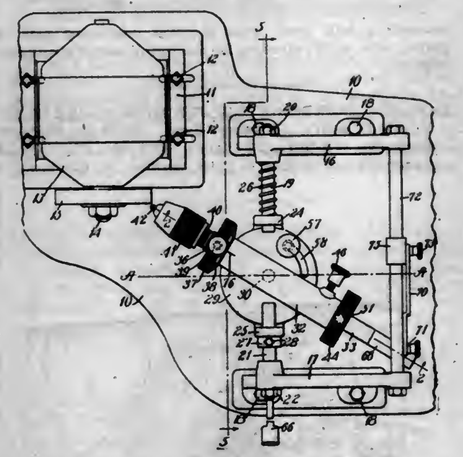


2. In combination with two members to be hinged together at adjacent ends in such manner that the two members may be turned on the hinge to bring said adjacent ends into converging relations to each other, two plates between which the adjacent ends of said first two members are embraced, a pivot which passes through both of said plates and one of said embraced members,

and another pivot which passes through both of said embracing plates and the member embraced between them,

said two plates being of sufficient expanse to cover the space between the said two embraced members when they are opened out on the pivots.

1,481,258. APPARATUS FOR MAKING DRIP COFFEE. EDWIN SAMUEL GARDINER, New Orleans, La. Filed Dec. 14, 1922. Serial No. 606,895. 5 Claims. (Cl. 53—3.)



1. Apparatus for making drip coffee, comprising a coffee pot, a coffee receptacle delivering thereto, a liquid reservoir outside the pot, a pipe extending from the reservoir to the upper part of the coffee receptacle and delivering thereto, and a heater outside the pot applied to the supply pipe between the reservoir and the receptacle.

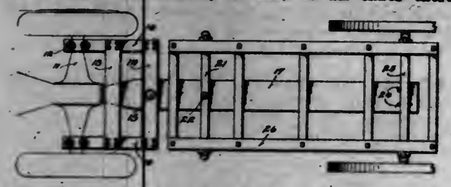
1,481,259. FISHING TOOL. JAMES E. HARRISON, Ardmore, Okla. Filed Jan. 19, 1923. Serial No. 613,676. 4 Claims. (Cl. 294—116.)

1. In a device of the character described, a socket, a pair of gripping jaws pivotally mounted in said socket, a movable plunger mounted in said socket above said jaws and adapted to close said jaws when in lowered position, means for normally retaining said plunger in raised position, and a spring to lower said plunger when said retaining means are released.

1,481,260. APPARATUS FOR POSITIONING AND GRINDING TWIST DRILLS. GEORGE HEMENWAY, Fitchburg, Mass. Filed Oct. 14, 1922. Serial No. 594,465. 10 Claims. (Cl. 51—219.)

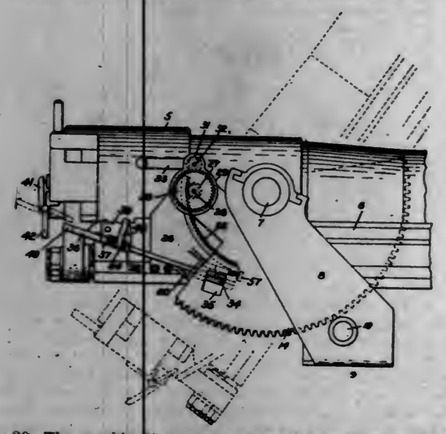
1. An apparatus of the character described comprising, in combination, a grinding wheel, means to rotate said grinding wheel, means to hold a drill, means to support said holding means to position the longitudinal median line of said drill at a predetermined angle to the face of said grinding wheel, means to adjust said holding means to position a cutting edge of said drill relatively to the face of said grinding wheel, said holding means also being adapted to be rotated to position another cutting edge of said drill relatively to said grinding wheel and means to move said drill supporting means to feed said drill into engagement with said grinding wheel.

1,481,261. STRAIGHT-LINE HULL. MYRON F. HILL, New York, N. Y. Filed Mar. 15, 1918, Serial No. 222,567. Renewed June 14, 1923. 3 Claims. (Cl. 114—79.)



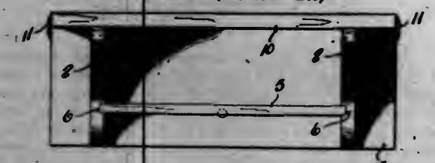
1. In a ship, a backbone composed of a cast H-section of cast metal molded in sections, each having a center girder member of one section dovetailed between the keel plate and tank top portions of the backbone of the next section and secured thereto and to the next portion of the center girder and having the tank top and keel plate edge portions of the backbone of one section secured to the corresponding members of the next section.

1,481,262. TRAILER ATTACHMENT FOR TRACTORS. CHARLES HULL, Tigerton, Wis. Filed Nov. 25, 1921, Serial No. 517,664. Renewed Nov. 23, 1923. 2 Claims. (Cl. 280—33.4.)



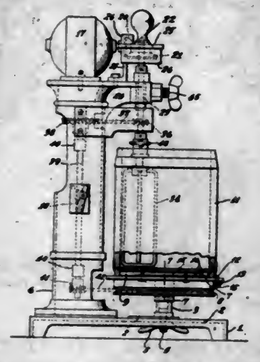
1. The combination of a tractor axle housing, supports pivotally secured thereto, a pair of apertured plates vertically aligned and spaced by said supports, a second pair of plates spaced by said supports and vertically aligned,

a reach resting upon the lower two of said plates, a pin pair of plates and freely slidable at all times there-



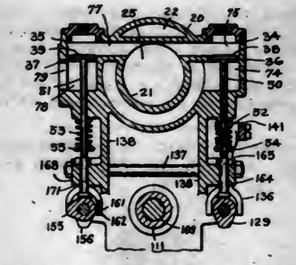
connecting said reach with the first mentioned pair of plates, said reach extending between said second mentioned between.

1,481,263. SAFETY DEVICE FOR HIGH-ANGLE GUNS. BRYAN P. JOYCE, Davenport, Iowa. Filed Oct. 26, 1923. Serial No. 670,167. 20 Claims. (Cl. 89—41.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



20. The combination of a gun cradle provided with a gun having firing means, of means for moving the gun to an elevated position for firing, means for moving the gun independently of the elevating means to and from a position for loading and cooperating members on the gun and elevating means for stopping the gun when it has been returned from its loaded to its elevated position, means connected to one of said stop members adapted to prevent firing of the gun except when the gun is in its elevated position.

1,481,264. FOLDABLE SHELF. WILLIAM KAUFERT, Wisconsin Rapids, Wis. Filed Apr. 24, 1923. Serial No. 634,215. 3 Claims. (Cl. 211—27.)

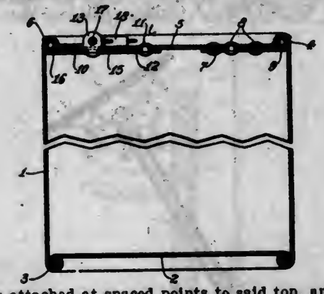


3. A foldable shelf comprising a back plate, a shelf portion hinged thereto and adapted to swing upwardly into alignment with said back plate, a pair of brackets hingedly mounted upon said back plate and adapted to be locked outwardly therefrom into shelf supporting position, said brackets and shelf portion having interengaging fastening means, a brace extending between said brackets, said brackets having slots adapted to removably receive said brace, and a spring connecting said brace and said back plate, and continuously tending to draw said brace towards said back plate.

1,481,265. MIXER OR EMULSIFYING MACHINE. JOHN KILSHAW, Brooklyn, N. Y., assignor of three-fourths to Michael A. Dupper, Brooklyn, N. Y. Filed May 3, 1922. Serial No. 558,257. 3 Claims. (Cl. 259—108.)

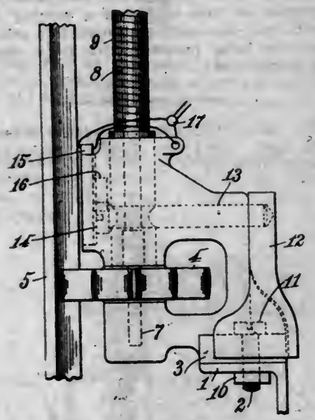
1. A machine of the character described embodying an agitator, means for rotating the agitator at a relatively high speed, a rotatable table adapted to support a tub into which the agitator is adapted to extend, means for rotating the table in the same direction as the agitator but at a lesser speed, and means for bodily shifting the table in a lateral direction to control the position of the agitator in the tub.

1,481,266. INTERNAL-COMBUSTION ENGINE. ROSCOE F. LEVENS, Portsmouth, R. I., assignor, by direct and mesne assignments, to The Levens Motor Company, Incorporated, a Corporation of Rhode Island. Filed Oct. 20, 1920. Serial No. 418,147. 3 Claims. (Cl. 123—21.)



1. In an internal combustion engine, a cylinder comprising inner and outer cylindrical walls with an intermediate annular air chamber shut off from communication with the crank case and closed at both ends, a piston reciprocable in said cylinder, a piston rod connected with said piston and reciprocable through one end of the cylinder, a gland for said piston rod, said air chamber forming a precompression chamber, there being ports affording communication between the cylinder and air chamber at one end of the cylinder, and exits from said air chamber, there being a valve-controlled passage between the cylinder and said air chamber, to prevent communication therebetween during four-cycle operation.

1,481,267. METAL SHIPPING PACKAGE. DWIGHT R. NORRIS, WALTER H. BAKER, and EDWARD C. WALKER, St. Louis, Mo., assignors to National Lead Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 1, 1921. Serial No. 488,971. 3 Claims. (Cl. 220—55.)

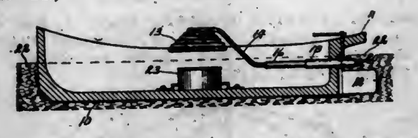


1. A shipping package having an inwardly extending rim, a removable cover having an upstanding marginal flange adapted to lap over said rim and provide a de-

pressed top, a retainer attached at spaced points to said top and adapted to take under said rim, a locking element

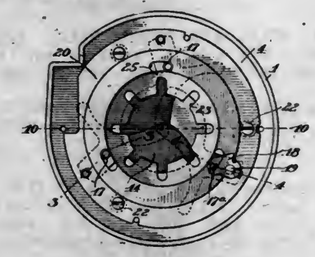
movably attached at spaced points to said top, and means disposed within the depression of said top for sealing said locking element.

1,481,268. DRIVING MEANS FOR TAXIMETERS AND SPEEDOMETERS. JOHN F. OHMER, Jr., and FRED GRAY, Dayton, Ohio. Filed Sept. 11, 1919. Serial No. 323,209. 11 Claims. (Cl. 74—7.)



1. In a driving means for taximetera and the like, a driving wheel of an automobile, a gear secured thereto, a second gear in mesh therewith, a frame supporting said second gear, a bracket supporting said frame, means attaching said frame to said bracket, a cover plate for said attaching means, the removal of said cover plate being under the control of said wheel.

1,481,269. WINDOW-DRAPERY-HANGER DEVICE. FRANK A. PETERS, Chicago, Ill. Filed May 14, 1920. Serial No. 381,324. 1 Claim. (Cl. 156—22.)



In a window drapery support, an upright, means slidably and rotatably securing said upright at one side of the window, a U-shaped cross piece secured to the upper end of said upright and extending across the window with the open end of the U toward the window, a supplemental tubular cross piece connecting the arms of the U, said tubular cross piece having its ends collapsed and formed to fit the arms of the U, the closed end of the U and said cross piece being both telescopic.

1,481,270. PROCESS AND DEVICE FOR OBTAINING A RECIPROCATING MOVEMENT. WILLIAM F. PURCELL, Hoboken, N. J., assignor to Hydromotor Company, Inc., a Corporation of New York. Filed Dec. 18, 1920. Serial No. 431,759. 10 Claims. (Cl. 115—14.)

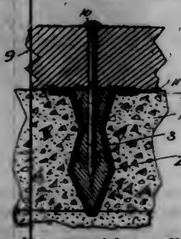
1. In a device of the character specified, in combination, a boat, a conduit having a coiled portion and expanded non-coiled portions carried by the boat, the non-coiled portions being extended rearwardly and outwardly of the boat below its water-line and means for applying heat to the coiled portion to cause a reciprocating movement to the liquid within the non-coiled portion.

1,481,271. PHOTOGRAPHIC SHUTTER. WILLIAM A. RIDDELL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 25, 1923. Serial No. 641,384. 5 Claims. (Cl. 95—63.)

1. In a photographic shutter, the combination with a shutter case having a lens opening therein and shutter blades fulcrumed on the case, of a blade actuating ring turning on the case within the opening and having an oscillatory operative movement, said ring being interlocked with the case by a rotary movement of greater magnitude than its operative movement.

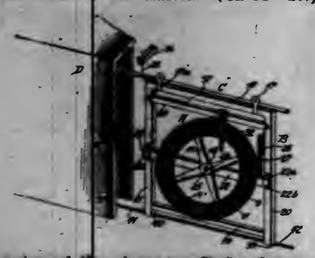
1,481,272. EXPOSURE-IDENTIFICATION CAMERA. JOHN A. ROBERTSON and PHILIP W. TIERNEY, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 8, 1922. Serial No. 542,105. 13 Claims. (Cl. 95—1.1.)

1. In a folding camera, the combination with a body having a bellows chamber provided with an opening through a side wall of the body, a bellows, and a frame forming an exposure opening at the rear of the bellows and chamber and provided in one of its sides with a marginal opening registering with the otherwise masked



margin of a film or plate when in rear of the frame and exposure opening, of a projection device arranged within the bellows chamber for conducting light from the opening in the side wall of the body to the marginal opening in the frame.

1,481,273. SCRAPER BUCKET. HARRY A. ROE, Chicago, Ill., assignor to John A. Sauerman, Chicago, Ill. Filed Dec. 23, 1920. Serial No. 432,667. 12 Claims. (Cl. 37—147.)



1. A bottomless scraper bucket comprising a body the sides of which curve in plan rearwardly toward the axis thereof and the upper and lower portions of which sides diverge forwardly.

1,481,274. WALL AND FLOOR PLUG. SAMUEL W. ROTHROCK, New York, N. Y. Filed Aug. 22, 1922. Serial No. 583,509. 1 Claim. (Cl. 72—105.)

A wall or floor plug comprising a filler of fibrous material, and a metal casing surrounding the filler on all sides but one, the casing being provided with outwardly turned flanges at its open end and being further provided with non-perforating depressions, which engage with the filler on the inside of the casing and are adapted to be engaged by the mortar or concrete in which the plug is set.

1,481,275. APPARATUS FOR STRETCHING LAUNDERED ARTICLES FOR DRYING. ALBERT O. SCHRAMM, Los Angeles, Calif. Filed May 8, 1920. Serial No. 379,953. 13 Claims. (Cl. 34—17.)

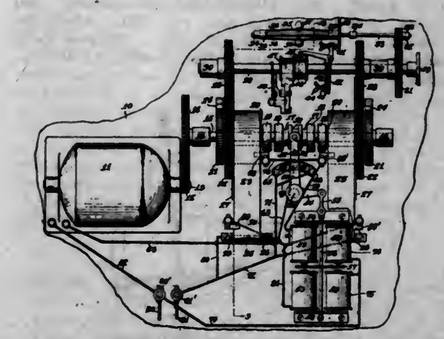
1. Apparatus of the character disclosed comprising a rotatable member mounted for rotation about an axis at right angles to its face, means for engaging and holding circular washed articles of varying diameters to said member, and carrier means upon which said member is rotatably mounted.

1,481,276. STEERING-WHEEL LOCK. HARRY D. STEINMANN, Bayridge, Brooklyn, N. Y. Filed Feb. 27, 1923. Serial No. 621,686. 5 Claims. (Cl. 74—33.)

1. In a locking device for a steering wheel, the combination of a fixed post, a steering bar mounted therein and provided at its upper end with a head, a threaded cam mounted on said head, and a steering wheel provided with cross-bars slidingly mounted on said head, one of said bars being provided with teeth engaging the threads of said cam.

1,481,277. ALCOHOL TESTER. JACOB WERSHOW, New Haven, Conn. Filed Mar. 27, 1923. Serial No. 628,177. 2 Claims. (Cl. 23—3.)

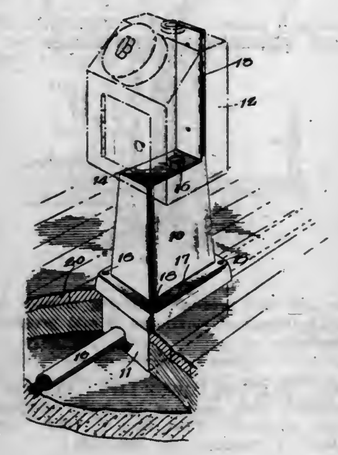
1. An alcohol tester, comprising a wick-container, a cap closing the same, and a plug carrying a coil housed within said cap.



1,481,278. MULTIPLE-SOCKET RECEPTACLE STRIP. FRANK W. WOOD, Montclair, N. J., assignor to Chas. Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1919. Serial No. 346,894. 4 Claims. (Cl. 173—334.)

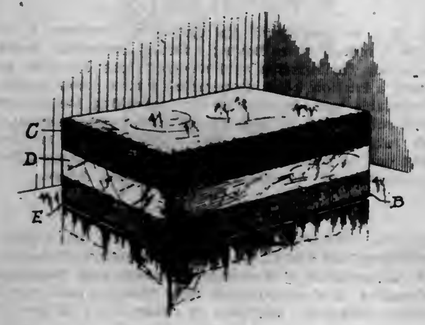
1. A multiple socket receptacle strip including a plurality of parallel bus bars having relatively spaced sockets therein, an integral casing of insulating material molded around the bus bars and completely enveloping the same at one end, the said casing having socket holes in one side face extending inwardly into registration with the respective bus bar sockets, the bus bars being terminated short of both casing ends, the casing being provided at the end opposite to that at which the bus bar ends are completely enveloped with lateral recesses contoured for the reception of the main or feed wires, the said recesses extending from the adjacent bus bar ends to the face in which the socket holes are located, the casing having lateral openings extending from the said bus bar

ends to the said face of the casing and terminal connectors for the last mentioned ends of the bus bars contained within the lateral openings of the casing.



1,481,279. APPARATUS FOR ACCUMULATION AND TRANSMISSION OF POWER. HYMAN M. ZIPPEL, Philadelphia, Pa. Filed Feb. 1, 1922. Serial No. 533,440. 6 Claims. (Cl. 185—11.)

1. In a device of the class described, a motor driven shaft, sleeves mounted on said shaft, coiled springs secured to said sleeves and to supports, clutch mechanism to engage said sleeves alternately to cause them in turn to rotate on said shaft to wind the springs secured thereto, electrically controlled means to shift said clutch mechanism laterally when a spring is wound and means to automatically shut off the motor when said springs are wound, substantially as described.

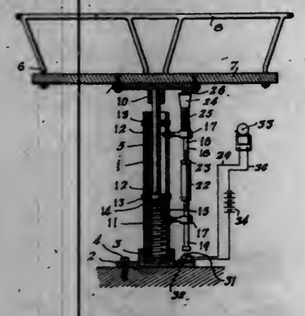


1,481,280. SWITCH MOUNTING FOR MACHINES HAVING INDIVIDUAL MOTORS. JOE P. BIVENS, Gastonia, N. C., assignor to Michael and Bivens Incorporated, Gastonia, N. C., a Corporation of North Carolina. Filed Dec. 8, 1922. Serial No. 605,691. 2 Claims. (Cl. 247—1.)

2. As a new article of manufacture, a switch supporting cover for junction boxes consisting of an upright hollow body open at one end and having an apertured outstanding flange around its said open end, the opposite end having a switch supporting surface and an

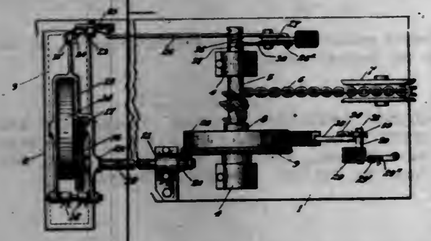
integral upstanding switch anchoring extension, as and for the purpose set forth.

1,481,281. IMITATION FROZEN CONFECTION AND METHOD OF MAKING THE SAME. GEORGE FREDERICK BOESSER, Arlington, N. J. Filed Feb. 21, 1923. Serial No. 620,350. 3 Claims. (Cl. 41—17.)



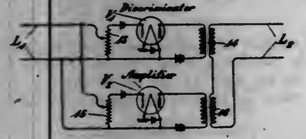
1. The method of simulating frozen confections which consists in coating a form with paint of a color corresponding to the color of the confection and causing said paint to "run" to produce an appearance of melting.

1,481,282. WEIGHING MACHINE. JOHN J. COLE, Orange, N. J. Filed Mar. 2, 1920. Serial No. 362,821. 6 Claims. (Cl. 265—63.)



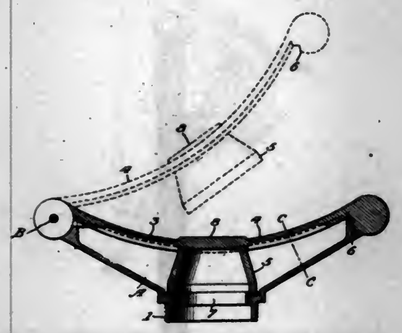
1. In a device of the character described, the combination of a fixed member, a pressure receiving member, yielding means interposed between said fixed member and said pressure receiving member to allow said pressure receiving member to move toward said fixed member

as pressure is applied to said pressure receiving member, and an extensible member interposed between said fixed



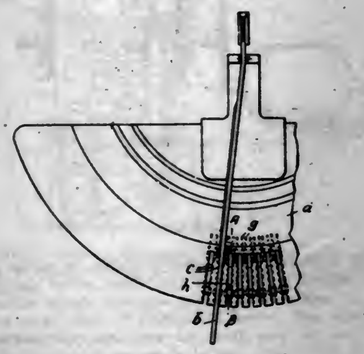
member and said pressure receiving member for regulating the amount of movement of said pressure receiving member.

1,481,283. TRACTOR POWER LIFT. EARLE H. DANIEL, Springfield, Ohio, assignor, by mesne assignments, to R. W. Johnston. Filed May 1, 1922. Serial No. 557,602. 7 Claims. (Cl. 192—138.)



1. In a mechanism of the character described, a rotatable winding device having a flexible connector, power mechanism for rotating said device in one direction including a friction wheel cooperating with a power operated rotatable member, a brake for controlling the reverse movement of said winding device, and means associated with said winding device for throwing said friction wheel out of contact with said rotatable member after a predetermined movement of said winding device.

1,481,284. MEANS FOR AND METHOD OF AMPLITUDE SELECTION. RALPH W. DEARDORFF, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 5, 1921. Serial No. 505,591. 23 Claims. (Cl. 178—44.)

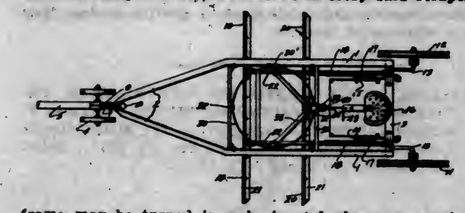


1. The method of discriminating between currents of the same frequency but of different amplitudes, which consists in translating said currents without changing the relative amplitudes of the individual currents, translating said currents to produce a change in the relative amplitudes of the individual currents, and combining the resulting components so that components of certain amplitudes neutralize each other.

1,481,285. AUTOMOBILE RADIATOR CAP. ARTHUR HARRY HARVEY, Dunbar, Pa. Filed Nov. 25, 1921. Serial No. 517,663. 2 Claims. (Cl. 220—86.)

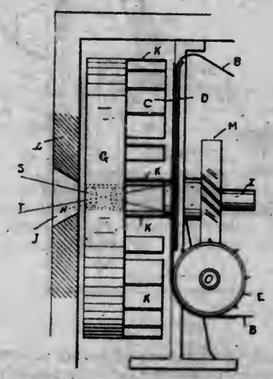
1. The combination with a hollow shell constructed and adapted to screw at the center to the radiator, the ends tapering and extending upwardly with the upper edge curved, a lid hinged at one end to one end of the shell, and conforming in shape to, and adapted to interlock with the curved upper edge of the shell, and having means at the free end for rigidly fastening the lid in closed position, the shell having an annular seat at the center and a cup which co-operates with the annular seat, and a gasket adapted to be held therebetween when the lid is closed.

1,481,286. LEVER BEARING AND METHOD OF MAKING SAME. MAX HELM, Niederschonhausen, near Berlin, Germany. Filed Aug. 24, 1921. Serial No. 494,972. 6 Claims. (Cl. 197—38.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



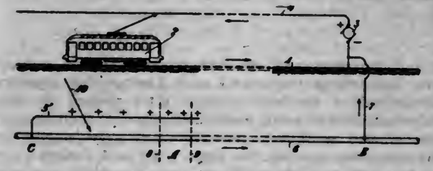
1. Bearing for the type bars and the like of typewriting and other machines comprising in combination, a cast metal body with a plurality of closely adjoining slots and a pair of hard metal plates embedded and fixed in parallel position in the side walls of each slot.

1,481,287. ROAD MACHINE. JAMES B. JARMIN, Spokane, Wash. Filed Apr. 10, 1922. Serial No. 551,316. 9 Claims. (Cl. 37—155.)



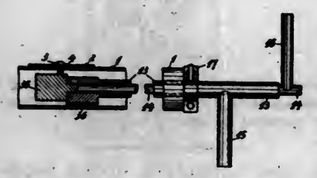
1. The combination in a wheeled scraper with a vertically adjustable main frame, of a flexible scraper frame having a swiveled connection on and suspended from

the main frame, a scraper having pivotal connection with the scraper frame, and means whereby said scraper



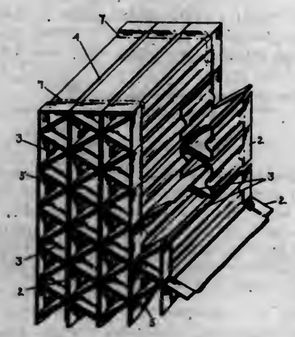
frame may be turned in a horizontal plane on a point at the longitudinal center of the main frame.

1,481,288. HIGH-SPEED CAMERA. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Apr. 14, 1921. Serial No. 461,427. 2 Claims. (Cl. 88—16.8.)



1. The combination with a camera casing having a light aperture and film feeding devices, of a disk carrier having fixed in its peripheral zone an annular series of duplicate, closely adjacent lenses in position to pass said aperture successively, radial partitions fixed to the carrier, separating each lens from its neighbors and extending substantially to the film, and means for moving the lenses and film at identical speeds across the path of light from said aperture, said carrier, lenses, and partitions moving as if integral.

1,481,289. ELECTROLYSIS MITIGATION. GEORGE G. JONES, Cambridge, Mass., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Sept. 24, 1920, Serial No. 412,433. Divided and this application filed Apr. 27, 1922. Serial No. 556,931. 1 Claim. (Cl. 171—316.)

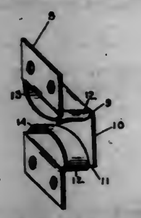


An electrically operated railway system, a metallic article buried in the ground in the vicinity of the tracks of said system, means to connect said article to the negative pole of the generator of said system, and a conductor buried in the ground in the vicinity of a section of said article which would normally have a potential positive to earth, said conductor being connected to a section of said article having a potential positive to the potential of said first mentioned section of said article, whereby the earth potential in the vicinity of said first mentioned section of said article will be raised so as to be positive with respect to said first mentioned section of said article.

1,481,290. RIVETING DEVICE. HUGO JUNKERS, Dessau, Germany. Filed July 11, 1921. Serial No. 483,852. 5 Claims. (Cl. 78—51.)

1. A riveting device for hollow bodies comprising a cam faced anvil and means for gradually displacing said anvil within the hollow body in contact with the rivet stem and with the opposite wall of said body so as to enlarge the distance between the point of contact of the cam face with the rivet and said wall.

1,481,291. HEAT-EXCHANGE DEVICE. THOMAS J. KEHOE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio. Filed Dec. 4, 1915. Serial No. 64,969. 9 Claims. (Cl. 257—130.)



1. In a device of the class described, the combination of water tubes provided with hollow fins extending laterally and upwardly therefrom, at an angle of approximately 60°, the width of said fins being approximately equal to the distance between the successive fins, said tubes being provided with outwardly swelled portions between successive fins and being assembled together with the outer edge of each of said laterally extending fins engaging the base of a laterally extending fin on the next adjacent water tube.

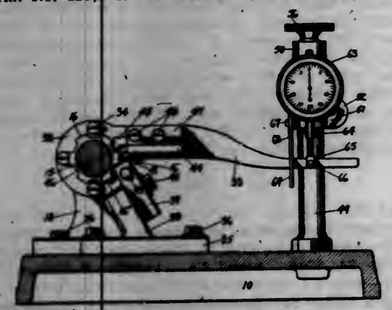
1,481,292. DOOR-GRIPPING DEVICE. THOMAS J. KEHOE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed July 24, 1916. Serial No. 110,862. 7 Claims. (Cl. 16—85.)

1. A buffer for doors comprising two independently supported parts, one of said parts being provided with a groove, the opposite walls of said groove being provided with notched edges, a pair of bowed springs dis-

posed in said groove, and having inturned ends engaging in said notches, whereby said springs are supported by

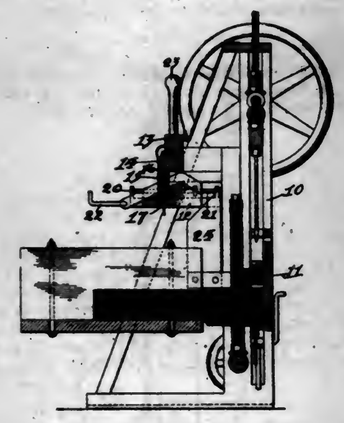
said member; the other of said members having a wedge-shaped lug operating in said groove, and adapted to be yieldingly engaged by said spring.

1,481,293. END LABEL FOR CLOTH BOLTS. JOHN W. LITTLE, Jr., Pawtucket, R. I. Filed Feb. 23, 1923. Serial No. 620,691. 1 Claim. (Cl. 40—20.)



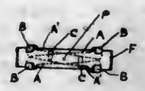
A tag for bolts of cloth comprising a tongue capable of being inserted between the folds of the bolt, a tag for printed matter, and a flexible member united to one transverse edge of said tongue and to the rear face of said tab extending transversely thereof intermediate the upper and lower edges of the same for allowing the tab to be held in a position at right angles to the longitudinal axis of the bolt or in a position projecting longitudinally therefrom.

1,481,294. SIGHT FOR FIREARMS. LAWRENCE W. LUELLEN, Mountain Lakes, N. J. Filed Nov. 1, 1918. Serial No. 260,651. 8 Claims. (Cl. 88—2.3.)



1. In combination with a firearm, a reflecting sight detachably arranged adjacent the rear sight, said reflecting sight being provided with means for alignment with the front sight to facilitate the proper sighting of the arm, said means comprising a projection located immediately in advance and at the base of the reflector, said projection having a central depression.

1,481,295. GAUGING MACHINE. HANS LUTZ, Elmira, N. Y., assignor to The Willys-Morrow Company, Elmira, N. Y., a Corporation of Ohio. Filed Oct. 6, 1920. Serial No. 415,128. 20 Claims. (Cl. 33—148.)

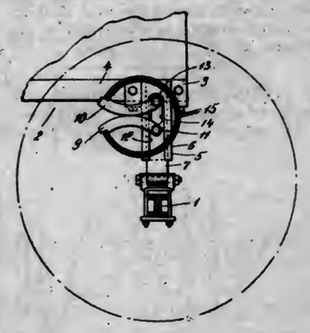


1. In a gauging machine, means adapted to rotatably support an object having projections thereon, means adapted to form a stop for one of said projections and means adapted when said object is rotated into engagement with said stop to indicate whether or not the distance between said projections is greater or less than a predetermined distance.

1,481,296. BACK MEASURING AND SHAPING DEVICE FOR BOOKBINDING MACHINES. CHARLES F. MCBEE, Athens, Ohio, assignor to The McBee Binder Company, Athens, Ohio. Filed Dec. 30, 1918. Serial No. 269,014. 4 Claims. (Cl. 11—1.)

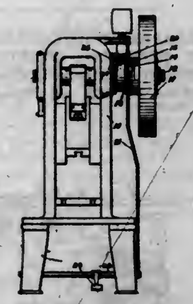
1. In a book binding machine having a pressure bar to retain the sheets in position, an attachment for measuring and shaping the back to be used in forming the volume, comprising a carrying frame with a movable plate; means for positioning the movable plate to measure the flanges to be formed on the back, and means to form the said flanges, substantially as shown and described.

1,481,297. FINGER-RING GUARD. ALEXANDER MCKELLAR, Greenock, Scotland. Filed Nov. 29, 1922. Serial No. 604,116. 1 Claim. (Cl. 63—17.)



A finger ring guard for reducing the size of a finger ring, comprising two plates each having ring gripping prongs turned up from opposite sides thereof at their ends, said plates being pivoted together at their central portion, one of said paltes, also having projections on opposite sides between the pivot point and the ends for bending over the other plate to lock the gripping prongs against the loop of the ring.

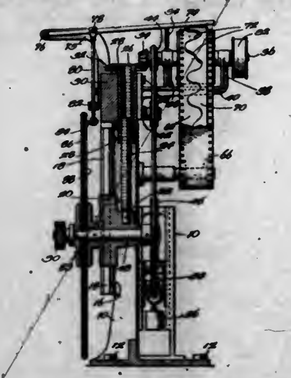
1,481,298. SPRING STRUCTURE. ROBERT J. MACNAIR, Providence, R. I. Filed June 3, 1920. Serial No. 386,215. 6 Claims. (Cl. 267—19.)



1. In a spring structure, the combination of a pair of rocking levers supporting the members whose movement

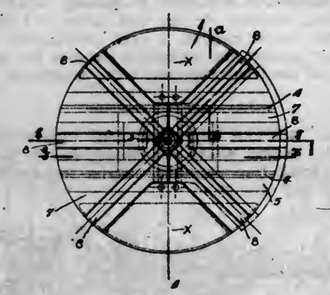
is to be cushioned with their contacting faces forming a shifting fulcrum and a spring for such levers comprising

a spring encircling the levers with its opposite ends bearing against the free ends of the levers and tending to press them together.



1,481,299. SAFETY DEVICE. WILLIAM J. MARTIN, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed May 3, 1918. Serial No. 232,236. 1 Claim. (Cl. 192—24.)

In a machine of the class described, a horizontal shaft, a drive wheel loosely mounted upon the shaft, said drive wheel being provided with a clutch face, a clutch splined to said shaft for movement into and out of engagement with the said drive wheel clutch face, a cam on said clutch, a plunger movable into engagement with said cam to shift the clutch out of engagement with the drive wheel, automatic means for preventing further forward rotation of the clutch after its disengagement with the drive wheel and means for preventing the reverse rotation of the clutch at all times, comprising a ratchet wheel rigidly mounted upon the clutch and a pawl mounted upon a rigid portion of the machine, the lateral proportions of the pawl and ratchet being such as to cause those parts to co-operate during all positions of the clutch.

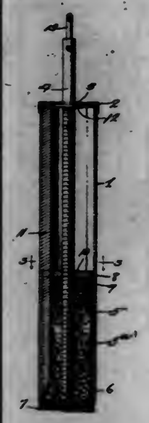


1,481,300. PHONOGRAPH-RECORD-TRANSFER MACHINE. HOWARD L. PAGE, Chicago, Ill. Filed Sept. 12, 1921. Serial No. 500,013. 4 Claims. (Cl. 274—3.)

1. In a phonographic record reproducing machine, a support for an undulated record, a support for a record blank on which the undulations of the record are to be reproduced, means for simultaneously imparting a single movement to one support and two movements to the other support, and means adapted to be operated by movement

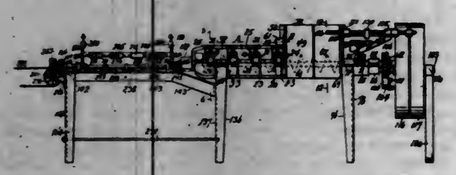
of a supported record to reproduce the undulations thereof on a supported record blank during movement of the latter.

1,481,301. UNIVERSAL FACEPLATE FOR MACHINE TOOLS. JOSEPH PIRON, Scleasin, Belgium. Filed Mar. 14, 1922. Serial No. 543,670. 7 Claims. (Cl. 82—40.)



1. A universal face-plate for machine-tools, comprising a body adapted to be secured upon the machine spindle, plate-sections mounted upon said body, parallel screw-threaded spindles mounted in said body, said screw-threaded spindles lying in a plane at right angles to the axis of the machine spindle, nuts engaged upon said screw-threaded spindles, said nuts being operatively connected to said plate-sections, and means for guiding said plate-sections in movement towards or away from the center.

1,481,302. LOCOMOTIVE. JOHN D. PUGH, Mount Washington, Baltimore, Md. Filed Sept. 11, 1916, Serial No. 119,570. Renewed Sept. 26, 1923. 10 Claims. (Cl. 105—36.)

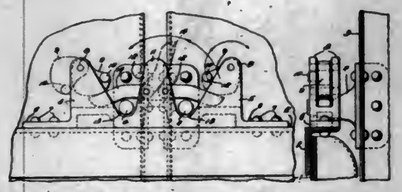


1. The combination with a steam locomotive, of an independently operable electric locomotive detachably connected thereto, said electric locomotive having motors connected to its driving wheels, a generator adapted to be connected to said motors, a collector for obtaining current for said motors from an external source, and a turbine for driving said generator, adapted to be operated by the exhaust steam from the steam locomotive.

1,481,303. STEEL-WOOL HOLDER. ERNEST C. REIMER, Algonquin, Ill. Filed Nov. 2, 1922. Serial No. 598,611. 1 Claim. (Cl. 15—209.)

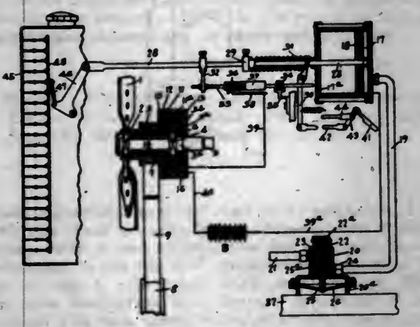
A holder for paper cartons containing steel wool, said holder comprising a tubular member, a cap threaded on the upper end of the tubular member, a feed screw rotatably mounted in a bearing of the cap, a carton engaging disc threaded on the feed screw and disposed within the tubular member, a guide rib disposed within the tubular member and engaging a recess in the disc, the open end of the tubular member being constricted.

1,481,304. BUTTER CUTTING AND PRINTING MACHINE. ALBERT SHARP and GEORGE SHARP, Bayonne, N. J. Filed Dec. 24, 1920. Serial No. 432,907. 9 Claims. (Cl. 31—25.)



1. In a machine the combination of a charging chamber, a conveying chamber connected to the charging chamber, a pair of conveyer shafts extending through the charging chamber and conveying chamber, a spiral conveyer connected to each shaft, spur gears on the shafts meshing with each other, a driving shaft for the machine, an intermittent gear on the driving shaft, an intermittent gear on one of the conveyer shafts coacting with the other intermittent gear, a shock absorbing lug on the latter shaft, and a shock absorbing roller on the intermittent gear of the driving shaft contacting during its revolution with the said shock absorbing lug.

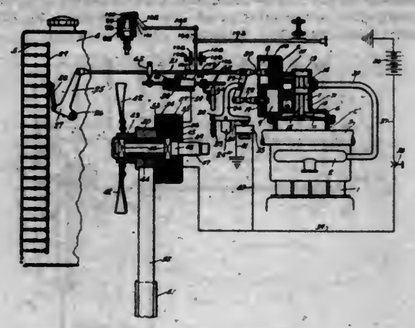
6. In a machine the combination of an oscillating shaft, cutting arms with one end of each connected to said shaft, a supporting bar connecting said arms adjacent to said shaft, a supporting bar connecting said arms at their ends distant from said shaft, wire carrying sleeves adjustably connected to each supporting bar, a lip extending from each sleeve on one of said bars, a screw adjustably connected to the sleeves of the other bar and cutting wires connecting each lip with one of said screws.



9. In a machine the combination of a charging chamber, a conveyer chamber connected to the charging chamber, means to feed a material operated upon from the charging chamber to the conveying chamber, an outlet nozzle for the conveying chamber, rollers extending from the outlet nozzle to carry material discharged from said nozzle, cutting means for said material operating over said rollers, printing means for said material actuating with the cutting means and a conveyer at the other end of said rollers.

1,481,305. COMPARTMENT FREIGHT CAR. ALFRED H. SMITH, Chappaqua, N. Y. Filed Apr. 28, 1921. Serial No. 465,347. 8 Claims. (Cl. 105—366.)

1. The combination with a car, of a series of lading compartments mounted thereon, projections secured to each compartment, and a series of fastening devices secured at the sides of the car adapted to receive said projections thereby locking the compartments to the car; said fastening devices consisting of a pocket to receive the projection, a pawl adapted to bridge the pocket over the projection and means to lock the pawl in its operative position.

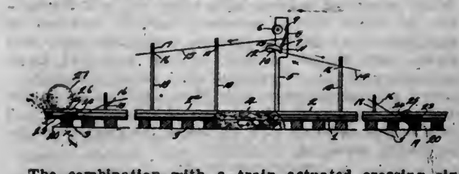


1,481,306. TEMPERATURE-CONTROLLING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. HARVE R. STUART, Springfield, Ohio. Filed Aug. 15, 1919. Serial No. 317,822. 18 Claims. (Cl. 123—174.)

1. In a cooling system for an explosive engine, the combination of a cooling member for said engine such as a fan, electrically-operated devices for controlling said cooling member, and thermostatically-controlled fluid-operated mechanism for controlling said electrically-operated devices as influenced by the temperature of said engine.

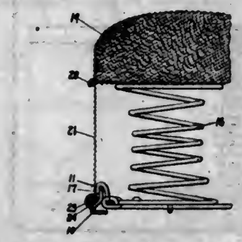
1,481,307. TEMPERATURE-REGULATING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. HARVE R. STUART, Springfield, Ohio. Filed June 14, 1920. Serial No. 388,716. 18 Claims. (Cl. 123—174.)

1. In a cooling system for an internal combustion engine, devices for creating a circulation of air, and means, including fluid pressure operated mechanism operated in both directions solely by a vacuum creating source and a thermostat influenced by the temperature of



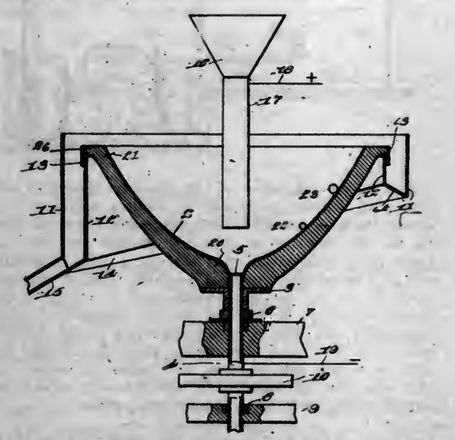
the engine for controlling said mechanism, for throwing said air circulation creating devices into and out of operation.

1,481,308. COIN CONTAINER. REGINALD TROY TAYLOR, New Virginia, Iowa. Filed July 12, 1922. Serial No. 574,495. 1 Claim. (Cl. 133—14.)



A coin receptacle of the class described, comprising a bracket, a coin receptacle provided with oppositely extending pintles, said pintles extending from the sides of said coin receptacle to pivotally support the same in the bracket, arms formed on the top edge of the coin receptacle and adapted to rest on the bracket, and a trip member at its forward end for the purpose of tilting the coin receptacle.

1,481,309. CROSSING SIGNAL. JOSEPH S. VAN BURKLEO, Detroit, Tex. Filed May 24, 1923. Serial No. 641,170. 1 Claim. (Cl. 246—206.)

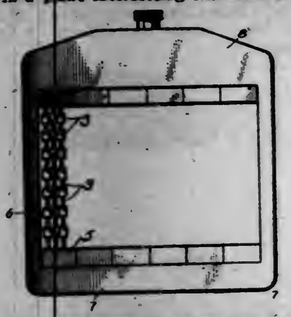


The combination with a train actuated crossing signal, of a depressible lever adapted to be engaged by a wheel flange and disposed adjacent the inner side of a rail, said lever comprising a rock shaft disposed beneath the rail, said rock shaft being rockably mounted in a bearing of the cross tie, the outer end of said rock shaft terminating in a downwardly extending arm, the inner end of the rock shaft extending upwardly and inwardly towards the inner side of the rail, a U-shaped member carried by the upper end of the upwardly and inwardly extending portion of the rock shaft and in a plane at a right angle to the rock shaft and in parallel relation to the plane of the inner side of the rail, the upper arm of the U-shaped member being curved and disposed adjacent the inner side of the rail in the path of a wheel flange.

1,481,310. SEAT CONSTRUCTION. EDMUND B. WHITCOMB, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 8, 1919. Serial No. 322,422. 8 Claims. (Cl. 155—180.)

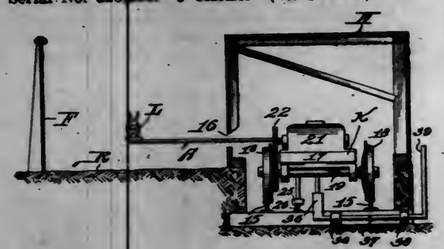
1. In a device of the class described, a seat support, a border frame, provided with an upstanding edge, a portion of said seat support extending around parallel with said frame, and, means integral with said portion for engaging over the upstanding edge of the border frame whereby the seat support is maintained in position relative to the border frame.

1,481,311. METHOD FOR CENTRIFUGAL AMALGAMATION AND PRECIPITATION OF GOLD AND SILVER. WILBUR H. APPLETON, Spokane, Wash., assignor to Western Metals Company, Spokane, Wash., a Corporation of Washington. Filed Apr. 28, 1919, Serial No. 293,302. Renewed Dec. 17, 1923. 4 Claims. (Cl. 83—65.)



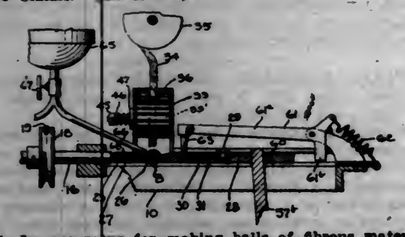
1. The herein-described method of preventing flouring of mercury for amalgamating purposes, which consists, in setting a body of mercury in motion at an upward inclination to the horizotal, and in supporting the body of mercury in correlation with application thereto of opposing forces to maintain the mercury united and spread the same in uniform thickness.

1,481,312. RADIATOR. AUGUST J. BORGMAN, Detroit, Mich. Filed Feb. 5, 1918. Serial No. 215,434. 1 Claim. (Cl. 257—129.)



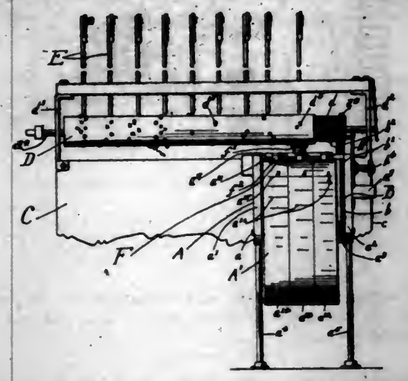
In radiator structures for motor vehicles, a plurality of units arranged in succession transversely of the radiator body, each unit including upper and lower headers connected by a plurality of independent tubes, each tube being formed of a succession of connected chambers of non-circular cross-section, adjacent chambers being disposed at right angles to one another, corresponding ends of the several tubes being of similar configuration and connected directly to the header with the ports of connection arranged in symmetrical spacing, the assemblage

of units providing a plurality of rows of tubes with each row alined in a plane intersecting the sides of the radi-



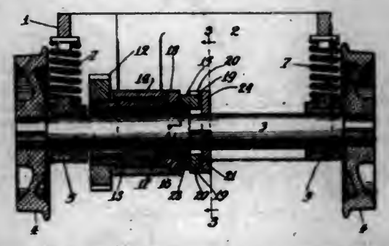
ator body, one row having its tubes laterally disposed from the tubes of the row immediately in front of it in front to rear planes of the structure.

1,481,313. ANIMAL RACING TRACK. WILLIAM C. CREVELING, Los Angeles, Calif., assignor of one-third to William W. Finn, San Diego, Calif., one-third to John O. Talbott, Denver, Colo., and one-sixth to Agnes Creveling, Los Angeles, Calif. Filed Dec. 29, 1921. Serial No. 525,538. 9 Claims. (Cl. 46—73.)



1. A racing apparatus of the character described comprising an endless race track, an endless conveyor track within the area defined by the race track, a slotted housing for the conveyor track, a car movable over the conveyor track and within the housing, a lure supporting arm, a horizontally arranged movable member pivotally mounted on the car and having said arm rigidly connected therewith, a latch on the car adapted to be engaged with said member to lock the latter in the operative position of the lure, a trip member adapted to engage said latch to release said member, and means connected with said arm and car adapted to automatically retract the lure from the track to an inoperative position.

1,481,314. APPARATUS FOR AND PROCESS OF MAKING ARTIFICIAL FRUITS. CARLO DE-FELICE, New York, N. Y., assignor to H. N. McMenimen, Scotch Plains, N. J. Filed Jan. 22, 1920. Serial No. 353,201. 25 Claims. (Cl. 41—2.)

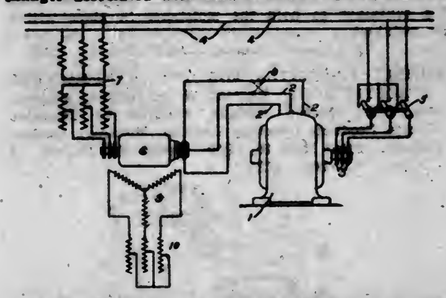


1. In apparatus for making balls of fibrous material, a rotatable spindle, a movable die having an aperture into which said spindle is adapted to project an automatic means for ejecting balls from the die aperture.

1,481,315. TIMING AND REGULATING DEVICE FOR CHIMES. WALTER EBERHARDT, Cincinnati, Ohio, assignor to The Herschede Hall Clock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 23, 1920. Serial No. 391,203. 9 Claims. (Cl. 33—180.)

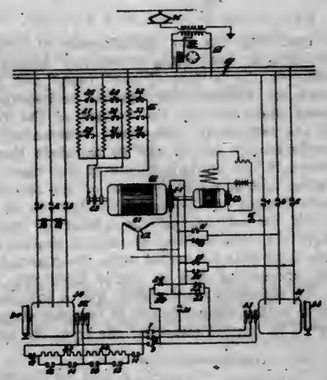
1. In a device for regulating the striking mechanism of clocks having a chime, the combination with means adapted to register the periods of time between sounding of the individual bells of the chime, of means adapted to transmit the movement of the chime striking mechanism to such registering means.

1,481,316. LOCOMOTIVE. WALTER S. GRAY, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 20, 1922. Serial No. 576,254. 1 Claim. (Cl. 105—131.)



In a locomotive, a frame, a motor mounted on said frame, two laterally spaced axles, spring suspension means interposed between said axles and said frame, a pair of hollow driving members rotatably mounted on said frame and having operative connection with said motor, each of said driving members extending longitudinally about one of said axles but spaced therefrom to permit relative movement thereof in a vertical plane, and a flexible coupling device operatively connecting each of said driving members with its respective axle at the approximate center of the latter.

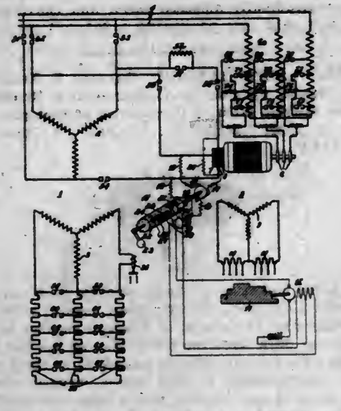
1,481,317. SPEED-CONTROL SYSTEM FOR INDUCTION MOTORS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of New York. Filed Aug. 26, 1918. Serial No. 251,381. 15 Claims. (Cl. 173—274.)



1. The combination with an induction motor, having two members which are relatively rotatable one with respect to the other, of a source of alternating current of relatively high frequency, an adjustable source of alternating current of relatively low frequency, and means for, at times, connecting one member of said motor to said high-frequency source and the other member of said motor to said low-frequency source and at other times connecting said low-frequency source to one member of said motor and closing the other member thereof upon itself.

6. The combination with an induction motor having two members which are relatively rotatable one with respect to the other and a winding on each of said members, of a source of alternating current of relatively high constant frequency, a variable-frequency frequency changer associated with said source for producing rela-

tively low frequencies, means for either close-circuiting one of said windings or connecting the same to said high-frequency source, and means for connecting the other of said windings to said frequency changer and for reversing the phase-rotation of the electromotive forces of said frequency changer.

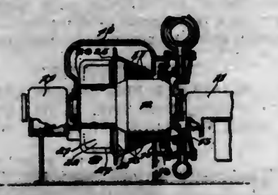


1,481,318. CONTROL SYSTEM FOR INDUCTION MOTORS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1918. Serial No. 266,747. 6 Claims. (Cl. 172—274.)

1. The method of utilizing a cascade motor aggregate and a frequency changer operating from a source of constant frequency in such manner as to reduce the required size of the frequency changer, which consists in initially connecting said motors in cascade and supplying energy to one end of said cascade aggregate through said frequency changer, then supplying energy to the head of said cascade aggregate directly from said source and regenerating energy from the foot of said aggregate through said frequency changer, then supplying energy to the foot thereof through said frequency changer and then operating said motors in parallel from said source.

1,481,319. INDUCTION-MOTOR CONTROL. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 8, 1919. Serial No. 281,447. 14 Claims. (Cl. 172—274.)

11. The method of operating an induction motor at a normally high speed and at an exceptionally low speed without rheostatic losses and in conjunction with a frequency changer which consists in initially connecting the primary member of said motor to a source of energy for high-speed operation, and thereafter connecting said motor to said source, through said frequency changer, for low-speed operation, the transition from said high-speed connection to said low-speed connection being made at a predetermined ratio of voltage to frequency.



14. The method of connecting a polyphase induction motor to a supply circuit in conjunction with an impedance device, which consists in closing two leads through said impedance, then closing the third lead, and finally eliminating said impedance device.

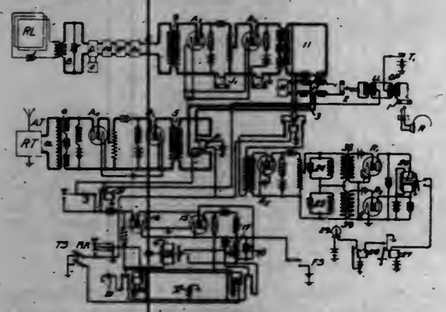
1,481,320. MOLDING APPARATUS. LEONARD JOHNSTON, Springfield, Mass., assignor to Springfield Bronze Company, Inc., a Corporation of Massachusetts. Filed Mar. 16, 1922. Serial No. 544,309. 8 Claims. (Cl. 22—26.)

1. In combination with a molder's flask, a pressure plate movable toward the bottom of the flask to compress the sand therein and having a raised peen portion thereon shaped to displace the sand inwardly toward the sides of a pattern within the flask as the plate is moved downwardly within the flask.

1,481,321. TURBINE. ALEXANDER T. KASLEY, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Original application filed Dec. 12, 1921, Serial No. 521,872. Divided and this application filed Apr. 23, 1923. Serial No. 634,067. 11 Claims. (Cl. 253—77.)

1. In an elastic-fluid turbine, a row of peripherally-discharging moving blades having lateral inlet edges which are substantially tangential to the direction of incoming elastic fluid.

1,481,322. GAUGE. CHARLES S. KELLUM, Detroit, Mich. Filed Dec. 3, 1919, Serial No. 342,178. Renewed June 15, 1923. 4 Claims. (Cl. 219—63.)

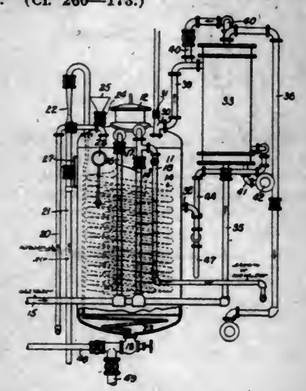


4. A resistance coil comprising a cylindrical core having a longitudinally disposed facet, and convolutions of wire about said core presenting a flat coil contact face.

1,481,323. VALVE HANDLE. CHARLES S. KELLUM, Detroit, Mich., assignor to Commonwealth Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 8, 1922. Serial No. 573,616. 1 Claim. (Cl. 16—117.)

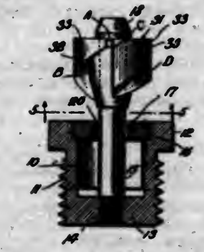
Means for mounting a handle relative to a valve stem comprising a one piece metallic insert member about which the handle may be formed, said insert member having a disk portion flush with the lower face of the handle and provided with dovetail tongues embedded in the handle to prevent displacement of said insert member should it become loose in said handle, and a stem receiving socket having an integral wall exposed at the upper face of the handle and extending over said stem to receive a stem screw.

1,481,324. SIGNALING SYSTEM. FREDERICK R. LACK, Pekin, China, and PAUL B. MURPHY, Nyack, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1922. Serial No. 586,614. 7 Claims. (Cl. 178—66.)



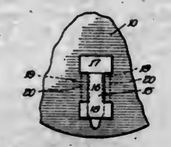
1. In a wave signaling system, a source of sustained waves of high frequency and a source of waves of lower frequency, means to control the higher frequency waves by the lower to produce modulated telegraph waves and alternative means for utilizing said source of lower frequency waves to transmit a characteristic call signal wave different from the modulated telegraph signal wave.

1,481,325. MOISTENER FOR CIGARS AND TOBACCO. HORACE LE GRIS, New York, N. Y. Filed Jan. 22, 1923. Serial No. 614,157. 1 Claim. (Cl. 131—30.)



A moistener for the purpose set forth comprising a holder having a body composed of a tubular member having a closed end and an open end, a tubular member having a longitudinal slot and sliding within said first member, a perforated member within said slotted member, a body of absorbent material within said perforated member, and a spring in said body acting to force said first and said second members apart whereby said moistener may be caused to frictionally engage the walls of a container to hold the moistener in place within the container.

1,481,326. APPARATUS FOR THE MANUFACTURE OF ACETIC ACID. HOWARD W. MATHESON, Shawinigan Falls, Quebec, Canada, assignor to Canadian Electro Products Company Limited, Montreal, Quebec, Canada. Filed Mar. 15, 1919. Serial No. 282,883. 4 Claims. (Cl. 260—173.)

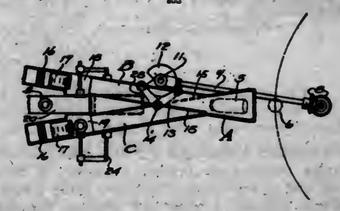


4. An apparatus for the manufacture of acetic acid from acetaldehyde comprising a reaction vessel, an air pipe leading to the bottom of said vessel and provided with means for directing air against sedimentary matter disposed upon or near the bottom of the vessel to maintain the bottom of the vessel substantially clear of such sedimentary matter and to maintain the matter in suspension in the liquid contents of the vessel, means for adjusting and gauging the flow of air through said pipe, means located in the vessel for heating or cooling the contents thereof, means for admitting heating or cooling agents to the heating or cooling means, a reflux condensing apparatus connected with the reaction vessel, means for preventing flow of liquid from the reaction vessel to the condensing apparatus, and a pressure regulating device at the discharge end of the condensing apparatus serving to control escape of gas from the system.

1,481,327. METHOD AND APPARATUS FOR DISTRIBUTING LIQUIDS. HENRY R. MERSELES, Bronxville, N. Y., assignor to Herbert E. Merseles, Bronxville, N. Y. Filed Nov. 4, 1922. Serial No. 599,138. 12 Claims. (Cl. 299—126.)

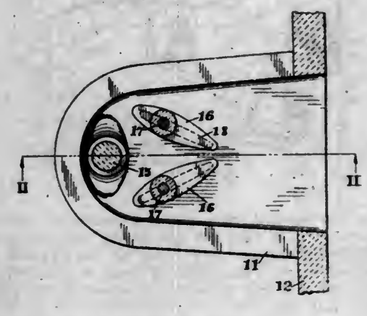
1. A method of distributing liquid, which comprises forming the liquid into a hollow stream, and forming said hollow stream into a solid cone of spray by deflecting different portions of the hollow stream outwardly from the axis of the stream through different acute angles while permitting another portion of the stream to proceed axially.

1,481,328. DISCHARGE APPLIANCE FOR CONTAINERS. ALBERT EDGAR NEELY, Chicago, Ill., assignor to W. C. Ritchie & Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 4, 1921. Serial No. 458,398. 1 Claim. (Cl. 220—41.)



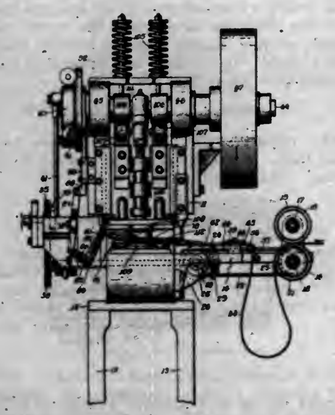
In an appliance of the character described, the combination of a container having a pouring aperture in its wall at one end through which its contents may be delivered, and a slide adapted to open and close said aperture bearing flat against the outer face of the apertured wall and having end portions overlying said outer face of the wall at the opposite margins of said aperture and having intermediate portions extended through the aperture lengthwise the latter and the slide to cooperate with the longitudinal edges of the aperture and bent in opposite directions to underlie said wall at the opposite margins of said aperture.

1,481,329. FOLDER FOR SEWING MACHINES. CARLOS RAGNVALD ROSS, Chicago, Ill., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 31, 1922. Serial No. 598,074. 14 Claims. (Cl. 112—141.)



8. A folding attachment for sewing machines having a strip folding passageway, a lubricant receptacle in communication with said passageway, a lubricant absorbent material disposed in said receptacle and having a tongue projecting into said passageway, and a guide-wall opposed to said tongue.

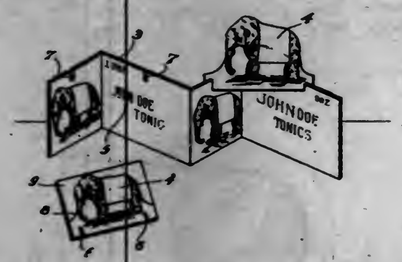
1,481,330. CONVEYING APPARATUS. HAROLD R. SCHUTZ, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 23, 1922. Serial No. 545,939. 10 Claims. (Cl. 198—52.)



1. The combination with a conveyor, of an inclined chute down which artticles move lengthwise in spaced relation by gravity, automatic means to direct the articles alternately to different setting-up positions, means to turn the articles to upright position, and automatic means interconnected with said directing means and operating in synchronism therewith to place said articles on the conveyor.

1,481,331. GLASS FEEDER. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 2, 1922. Serial No. 591,752. 16 Claims. (Cl. 49—55.)

16. The combination with a furnace, of a boot or extension thereon, said boot having an outlet orifice in its floor at the forward end of the boot, a regulator projecting downward into the glass over said outlet, a pair of wing guides projecting downward into the glass between said regulator and the furnace, means to laterally adjust said wings, and means to adjust said wings up and down in the glass.



1,481,332. FEEDING DEVICE. JULIUS A. STOCK, Cicero, Ill., assignor to W. C. Ritchie and Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1922. Serial No. 570,023. 6 Claims. (Cl. 164—21.)

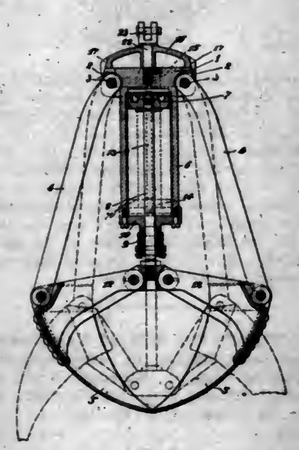
1. In a feeding appliance of the character described, the combination of a sliding carriage, means to reciprocate said carriage, a spring-pressed finger hinged on said carriage designed during its forward travel strokes

to engage in sequence the walls of spaced recesses previously cut in the stock strip of material to be fed and to yield during its backward strokes, whereby said finger intermittently advances said stock strip.

1,481,333. BOX LINER. CALVIN A. AGAR, West Orange, N. J. Filed June 16, 1921. Serial No. 478,038. 2 Claims. (Cl. 229—14.)

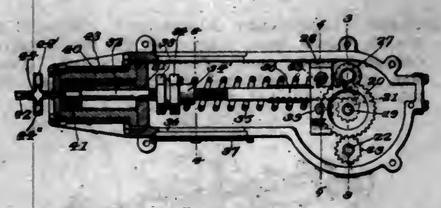
2. In combination with a box, a removable liner and pad therefor, said liner and pad having advertising matter displayed thereon and being so constructed that the several parts when removed from the box will cooperate and interlock to form an advertisement for the goods in said box.

1,481,334. CONNECTING-ROD CONSTRUCTION. ROY O. ALLEN, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 28, 1922. Serial No. 591,045. 8 Claims. (Cl. 74—17.)



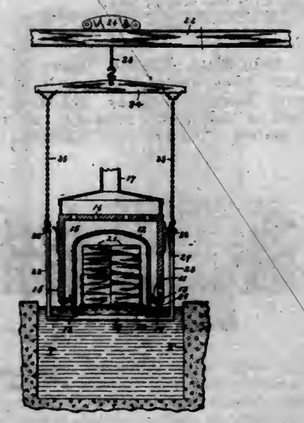
1. A connecting rod construction comprising a crank and a plurality of connecting rods, said connecting rods being adapted to be set at an angle to each other, each of said rods having a claw adapted to embrace the crank and another claw adapted to embrace the crank-embracing claw of the opposite rod, the openings between the ends of said claws permitting insertion and removal of the crank transversely past the ends of the claws.

1,481,335. ELECTRICITY METER. MARIO ANNINGER, Trieste, Italy. Filed Apr. 30, 1919. Serial No. 293,815. 1 Claim. (Cl. 171—34.)



Apparatus for use in connection with an electric meter for controlling the supply of limited quantities of electric energy and comprising a spindle arranged for rotation in one direction by a key or the like manually operable instrument and provided with a disk having a tappet element, a spring to normally turn said disk to zero position, meter-actuated driving means for the spindle including a clutch to release the spindle, a bolt movable across the key end of the spindle, a circuit closer including a movable element, a spring to normally hold said element in circuit breaking position, means, operated by the said bolt, to turn said element to circuit closing position, and a detent element to hold said circuit closer element in closed position and including an arm arranged for operaton by the tappet to cause said detent element to release the circuit closing element when the said disk is in zero position.

1,481,336. BUCKET. PHILIP M. ARMSTRONG, Hackensack, N. J., assignor to The Hayward Company, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1920. Serial No. 428,109. 3 Claims. (Cl. 37—182.)



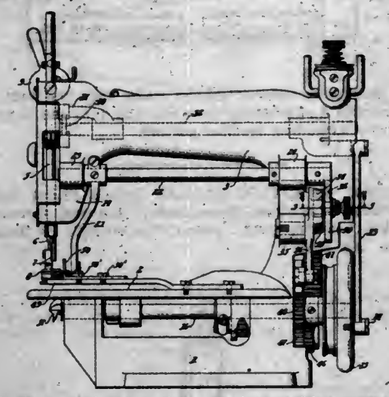
1. The combination with a dredging bucket of an operating cylinder whose upper head is common with the head of the bucket, a series of raised ears on said head, connecting-rods pivotally connected to the ears, and a removable cap fitted to the head having recesses adapted to receive the ears on the head.

1,481,337. STEAM-REGULATED EXHAUST NOZZLE. CHARLES LESLIE BAKER, St. Joseph, Mo. Filed Feb. 10, 1921. Serial No. 443,974. 3 Claims. (Cl. 162—8.)

1. An actuating mechanism for the draft control of a steam boiler furnace comprising a casing, a depending web in one end of said casing, said web being formed with a transverse groove, a rack bar slidable through said groove, a guide roller positioned above the rack bar and contacting therewith, and a rack bar retaining plate secured to the said web and spanning said groove.

1,481,338. ANNEALING FURNACE. CHAUNCEY C. BALDWIN, Perth Amboy, N. J., assignor to Standard Underground Cable Company, Perth Amboy, N. J., a Corporation of Pennsylvania. Filed Apr. 20, 1922. Serial No. 555,675. 13 Claims. (Cl. 266—4.)

1. An annealing furnace comprising a tank with cantilever retort-seat at one end and a loading-floor at the other, the said seat having an inverted retort seated thereon with an aperture below the same for inserting the load in the retort, a platform fitted to enter the bottom of the retort with its load, and a traveling crane with connections for raising and lowering the platform below the retort and for depositing the platform with its load upon the loading-floor.



1,481,339. PACKAGE. FRANK WILLIAM BARRON, Montreal, Quebec Canada. Filed Apr. 3, 1920. Serial No. 371,107. 10 Claims. (Cl. 221—60.)

1. A collapsible container including a casing having a head-casing and a cap, and an impervious liner within said casing free to adjust itself transversally and longitudinally within said casing, and to deformations in the contour thereof.

5. A collapsible container including a tapered metallic casing having a head-casing and a cap, and an impervious liner within said casing free to adjust itself transversally and longitudinally within said casing, and to deformations in the contour thereof.

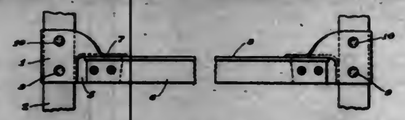
1,481,340. RUFFLING MECHANISM FOR SEWING MACHINES. RUDOLPH BECKER, Roselle Park, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 29, 1921. Serial No. 504,095. 6 Claims. (Cl. 112—135.)

1. The combination with a sewing machine presser-foot and feed-dog, of a reciprocating ruffling blade mounted independently of said presser-foot, and a separator-blade carried by the presser-foot and underlapping said ruffling blade and the toe end of the presser-foot.

1,481,341. GREASE-GUN HOSE COUPLING. MARTIN C. BERATED, Chicago, Ill. Filed Aug. 9, 1920. Serial No. 402,280. 10 Claims. (Cl. 285—84.)

1. The combination with a hose, of a tube arranged within the end of the hose, a bushing on the hose at the end thereof, a compression sleeve on the bushing compressing the bushing and the tube between their ends to make interlocking engagement between the tube, the hose and the sleeve, and an outer shell swivelly secured on the sleeve.

1,481,342. LEAF HOLDER FOR LOOSE-LEAF BINDERS. HARRY A. BLACKWELL, St. Louis, Mo., and RICHARD M. WATSON, Detroit, Mich. Filed Jan. 31, 1923. Serial No. 616,069. 5 Claims. (Cl. 129—24.)

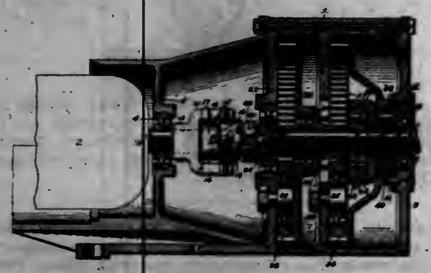


1. A leaf holder for loose leaf binders, having, in combination, a binder plate bent downwardly at its side edges to form guides, and a plurality of clasping devices slidably mounted on the binder plate and spanning the plain side thereof.

1,481,343. CARLINE BRACKET. CHARLES D. BONSALL, Parnassus, Pa., assignor to P. H. Murphy Company, Parnassus, Pa., a Corporation of Pennsylvania. Filed Sept. 19, 1921. Serial No. 501,696. 4 Claims. (Cl. 105—5.7.)

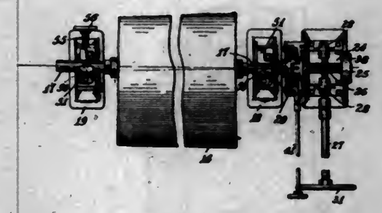
1. A metal carline bracket having a main body adapted to embrace the top of a car side plate having an integral vertical portion adapted to engage the interior of the

side plate provided with integral inwardly extending horizontal and vertical projections adapted to support and engage the horizontal and vertical members of a carline,



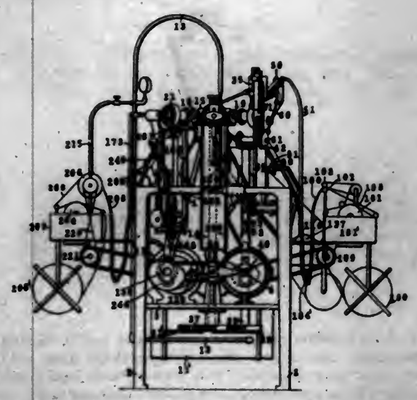
said main body being of greater width than the width of the carline and bending from one end into the integral inwardly extending vertical portion.

1,481,344. REMOVING BROKEN TOOLS FROM BORE HOLES. THEODOR BORNEMANN, Hanover, Germany. Filed June 15, 1922. Serial No. 568,572. 8 Claims. (Cl. 294—88.)



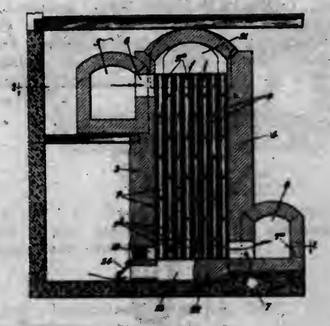
1. In an electric lifting device for use in bore-holes in combination, mechanical gripping means, an electromotor operatively associated with said gripping means, means for lowering said gripping means and said motor into a bore-hole, and a source of electric energy associated with said electromotor and suspended from said lowering means.

1,481,345. AUTOMATIC POWER-TRANSMISSION DRIVE GEAR. CHARLES P. BREESE, Dayton, Ohio. Filed Apr. 8, 1921. Serial No. 459,582. 4 Claims. (Cl. 74—7.)



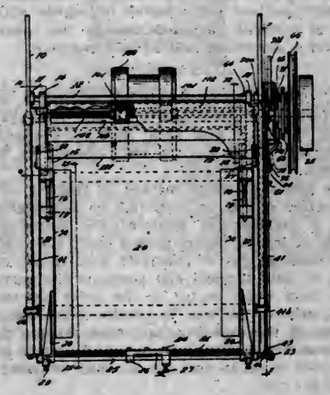
1. The combination of a starter shaft, a power shaft adapted to be driven thereby, a transmission shaft, speed-ratio changing gearing to connect the starter shaft with said power shaft, automatic releasing means to throw said gearing out of operation when the speed of the power shaft exceeds the speed of the starter shaft, clutch means operating automatically under the last named condition to connect the power shaft with the transmission shaft, a driving connection between the transmission shaft and the starter shaft and a second automatic clutch and release means to connect said gearing with the starter shaft.

1,481,346. MILL-ROLL STAND. JAMES A. CAMERON and GUSTAF BIRON BIRCH, Brooklyn, N. Y., assignors to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 25, 1920. Serial No. 405,996. 7 Claims. (Cl. 242—58.)



1. The combination with a machine for acting on a web of flexible material, said machine including a roll, of a mill roll stand comprising: a web roll shaft, a control shaft arranged end to end, a flexible connection between the two shafts, means for adjusting the control shaft, and thereby the web roll shaft, lengthwise of its axis to bring the web into register with the roll of the machine, and means for adjusting the web roll shaft, independently of the control shaft, obliquely with respect to its axis to bring it parallel with the roll of said machine.

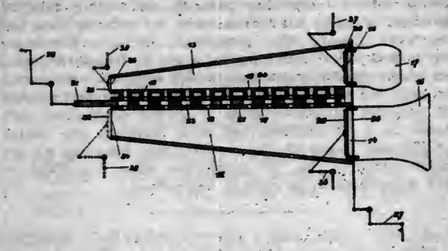
1,481,347. MACHINE FOR MAKING BOXES. HAROLD CARLE, Buffalo, N. Y., assignor to F. N. Burt Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Jan. 8, 1921. Serial No. 435,827. 61 Claims. (Cl. 93—44.)



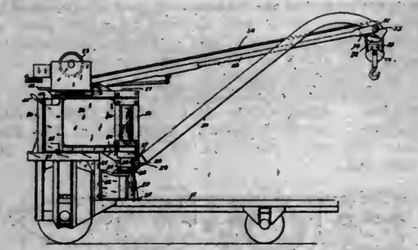
1. In an apparatus of the character described, in combination, a rotatable and translatable former having a pneumatic-gripper opening, an air-exhaust, and intervening air-conduits.

1,481,348. RECUPERATOR. WILLIAM B. CHAPMAN, New York, N. Y., assignor to Chapman-Stein Furnace Company, Mount Vernon, Ohio, a Corporation of Ohio. Filed May 8, 1922. Serial No. 559,184. 25 Claims. (Cl. 263—20.)

1. A continuous recuperator wall made up of hollow tiles providing upwardly extending passages in such wall adapted to receive gas to be heated, and members interposed between adjacent sides of adjacent tiles making up such wall interlocking to prevent lateral shifting between adjacent tiles.



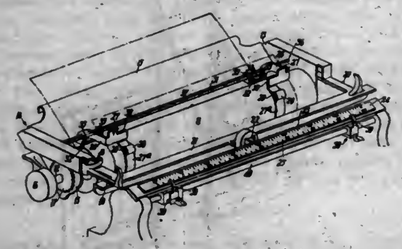
1,481,349. PAPER-FEEDING MECHANISM. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 8, 1922. Serial No. 550,801. 41 Claims. (Cl. 271—8.)



1. In a paper feeding mechanism, paper feeding rolls, means to support a stack of paper, and means whereby movement of the paper stack supporting means may initiate the action of said paper feeding rolls.

1,481,350. REED ORGAN. GEORGES CLOETENS, St. Gilles, near Brussels, Belgium. Filed May 3, 1922. Serial No. 558,053. 11 Claims. (Cl. 84—362.)

2. A reed organ comprising a resonating pipe of a substantially conical form, a plurality of beating reeds of different pitch forming a scale, an air chest in communication with said reeds, valves between said reeds and said resonating pipe, an auxiliary resonating pipe, and a plurality of openings of substantially equal section establishing the communication between the two resonating pipes, each of these openings being situated opposite a reed.



1,481,351. INDUSTRIAL TRUCK. CLYDE E. COCHRAN, Cleveland, Ohio. Filed Oct. 4, 1920. Serial No. 414,537. 10 Claims. (Cl. 212—38.)

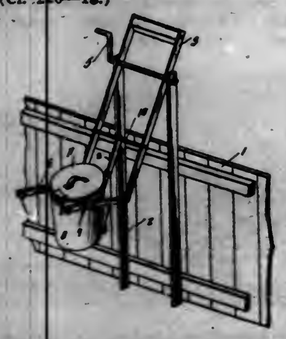
1. The combination with a wheel truck having a front frame housing for the truck propelling mechanism and a horizontal load supporting platform extending rearwardly from said housing, of a bracket mounted on the platform and abutting the rear of the housing, a vertical post carried by the bracket, a member swiveled on the post, a thrust bearing between said member and the bracket, a boom pivoted to said member near its lower end, and a frame for a battery box extending from the members in the opposite direction to the boom.

1,481,352. TYPEWRITING MACHINE. SAMUEL COLLINS, Philadelphia, Pa., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 17, 1923. Serial No. 639,489. 3 Claims. (Cl. 197—140.)

1. In a typewriting machine, the combination with a platen, a platen-frame, and a traveling carriage, of means settable for centering work-sheets of different widths on the platen, and means including a centering-scale, for determining the initial positions of the carriage

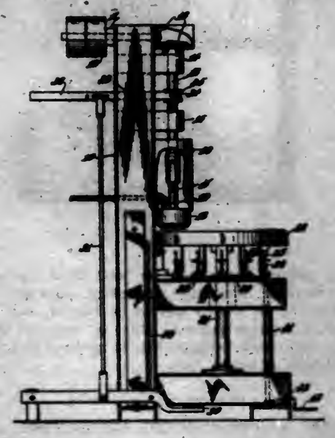
for typing headings, or the like in centered positions on work-sheets centered on the platen, the work-sheet-centering means comprising paper-fingers having forward portions engaging the platen above the printing line and rearward laterally-offset portions to serve as side gages for a work-sheet on the platen, a rod in the platen-frame on which the side gages are slidably mounted, and a scale on said rod auxiliary to said centering-scale, and marked in opposite directions from a central graduation indicated by a "0" marking, so as to facilitate the setting of the side gages at the proper equal distances on opposite sides of the "0" graduation when the width of the work-sheet to be used is determined.

1,481,353. INHALER AND NEURALGIC PENCIL. HERMAN DANZIGER, New York, N. Y. Filed Mar. 26, 1923. Serial No. 627,557. 3 Claims. (Cl. 128—200.)



1. An inhaler and pencil of the character described, comprising a perforated tubular body portion closed at one end and provided with a bored nipple, a cap to close the opposite end of the tubular body portion and provided with a receptacle to hold medicine, a mouth piece adjustable over said nipple, and a nose piece adapted to embrace the closed end of the body portion.

1,481,354. HEADGEAR FOR RELIEVING HEADACHES. OSCAR DINGFELD, Brooklyn, N. Y. Filed Mar. 15, 1923. Serial No. 625,341. 2 Claims. (Cl. 128—163.)



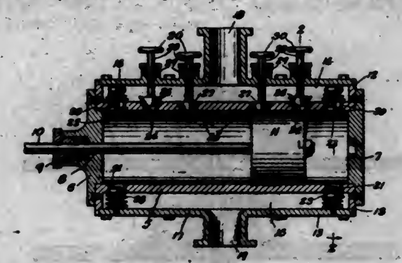
1. In a headgear for relieving headaches the combination of a band, adapted to be secured to the head of a person, a laterally stationary pressure knob, adapted to be placed opposite the middle part of the rear of the head when said band is in position, secured to said band, and a pair of laterally adjustable pressure knobs on opposite sides of said stationary knob, adjustably connected to said band, said knobs being adapted to press on three points below the rear of the head, thereby relieving headaches.

1,481,355. GARBAGE CAN. JOSEPH DOMPIER, Toledo, Ohio. Filed Aug. 2, 1922. Serial No. 579,163. 3 Claims. (Cl. 220—18.)

1. In an appliance of the character specified, a framework, a frame pivotally mounted thereon intermediate its ends and having lateral arms at one end and a counterbalance at its opposite end, slides mounted on said arms, a receptacle journaled to said slides, a bridle between the receptacle and frame, and a cover hinged to the receptacle and adapted to swing outwardly and downwardly when the receptacle is inverted to dump the contents thereof.

1,481,356. CAN-MAKING MACHINE. ROLLIN L. DRAKE, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Nov. 30, 1920. Serial No. 427,299. 7 Claims. (Cl. 113—89.)

1. A can soldering machine comprising a rotatable table, openings therein through which the members to be soldered may be hung, a rotatable solder melting member adapted to be brought into contact with the members to be soldered, and gripping members underneath said openings and adapted to engage with members to be soldered, extended through the openings, so as to exert a downward pull on said members.



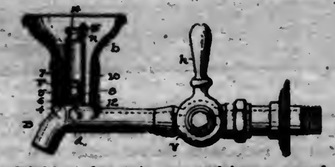
1,481,357. TREATMENT OF ORES. ARTHUR S. DWIGHT, New York, N. Y., assignor to Dwight & Lloyd Metallurgical Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 29, 1922. Serial No. 557,377. 5 Claims. (Cl. 75—17.)

1. The herein described method of treating ores containing oxides of iron, it consisting in commingling with the ore a carbonaceous material and sintering it to transform it into a highly porous body, then causing a body of reducing gas of relatively high initial reducing efficiency to pass through and permeate the particles of said ore body while heated to the point necessary for reducing, causing the iron to oxidise a relatively small proportion of the said gas, and then causing the said body of gas to immediately move out of contact with the ore particles prior to the gas becoming efficient in re-oxidising the ore.

1,481,358. COMPRESSOR. JOSEPH DWYER, Montclair, N. J. Filed July 7, 1921. Serial No. 482,920. 2 Claims. (Cl. 230—27.)

1. An ammonia gas compressor comprising a tubular cylinder provided on opposite sides with outwardly directed chambers closed by plates, one of said chambers forming the intake and the other the discharge chambers of the compressor, the ends of said cylinder being closed by plates, a piston mounted in said cylinder and the rod of which passes through one of the plates of said cylinder, automatic valves mounted in the end portions of said cylinder and in communication therewith and with said intake and discharge chambers and adapted to control admission of ammonia gas into the

opposite end portions of said cylinder and the discharge of gas therefrom, and other valves spaced longitudinally of the cylinder and projecting outwardly through the

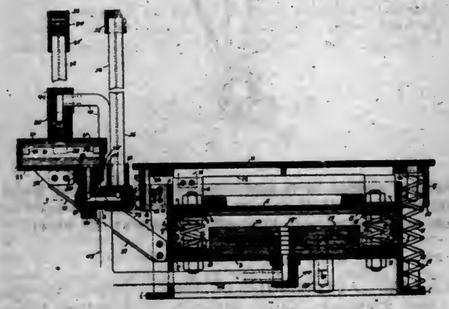


closure plate of the intake chamber thereof and adjustable in said plate to control the admission of ammonia gas into said cylinder.

1,481,359. LIQUID-DISPENSING CAN. CHARLES T. DYE, La Fayette, Ind. Filed July 8, 1922. Serial No. 573,719. 5 Claims. (Cl. 221—25.)

1. In an appliance of the character described, the combination of a can, a flexible resilient tube fastened at one end to and in communication with the interior of said can, a sleeve communicating with the interior of said can, and a nozzle on the other end of said tube designed to have a detachable telescopic connection with said sleeve, the tube being of such length that when said nozzle is telescopically associated with said sleeve the friction between said nozzle and sleeve is increased by the tendency of the tube to straighten itself out.

1,481,360. DRINKING FOUNTAIN. MYRON JOSEPH GLAUBER, Cleveland, Ohio, assignor to Morris H. Glauber, Cleveland, Ohio. Filed Aug. 6, 1919. Serial No. 315,600. 4 Claims. (Cl. 299—12.)

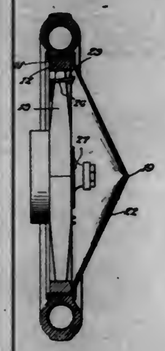


1. A drinking fountain, comprising a nozzle and a cover lying flat across the mouth of said nozzle and hinged thereon adapted to be opened solely by water pressure and to automatically close when the water pressure is shut off, said cover being provided with means to prevent the jet of water from spreading and spraying.

1,481,361. SECONDARY CHARGE FOR COMPOUND DETONATORS. BENNETT GROTTA, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 1, 1923. Serial No. 622,220. 6 Claims. (Cl. 52—3.)

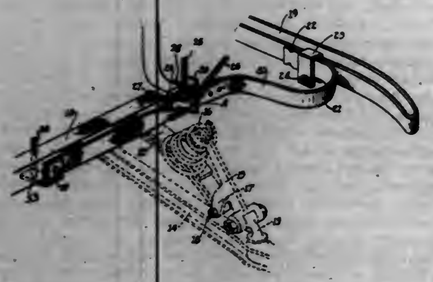
1. A compound detonator of which the main charge consists of any suitable nitroaromatic compound and ground smokeless powder mixed therewith.

1,481,362. UNIVERSAL PNEUMATIC WEIGHING SCALE. DAVID GUELBAUM, Syracuse, N. Y. Filed Apr. 11, 1923. Serial No. 631,354. 7 Claims. (Cl. 265—47.)



1. A universal pneumatic weighing scale, comprising a stationary cylinder with an open top and a flanged bottom with a blank bottom between and with vertical ribs outside, a movable flange with vertical ribs on top telescoping inside of said stationary cylinder and having a hole in centre closed by a cover, a corrugated flanged cylinder fastened with its bottom flange to the blank bottom inside of said stationary cylinder and with its top flange fastened to the bottom side of said movable flange and forming a closed contractible air space inside of said stationary cylinder, a movable cylinder with an open bottom and a flat top forming the weighing platform and telescoping outside of said stationary cylinder supported by the vertical ribs on top of said movable flange, means for holding said movable inner flange and outer cylinder suspended and said corrugated cylinder normally inflated, means for regulating the volume of said closed contractible air space and the drop of said weighing platform, a closed well with an air tight cover divided by a partition in two compartments one holding mercury the other oil with a nozzle on top connecting the closed air spaces within the well above these fluids with the contractible closed air space of said corrugated cylinder and provided with a bottom socket either side of the partition, means for instant communication and discommunication of said closed air spaces with the outside atmosphere, double sockets with tri-way cocks connected to the bottom sockets of said closed well and holding upright glass pipes one containing a mercury column the other an oil column and provided with a graduation plate for indicating the weights, means for automatically closing the top of said glass pipe with the oil column when weighing heavy loads, substantially as and for purpose specified.

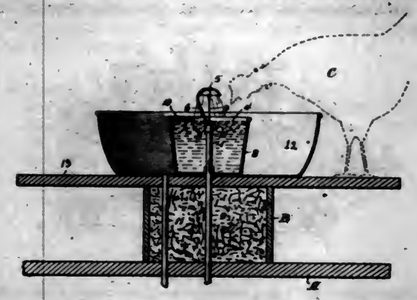
1,481,363. ADVERTISING DEVICE FOR VEHICLE WHEELS. HAROLD G. HALL, Yonkers, N. Y. Filed Jan. 31, 1923. Serial No. 616,125. 4 Claims. (Cl. 40—129.)



1. An advertising device for wheels, comprising a circular disk having a radial slit and provided with advertising matter on one side thereof, the edges along said

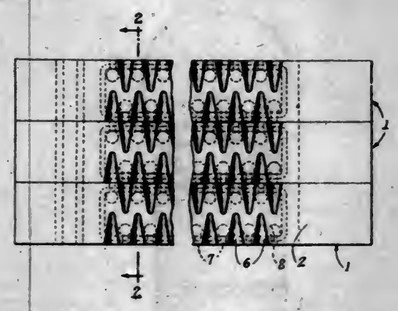
slit placed in overlapping position and rigidly secured together whereby a hollow body with an uninterrupted

conical surface is formed adapted to be secured along its base to a wheel in such a manner that the apex of the cone surface coincides with the axis of the wheel.



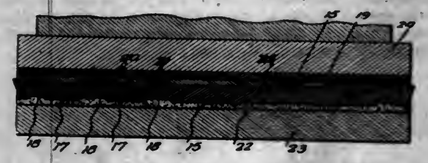
1,481,364. AUTOMOBILE BUMPER. CONRAD HANSEN, San Francisco, Calif., assignor to American Chain Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Mar. 23, 1922. Serial No. 545,971. 6 Claims. (Cl. 293—55.)

1. The combination with a bumper member designed to extend across the end of an automobile, of rearwardly extending attaching arms therefor, said arms having means at their rear end for attachment to the automobile frame and having intermediate offsets forming abutments to engage the automobile frame members endwise and thereby resist impact against the bumper member, said attaching arms comprising flat steel bars lying in a vertical plane, said arms having a portion between said end attaching means and said abutment disposed at an angle to the vertical to afford clearance when in place upon the machine.



1,481,365. DRINKING DEVICE FOR POULTRY. WILLIAM HEGEL, Robbinsville, N. J. Filed Mar. 9, 1921. Serial No. 450,031. 4 Claims. (Cl. 119—74.)

1. A sanitary device for furnishing drinking water to poultry, comprising in combination, a drinking trough, a spout provided with a nozzle located within the confines of the trough just below the water level and arranged to project a stream of water upwardly thereby agitating the body of water, and a canopy spaced above

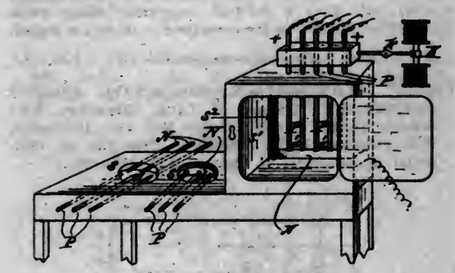


the nozzle to intercept the stream of water and cause it to be returned in sprayed condition to the drinking trough.

1,481,366. GRATE BAR TO BURN PULVERIZED COAL. FRANCISCO HERKENRATH, Santiago, Chile. Filed Nov. 1, 1921. Serial No. 512,075. 3 Claims. (Cl. 126—167.)

1. A grate bar having a plurality of vertical recesses extending into the bar from the underside thereof, a plurality of horizontal perforations extending into the bar at the sides thereof and communicating with said vertical recesses, and a plurality of recesses at the top edges of the bar between the horizontal perforations thereof.

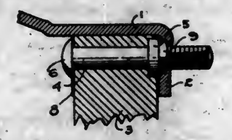
1,481,367. METHOD OF PREPARING PRINTING PLATES. HENRY A. HEAR, Chicago, Ill. Original application filed Jan. 2, 1923, Serial No. 610,212. Divided and this application filed Mar. 17, 1923. Serial No. 625,701. 1 Claim. (Cl. 101—401.2.)



The method of treating printing plates which consists in placing against the back of the plate a matrix which has etched on both faces thereof registering facsimiles of the design appearing on the face of the printing plate and in a position that the designs on both faces of the matrix will register with the design on the face of the printing plate, and then applying pressure upon the matrix to displace predetermined portions of the printing surface of the said plate and from the back of said plate.

1,481,368. ELECTRIC-CIRCUIT-CLOSING DEVICE. WILLIAM H. HOPE, Newark, N. J., assignor to Hope Foundry and Machine Co., a Corporation of New Jersey. Filed Jan. 14, 1921. Serial No. 437,193. 2 Claims. (Cl. 173—330.)

1. In a device of the kind described, a floor plate having a plug receiving opening, a main receptacle body having a plug guiding means, contact devices associated with said plug guiding means, means for connecting said contact devices in an electric supply circuit, a barrel connected with the underside of said floor plate having an internal bore alined with said plug receiving opening of said floor plate, said barrel and its bore being angularly off-set relative to said plug receiving opening and said plug guiding means, a spherical closing member movable within the bore of said barrel, and a compression spring between the bottom of said barrel and said closing member for normally moving the latter into closing relation to said plug receiving opening when the plug is withdrawn but exerting a lateral thrust upon the plug relative to said receptacle contacts when said plug is inserted.

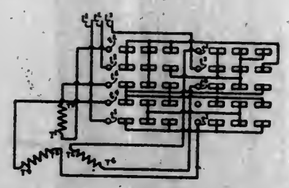


1,481,369. ELECTRICAL COOKING AND HEATING MEANS. ADOLPH C. HOTTENROTH, Freeport, N. Y. Filed Sept. 1, 1921, Serial No. 497,691. Renewed May 24, 1923. 3 Claims. (Cl. 219—35.)

1. Electric culinary apparatus of the character designated, comprising an electric arc, and means for supporting and positioning a substance to be treated in juxtaposition thereto in such manner as to expose said substance directly to the radiant heat emanating from said electric arc, substantially as set forth.

1,481,370. WHEEL CONSTRUCTION. RUSSELL HUFF, Detroit, Mich., assignor to Dodge Brothers, Detroit, Mich., a Corporation of Michigan. Filed Sept. 4, 1920. Serial No. 408,334. 9 Claims. (Cl. 301—20.)

1. In a wheel, the combination with a metal felloe and a wooden spoke, said felloe adapted to support a tire rim, of a bolt, and means cooperating with said bolt for securing the spoke and the rim to the felloe, said se-

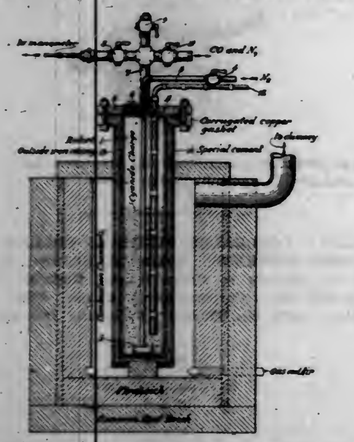


curing means so constructed and arranged that no crushing pressure is exerted on the spoke.

1,481,371. CONCEALED STITCHED COLLARET FOR UNDERGARMENTS. ROBERT R. HUGHES, Jr., Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1919. Serial No. 300,649. 3 Claims. (Cl. 112—262.)

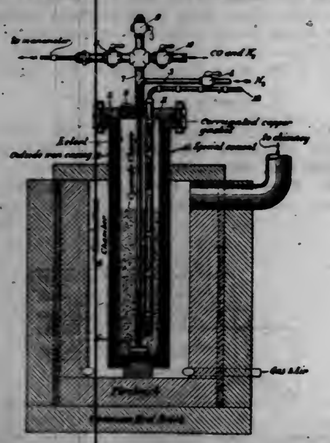
3. An undergarment comprising a body portion having a neck opening, a collaret strip folded about the edge portion of the garment at the neck opening thereof and forming inner and outer face portions, the edge portion of the outer face portion being turned under, two spaced needle threads lying between the turned under edge portion and the outer face portion and respectively formed into spaced rows of needle thread loops extending through said turned under edge portion, and said body portion of the garment, the edge of the inner face portion of the collaret strip being disposed between said rows of needle thread loops, and means connecting the loops of said rows of needle thread loops and covering the edge of the inner face portion of the collaret strip.

1,481,372. ELECTRICAL CONTROLLER. RICHARD B. HUNTER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 18, 1922. Serial No. 530,081. 11 Claims. (Cl. 172—179.)



3. A rotatable drum controller for three phase motors comprising a number of fixed contacts not to exceed ten and a number of similar contacting surfaces not to exceed thirty to co-operate therewith, said contacts and said surfaces being so arranged as during each complete revolution of the drum, to effect two cycles of control, each cycle including star, delta and reverse star connections and also de-energization of the motor.

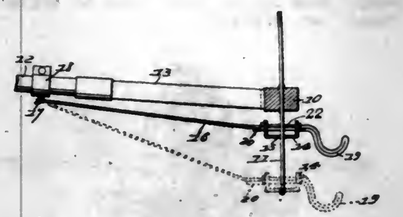
1,481,373. PROCESS OF PRODUCING ALKALI-METAL CYANIDES. CHARLES B. JACOBS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 28, 1919, Serial No. 279,801. Renewed June 15, 1923. 25 Claims. (Cl. 23—13.)



2. The process of making sodium cyanide which comprises heating in contact with nitrogen a mixture con-

taining a sodium halide, sodium carbonate, and carbon, to a temperature sufficient to effect a reaction between

the carbon, nitrogen, and the sodium carbonate to form sodium cyanide.

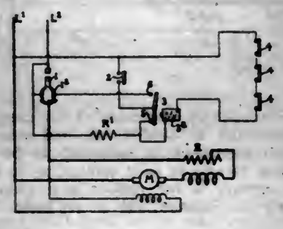


1,481,374. PROCESS FOR THE PRODUCTION OF ALKALI-METAL CYANIDES. CHARLES B. JACOBS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 28, 1919, Serial No. 279,802. Renewed June 15, 1923. 44 Claims. (Cl. 23—13.)

1. The process of making an alkali-metal cyanide, which comprises heating in contact with nitrogen a mixture containing an alkali-metal halide, a reducible compound of a carbide-forming metal, a compound of an alkali-metal other than a halide, and carbon, to a temperature sufficient to effect a reaction between the carbon, nitrogen and the second alkali-metal compound to form an alkali-metal cyanide.

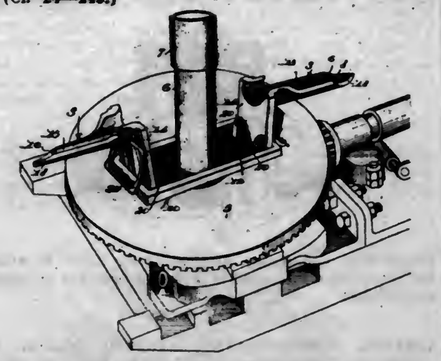
1,481,375. LAWN RAKE. CLYDE M. KENT and JOHN W. ROSS, Jackson, Ohio. Filed May 24, 1921. Serial No. 472,137. 1 Claim. (Cl. 55—146.)

The combination with a rake having looped or hair-pin tines, of a channel shaped cleaner bar disposed in parallelism with the rake head and provided with openings for the reception of said tines, hanger rods having pivotal connections at their rear ends with the rake handle and extended to form runners of which each consists of a rod



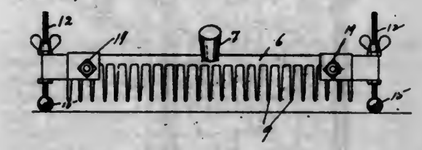
or heavy wire looped to provide parallel arms which pass slidably through eyes formed in the flanges of the cleaner bar between adjacent teeth loops.

1,481,376. TRAILER TRACTION HITCH. JOHN H. KLEIN, Denver, Colo. Filed May 18, 1922. Serial No. 561,879. 2 Claims. (Cl. 280—33.2.)



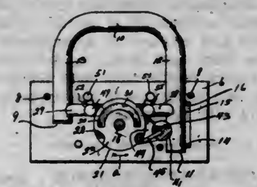
1. In combination, a tractor, a trailer, means for guiding the trailer in accordance with the movements of the tractor, and means connecting the trailer and tractor whereby the latter will pull the former, said means comprising a tension member having one end secured to the truck chassis, a bracket secured to the top of the chassis on each side thereof, a shaft connecting the upper portions of said brackets and lying substantially parallel to and vertically over the rear axle, a pulley rotatably and slidably connected to said shaft, the tension member passing over said pulley and having its other end secured to the trailer, whereby the pulling force in said tension member will have a vertical component whose value varies directly with the force required to move the trailer.

1,481,377. LOW-VOLTAGE PROTECTIVE CIRCUIT CONTROLLER. GILBERT E. LAUB, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 26, 1921. Serial No. 440,060. 6 Claims. (Cl. 175—294.)



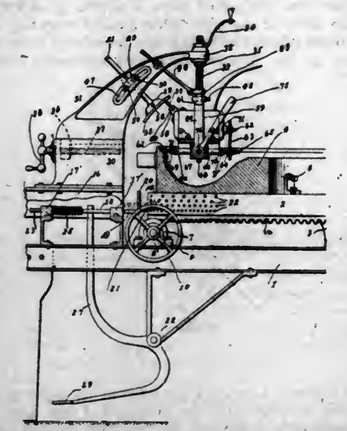
1. In a low voltage protective circuit controller in combination, an electro-responsive switch, a control switch therefor in circuit with the winding thereof, and a low voltage relay also controlling said electro-responsive switch, said relay having self controlled circuit connections rendering its setting operation dependent upon predetermined positioning of said control switch.

1,481,378. SLIP. GEORGE F. LA BUE, Electra, Tex. Filed Apr. 30, 1923. Serial No. 635,807. 8 Claims. (Cl. 24—249.)



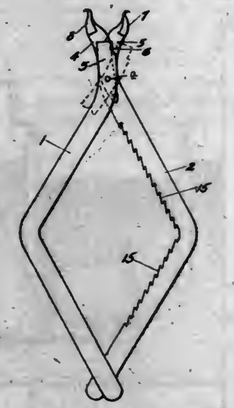
1. A slip for oil well operations comprising a holder, and L-shaped slips having base portions swingingly and detachably connected to the holder and having shoulders to engage and support a tool joint.

1,481,379. ATTACHMENT FOR RAKES. THOMAS F. LENNON, Crosby, Tex. Filed Aug. 21, 1922, Serial No. 583,166. Renewed Oct. 19, 1923. 1 Claim. (Cl. 55—10.)



The combination with a rake of clamp members detachably secured to each end thereof, each clamp member being formed with an end sleeve forming a vertical bearing, rods fitted through said sleeves and adjustably secured therein, the lower ends of said rods being formed with round heads.

1,481,380. PERMUTATION PADLOCK. EMIL I. LINDBERG, Gackle, N. Dak. Filed Feb. 26, 1923. Serial No. 621,419. 5 Claims. (Cl. 70—113.)

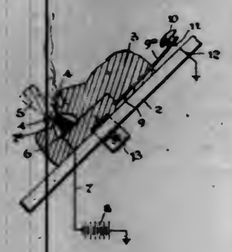


1. A permutation padlock comprising a casing having spaced vertical sockets therein open at the top of the casing, a substantially U-shaped shackle adapted to have its legs slidably moved into said sockets, a horizontal transverse rotatable locking pin operatively associated with one leg of the shackle, a horizontal slidable locking pin operatively associated with the other leg of the shackle, means to manually move said locking pins separately to locking or released position, means including a plurality of rotatable tumbler discs having a transverse horizontal axis and mounted between the legs of the shackle for retaining said locking pins in locking position and movable to positions for permitting releasing movement of the locking pins, and means to rotate said tumbler discs.

1,481,381. MOLD-FINISHING MACHINE. SAMUEL A. MCCLELLAN, Akron, Ohio. Filed Jan. 22, 1921. Serial No. 439,196. 9 Claims. (Cl. 90—13.1.)

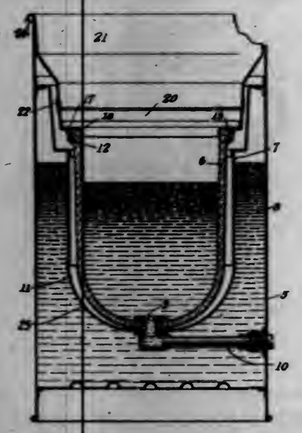
1. The combination of a pattern plate, means for holding said pattern plate stationary, a swiveled hanger, a supporting body mounted in said hanger for rocking movement, a motor carried by said body, a tracer mounted on the motor and engaging the pattern plate, and a tool carried by the said supporting body and operatively connected with the motor.

1,481,382. PISTON-RING EXTRACTOR. GUSTAV C. MONCKMEIER, Tipton, Iowa. Filed Sept. 7, 1920. Serial No. 408,421. 2 Claims. (Cl. 29—86.4.)



1. A device of the class described, comprising a pair of handles, pivotally united; oppositely disposed arms projected therefrom; a pair of teeth on one of said arms spaced apart from each other and adapted to engage the end of a piston ring; and three similar teeth on the other of said arms, alternating in position with said first-named teeth; the movement of said handles away from each other operating to separate said arms and teeth.

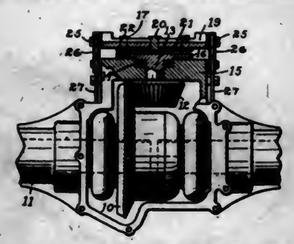
1,481,383. CIGAR LIGHTER. JOHN NELSON, Winter Park, Fla. Filed Nov. 11, 1922. Serial No. 600,456. 1 Claim. (Cl. 219—32.)



A cigar lighter comprising a base member in the shape of a face having lips spaced apart sufficiently to receive the end of a cigar, a cavity in the member below the

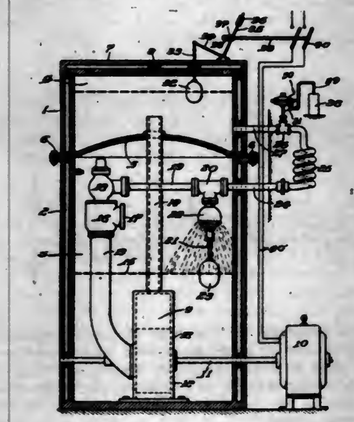
lips, a cone-shaped member mounted in the cavity with the apex of the cone adjacent the space between the lips, a heating element in the form of a resistance wire coiled about the cone connected with a source of electric current, the apex of the cone being located inwardly of and in protected relation with the lips, a resilient lever rigidly mounted in the base member and connected with the

heating element, said lever provided at its outer end with a contact member and an insulated finger piece, said lever forming a conductor between the contact and the heating element, and a grounded contact adjacent to the contact on the lever and adapted to be engaged by said first mentioned contact when the lever is depressd for closing the circuit and causing incandescence of the heating element on the conical member.



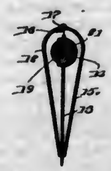
1,481,384. COFFEE URN. EDWARD NEY, New York, N. Y. Filed Aug. 1, 1923. Serial No. 654,971. 9 Claims. (Cl. 53—3.)

8. In an urn of the character disclosed, a jar, an annular extension permanently secured in sealing engagement with the mouth of the jar and an annular casing member having an adjustable engagement with said permanently secured jar member.



1,481,385. AUTOMOBILE BRAKE. NILS NILSON and FREDERICK W. NILSON, Worcester, Mass. Filed Sept. 21, 1922. Serial No. 589,660. 4 Claims. (Cl. 188—18.)

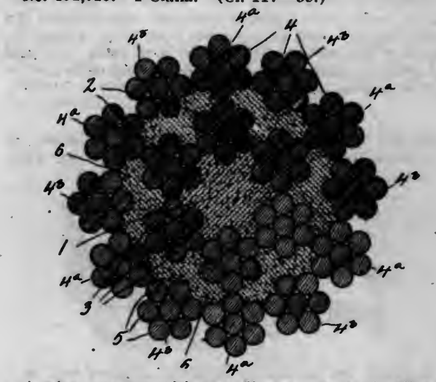
1. In a brake for an automobile, the combination with a circular flat disc positively connected with the driving mechanism to rotate whenever the car is moving, of a circular disc of the same size and shape normally supported a slight distance from it and freely rotatable on its axis, a reciprocable non-rotatable plate beyond the



second disc, and means for moving the plate to bring the second disc into contact with the first disc to apply the friction.

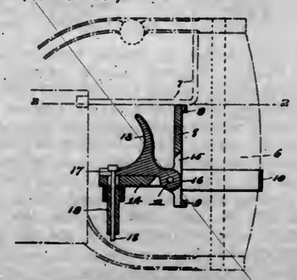
1,481,386. REFRIGERATING SYSTEM. MILLARD P. OSBOURN, Philadelphia, Pa. Filed Aug. 13, 1920. Serial No. 403,331. 6 Claims. (Cl. 62—152.)

1. In a refrigerating system, the combination of a closed chamber containing a refrigerant in the lower portion thereof, a pump submerged in said refrigerant for commingling said refrigerant with the vapors in said chamber above said refrigerant and for continuously expelling said commingled refrigerant and vapor from said closed chamber to produce a partial vacuum in said chamber above said refrigerant, a receptacle into which the discharge from said pump is delivered and from which said vapors escape from said refrigerant, and a conduit from said receptacle to the space in said closed chamber above said refrigerant.



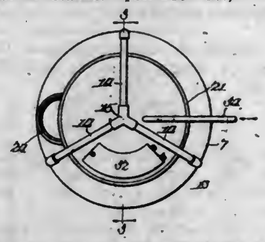
1,481,387. POWER-DRIVEN RAZOR. BARTOLO PARATORE, Johnstown, Pa. Filed Feb. 2, 1923. Serial No. 616,550. 2 Claims. (Cl. 30—12.)

1. A power driven safety razor comprising an elongated handle having one end prolonged and formed to define a casing section, a removable cover engaged against



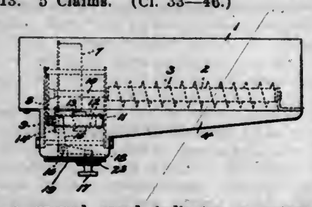
and mating with said prolongation to complete the casing, a shaft journaled longitudinally through the handle and casing and formed at one end portion with an elongated cam, and a blade movable transversely of said casing and formed with opposite offset portions, certain offset portions guiding the blade with respect to the shaft and the other offset portion bearing conformingly upon the cam, the blade projecting through a slot between said prolongation and the cover.

1,481,388. WIRE ROPE. EDWARD HAROLD PARKER, Belleville, N. J., assignor of one-half to Clarence H. Mathews, Cleveland, Ohio. Filed Aug. 12. 1921. Serial No. 491,719. 1 Claim. (Cl. 117—59.)



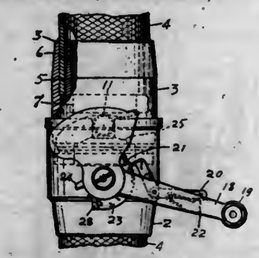
A wire rope comprising: a fibrous core, a plurality of inner strands laid around said core, each strand being composed of a plurality of wires twisted together, a plurality of outer strands, in number twice that of the inner strands, and each outer strand being composed of a plurality of wires twisted together, the diameter of the inner and outer strands and the number and diameter of the wires of both the inner and outer strands being the same and said outer strands being laid around the inner strands with one set of alternate outer strands radial to and in contact with the inner strands, to thereby transmit the thrust of said set of alternate outer strands to the core, and a circumferentially discontinuous intermediate core between the inner and outer strands to receive the thrust of the other alternate set of outer strands.

1,481,389. TRIGGER MECHANISM FOR DUPLEX FLEXIBLE GUNS. CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Mar. 9, 1922. Serial No. 542,334. 2 Claims. (Cl. 89—27.)



1. In combination with the spade grip of a flexibly mounted gun, an auxiliary trigger mechanism for firing another gun, said mechanism embodying a mounting plate, a quickly detachable clamp to secure said plate to the spade grip, a trigger mounted on said plate, and a flexible connection leading from said trigger to the trigger of the other gun.

1,481,390. ELECTRIC DECORTICATOR. ARTHUR A. PIEPJOHN, Chicago, Ill. Filed July 27, 1923. Serial No. 654,155. 7 Claims. (Cl. 146—50.)

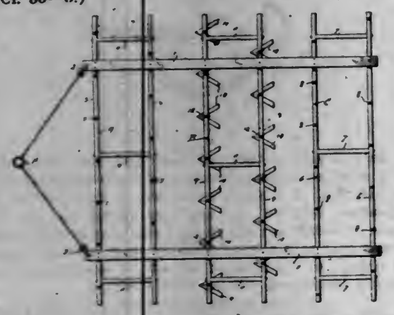


1. In a device of the class described, the combination with a vibratory member supported for free movement in any direction, of a shaft connected to said member for independent rotation and extended therefrom, an overbalance or weight carried by said shaft, an electric motor mounted near said member with its shaft disposed axially with respect to the point of support of said member, and a flexible connection uniting said shafts.

1,481,391. GROUND-SPEED INDICATOR. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,413. 5 Claims. (Cl. 33—46.)

1. In a ground speed indicator, a rotary threaded shaft, a housing therefor having an observation orifice through which the movement of the threads of said shaft is visible, a motor for driving said shaft, means for regulating the speed of said shaft in synchronism with a fixed object on the ground, and means controlled by said regulating means to indicate the ground speed in miles per hour.

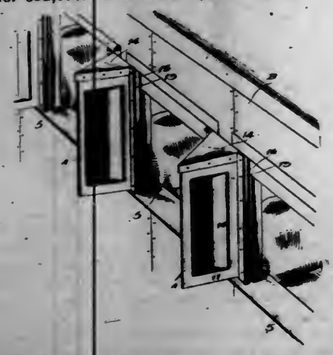
1,481,302. HOSE COUPLING. RALPH SCHAWROW, Bayonne, N. J. Filed Dec. 21, 1920. Serial No. 432,315. 3 Claims. (Cl. 285—172.)



1. A hose coupling comprising male and female members, levers pivoted at opposite sides of the female member, lugs integral with the male member, cam surfaces upon one of the arms of the levers and arranged to engage with the lugs of the male member, an undulation at the exposed end of one of the said surfaces for the purpose of lifting the male member subsequent to the movement of the cam for releasing the said members.

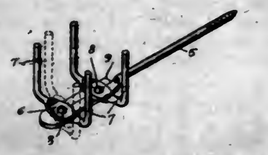
2. A hose coupling comprising male and female members, levers pivoted at opposite sides of the female member, upper and lower cam surfaces disposed upon the levers, lugs disposed at opposite sides of the male mem-

ber and arranged to engage with the cam surfaces and means comprising a pawl and a toothed segment whereby the said cam surfaces may be retained in a given relation with the said lugs.



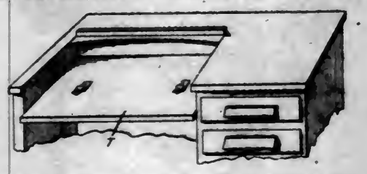
1,481,393. HARROW. JOHN J. SCHRAG, Harvey, Kans. Filed Apr. 14, 1923. Serial No. 632,072. 4 Claims. (Cl. 55—3.)

1. A harrow comprising parallel beams, draft means associated therewith, a harrow section supported by said beams and extending transversely thereof, shanks depending from said harrow section, substantially horizontally disposed hoes carried by the lower end portions of the shanks, a second harrow section positioned in advance of the first section, and a third harrow section positioned rearwardly of the first section, harrow teeth depending from said second and third named sections, each tooth of the second named section being positioned directly in advance of a hoe of the first section.



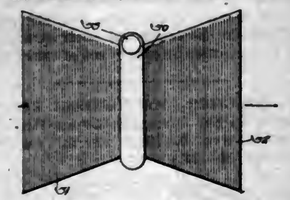
3. A harrow comprising parallel beams, draft means associated therewith, a harrow section supported by said beams and extending transversely thereof, shanks depending from said harrow section, substantially horizontally disposed hoes carried by the lower end portions of the shanks, a second harrow section positioned in advance of the first section, and a third harrow section positioned rearwardly of the first section, harrow teeth depending from said second and third named sections, each tooth of the second named section being positioned directly in advance of a hoe of the first section, said shanks being arranged in two rows, the shanks of one row being staggered with respect to the shanks of the second row.

1,481,394. RAILROAD-CAR ATTACHMENT. EARNEST J. SIMPSON, Gastonia, N. C. Filed Apr. 12, 1923. Serial No. 631,690. 4 Claims. (Cl. 98—21.)



3. A railroad car attachment comprising a casing of substantial triangular shape in plan embodying a pair of diverging side walls, attaching means carried by the side walls and the wings struck in from said side walls.

1,481,395. BRACKET. THOMAS FRANCIS TAYLOR, Wallingford, Conn., assignor, by mesne assignments, to H. L. Judd Company Inc., Dover, Del., a Corporation of Delaware. Filed Jan. 24, 1922. Serial No. 531,428. 1 Claim. (Cl. 156—22.)



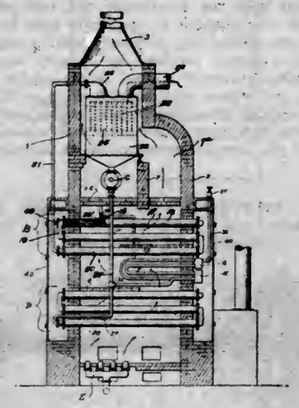
A bracket comprising a main supporting bar, a horizontal cross bar pivotally mounted intermediate its length thereon, and an upwardly projecting curtain rod engaging member at each end of said cross bar, said engaging members being in a plane transverse to the said supporting bar.

1,481,396. TYPEWRITER FASTENER. FRANK B. TERNES, San Francisco, Calif. Filed Nov. 14, 1921. Serial No. 514,970. 1 Claim. (Cl. 45—52.)

A device for detachably securing a typewriter to a support, comprising a headed stud adapted to be secured to the typewriter frame, a base plate, means for fixing the base plate to the support, a pair of spring arms on said base plate for resiliently engaging the head of said stud on opposite sides and a spring arm on said base plate for resiliently engaging the end of the head of said stud.

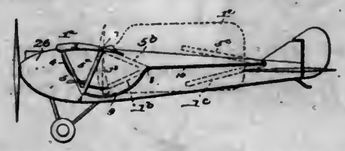
1,481,397. CHAIN TURBINE. ARMIN TETÉTLENI, Budapest, Hungary. Filed Sept. 30, 1921. Serial No. 504,459. 10 Claims. (Cl. 170—88.)

4. In a chain-turbine, an endless chain supported for movement in two reversely-moving parallel sections, spaced turbine-blades carried by said chain and forming two parallel rows, and casing plates disposed over the upper and lower edges of said blades, the upper and lower surfaces of the casing plates limiting the blades converging toward the interior of the chain-turbine, in such manner that the ratio of their broadest and smallest interspace is the same as the largest blade interspace to the smallest, in order that the first row of blades shall function as a reaction turbine and the other row as an action turbine.



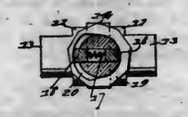
1,481,398. NAIL FOR WIRE LATH. THEODORE R. VINCENT, Oakland, Calif. Filed Aug. 1, 1922. Serial No. 578,914. 2 Claims. (Cl. 72—120.)

1. A fastener for wire lath comprising a nail having its shank formed with a helical convolution to cause the nail to turn when being driven into a wall, and a loop forming the head of the nail, said loop terminating with a projecting portion inclined downwardly and



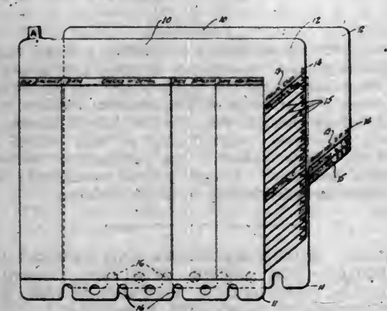
spaced laterally from the shank and adapted to be moved beneath a strand of wire to guide the same within the loop while the nail is being driven.

1,481,399. METHOD OF AND APPARATUS FOR TREATING CARBONACEOUS MATERIAL. LOUIS P. WEBERT, Annapolis, Md. Filed Feb. 18, 1920. Serial No. 359,527. 7 Claims. (Cl. 48—210.)



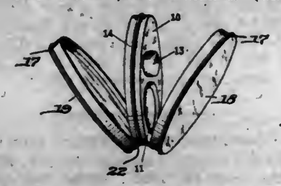
1. The method of treating comminuted carbonaceous material for destructive distillation thereof, consisting in passing such comminuted material in a carrying medium of superheated steam through a plurality of series of retorts containing spiral cores carrying a catalytic agent, each series of retorts being heated to a different temperature to affect changes in the gaseous medium surrounding such comminuted material.

1,481,400. FOLDING-WING MONOPLANE. LOWELL C. WEINBERG, Dayton, Ohio. Filed Nov. 17, 1921. Serial No. 515,792. 5 Claims. (Cl. 244—12.)



1. In an aircraft, hinged connections between the center section and the wings of said aircraft, said connections being adapted to enable the wings to be rotated from a substantially horizontal flying position to a vertical position and subsequently laterally swung rearwardly parallel with the fuselage of said aircraft to a folded position, sliding members on the inner end of the front spar of each of said wings, arcuate channeled guideways in said fuselage along which said sliding members are movable, and means operable by the pilot in the fuselage for shifting said wings from their normal operative position to their folded position and vice versa.

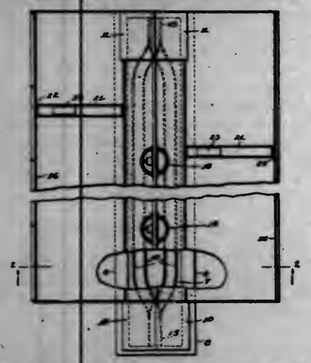
1,481,401. RAILROAD-TRACK WRENCH. LESTER M. WENTLING, Foxburg, Pa., assignor of one-half to Charles Goughler, Foxburg, Pa. Filed Sept. 19, 1922. Serial No. 589,285. 1 Claim. (Cl. 81—62.)



A wrench having its shank provided with a terminal yoke of which the arms are provided with registering bearings, a rotary head having oppositely directed barrels rotatably mounted in said bearings and provided in the space between the arms of the yoke with a ratchet ring, a double pawl mounted upon the shank and having jaws for respectively engaging the teeth of the ratchet ring for causing a step by step movement thereof in opposite directions, the said barrels being provided with terminal wrench seats, and means for selectively locking the jaws of said pawl in an inoperative position, said means consisting of a ring rotatably and longitudinally movable upon the shank and provided with an inwardly directed web for engagement with either one of the members of the pawl.

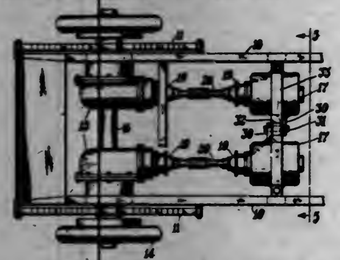
1,481,402. INDEX LEDGER OR BALANCE SHEETS. LEONARD P. WETZEL and ARTHUR F. SELIGMAN, Troy, Ill. Filed Feb. 20, 1922. Serial No. 537,933. 1 Claim. (Cl. 129—16.7.)

A series of balance or ledger sheets for use with bookkeeping machines, each sheet having a relatively wide laterally projecting index tab, the lower edge of each tab being sharply inclined laterally and toward the top of the sheet, the tab of any one sheet being longer than the tab of the next preceding sheet and underlying the tab of such preceding sheet throughout the length thereof, the upper edge of the tab being coincident with the upper edge of the sheet.



1,481,403. CONTAINER. RALPH W. WILSON, New York, N. Y., assignor to Theodore W. Foster & Bro. Co., Providence, R. I., a Corporation of Maine. Filed Aug. 12, 1922. Serial No. 581,335. 2 Claims. (Cl. 132—83.)

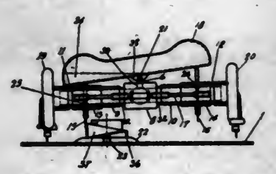
1. A vanity box comprising a container formed of a plate with an annular flange surrounding same, and two recesses in the plate on the side opposite the annular flange, and an annular protruding portion on the said



flange; a pair of covers hinged in spaced relation to each other and provided with flanges to telescope the wall formed by the flange on the container; a mirror on each of said covers; a quantity of powder in the container on the side opposite the recesses, a quantity of rouge in one of the recesses and a lip stick in the other recess; a pad intermediate each of the mirors and its respective rouge and powder compacts.

1,481,404. DOCK PIER CONSTRUCTION. GEORGE WRIGHT, East Orange, N. J. Filed Nov. 20, 1919. Serial No. 339,270. 2 Claims. (Cl. 214—16.)

1. A structure comprising a building, a tunnel extending longitudinally beneath the building, and having one end extending beyond the building and having its inner and outer ends provided with hatchways, conveyor means for receiving material through the outer hatchway and moving the same longitudinally in said tunnel, and overhead carrier means in the building for extracting material from said conveyor means through the inner hatchway and distributing it in the building.

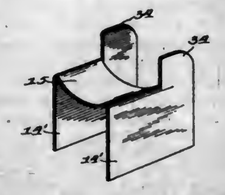


1,481,405. MOTOR MOUNTING AND DRIVING CONNECTION FOR MOTOR VEHICLES. JOSEPH A. ANGLADA, Jenkintown, Pa. Filed Mar. 16, 1922. Serial No. 544,350. 7 Claims. (Cl. 180—57.)

1. In a motor vehicle, a frame, a pair of drive wheels and wheel axles, and a pair of motors, flexibly connected to drive the wheel axles, each motor having its casing pivoted to the frame at one side of the casing and resiliently supported at its opposite side.

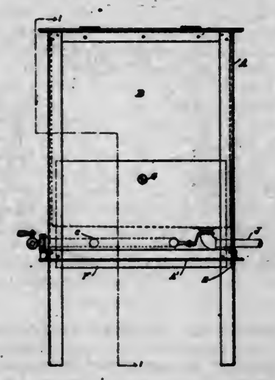
1,481,406. CONTINUOUS PLAYER FOR TALKING MACHINES. ADRIAN CLIFFORD BALSON, Philadelphia, Pa. Filed June 19, 1922. Serial No. 569,303. 18 Claims. (Cl. 274—15.)

1. In a continuous player device for a talking machine the combination of a disc record for a talking machine, a spiral governor placed in the center of the record, a bevelled surface on the spiral governor coming down flush with the record and merging into a cam, and provided with a guiding groove graduated to correspond with the lines on the face of a talking machine record, a tone arm of a talking machine, a tube pivoted at right angles to the tone arm of the talking machine horizontally above the record, an adjustment rod with two right hand and two left hand threads thereon, an oscillating mercury weight tube, two sound boxes



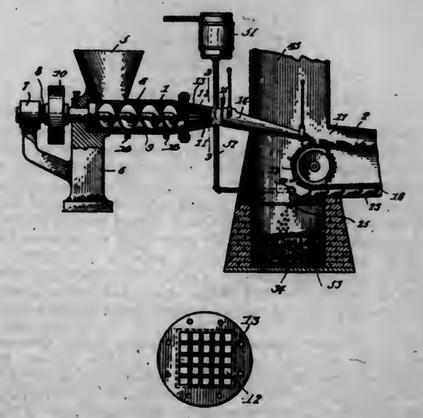
with needles, two sound box sleeves with lugs adapted to co-operate with the adjustment rod, two trigger pin sleeves with lugs adapted to co-operate with the adjustment rod, two alternating, vertically moving trigger pins adapted to co-operate between the mercury weight tube and the spiral governor, a steel spring seated on each trigger pin, two wheels with knurled edges on the adjustment rod, adapted to co-operate with the adjustment rod and with the lugs on the two sound box sleeves and on the trigger pin sleeves, substantially as described.

1,481,407. FILTERING DEVICE. ARCHIE E. BASS, Birmingham, Ala. Filed Feb. 3, 1922. Serial No. 533,967. 8 Claims. (Cl. 210—168.)



1. In a straining device for fluids, the combination with a conduit therefor, of a casing rotatably mounted on said conduit, independent straining or filtering means positioned within said casing, inlet and outlet ports to and from said filtering means carried by said casing, corresponding ports formed in that part of the conduit surrounded by said casing, said ports being located so that the necessary communication from said conduit through both filtering means, and back into the conduit, will be established only when said casing is in its horizontal position, and communication established through one of said filters only when the casing is in its vertical position.

1,481,408. METHOD OF MAKING PARTS OF BOILERS. ROBERT W. BIRCHFIELD, Tacoma, Wash. Filed Sept. 16, 1921. Serial No. 501,068. 8 Claims. (Cl. 29—157.4.)



1. The method of manufacturing a combined crown and side sheet for a boiler which consists in providing a suitable blank, cutting the blank inwardly at one end at the transverse center line for a portion only of the length of the blank, transversely cutting the blank at the inner end of the first-mentioned cut and ending at points between the sides of the blank, and bending the uncut residue of the blank to bring the sides into parallelism to form the side sheets and the intermediate portion to form the crown sheet.

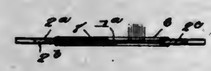
1,481,409. WASHING-MACHINE HEATER. JULIEN A. BRIED, Oakland, Calif., assignor of one-half to Samuel L. Rogers, San Francisco, Calif. Filed Sept. 19, 1921. Serial No. 501,850. 5 Claims. (Cl. 126—350.)

1. In a washing machine comprising a wash tank supported on a rectangular frame, a heating burner arranged under said tank, and heat guards arranged on three sides only of said frame with the fourth side left unguarded.

1,481,410. MACHINE FOR DRYING PEAT. JOSEPH ROCH BRIEN, Montreal, Quebec, Canada, assignor of one-half to Lydia Plamondon, née Hardy, Montreal, Canada. Filed Sept. 29, 1922. Serial No. 591,394. 4 Claims. (Cl. 44—28.)

1. In a machine for drying peat, a conveyor, a water heater disposed beneath said conveyor, a steam chest communicating with said heater, an air passage at the lower portion of said heater, and a steam supply pipe extending from the steam chest to the air pipe.

1,481,411. FUEL-CHARGE-TREATING DEVICE. VIOLA ROOT CAMERON, New York, N. Y. Filed Oct. 12, 1922. Serial No. 594,216. 4 Claims. (Cl. 48—180.)

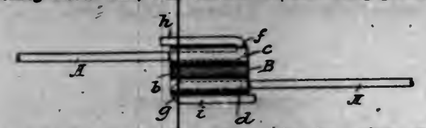


1. In a device of the character described, a plate member having an opening therethrough, a coiled spring cone having the base thereof positioned in said opening and freely vibratile from the base to and including the apex of the cone, and fastening means supported by said plate member and engaging the base portion of said cone on the side thereof opposite to the encircling wall of said opening and holding said cone in axial alignment with said opening.

1,481,412. FUEL-CHARGE-TREATING DEVICE. VIOLA ROOT CAMERON, New York, N. Y. Original application filed Oct. 12, 1922, Serial No. 594,216. Divided and this application filed Nov. 16, 1922. Serial No. 601,282. 5 Claims. (Cl. 48—180.)

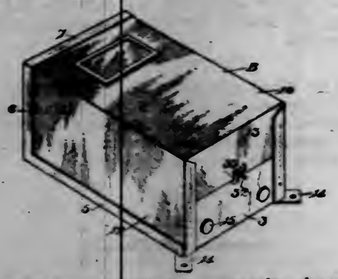
5. In a device of the character described, a gasket comprising opposite outer metal faces and an intermediate material therebetween and having an opening through the thickness of the gasket, a coiled spring having the largest coil thereof fitted concentric with the wall of said opening, and a plurality of eyelets each formed as an extension of one gasket face, each eyelet extending centrally, thence axially of said largest coil and thence recurved toward said opposite gasket face, said largest coil being threaded through said plurality of eyelets, and said spring being freely vibratile from the largest coil thereof to and including the opposite end of said spring.

1,481,413. FUEL-CHARGE-TREATING DEVICE. VIOLA ROOT CAMERON, New York, N. Y. Original application filed Oct. 12, 1922, Serial No. 594,216. Divided and this application filed Nov. 16, 1922. Serial No. 601,283. 4 Claims. (Cl. 48—180.)



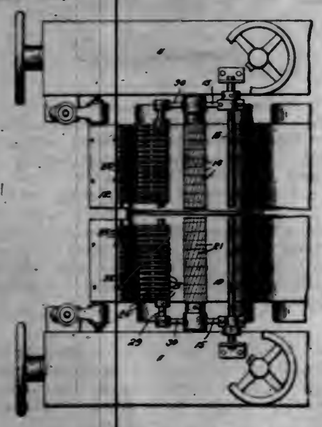
1. In a device of the character described, a gasket comprising opposite outer metal faces and an intermediate material therebetween and having an opening through the thickness of the gasket, said intermediate material being spaced back away from the side walls of said opening and providing an annular space between said outer metal faces, and a coiled spring having one coil thereof fitted in and held in said annular space between said opposite faces, said spring being freely vibratile from the supported portion thereof next adjacent the wall of said opening to and including the opposite end of said spring.

1,481,414. BINDER CONNECTION. SPENCER C. CARY, Brooklyn, N. Y., assignor to Cary Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 9, 1919. Serial No. 343,554. 9 Claims. (Cl. 24—23.)



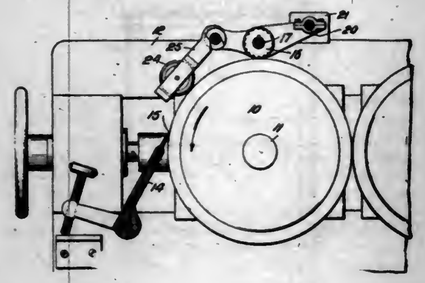
7. As a new article, a non-compressible binder seal composed of a single piece of metal bent to form a flat web and doubled to produce a plurality of tubular mem-

bers the openings in which are separated by an intervening metal wall, said tubular members being parallel



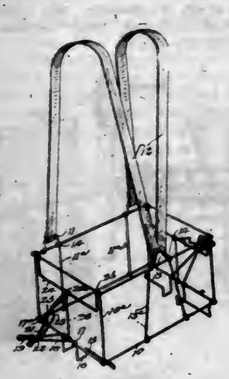
to each other and said members being in a plane substantially parallel to the flat web.

1,481,415. METER BOX. ALBERT CASPER, Vallejo, Calif. Filed Sept. 13, 1921. Serial No. 500,470. 3 Claims. (Cl. 220—4.)



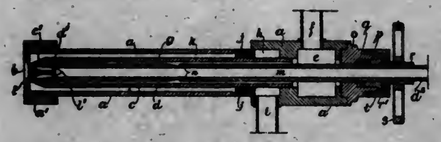
1. A meter box comprising a rectangular shaped box vertically divided to form separable front and rear sections, said front section comprising a front plate, integral side plates and a bottom flange, said rear section comprising a rear plate, a bottom plat and a cover plate, downwardly extending flanges on the front and sides of the cover plate adapted to overlap the front and side plates of the front section, two pairs of interspaced flanges on the rear plate forming channels for the reception of the front edges of the side plates of the front section, and means for locking the front section against vertical movement with relation to the rear section.

1,481,416. METHOD OF AND APPARATUS FOR CUTTING SOAP AND THE LIKE. JAMES R. COVE, Arlington Heights, Mass., assignor to Lever Brothers Company, Cambridge, Mass., a Corporation of Maine. Filed Oct. 30, 1922. Serial No. 597,711. 7 Claims. (Cl. 146—78.)



1. The method of producing flaked material which consists in feeding a relatively thin sheet of the material to be flaked in one direction, cutting said sheet in a transverse direction to the line of feed, said cutting operation terminating short of complete penetration, then cutting said sheet in a direction substantially parallel to the line of feed, said second named cutting operation terminating short of complete penetration, and finally separating the sheet into flakes along the line of the cuts.

1,481,417. APPARATUS FOR PRODUCING CURLED FLAKED SOAP. JAMES R. COVE, Arlington Heights, Mass., assignor to Lever Brothers Company, Cambridge, Mass., a Corporation of Maine. Filed Feb. 5, 1923. Serial No. 616,899. 3 Claims. (Cl. 146—78.)



1. An apparatus for producing curled soap flakes comprising a roll over which a sheet of soap is adapted to travel, means for making transverse and longitudinal cuts in the sheet of soap and a scraper for removing the cut flakes from the roll, the roll contacting end of said scraper being concaved to cause the soap flakes to curl or roll up.

1,481,418. SLING FOR CONTAINERS. ALONZO EVERETT DARBY, Lakeside, Wash. Filed Apr. 26, 1922. Serial No. 556,757. 3 Claims. (Cl. 224—5.)

1. A sling for containers including a body, elements swingingly mounted on the body at the bottom for movement beneath a container or laterally outward from the engaging position, a lever to actuate said retaining elements, and a link pivoted at its upper end on the body and having sliding and rocking engagement with said lever, said lever at its upper end and said link at the upper and lower ends of the slot having co-engaging members to automatically hold the lever in position with said engaging elements in either the inner or the outer position.

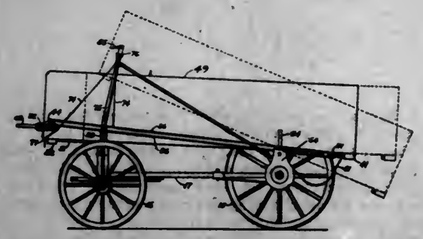
1,481,419. OIL-FUEL BURNER FOR USE IN FURNACES, BOILERS, AND THE LIKE. JOHN DAVIES, Darlington, England, assignor to The Davies Fuel Burners Limited, Stockton-on-Tees, Durham, England. Filed May 11, 1922. Serial No. 559,995. 2 Claims. (Cl. 158—74.)

1. Improved oil fuel burner for furnaces of various kinds utilising liquid fuel comprising a medial tubular casing with a nozzle projecting an annular jet of fuel, an inner tubular casing concentric thereto, a passage between said medial tubular casing and said inner tubular casing, an outer tubular casing concentric with the before-mentioned medial tubular casing and a passage between said outer tubular casing and said medial tubular casing and means for supplying compressed air to a passage between the said inner tubular casing and said medial tubular casing and means for ensuring that the air, steam in the passage betwen the medial tubular casing and the inner tubular casing issues at the nozzle in an annular jet at an angle inclined from the axis of the said tubular casing to meet the outer jet of air at an obtuse angle.

1,481,420. DECORATIVE ART. MARY BRENDA FRANCKLIN, Redwood City, Calif. Filed Mar. 30, 1921. Serial No. 456,948. 2 Claims. (Cl. 41—17.)

1. The herein described process of manufacturing decorative window screens having transparent and semi-transparent areas which consist in coating a coarse wire screen to protect the screen against rust without filling the interstices thereof and applying a semi-transparent masking agent consisting of a filler of glue and plaster Paris to predetermined areas of the screen to fill the interstices of said areas, painting the masked areas with semi-transparent oil colors to decorate the same and to render the masking agent water and damp proof, while preserving the semi-transparent character of the painted areas and then shellacing both sides of the screen without filling the interstices of the open portion of the screen.

1,481,421. AUTOMATIC CONTROLLING MECHANISM FOR FLOUR-PACKING MACHINES. HENRY O'B. HARDING, Minneapolis, Minn., assignor to Washburn-Crosby Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 1, 1920. Serial No. 385,567. 7 Claims. (Cl. 226—25.)

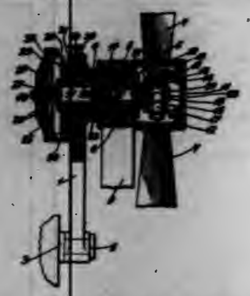


1. In a machine of the class described, the combination with means for feeding the material to be packed, of a support for the bag to be filled, driving means for said feeding means, a shifting lever operatively connected to said driving means and with which said bag support contacts to initiate movement of the feeding means, means for engaging said shifting lever for locking the driving means in driving relation to the feeding means, and means for releasing said engaging means when the bag has been filled and to release said driving means from driving relation with said feeding means.

1,481,422. ELECTRIC DISCHARGE TUBE. GILLES HOLST, EKKO OOSTERHUIS, and JOHANNES BRUINES, Eindhoven, Netherlands, assignors to Naamlooze Vennootschap Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed June 1, 1922. Serial No. 565,230. 2 Claims. (Cl. 250—27.)

1. A gas-filled electric discharge tube with independent discharge in which the gas-filling consists of a principal volume of one rare gas and an added small quantity of another rare gas the ionization potential of which is lower than the potential at which the first inelastic collision in the first mentioned gas occurs.

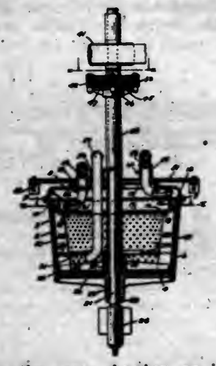
1,481,423. POWER TRANSMISSION FOR VEHICLES. ALPHONSE W. HUNZ, Cornell, Wis. Filed July 25, 1921. Serial No. 487,339. 11 Claims. (Cl. 298—14.)



1. In a power transmission for vehicles, the combination of an endless flexible transmission member movably mounted on the vehicle, a clutch movable into and out of engagement with a wheel of said vehicle, said clutch being adapted to drive said member when in engagement with said wheel, and said member used as means to engage and disengage the clutch whereby upon movement of the vehicle and engagement of the clutch, said transmission member is rotated.

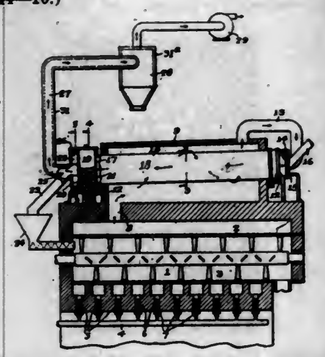
1,481,424. WIRE STRETCHER. ALLEN J. KING, Grand Saline, Tex. Filed June 24, 1922. Serial No. 570,578. 1 Claim. (Cl. 254—65.)

A wire stretcher of the character described comprising a casing having one end opened and its opposite end provided with an interiorly threaded centrally disposed opening, a partition longitudinally arranged adjacent one side wall of the casing and dividing the casing into a spool and gear compartment respectively, a shaft passing through the partition having its ends journalled from the side walls of the casing, a spool disposed in the spool compartment and carried by the shaft, a stub shaft passing through one side wall of the casing and having bearings in the partition and side wall respectively, a pair of intermeshing gears carried by the respective shafts, means for rotating the stub shaft, means for preventing retrograde rotation thereof, a tube threadedly secured in the threaded opening of the casing, collars surrounding the tube adjacent its respective ends, a supporting element having an elongated hooked upper end and parallel depending portions received by the respective collars, apertured extensions projecting from the side walls of the opened end of the casing, a bracket a pulley supported by the bracket, a wire clamp having a pulley secured thereto and a flexible element trained over the pulleys and fixed to one pulley and the spool respectively as and for the purpose specified.



1,481,425. COMBINED FAN AND AIR-PUMP MECHANISM. RAYMOND H. KIRSCH, St. Louis, Mo., assignor to Hexagon Specialty Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 5, 1922. Serial No. 579,933. 16 Claims. (Cl. 230—1.)

7. Mechanism of the character described comprising a support, a sleeve carried by said support, a rotary fan carried by said sleeve, means for rotating said fan, a pump, a support for said pump extending through said sleeve, operating mechanism for said pump extending through the sleeve for operation by the fan, gearing for operating said operating mechanism, and means carried by said support for moving said operating mechanism and said gearing to and from position to be operated by the fan.

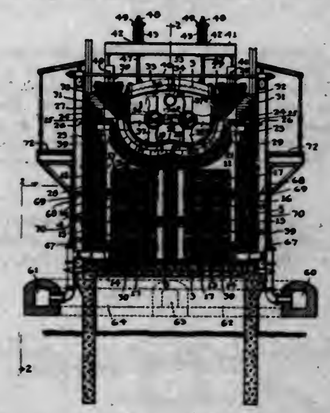


1,481,426. CENTRIFUGAL SEPARATOR. FRED WILLIAM MCENTIRE, Spreckels, Calif. Filed Mar. 16, 1921. Serial No. 452,673. 4 Claims. (Cl. 233—2.)

1. A centrifugal separator comprising an outer and an inner basket, the latter having a perforated wall, means for rotating said two baskets on the same axis at different speeds, an upper and a lower receiving chamber fixed to the top of the outer basket, ports leading from the inner basket to the lower chamber and from the

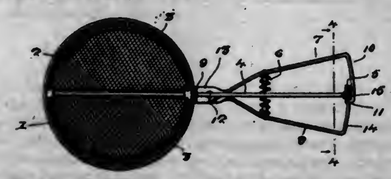
outer basket to the upper chamber, an inlet leading to the bottom of the inner basket, and a stationary discharge pipe for each chamber adapted to receive the content of said chamber.

1,481,427. TREATING OF COAL AND MANUFACTURE OF BRIQUETTES. CHARLES V. MCINTIRE, East Orange, N. J., assignor to International Coal Products Corporation, Bristol, Va., a Corporation of Virginia. Filed Aug. 9, 1920. Serial No. 402,168. 17 Claims. (Cl. 44—10.)



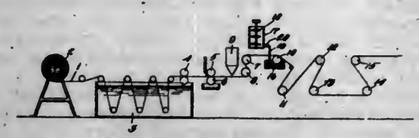
1. In the handling and treating of coal the method involving passing coal through apparatus comprising a dryer and a ball mill arranged in a manner to dry the coal and to thereafter subject the dry coal to the disintegrating or crushing action of the ball mill; during the drying and crushing passing a stream of hot products of combustion through the dryer and ball mill in direct contact with the coal in each and by said stream picking up the dust particles and conveying them from the dryer and ball mill; conducting said dust-laden products of combustion to a dust-separating means where the coal dust is collected, and separately collecting the pieces of coal or heavier particles as they are delivered from the ball mill.

1,481,428. FURNACE RETORT. CHARLES V. MCINTIRE, East Orange, N. J., assignor to International Coal Products Corporation, Richmond, Va., a Corporation of Virginia. Filed Jan. 26, 1921. Serial No. 439,925. 20 Claims. (Cl. 202—9.)



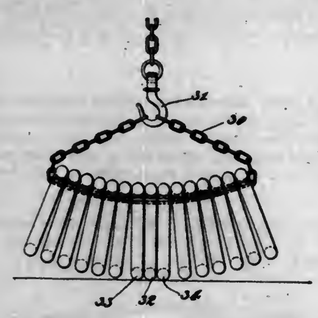
1. A furnace-retort wherein coal or the like is carbonized, the retort chamber of which is provided in a longitudinally extending portion which in cross-section is in

the form of a modified B so positioned that the curved portions of the B are at the bottom and so that the back line of the B extends substantially horizontally, the lower curved portions of the B providing the portion of the retort shell through which heat is conducted from combustion flues of the furnace to the material being treated within the retort chamber, said retort having means for feeding the material thereinto at one end, having parallel shafts with paddles thereupon for agitating and mixing material within the retort and for conveying material along the shell of the retort from the charging end to the opposite or discharging end, having means whereby the residue resulting from a carbonizing operation within the retort is conveyed from the discharging end of the retort, and having means for conducting away the gases and vapors given off during the carbonizing



operation, the furnace-retort construction being characterized by having a relatively permanent masonry structure that provides longitudinally and inwardly extending overhangs that constitute the uppermost portions of the side walls of the retort, and by having the bottom and lowermost side portions of the retort defined by a shell portion composed of readily assembled-in-place and readily removable carborundum tiles, which carborundum tiles define a portion of the combustion flues of the furnace and through which heat is conducted from the combustion flues to the material within the retort, the furnace-retort also being characterized by having a roof of composite metallic masonry structure and formed in sections spanning the space from one side wall of the retort to the other side wall and constructed so that the sections can be readily removed and replaced without disturbing the permanent masonry structure.

1,481,429. FLOUR SIFTER. HARRY NAKAGAWA, Tanana, Alaska. Filed Mar. 26, 1923. Serial No. 627,868. 2 Claims. (Cl. 83—60.)

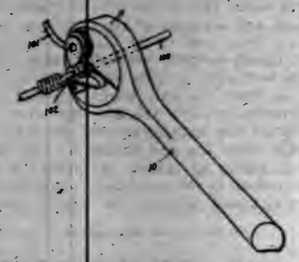


1. A flour sifter comprising a cylindrical body, a concavo-convex screen carried in said body, a handle member having an upright arm at its inner end fixed to the said body and also having at its outer end an inwardly directed lateral arm on the upper edge of which is an inwardly extending guide lug, a shaft journaled in the body and in the said arms of the fixed handle member, an agitator mounted on and arranged to turn with the shaft and also arranged to turn in the body and in close proximity to the upper side of the screen, a spur gear fixed on said shaft and arranged at the inner side of and adjacent to the outer arm of the fixed handle member, an oscillatory handle member pivotally connected to the fixed handle member at a point adjacent to the body and having at its outer end an inwardly directed rack bearing arm intermeshed with the said spur gear, said arm being interposed and movable between the said spur gear and the said guide lug and having a projection at its inner end to spring up against the guide lug and limit outward movement of the oscillatory handle member, and a spring maintained between the handle members.

1,481,430. MANUFACTURE OF ASPHALT ROOFING. FREDERICK C. OVERBURY, Hillsdale, N. J., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 24, 1919. Serial No. 340,128. 1 Claim. (Cl. 91—68.)

In the manufacturing of prepared asphalt roofing, impregnating felt with a molten asphaltic compound, then applying to the saturated sheet an inert insoluble powdered mineral of the character of talc or slate, suspended in water, and then permitting the evaporation of the water leaving the powdered material on the surface of the sheet.

1,481,431. CONVEYING METHOD AND APPARATUS. RALPH PLUMB, Buffalo, N. Y. Filed Nov. 17, 1920. Serial No. 424,627. 6 Claims. (Cl. 214—152.)



1. The method of depositing a plurality of identical relatively heavy units into substantially upright position upon a horizontal flat surface and in alignment and in contact with each other, which consists in depositing one or more of said units, moving said units successively in pairs toward and into contact with opposite ends of the units between them, each unit being urged against the group with the same force as the unit moving concurrently therewith.

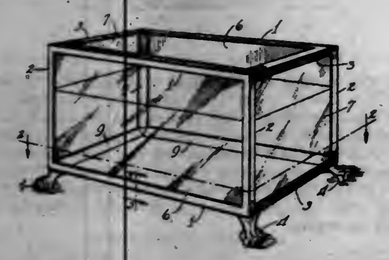
1,481,432. WIRE-SPLICING TOOL. BERT O. REPASS, Carmel, Ind. Filed Feb. 12, 1923. Serial No. 618,638. 5 Claims. (Cl. 140—119.)

1. A device of the character described comprising a wire mount including a handle portion, an arm pivotally

and eccentrically mounted upon the wire mount and having its free end toothed, and a pawl engaging said toothed

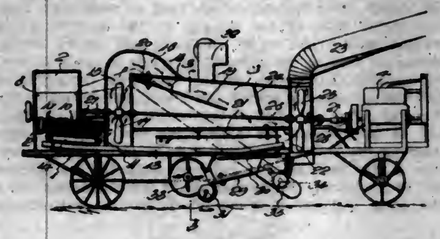
surface of said arm and adapted to maintain the arm in the adjusted and tilted position, substantially as described.

1,481,433. METHOD FOR FINISHING PAINTED SURFACES. FRANK KIESSINGER, Dayton, Ohio. Filed Apr. 9, 1923. Serial No. 630,971. 1 Claim. (Cl. 91—67.9.)



The herein described method of finishing painted surfaces, consisting in applying a body coat of paint on a surface to be finished, in applying a finishing coat of paint on said body coat, in working a fabric by progressive operations over said entire surface before the finishing coat of paint is dry, to produce thereon impressions showing the texture and configuration of the fabric.

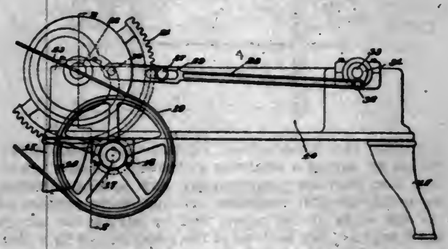
1,481,434. DIE AND HEAD FOR FOLDING MACHINES. EDWARD B. ROBY, Troy, N. Y., assignor to Stanley M. Stone, Cohoes, N. Y. Filed June 21, 1918, Serial No. 241,124. Renewed June 29, 1922. Serial No. 571,793. 14 Claims. (Cl. 223—55.)



1. In a head and die for folding machines, the combination, with a grooved head, and slidably adjustable and detachable tongues within said head, of removable die sections engaging said tongues, and a bow-spring for detachably fastening said die-sections to said tongues.

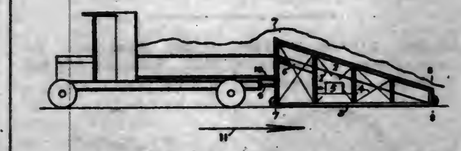
1,481,435. AQUARIUM. WILLIAM ROSSBERGER, Wilmette, Ill. Filed Apr. 26, 1923. Serial No. 634,836. 4 Claims. (Cl. 119—5.)

1. In an aquarium construction, a glass bottom plate, glass side and end plates resting on said bottom plate, a plastic covering for the joints at the contiguous edges of said plates, and means for protecting the plastic covering from drying out.



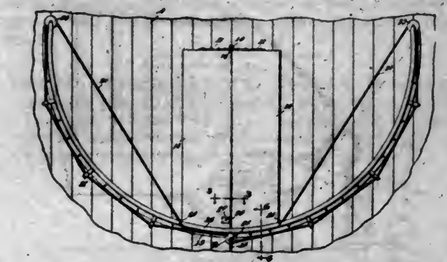
1,481,436. THRASHING MACHINE. EARL F. RUSSELL, Bird City, Kans., and RAYMOND B. LAMME, Ulysses, Nebr. Filed Aug. 28, 1922. Serial No. 584,771. 4 Claims. (Cl. 130—27.)

1. A thrashing machine comprising a chamber and means therein for thrashing grain from straw, a wall of open-work form in said chamber through which the grain is thrown by the thrashing means and by which the straw is checked, receiving means for the grain, and means between the thrashing means and wall for carrying the checked straw from the chamber



---

1,481,437. BROACHING. GEORGE J. RUSSELL, Lowell, Mass. Filed July 16, 1921. Serial No. 485,363. 48 Claims. (Cl. 90—33.)



39. In a broaching machine, a broach constructed and arranged to be supported upon the stock operated on, and means for removing chips from the teeth of the broaching tool.

1,481,438. TRUCK SNOW-LOADING DEVICE. ANTHONY F. A. SCHMITT, New York, N. Y. Filed Mar. 5, 1921. Serial No. 450,046. 2 Claims. (Cl. 37—41.)

1. A snow loading unit adapted to be pushed as a pilot unit before a truck to be loaded, said unit having an inclined bottom along which the snow may rise and pass to the truck; together with means on the pilot unit to receive the impact of and maintain contact with a truck frame, whereby to permit a truck to be run against the pilot unit for pushing the latter and then backed away from said unit, and a rearwardly projecting element additional to said impact means and disposed on said element at the back thereof in a position to enter beneath the pushing truck frame to prevent vertical tilting of said pilot unit.

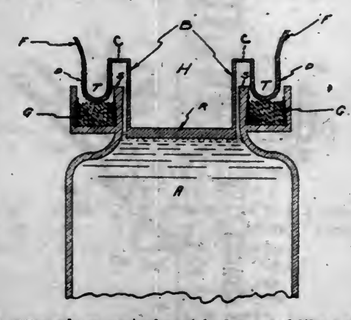
1,481,439. CAR DOOR. NATHAN N. SELLERS, Guthrie, Okla. Filed Apr. 14, 1922. Serial No. 552,821. 4 Claims. (Cl. 20—29.)

1. A door structure comprising a pair of similar door members hingedly mounted at their inner upper corners above the door opening, a curved guide member of angular formation confining the lower ends of the doors and serving as a guide therefor during their movement, and means for swinging both door members upwardly and outwardly simultaneously.

1,481,440. TIRE TREAD. ANTONY SILVENE, Victoria, British Columbia, Canada. Filed Dec. 23, 1922. Serial No. 608,644. 2 Claims. (Cl. 152—14.)

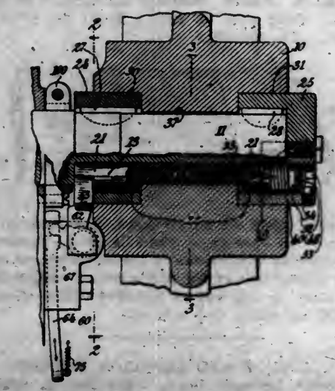
1. A tire tread comprising a casing segment adapted to fit the tire and having a recessed portion facing the tire along the tread, the recessed portion having apertures across the tread which are alternately oppositely angled, separate road engaging members flanged to fit the recess of the casing segment and provide a practically continuous contact around the tire, each member having a projection which passes through an aperture in the recessed portion of the casing segment.

1,481,441. PRINTER'S MATERIAL AND MEANS FOR PRODUCING SAME. ASHTON G. STEVENSON, Chicago, Ill. Filed Jan. 20, 1921. Serial No. 438,769. 6 Claims. (Cl. 199—57.)



1. The improvements herein described comprising a mold adapted to cast low spacing printers' material in combination with mold edge defining means adapted to be secured to the face of the mold and to project forward therefrom for contact with the so-called linotype matrices in their ordinary casting positions relatively to a standard thickness mold, and for the production of printing slugs having overhanging printing faces and a liner adapted to be reversibly arranged to produce overhanging faces of different widths.

1,481,442. TYPE-SLUG-CASTING MACHINE AND PRODUCTS. ASHTON G. STEVENSON, Chicago, Ill. Filed Feb. 10, 1921. Serial No. 443,864. 5 Claims. (Cl. 101—398.)

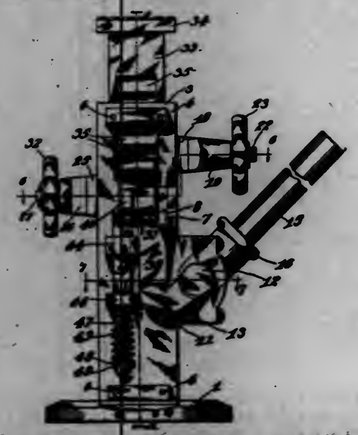


1. The herein described printing slug having a narrow body and an upper printing part extending on one side thereof in combination with a supporting slug adapted to receive the overhanging part of the printing slug and of such relative height that the lower edge of the printing slug is maintaining above the lower surface of the supporting slug.

1,481,443. SEAL-TIGHT PRESERVING JAR. HARRY STONE, Weymouth, Mass. Filed Mar. 16, 1922. Serial No. 544,380. 4 Claims. (Cl. 215—80.)

1. A cover whose central part is depressed like a shallow cup that goes into the mouth of a container and is floating and sinkable, a trough on the lower side of its outer part, that trough going into a groove filled with wax around the outer side of the mouth of the said container forming a seal tight closure therewith.

1,481,444. CLUTCH. ROBERT W. STOUT, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Nov. 2, 1921. Serial No. 512,214. 11 Claims. (Cl. 192—29.)



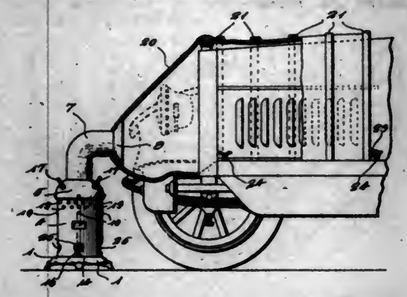
3. A clutch comprising a driving and a driven part, one of said parts having a clutch-key for engaging the other part to effect driving thereof, and means for operating said clutch-key comprising a pawl, said key having a shoulder

adapted to be struck by said pawl to move said key out of clutching engagement, and a portion on said key immediately beyond said shoulder concentric with said driven part when pressed back by said pawl against which said pawl is adapted to press to hold said key precisely out of engaging position.

9. A clutch comprising a driving and a driven part, one of said parts having a clutch-key for engaging the other part to effect driving thereof, said clutch-key being oscillatory on an axis longitudinally thereof and having spaced bearing portions and an engaging portion between said bearing portions, and a spring for turning said clutch-key on its axis, said spring being coaxial with said key beyond said bearing portions.

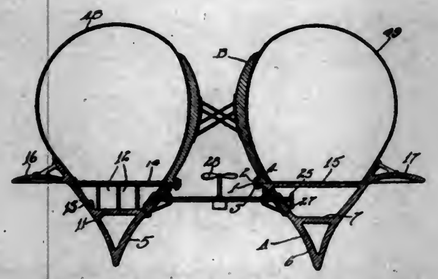
1,481,445. LIFTING JACK. ALFRED SWANSON, Billings, Mont. Filed Jan. 29, 1923. Serial No. 615,675. 15 Claims. (Cl. 254—109.)

1. A lifting jack comprising a base, a standard on said base, a lifting post in said standard, means cooperable with two faces of said lifting post for elevating the same, a main pawl for engaging another face to retain the lifting post as it is operated step by step, and an independent auxiliary member for engaging the fourth face of the lifting post.



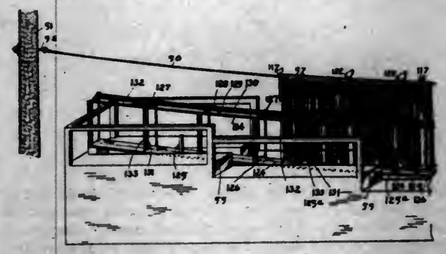
1,481,446. WINDPROOF SHIELD FOR MATCH BOXES. CHARLES R. WELCH, Schofield Barracks, Territory of Hawaii. Filed Apr. 10, 1923. Serial No. 631,198. 7 Claims. (Cl. 206—31.)

1. A wind shield for match boxes, comprising a casing for the box, an opening on the side of the shield to expose the igniting composition of the match box, a lighting aperture on one face of the shield, and a resiliently supported opener in one end of the shield, said opener provided with shoulders and a tongue.



1,481,447. ENGINE AND RADIATOR WARMER. JOHN R. WESTON, Dubuque, Iowa. Filed Dec. 30, 1922. Serial No. 609,849. 4 Claims. (Cl. 126—96.)

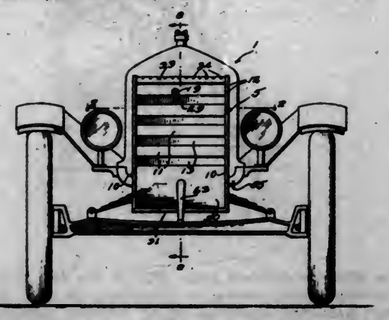
1. An automobile engine and radiator heating device including a flexible cover adapted to extend over the automobile radiator and engine hood, the front portion of the cover extending in advance of the radiator and being constructed to form a hot air intake, and a plurality of



arched supports secured to the cover at spaced points and adapted to straddle said hood to space the cover therefrom to permit circulation of the hot air therebetween.

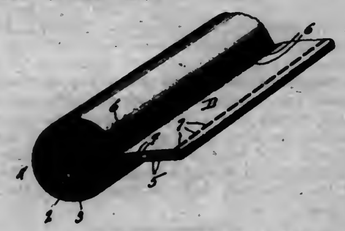
1,481,448. AIRCRAFT. JAMES WHALEN, Chicago, Ill. Filed Nov. 16, 1922. Serial No. 601,310. 6 Claims. (Cl. 244—7.)

1. An aircraft comprising a frame having an under-structure and a super-structure removably secured to each other, said under-structure being composed of two keels disposed parallel with respect to each other and said super-structure having two gas bags, the bags combining to form a common bull nose at the front of the device and combining to form a common tail at the other end of the device.



1,481,449. APPARATUS FOR INDICATING AND EXPEDITING WORK. SCHUYLER S. WHEELER, Bernardsville, N. J., assignor to Crocker-Wheeler Company, Ampere, N. J., a Corporation of New Jersey. Filed Oct. 21, 1920. Serial No. 418,602. 25 Claims. (Cl. 40—2.)

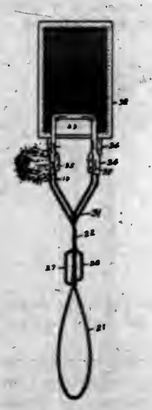
1. Apparatus for indicating and expediting work, comprising a suspension line, a number of strings or appendages representing different subject matters, and which are assembled on and detachably engaged with the said line, each string being built up of a number of indicators detachably connected together successively, and a passage



for attendants at each side of the line of suspended strings or appendages, whereby the strings of indicators are rendered readable and accessible at one or both sides of the line, depending upon whether the indicators of any given string face away from one side or the other of the line.

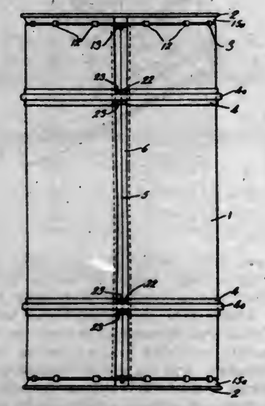
1,481,450. HEATING DEVICE. ROBERT W. WIEDERWAX, Atlantic City, N. J., assignor to Geist Manufacturing Company, Atlantic City, N. J., a Corporation of Delaware. Filed Jan. 28, 1922. Serial No. 532,508. 7 Claims. (Cl. 263—5.1.)

1. A heater for automotive radiators comprising a casing adapted to be secured to the front of the radiator, said casing being provided with a horizontal air chamber, a burner arranged in the lower portion of said casing, means for delivering air from said horizontal air chamber to said burner, means for conveying the products of combustion from said burner, and a horizontal passage adapted to receive the products of combustion, said passage being aranged adjacent said horizontal air chamber.



1,481,451. GASKET. EDWARD J. WIEPS, Webster Groves, Mo. Filed Nov. 28, 1921. Serial No. 518,221. 3 Claims. (Cl. 20—69.)

1. As a new article of manufacture, a gasket comprising an elongated body of yielding packing, a strip of flexible, pliable material having a tubular enclosing portion surrounding said packing and attaching portions extending from one side of said packing to form an attaching flange, stitches passing through and uniting said attaching portions at the junction of said tubular enclosing portion and the attaching portions so as to close said tubular portion and confine the packing therein, and stitches passing through and uniting said attaching portions at the outer edge of said attaching flange, one of said attaching portions having a marginal extension folded backwardly to form a folded outer edge for said attaching flange, and the last mentioned stitches being passed through said marginal extension.

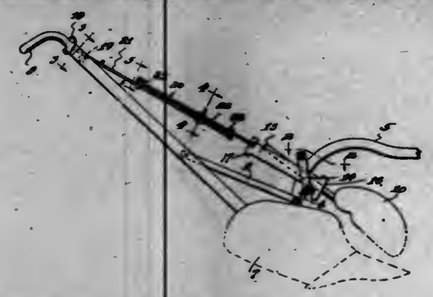


1,481,452. FLY SWITCH. LOUIS H. WOODCOCK, Colville, Wash. Filed Apr. 16, 1923. Serial No. 632,523. 1 Claim. (Cl. 43—137.)

A fly-switch holder comprising a pair of wire clamps, the two being hinged together in such a fashion as to form a pair of loops at one end, the outer end of one of said loops being provided with inwardly extending pins and the outer end of the other of said loops being provided with a plate extending across such loop directly opposite said pins, between which pins and plate

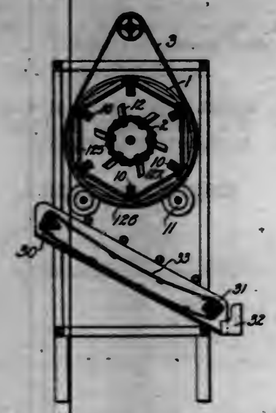
the switch is to be held and the other end of said clamps formed into a handle and means at the handle end for interlocking the two parts together to hold said switch firmly in place between said loops.

1,481,453. METAL KEG. RALPH E. BLACKFORD, Middletown, Ohio. Filed Sept. 20, 1922. Serial No. 589,291. 10 Claims. (Cl. 220—55.)



1. In metal kegs, including in combination with the body and heads of the keg, a plurality of channels extended parallel one with another longitudinally of said body and open outwardly to the periphery thereof, and an intermediate band having a series of lugs assembled thereon and adapted to register with and to effect interlocking relations with said channels as said ring is brought to position on said body.

1,481,454. WEED AND STUBBLE CLEARER FOR PLOWS. MICHAEL BRABAW, Pearl Beach, Mich. Filed Mar. 9, 1922. Serial No. 542,202. 2 Claims. (Cl. 97—194.)

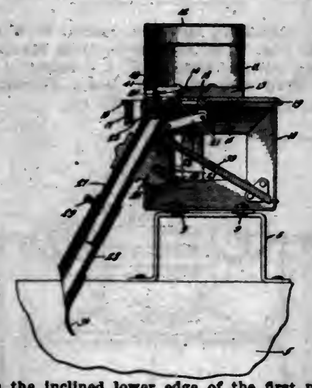


1. A weed and stubble clearer for plows comprising a colter, a blade portion arranged adjacent the colter, a handle portion and adjustable intermediate members

whereby the handle may be positioned adjacent the plow handles, a clamp for securing the intermediate members in any adjusted position, a bracket for retaining the

blade portion upon the plow beam, and stop members at either end of the blade portion to limit the thrust thereof.

1,481,455. GREEN-PEA VINER. WILLIAM F. CHRISTEL, Valders, Wis., assignor to Chisholm-Scott Company, Columbus, Ohio. Filed Oct. 20, 1923. Serial No. 669,754. 1 Claim. (Cl. 130—30.)



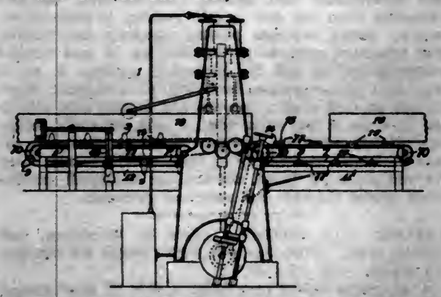
A green pea viner comprising an outer, open-ended, slowly rotating cylinder having elevating devices on its inner periphery and covered by perforated screens, the size of the perforations at the feed end being smaller than the normal size of perforations for the rest of the screen; a rapidly revolving beater-carrying drum within the outer cylinder; and an apron extending from feed to the discharge end of the cylinder for separating the hulled peas from the refuse, substantially as described.

1,481,456. COAL-SAVING COMPOSITION. OVID OBLINGTON COOPER, Chicago, Ill. Filed Jan. 9, 1922. Serial No. 528,062. 2 Claims. (Cl. 44—4.)

1. A fuel saving composition consisting of a mixture of sand, fine coal, ashes, salt, and water sufficient to make mortar-like mass.

1,481,457. REPLANTER. ROBERT W. CROSSMAN and LOUIS MASCHEK, Texola, Okla., assignors, by direct and mesne assignments, to Visible Manufacturing Co., Texola, Okla. Filed Sept. 7, 1921. Serial No. 498,967. 1 Claim. (Cl. 111—93.)

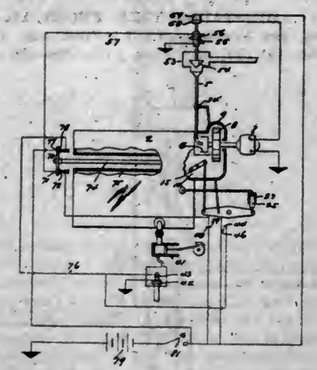
A planter including runners, a grain box supported above the runners and having an outlet opening, an auxiliary bottom spaced from the bottom of the grain box, a slide having an opening adapted to register with the opening of the grain box, said auxiliary bottom having one end thereof extending beyond the wall of the grain box, and supplied with a discharge spout, said discharge spout having an inclined lower edge, a pivoted discharge pipe having an inclined upper edge cooperat-



ing with the inclined lower edge of the first mentioned discharge spout, means for connecting the slide and second mentioned discharge spout whereby movement of the discharge spout results in a relative movement of the slide to cause the slide to pick up seed and deposit the same in the discharge spouts, and means for moving the last mentioned discharge spout.

1,481,458. DETACHABLE PLOWPOINT. ERNEST E. CULLEN, New Baltimore, Mich., assignor of one-half to Charles H. Murdick, New Baltimore, Mich. Filed Jan. 9, 1922. Serial No. 528,067. 2 Claims. (Cl. 97—125.)

1. A detachable plow point having a point portion of solid metal and a hollow body portion arranged with a horizontal bottom and a vertical side wall, and means for securing the plow point on the plowshare with the vertical side wall engaging the landside of the plowshare, comprising a wedge adapted to engage the landside of the plowshare and the horizontal bottom wall of the point.

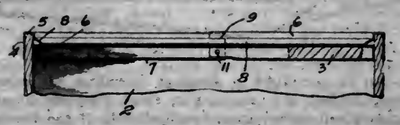


1,481,459. GANG-SAW MILL. GEORGE A. DICKIE, Seattle, Wash. Filed Jan. 24, 1921. Serial No. 439,464. 3 Claims. (Cl. 143—105.)

1. In a gang saw mill, a device for supporting the sawed end of the log and conveying away the sawed lumber, comprising a trackway, and endless chain ex-

tending lengthwise of the trackway, a series of trucks secured to said chain at intervals and each comprising an axle, wheels upon the axle and engaging the trackway and a bolster, and a pair of plates secured to the bolster and adapted to enter saw kerfs in the log.

1,481,460. STEAM-POWER-PLANT CONTROL. JESSE W. DOBLE, San Francisco, Calif., assignor to Doble Laboratories, San Francisco, Calif., a Corporation of California. Filed Dec. 13, 1919. Serial No. 344,741. 14 Claims. (Cl. 158—45.5.)

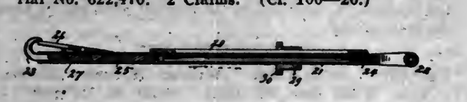


1. In a control system for a steam power plant, a liquid fuel burner for affecting a heat absorbing medium in which the pressure may be made to vary by an application of heat, a valve for varying the amount of air supplied to the burner, a valve for varying the supply of fuel to the burner, means responsive to the pressure of the heat absorbing medium for mechanically operating the air valve, and means responsive to the movement of the air valve for operating the fuel valve.

1,481,461. PHONOGRAM BLANK. VICTOR H. EMMASON, New York, N. Y., assignor, by mesne assignments, to Metal Recording Disc Company, Inc., a Corporation of New York. Filed Oct. 16, 1919. Serial No. 331,147. 4 Claims. (Cl. 274—42.)

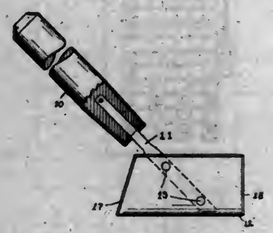
1. A blank for original round records having a non-undulatory groove with similar upturned edges at its sides.

1,481,462. BARREL CONSTRUCTION. STANTON W. FORSMAN, Los Angeles, Calif., assignor to The Paraffine Companies, Inc., a Corporation of Delaware. Filed Aug. 18, 1921. Serial No. 493,269. 2 Claims. (Cl. 217—89.)



1. A split croze ring of channel form in cross section to fit down over the end of a barrel and having inwardly extending spaced shoulders to receive a head, the ends of the ring being telescopic, and one end being slotted to receive a part of the other end.

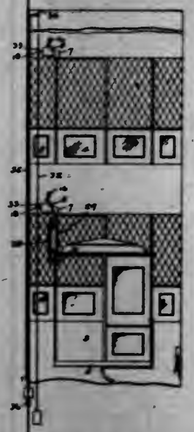
1,481,463. CENTERING AND SECURING MEANS FOR ELECTRIC CANDLES. WILFRED B. GODDARD, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed May 4, 1921. Serial No. 466,694. 1 Claim. (Cl. 240—52.)



In an electric candle fixture, a support having a bottom, a wall surrounding the bottom and projecting above the plane thereof, and a plurality of rigid, pliable pegs of decreasing diameter upwardly, projecting upwardly from the bottom and arranged in a circle, said pegs being adapted to fit within and engage the inside cylindrical surface of a candle simulating member.

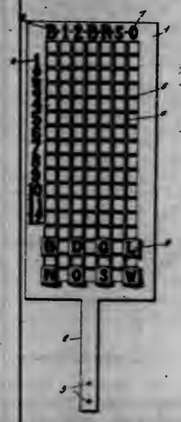
1,481,464. MEANS FOR TYING BUNDLES. ANDREW W. GROW, Indianapolis, Ind. Filed Mar. 3, 1923. Serial No. 622,470. 2 Claims. (Cl. 100—20.)

1. A hand tool for tying bundles comprising a body portion, a handle at one end of the body and a hook at the other, and a movable member sliding longitudinally of the body.



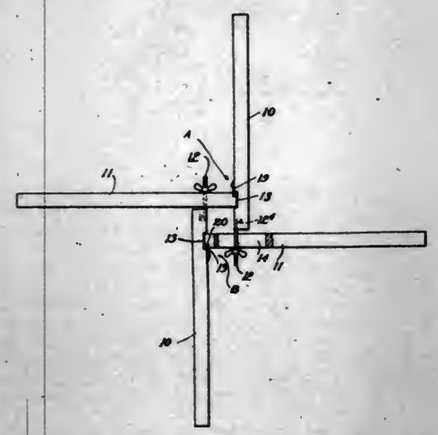
1,481,465. LAWN TRIMMER. MINER G. HALVERSON, Whitewater, Wis. Filed Jan. 20, 1922. Serial No. 530,610. 1 Claim. (Cl. 97—227.)

In a lawn trimming tool a handle, a shank projecting therefrom and a trimming member formed in one piece rigidly secured to said shank, said trimming member being formed with a substantially horizontal guiding portion, an angularly disposed cutting portion and an intermediate portion disposed substantially at right angles to said guiding portion, said cutting portion being provided with forward and rear sharpened cutting edges, the rear



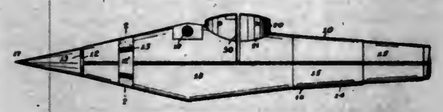
one of said edges being angularly disposed to permit a draw cut, said shank extending obliquely across the entire width of said intermediate portion for reinforcing said trimming member.

1,481,466. ELEVATOR-DOOR-CONTROL SYSTEM. WILLIAM H. HARTMAN, Los Angeles, Calif., assignor to Randall Control and Hydrometric Corporation, Los Angeles, Calif., a Corporation of California. Filed Dec. 2, 1920. Serial No. 427,669. 8 Claims. (Cl. 187—31.)



5. In an elevator system having a car, a plurality of landings, and doors for the landings, locks for the doors, a member arranged to keep the locks in closed position, means responsive to the arrival of a car at a selected position for rendering said means inoperative, and means for preventing the movement of the car responsive to the inoperative condition of the member arranged to keep the locks closed.

1,481,467. INDICATOR. WALTER HOCKIN, Jackson, Mich. Filed Mar. 26, 1923. Serial No. 627,906. 1 Claim. (Cl. 116—114.)

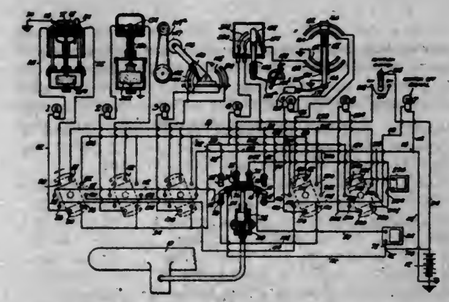


An indicator comprising a substantially rectangular base having the intermediate portion thereof divided into transverse and longitudinally disposed rows of squared openings by transversely and longitudinally arranged bars, the transverse rows of squared openings being individually designated by a group of symbols indicative of the consecutive hours and the longitudinally disposed row of squared openings being individually designated by a group of symbols indicative of the various steps of a laundering process and indicating pieces comprising metal bodies having substantially right angularly formed fingers arranged upon their upper ends and substantially right angularly and outwardly disposed extensions formed upon their lower ends adapted to be interchangeably engaged with said transversely and longitudinally disposed rows of squared openings, as and for the purpose set forth.

1,481,468. ADJUSTABLE TREE PEDESTAL. FRANS E. JUTH, San Francisco, Calif. Filed Aug. 10, 1921. Serial No. 491,180. 4 Claims. (Cl. 248—38.)

1. A tree pedestal comprising pairs of supporting members, the members of each pair being arranged at right angles to each other and detachably connected together, one member of each pair having a groove therein to receive the inner end of one of the members of the other pair of supporting members, the latter member having a transverse groove at its inner end and located adjacent the open side of said groove of the first mentioned grooved member, and means carried by the first mentioned grooved member to engage in the groove of the second mentioned grooved member, whereby to form a tree receiving socket between said pairs of members, and securing means slidably supported on the second mentioned grooved members and engageable with the inner ends of the first mentioned grooved members.

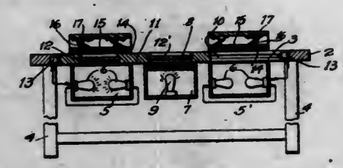
1,481,469. BATTLE PLANE. HENRY E. KRAMMER, New York, N. Y. Filed Aug. 6, 1917. Serial No. 184,604. 22 Claims. (Cl. 244—30.)



1. In an aeroplane, a fuselage including an internal bracing formed of a plurality of rings disposed in parallel planes and spaced apart longitudinally of the fuselage, a plurality of plates extending lengthwise of the fuselage and forming an enclosing structure surrounding the rings, said plates being each concaved and joined along adjacent edges in order to form a structure star-shaped in cross-section.

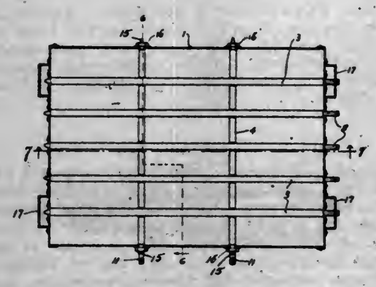
1,481,470. ELECTRIC LIQUID-LEVEL INDICATOR. WILLIAM S. LA LONDE, Evanston, Ill. Filed Oct. 11, 1920. Serial No. 416,279. 1 Claim. (Cl. 137—102.)

In mechanism of the class described, a liquid containing tank having a perforation in its top, a float in the tank, a reduced axial extension on the upper end of the float, an axial spindle carried by the float and slidably engaged through the perforation in the top of the tank, and a flexible disk valve carried by the spindle and seated on the upper end of the float extension for sealing the perforation in the top of the tank when the float reaches its extreme upper position, said flexible disk valve being of greater diameter than the extension of the float whereby the outer portion of said valve is forced into sealing engagement with the top by direct liquid pressure against the bottom thereof.



1,481,471. ELECTRIC-SIGNAL TROUBLE INDICATOR FOR AUTOMOBILES. WILLIAM S. LA MONDE, Evanston, Ill. Filed Mar. 9, 1921. Serial No. 450,853. 10 Claims. (Cl. 177—311.)

7. In mechanism of the class described, an electric circuit including a signal 1 and a switch for operating it, a supplemental electric circuit including a signal 7, a second switch controlling mechanism 36 movable between two positions in one of which it closes the first circuit so that the first signal 1 is operatable in the main circuit and in the other of which it closes the second circuit so that the second signal 7 may be operated in the supplemental circuit, a third switch 58 movable between two positions in one of which the first signal 1 if operatable thru the proper positioning of the first two switches in the main circuit will be energized, otherwise not, and in the other of which the second signal 7 if operatable thru the alternative positioning of the second switch in the supplemental circuit will be energized, otherwise not, and means operated thru the action of moving parts of the automobile engine adapted when the device is applied to an automobile to maintain the second switch in such position that the first signal may be operated while the engine is running, while the second signal is only operative when the engine stops; and means automatically holding said switch in the opposite position when the automobile is at rest.

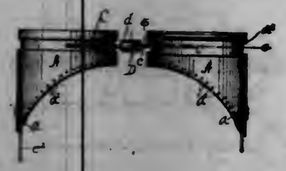


8. In mechanism of the class described, in combination with a plurality of parts of an automobile which may get out of order while the automobile is running, and another group of parts which may require attention when the automobile stops, a set of signals of one class, one for each of such parts in the automobile, one common signal of another class, an electric circuit for each signal of the first class, electric circuits for the signal of the second class, a switch for each circuit operated by the adjacent part whose condition is to be indicated, and means for supplying electric current to all of such circuits, this in combination with switch mechanism controlled thru the action of a moving part of the automobile engine movable to two positions, in one of which the signals for the parts whose condition is to be noted while the engine is moving are energized only when the engine is moving and the other of which the parts whose condition is to be noted when the engine is stopped are energized only when the engine is stopped.

1,481,472. PHOTOGRAPHIC-PRINTING MACHINE. WILBUR C. LAMPHIER, New York, N. Y. Filed Feb. 2, 1922. Serial No. 533,552. 6 Claims. (Cl. 95—73.)

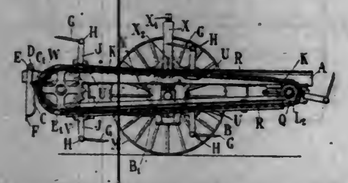
1. A photographic printing machine comprising a table, a plurality of photographic lamp boxes mounted beneath the top of said table, a slidable frame mounted within said table top and provided with a plurality of glass plates, and a lamp box provided with a colored glass plate centrally mounted below the table top and between said lamp boxes.

1,481,473. CONCRETE-BRICK MOLD. ERICK J. LARSON, Moline, Ill. Filed Feb. 21, 1921. Serial No. 446,725. 2 Claims. (Cl. 25—121.)



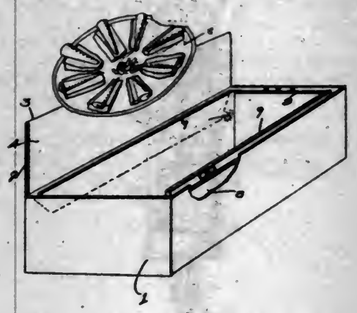
1. A device of the class described, comprising a suitable frame; a plurality of partitions having an intersecting connection with each other, dividing said frame into rectangular compartments, said partitions being formed of spaced-apart plates, capable of resilient movement with relation to each other; and intersecting bars removably held in said partitions, and holding the same normally in spaced-apart relations.

1,481,474. DETACHABLE BUTTON. JOHN F. LEIDECKER, Alameda, Calif. Filed Mar. 29, 1923. Serial No. 628,492. 2 Claims. (Cl. 24—90.)



1. A button comprising a pair of jaws hinged together, teeth on said jaws, a locking plate, said plate having a groove therein, the outer edges of said jaws being adapted to rest in said grooves.

1,481,475. GOGGLES. ROBERT MALCOM, Chicago, Ill. Filed July 14, 1920. Serial No. 396,225. 4 Claims. (Cl. 2—149.)

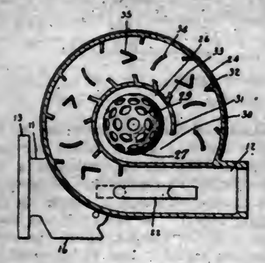


1. Goggles comprising a pair of eye cups formed of non-absorbent material, each elongated at one side diagonally of the axis thereof and having an outer circumferential groove formed therein, lenses, an inner circumferential shoulder forming a seat for each lens, a retaining ring having threaded engagement with the eyecup and bearing against the front of each lens, semi-circular retaining members in the aforesaid groove engaging the eyecups on opposite sides thereof, and a flexible nose bridge connecting said retaining members.

1,481,476. FLAX-PULLING MACHINE. GEORGES MICHOT, Dromara, Ireland, assignor to The Fibre Corporation, Limited, London, England, and Marshall Sons and Company, Limited, Gainsborough, England. Filed Mar. 6, 1922. Serial No. 543,282. 2 Claims. (Cl. 55—66.)

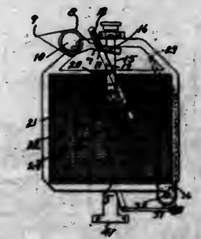
1. A flax-pulling machine having comb teeth comprising a pivotally mounted cleaning bar adapted to follow the motion of the comb teeth so that the cleaner remains close to or in contact with the comb teeth and cleans them from end to end as each comb passes the said bar.

1,481,477. DISPLAY CARTON. AUGUST F. MILLER, San Francisco, Calif., assignor to Schmidt Lithograph Company, a Corporation of California. Filed Feb. 28, 1922. Serial No. 538,487. 2 Claims. (Cl. 229—14.)



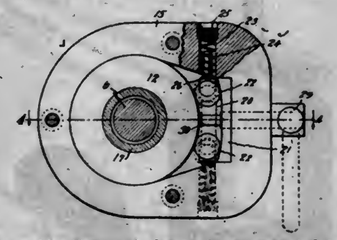
1. A reinforcing for cartons comprising a corrugated board sleeve narrower than the depth of the carton, the corrugations extending vertically and adapted to act as object receptacles, and an additional reinforcing in the carton inside the sleeve substantially of the same heighth as the carton.

1,481,478. CAN OPENER. JESSE S. MOORE and JEROME MEYER, New York, N. Y. Filed June 17, 1922, Serial No. 568,923. Renewed June 6, 1923. 4 Claims. (Cl. 30—3.)



1. In a can opener, a hand lever having a seat and a curvilinear blade hinged to the lever and formed to contact with the seat when in cutting position.

1,481,479. ENGINE EXHAUST MUFFLER. JAMES A. MURPHY, Connersville, Ind. Filed July 2, 1921. Serial No. 482,158. 8 Claims. (Cl. 137—160.)

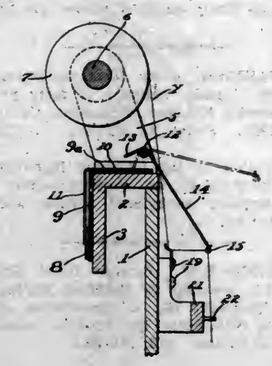


1. A muffler adapted for use with gas engines and the like, comprising a casing having an inlet opening formed tangentially thereof, a tangentially formed and oppositely directed outlet opening, a passage extending through said casing connecting said openings, and a plurality of curved baffle plates mounted substantially in the center of and horizontally with respect to said passage.

1,481,480. AUTOMOBILE SIGNAL. STEVE W. ORRICO, Oakland, Calif. Filed Jan. 31, 1923. Serial No. 616,060. 1 Claim. (Cl. 116—51.)

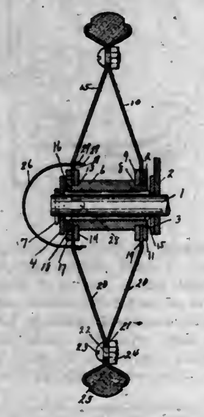
An automobile signal comprising a pair of pivoted signal arms, one at the front and the other at the rear of an automobile, brackets to support said arms, a lever pivoted on each bracket each of said levers having slots in its upper ends, pins on said signal arms which extend through the slots of each lever said levers also having slots in their lower ends, cranks engaging the slots in the lower ends of said levers, a shaft carrying each crank, and means for operating said shafts in unison whereby the front and rear signals may be simultaneously operated.

1,481,481. WRINGING MACHINE. WILLIAM V. ORR, Cleveland, Ohio. Filed Oct. 25, 1920. Serial No. 419,247. 10 Claims. (Cl. 68—32.)



2. In combination a clothes wringer mounted to swing on a vertical axis, a drive shaft geared to the wringer rolls and concentric with such axis, and a spring lock equally operative at all positions of said wringer to lock said wringer against swinging.

1,481,482. AGENT FOR ACCELERATING VULCANIZATION OF RUBBER AND METHOD OF PRODUCING SAME. STANLEY JOHN PEACHEY, London, England. Original application filed July 15, 1918, Serial No. 245,097. Divided and this application filed Oct. 2, 1922. Serial No. 591,925. 8 Claims. (Cl. 260—23.)

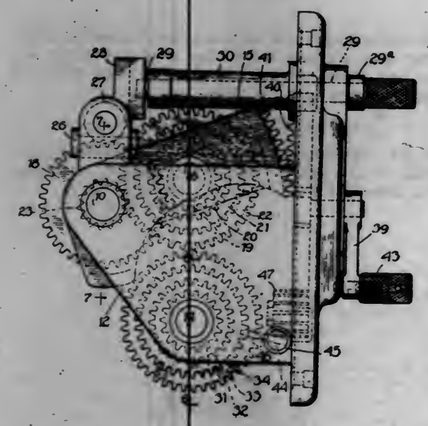


1. Materials or agents for accelerating the vulcanization of rubber or rubber-like substances consisting of the condensate produced by heating together a paranitroso dimethylaniline homologue and sulphur to a temperature at which interaction takes place, substantially as described.

1,481,483. CONTACT DEVICE FOR BRAIDING MACHINES. ANKER PETERSEN, Winthrop, Mass., assignor to American Wire-Mold Company, Hartford, Conn., a Corporation of Connecticut. Original application filed July 30, 1920, Serial No. 400,172. Divided and this application filed Aug. 16, 1922. Serial No. 582,159. 7 Claims. (Cl. 96—13.)

1. A braiding machine of the type employing an electrical stop mechanism and comprising in combination an insulated contact plate and a pair of fingers extending substantially radially from a common axis parallel to said contact plate and simultaneously movable about said axis, one of said fingers being of such length as to permit its end portion to engage the surface of the contact plate and the other finger extending downwardly from its axis and having a yarn engaging element, and means normally tending to hold said first finger in contact with the plate.

1,481,484. WHEEL. HENRY F. BIESER, Lakewood, Ohio. Filed Apr. 4, 1921. Serial No. 458,365. 1 Claim. (Cl. 301—62.)

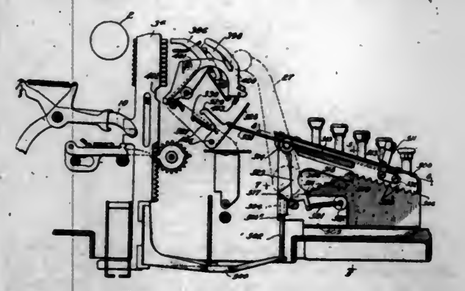


In a device of the character described, a tubular hub having sections of smaller diameter at each end thereof providing annular shoulders, a pair of discs of sheet material centrally apertured to fit over the respective ends of said hub, said discs having flat central and peripheral sections and frusto-conical intermediate sections, washers fitted over the respective reduced hub sections, the centrally flattened portion of said discs seated against their respective washers, an outside washer, having a cut out portion extending radially from its central aperture, seated against the outer face of one of said discs and held in rigid relation thereto by the upsetting of the adjacent end of the hub into said radial cut out portion, and a screw threaded washer in threaded engagement with the other end of said hub and adapted

to be turned into clamping engagement against the central portion of the disc positioned on the outside of said hub, the circumferential portions of said discs being inclined toward each other to provide a V-shaped seat for a rubber tire, and means for holding the flat peripheral portions of said discs firmly together and at the same time serving to firmly clamp a rubber tire within said seat.

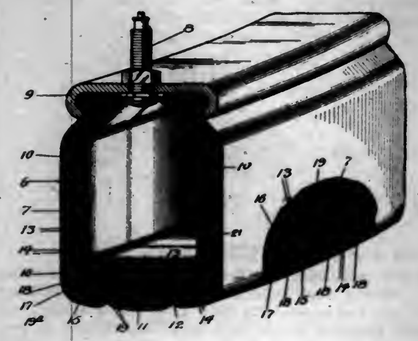
1,481,485. VARNISH. JOHN WILLIAM SNAPE, Edmonton, Alberta, Canada, assignor of forty per cent to George Frederick Moulman, Edmonton, Canada. Filed Apr. 16, 1923. Serial No. 632,526. 1 Claim. (Cl. 134—79.)

The combination of the following ingredients mixed in suitable proportions as specified:—clear celluloid, spirits of camphor, methylated spirits, acetone and domestic castor oil.



1,481,486. FEED BOX. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Oct. 2, 1919. Serial No. 328,058. Renewed June 22, 1923. 19 Claims. (Cl. 74—58.)

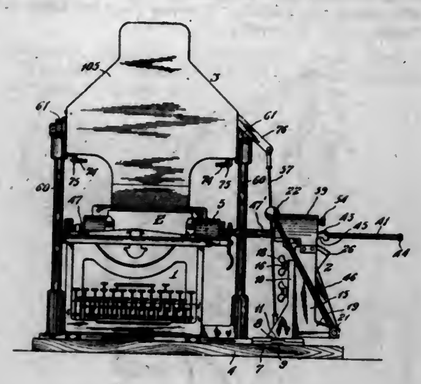
13. In a mechanism of the class described, the combination of a pair of fixed shafts and an intermediate shaft, each of said shafts having a plurality of gears thereon, the gears of said intermediate shaft being fixed against axial movement and movable into and out of operative engagement with the gears on one of said pair of shafts while continuing to mesh with certain of the gears on the other one of said pair of shafts.



1,481,487. ADDING AND LISTING MACHINE. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor to Rockford Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 15, 1921. Serial No. 492,241. 12 Claims. (Cl. 101—93.)

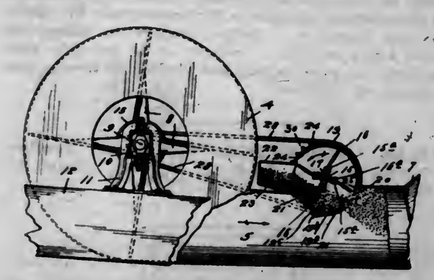
1. A ten-key adding machine having, in combination, a keyboard, a group of vertically reciprocatory type bars located rearwardly of the keyboard, each of the two type bars at the left-hand side of the group carrying special type which are useful in statement work, each of said special type bars having attached to its lower portion a forwardly extending arm, an upwardly extending pin connected to the forward end of each of said arms, said pins being guided for vertical movement, two vertically disposed plates arranged at the left-hand side of the keyboard for sliding movement forward and back above the upper ends of said pins, the lower edges of said plates being stepped to limit rising movement of the special type

bars, a finger piece rigidly secured to each of said plates for sliding the latter, and means for yieldingly holding each plate in the position to which it has been slid.



1,481,488. TIRE. NATHAN L. TOBIN, Chicago, Ill. Filed Jan. 22, 1923. Serial No. 614,129. 1 Claim. (Cl. 152—18.)

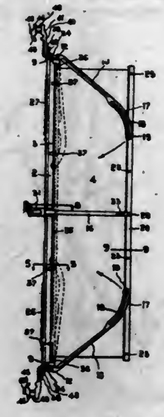
In a tire, a tire casing, comprising a generally channel shaped vulcanized body portion composed of layers of fabric and rubber, the bottom of the channel extending across in straight lines from wall to wall of the body portion, and an armored band contained in the tread portion of the casing between said layers of fabric, and having overlapping, flat, non-contacting metal plates embedded in rubber between fabric strips and riveted to said fabric strips to prevent any appreciable movement between said plates, said plates and fabric strips extending in straight lines across the tread portion from wall to wall, and each plate overlying an adjacent one and underlying another adjacent one.



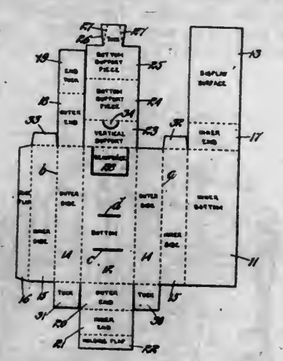
1,481,489. MACHINE FOR FEEDING ENVELOPES TO TYPEWRITING MACHINES. GEORGE T. TAUNDLE, Jr., Cleveland, Ohio, assignor to The American Speed-O-Feeder Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 21, 1921. Serial No. 438,911. 17 Claims. (Cl. 197—130.)

1. The combination of a typewriting machine; a work-feeding device adapted to supply work-members successively to said machine; and reciprocating means connected with the typewriter carriage and with said feeding device so as to actuate the latter; said reciprocating

means being arranged so as to effect the actuation of said feeding means during one stroke and the rotation of the carriage platen during its other stroke.



1,481,490. PNEUMATIC ELEVATOR. TIMOTHY C. VAUGHN, Morris, Minn. Filed June 22, 1921. Serial No. 479,550. 8 Claims. (Cl. 302—38.)

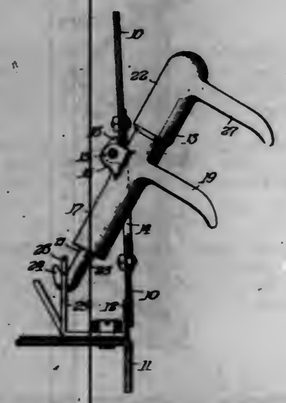


1. In a pneumatic elevator, the combination with a stack, of means for delivering a blast of air into the stack, a housing extending into the stack and contracting the same and having a discharge opening into the stack forward of the contracted portion thereof, means for delivering grain to the housing, paddle blades in the housing, and means for moving the paddle blades in a direction to deliver grain to said discharge, said housing having an air vent rearward of its discharge and exposed to the blast of air.

1,481,491. WINDSHIELD ATTACHMENT. JOSEPH HIRSCH VINEBERG and JOSEPH PRESNER, Montreal, Quebec, Canada. Filed Feb. 8, 1921. Serial No. 443,466. 8 Claims. (Cl. 296—95.)

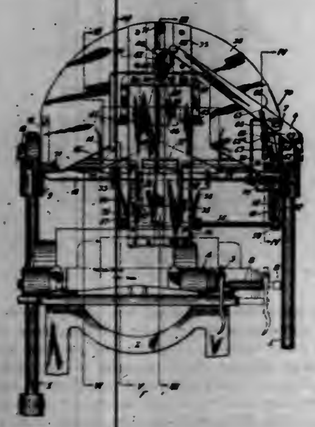
1. A storm and sun shield comprising a roller, a blind wound upon the roller, lever arms one end of each being pivoted at the ends of the roller and having their opposite ends in operative engagement with the forward end of the blind said arms being adapted to assume positions parallel to the roller when the blind is withdrawn and to extend parallel to the plane of the blind and beneath the same when the blind is extended, resilient means operatively connecting the lever arms together to maintain the same yieldingly in extended position, and manually operated means for withdrawing the blind.

1,481,492. PAPER BOX. HAROLD RAYMOND WARREN, Boston, Mass., assignor to P. R. Warren Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 23, 1919. Serial No. 292,009. 8 Claims. (Cl. 206—44.)



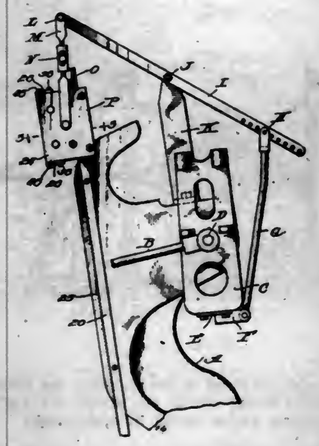
1. The improved knockdown box formed from a single blank of material with an outer bottom, inner and outer sides, an inner bottom, an inner end secured to one end of the inner bottom, tucks secured to said inner sides, an outer end and tuck secured to said outer side, and a display surface secured to the inner end, said inner end projecting upwardly between the outer end and said tucks.

1,481,493. HOOD LATCH. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 4, 1921. Serial No. 458,184. 13 Claims. (Cl. 292—114.)



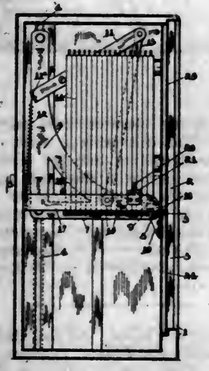
1. In a hood latch, a guiding member, a keeper, a keeper-engaging member adapted to move longitudinally of said guiding member and provided at its lower end with a hook, yieldable means tending to maintain said keeper-

engaging member in the position in its longitudinal movement most removed from the keeper, and cooperating handles associated with said keeper-engaging member and guiding member for moving the former relative to the latter against the resistance of said means, said handles



providing when thus moved a handle structure by means of which the movable hood structure mounting the latch may be moved outwardly and upwardly without releasing the pressure of the yieldable means acting on the handles.

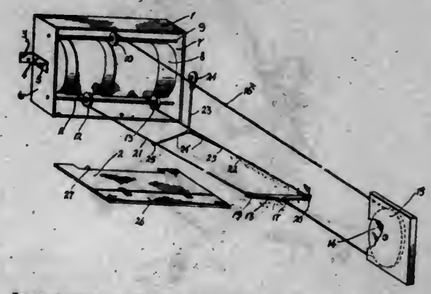
1,481,494. ENVELOPE FEEDER FOR TYPEWRITER MACHINES. HARRY L. WOOD, Cleveland, Ohio, assignor to The American Speed-O-Feeder Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 5, 1921. Serial No. 519,874. 20 Claims. (Cl. 197—130.)



1. In a work feeding device for typewriting machines, a magazine adapted to receive a stack of work sheets on edge; an upright plate at the front end of said magazine; a primary feeding member reciprocably mounted upon said plate; means for reciprocating said primary feeding member; and a secondary feeding member mounted independently of and behind said plate, said secondary feeding member being controlled by said primary feeding member.

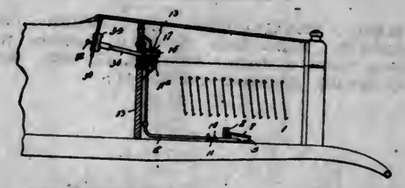
1,481,495. PRINTING-PRESS ATTACHMENT. HERMAN A. AGRICOLA, Jr., Atlanta, Ga., assignor of one-fourth to Joseph E. Lane and twenty-four per cent to H. Y. Garrett, both of Atlanta, Ga. Filed Oct. 30, 1920, Serial No. 420,627. Renewed June 20, 1923. 10 Claims. (Cl. 101—194.)

2. In combination with a printing press, a carriage adapted for reciprocation thereon, a chase mounted on the press, a plurality of tracks arranged in parallelism upon opposite sides of the chase, each track being formed with a depression having a prearranged length and location to provide in effect a cam, an ink supply mounted on the carriage, and means for transferring the ink to the type including a device arranged to engage the tracks and permitting a transfer of the ink only when the device is seated within said depressions therein, substantially as described.



1,481,496. ACCOUNT FILE. WILSON BARR, Hamilton, Ontario, Canada. Filed Oct. 3, 1922. Serial No. 592,173. 7 Claims. (Cl. 45—2.)

1. In an account file the combination of a cabinet open at the front; vertically movable table supporting means; a table hinged on said supporting means so that it may be held in a horizontal position or swung up to a vertical position when the leaves are vertical; a plurality of account holding leaves hinged together to form a book; a pivotal connection between the front of the book and the

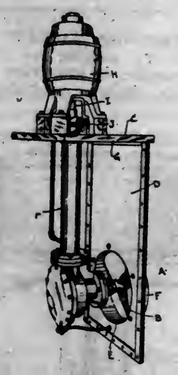


table; means for supporting the back leaf of the book; a restraining bar at each side of the cabinet; pins projecting from the hinges of the leaves engaging beneath said bars; and means tending to raise the table supporting means.

1,481,497. ROLLER WASHLINE. JOHN BETZ, St. Cloud, Minn. Filed Dec. 31, 1921. Serial No. 526,118. 1 Claim. (Cl. 68—3.)

In a device of the character described, a pair of wash lines disposed in parallel relation to one another, a cable disposed over said wash lines and arranged to move said wash lines longitudinally when said cable is moved longitudinally, and a supporting hanger movably disposed on said cable, said hanger having hook members for slidably supporting said wash lines.

1,481,498. UNDER-HOOD LOCK FOR AUTOMOBILES. LAWRENCE C. BOGGESS, Fairview, W. Va., assignor of one-half to Gaylord S. Basnett, Fairview, W. Va. Filed Sept. 15, 1922. Serial No. 588,315. 2 Claims. (Cl. 180—82.)

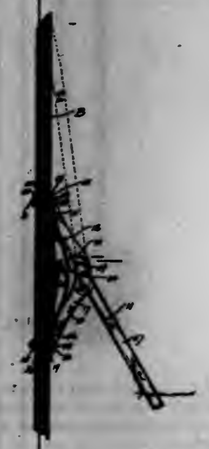


1. In an automobile, the combination of a hood having a movable section whereby access is afforded to its interior, means within the hood and including a movable member to fasten said section in closed position, a movable exposed handle connected with said movable member of the fastening means, a spring to move said movable member in one direction, a key-controlled lock to engage and secure said handle against movement under the impulse of said spring, a terminal of an ignition circuit within the hood, and a second terminal of said circuit within the hood and connected and movable with said exposed handle and arranged to rest out of contact with the first-named terminal when said movable member of the fastening means is in position to secure the movable hood section in closed position.

1,481,499. FOUNTAIN BRUSH. ANTONIO BONGIOVANNI, Barnesboro, Pa. Filed Aug. 16, 1922. Serial No. 582,180. 2 Claims. (Cl. 15—188.)

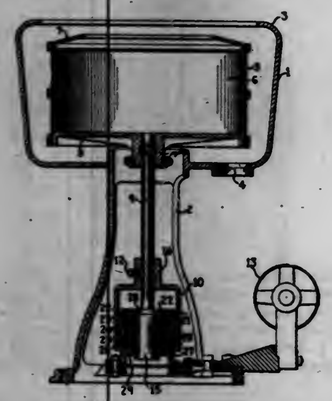
1. A fountain brush comprising a hollow base member a tubular handle constituting a reservoir having a removable closure cap at its upper end and its lower end connected to the base member, an apertured partition plate in the base member transversely of the lower end of the reservoir, an apertured valve plate coacting with the partition plate to control flow of material from the reservoir, a removable perforated brush block having bristles and fitted into the lower end of the body member, a brush retaining sleeve engaging the block and having detachable connection with the lower end of the body member to permit removal of said brush, and a rubber washer located in the base member between the block and the valve plate.

1,481,500. BRINE-CIRCULATING APPARATUS FOR ICE MACHINES. GEORGE B. BRIGHT, Detroit, Mich., assignor to Detroit Ice Machine Co., Detroit, Mich., a Corporation of Michigan. Filed Aug. 21, 1922. Serial No. 583,334. 5 Claims. (Cl. 259—110.)



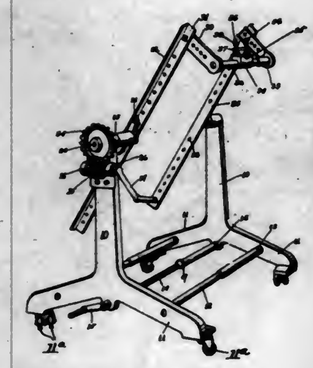
1. The combination with a brine tank, of an impeller unit detachably engaging said tank and comprising an apertured panel, an impeller operating in the aperture of said panel, a motor arranged at the upper end of said panel, a transmission between said motor and impeller, and guides within said tank for receiving and holding said panel.

1,481,501. DOORCHECK. MARSHALL R. BRITTEN and CHESTER K. BRITTEN, Grants Pass, Oreg. Filed July 24, 1922. Serial No. 577,145. 2 Claims. (Cl. 292—338.)



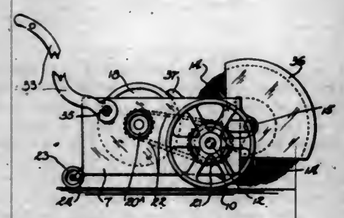
1. A door check, comprising an attaching bracket including a relatively flat plate provided with side walls extending outwardly substantially at right angles thereto throughout the length of said plate, said walls being of

greatest width intermediate the ends of said plate, a pin member connected transversely between said side walls and in spaced relation directly opposite the plate substantially midway of its ends, a retaining lever pivoted to said pin and including an elongated portion extending outwardly from said attaching bracket and having a rounded cam head portion extending opposite from said elongated por-



tion of said lever into said attaching bracket intermediate the side flanges thereof, a bowed spring having the ends thereof in sliding engagement with the plate of said attaching bracket and the bowed central portion thereof in engagement with said cam head of the lever for normally maintaining said lever in a position in which the same is set.

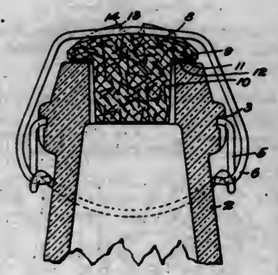
1,481,502. CENTRIFUGAL MACHINE. TANDY A. BRYSON, Troy, N. Y., assignor to Tolhurst Machine Works, a Corporation of New York. Filed June 12, 1920. Serial No. 388,658. 11 Claims. (Cl. 64—48.)



7. A centrifugal extractor including in combination a basket, a shaft, a casing, a resilient member fitted within the casing about the shaft against radial displacement to constitute a resilient center of gyration, a plurality of friction plates radially slidable one upon and relatively to another, a housing in which the shaft is journaled and a supporting flange carried by the housing, the flange resting on the topmost friction plate.

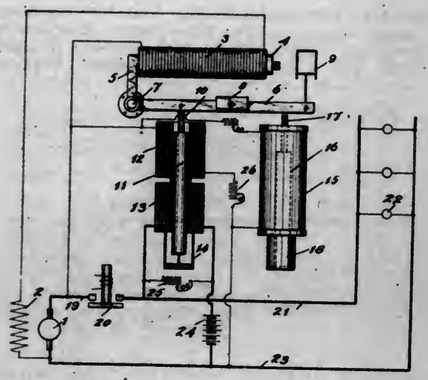
1,481,503. REPAIR STAND FOR MOTORS. JOSEPH SINCLAIR CARSWELL and AMIL RAY HAMMOND, Boone, Iowa. Filed Sept. 24, 1920. Serial No. 412,606. 4 Claims. (Cl. 29—89.)

2. A motor stand of the character described, comprising two side members, means for adjustably securing them in position relative to each other, two side bars pivotally supported to said sides, one being pivotally connected with each of said side members, a bracket adjustably supported at one end of each side bar, a tube connected to one of said brackets, and a tube connected to the other bracket, and telescopically and slidingly connected with each other, a bracket loosely mounted on one of said tubes, and means for securing a motor shaft to said latter bracket.



1,481,504. TENNIS-COURT AND OTHER LINE MARKER. FRANK KMAE CHISHOLM, Goulburn, New South Wales, Australia. Filed Oct. 13, 1922. Serial No. 594,295. 5 Claims. (Cl. 91—44.)

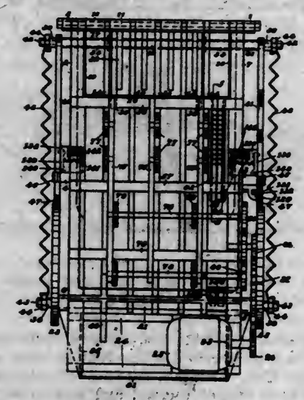
1. In a portable line marking machine for tennis courts and the like, a liquid receptacle, a feed wheel adapted to revolve therein, an inclined member in contact with and extending below said wheel, a rotatable brush in contact with said member and adapted to project liquid on to the ground from the bristles leaving the end thereof.



1,481,505. POROUS STOPPER AND METHOD OF MAKING SAME. MAURICE F. CRASS, East Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 1, 1921. Serial No. 504,605. 5 Claims. (Cl. 215—48.)

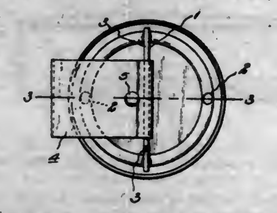
1. In a method of making porous stoppers, the steps which consist in intimately mixing finely divided acid-resisting material with finely divided combustible material, molding the mixture to the desired shape, and then firing

the same, whereby the combustible material is removed from the mixture.



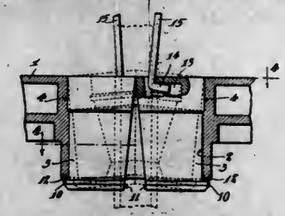
1,481,506. ELECTRIC REGULATION. JOHN L. CREVELING, White Plains, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Apr. 9, 1917, Serial No. 160,718. Renewed Apr. 25, 1923. 9 Claims. (Cl. 171—313.)

3. The combination with a generator, of a regulator having a plurality of actuating coils and means cooperating therewith whereby when one coil is inert the other coil tends to increase the generator output and when both coils are energized their mutual effect tends to limit the generator output.



1,481,507. SELECTOR MECHANISM. HOWARD C. EINSTEIN, Cleveland, Ohio. Filed June 23, 1922. Serial No. 570,467. 14 Claims. (Cl. 83—92.)

1. In a card selecting mechanism, the combination of means adapted to receive a guide card bearing certain perforations therein, said means also being adapted to pass therethrough a series of data cards also bearing various perforations, means including elements engaging in certain perforations on said guide card, said elements being adapted to engage in predetermined perforations in one of said data cards, a receiving hopper actuated by said means upon engagement of said elements, and said



hopper being rendered operative to receive one of said data cards upon the engagement of said elements in the desired predetermined perforations therein.

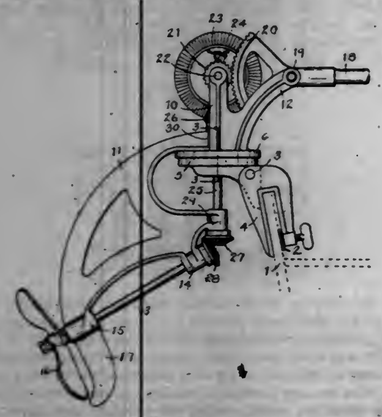
1,481,508. ROOFING-CEMENT SPREADER. CHESTER A. HARRIS, North Evans, N. Y., assignor to Daniel B. Forbush, Gowanda, N. Y. Filed Feb. 23, 1922. Serial No. 538,594. 4 Claims. (Cl. 91—67.4.)

1. In combination with a container having a pair of diametrically arranged holes in one end, a spreader hingedly connected with the perforated end of the container so that it can be used with either hole.

1,481,509. TABLE BUSHING. ARTHUR J. HODGE, Lomita, Calif., assignor to Union Tool Company, Torrance, Calif., a Corporation of California. Filed Mar. 10, 1923. Serial No. 624,172. 8 Claims. (Cl. 285—23.)

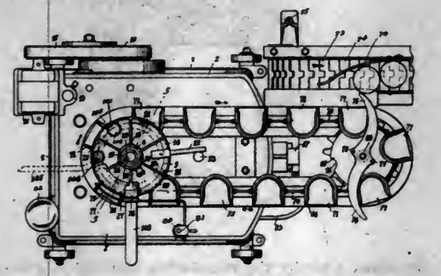
1. In a device of the nature disclosed, the combination of a rotary drill table having a vertical bore, and opposed split coengaging table-bushing members adapted to seat within said bore and engage beneath an under surface of the table to prevent a vertical displacement of said members from normal position, the opposed diametric surfaces of the members being angled downwardly and outwardly to permit a tilting of one or both of the members from beneath said under surface of the table whereby said members may subsequently be removed.

1,481,510. JOURNAL-BOX COVER. LEIGH W. HOSTETTLER, Tarentum, Pa., assignor to Allegheny Steel Company, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Mar. 29, 1922. Serial No. 547,707. 7 Claims. (Cl. 220—35.)



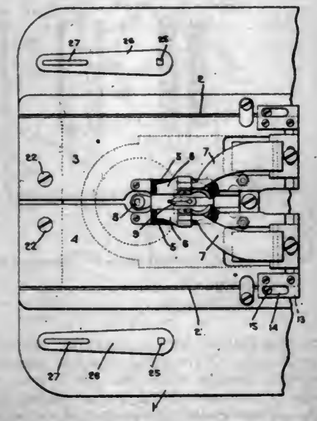
1. A journal box lid comprising a body portion, a spring attached thereto for cooperation with a journal box to selectively maintain said lid in open and closed positions with respect thereto, and means for relieving said spring of strain adjacent to its point of attachment to said body portion caused by the flexing of said spring.

1,481,511. VANITY BOX. NATHAN KASDAN, New York, and DANIEL POLLACK, Brooklyn, N. Y., assignors to Majestic Machine & Tool Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 13, 1923. Serial No. 662,394. 14 Claims. (Cl. 132—83.)



1. A vanity box comprising a body, a cover and a strip for retaining a compact in said body, said strip fitting against the side walls of said body with its ends against abutments and having spring-fingers against and below which the compact may be forced, said fingers serving to retain the compact in position.

1,481,512. BOAT PROPELLER. GEORGE C. KELLY, Kalamazoo, Mich. Filed June 18, 1923. Serial No. 646,115. 8 Claims. (Cl. 115—18.)

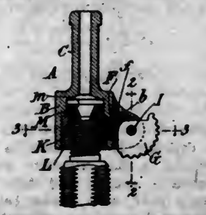


8. In a boat propeller, the combination of a frame, a propeller shaft mounted on said frame and provided with a propeller, a driving lever mounted on said frame, said lever being provided with a segment, a driving gear mounted on said frame to coact with said segment, a driven gear provided with a reversible pawl coacting with said driving gear, and driving connections for said driven gear and propeller shaft.

1,481,513. FILLING MACHINE. KARL KIEFER, Cincinnati, Ohio. Filed Feb. 20, 1919. Serial No. 278,287. 7 Claims. (Cl. 226—95.)

1. In a filling machine, filling means comprising members continuously moving relatively and provided, respectively, with passages adapted to register, the passage in one member being elongated in the direction of the relative movement, and measuring means having a discharge passage connected with the passage of one of said members and comprising a plunger and a crank causing a complete gradual discharging stroke of said plunger while said passages are in registry.

1,481,514. SEWING MACHINE. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Aug. 8, 1922. Serial No. 580,571. 4 Claims. (Cl. 112—74.)

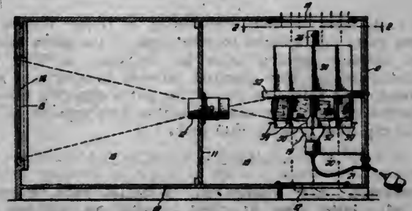


1. In a sewing machine having a bed plate, work-holding means carried thereby and comprising two clamp-plates capable of separating movement to spread the button-hole slit, a throat plate, said work-holding means and throat plate having a relative movement from button-hole cutting position to stitching position, and a spreader by which the clamp-plates are separated to a predetermined point during such relative movement, the combination with said clamp-plates and spreader, of a positioning device for determining the initial position of each clamp-plate and a swinging arm operating parallel to but above the bed plate and by which each positioning device is adjusted.

1,481,515. WASHER. HENRY P. KRAFT, Ridgewood, N. J. Filed Dec. 19, 1919. Serial No. 346,016. 5 Claims. (Cl. 85—50.)

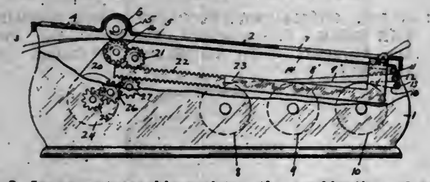
1. A washer having a central web portion and a marginal beaded portion extending on each side beyond the web portion.

1,481,516. PUMP COUPLING. HENRY PHILLIP KRAFT, Ridgewood, N. J. Filed Aug. 5, 1921. Serial No. 490,175. 4 Claims. (Cl. 285—150.)



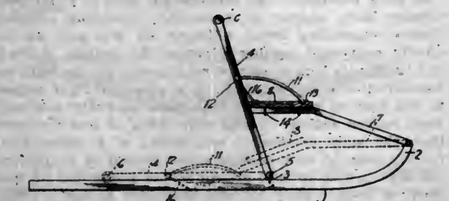
1. A pump coupling or the like comprising a shank, a body portion having a recess therein, a dog movable in said recess, and a sleeve within the body portion, said body portion being formed of easily castable metal and the dog and sleeve being formed of non-oxidizable wear resisting metal.

1,481,517. FUSE PULLER AND REPLACER. WILLIAM D. KURZ, Appleton, Wis. Filed Apr. 13, 1922. Serial No. 552,300. 3 Claims. (Cl. 81—3.)



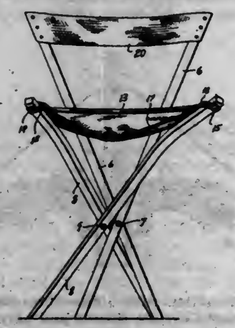
1. In a fuse puller and replacer, like plier members of high insulating material, said plier members having a plurality of opposite concave portions at each end of the pliers, said concave portions being of different sizes suitable for operating on all standard-sized fuses, and a plurality of spaced opposite grooves in the pliers of suitable size for holding wires when making joints on live wires.

1,481,518. AUTOMATICALLY-ROTATING TRANSPARENCY-DISPLAYING LANTERN. FRANK MCLENNAN LENNARD, Darlinghurst, near Sydney, New South Wales, Australia. Filed Sept. 11, 1922. Serial No. 587,525. 4 Claims. (Cl. 88—27.)



1. In a display lantern having a slide carrier and a lamp located within it with means dependent on convection air currents to procure rotation of said carrier, means for momentarily arresting the rotation of the carrier to offer a still view of the slides, consisting of one or more pendent tappets rotatably hung from a fixed member in the path of movement of strikers fixed to the carrier and engageable by said strikers.

1,481,519. AUTOGRAPHIC REGISTER. MURDOCK MACDONALD, Cleveland, Ohio. Filed May 12, 1920. Serial No. 380,711. 7 Claims. (Cl. 282—16.)



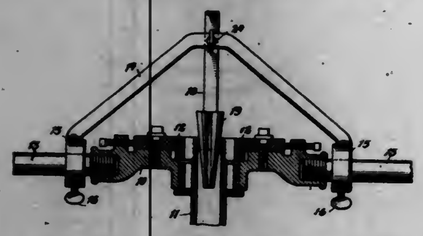
2. In an autographic register, the combination of an enclosing casing, a plurality of paper-carrying rollers mounted in said casing, a pair of paper-discharge rolls mounted in said casing, a reciprocably mounted longitudinal carriage movable toward and away from said discharge rolls, the paper from said carrying rolls passing over said carriage and between said discharge rolls, means mounted at one end of the carriage adapted to actuate one of said discharge rolls, and means mounted at the other end of said carriage adapted to grip the paper and move the same with said carriage in its forward movement.

1,481,520. SLED. WALTER MAKI, Detroit, Mich. Filed Feb. 23, 1922. Serial No. 538,641. 1 Claim. (Cl. 280—23.)

In a sled, runners, standards pivotally carried thereby, a cross bar connecting said standards, a frame pivoted to the ends of said runners and adapted for releasable supporting engagement with said standards, a seat carried by said frame, and means carried by said cross bar for engagement with opposite ends of said seat whereby the same and said frame are retained in operative position, said means comprising a spring arm terminally bearing upon the seat.

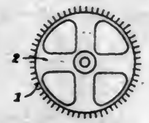
1,481,521. FOLDING STOOL AND CHAIR. WILLARD E. MARSH, Memphis, Tenn. Filed Dec. 21, 1921. Serial No. 523,997. 2 Claims. (Cl. 155—136.)

1. A foldable stool or chair comprising legs arranged in pairs, the legs of each pair being connected together



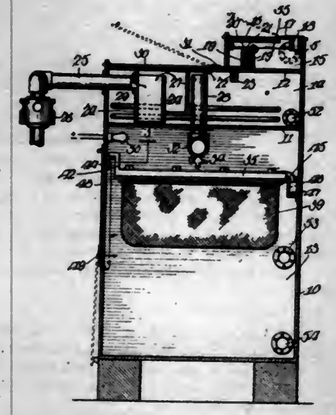
at their center portions, a pivot pin for connecting pairs of pivoted legs at the center of the pairs of legs thereby adapting the stool or chair to be folded into an elongated package, a seat-piece carried by the legs, and a frame extension to form a back rest.

1,481,522. CONTAINER AND PROCESS FOR FORMING THE SAME. VICTOR MAUCK, Norristown, Pa. Filed Aug. 22, 1922. Serial No. 583,539. 12 Claims. (Cl. 220—66.)



1. In a container, the combination with a cylindrical tubular body, having an outwardly extending annular closure supporting flange adjacent its top, and an inwardly converged portion adjacent the bottom thereof, and having its bottom edge curved outwardly, to form an annular groove in said body in a plane at right angles to the axis of said body; both said inwardly and outward curved regions of said body being of less diameter than the main portion of said body; of a chime reinforcing ring, of toric configuration, formed of a cylindrical wire, seated in said groove at the lower end of said body; a bottom plate for said container having a cylindrical portion fitted in said body and a portion extending transversely to said body, said cylindrical and transversely extending portions of said bottom plate forming a sharp cornered annular ridge abutting the inner surface of said body, whereby a smoothly continuous curved surface is formed upon the interior of said container at the junction of said bottom plate and body; said bottom plate having a cylindrical flange upturned exterior to said body, forming a substantially continuous cylindrical surface therewith.

1,481,523. REAMER ATTACHMENT FOR DIESTOCKS. GEORGE A. MEIERS, New York, N. Y. Filed Jan. 24, 1922. Serial No. 531,321. 2 Claims. (Cl. 77—73.)

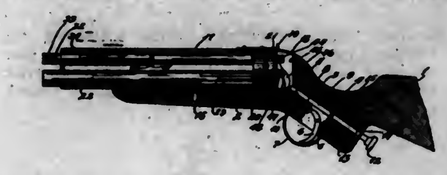


1. The combination with a pipe threading die-stock, of a yoke detachably secured thereto and having a polygonal hole therethrough in alignment with the die-stock, a reamer having a stem of cross-sectional form corresponding to that of said hole, said stem and one wall of said hole having coacting transversely extending teeth of a spacing substantially equal to the spacing of the threads to be cut by the die, and means for holding the stem with its teeth in locking engagement with those of the hole, and in endwise adjusted position in accordance with the number of threads to be cut, said hole being slightly larger than said stem, whereby upon release of said last mentioned means said stem may be moved freely through said hole.

1,481,524. MACHINE FOR STRETCHING HIDES AND SKINS. DANIEL MERCIER, Annonay, France. Filed Jan. 27, 1921. Serial No. 440,304. 3 Claims. (Cl. 149—14.)

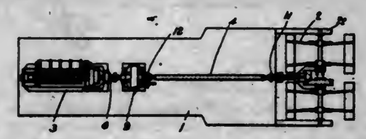
3. A working drum for stretching hides and skins comprising a cylinder having slots in its periphery and blades comprising a flat straight portion, a part of which is adapted to engage said slots and an outer corrugated working part, said blades being arranged in a radial direction and having a general direction parallel to the axis of said cylinder.

1,481,525. OIL-PURIFYING MECHANISM. WILLIAM W. NUGENT, Chicago, Ill. Filed Feb. 23, 1918. Serial No. 218,643. 7 Claims. (Cl. 210—43.)



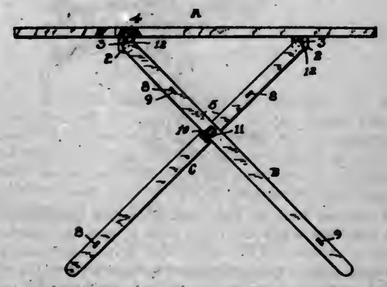
1. A filter element comprising a frame formed in two parts and secured together, one of the parts having an overflow opening below its top edge; a filter bag having its top edge clamped between the parts of said frame; and points on one of the parts engaging the top portion of the filter bag preventing displacement of the bag top from between said parts.

1,481,526. AIR SHOTGUN. WILLIAM PAUL, Beecher, Ill. Filed Mar. 31, 1923. Serial No. 628,980. 9 Claims. (Cl. 124—8.)



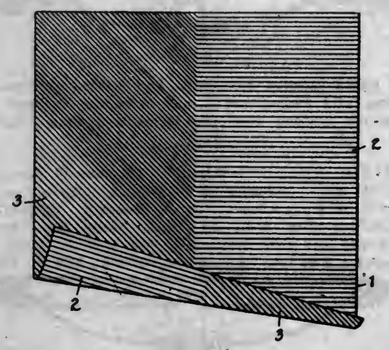
1. An air shot gun comprising a stock, an air casing mounted thereon, an air pump connected with the casing for pumping air into said casing, a tube fixed in said casing, a control valve closing the inner end of said

tube, a barrel removably engaged in said tube for carrying a bullet to be fired, a resilient tube for holding said valve in closed position, a valve operating mechanism connected with the valve, a trigger in said stock, and a spring controlled cocking member adapted to be oper-



ated to cock the trigger and when the trigger is pulled to actuate the valve operating mechanism to open the control valve to permit only a predetermined charge of compressed air to be discharge from the air casing to fire the shot.

1,481,527. DRIVE MECHANISM FOR PADDLE WHEELS OF BOATS. LUTHER T. PEARSALL and WARREN ELSEY, Pittsburgh, Pa. Filed Apr. 18, 1923. Serial No. 632,963. 4 Claims. (Cl. 115—54.)

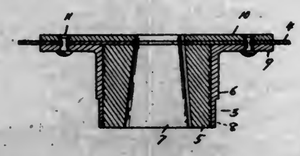


1. In a power-driven boat the combination with the hull of the boat, brackets extending from the hull, and a paddle-wheel rotatable in bearings borne by said brackets, of an engine having a rotary power shaft carried by the boat, a floating bridge member spanning the space between the hull and paddle-wheel axle and sustained by said paddle-wheel axle, a transmission shaft journalled upon said bridge member, means for imparting rotation from the engine shaft to the transmission shaft, and means for imparting rotation from the transmission shaft to the paddle-wheel axle.

1,481,528. IRONING-TABLE STRUCTURE. BENJAMIN F. BAIN, Pittsburgh, Pa., assignor to Wolverine Supply and Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 4, 1922. Serial No. 541,191. 2 Claims. (Cl. 68—10.)

1. An ironing table structure comprising a board detachably mounted on a pair of resilient supports disposed in crossed relation, one of said supports being provided with projections which are sprung laterally into engagement with corresponding sockets in the other support, and the upper ends of said supports being provided with angular projections which are sprung laterally into engagement with sockets on said board, for the purposes described.

1,481,529. PAPER. PHILIP G. BALTZ, Chicago, Ill., and CLARENCE O. THORNE, Watervliet, Mich. Filed Apr. 14, 1923. Serial No. 632,162. 5 Claims. (Cl. 91—68.)

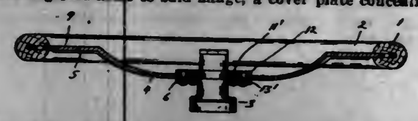


5. A sheet or web of paper having corresponding portions of each side correspondingly colored so that first one side of the sheet and then the other may be presented to a press with the colors in the same relation at each presentation.

1,481,530. STEERING WHEEL. CHARLES W. BECK, Detroit, Mich. Filed Jan. 2, 1923. Serial No. 610,366. 9 Claims. (Cl. 74—33.)

1. In a wheel, the combination with a hub, of projections upon said hub, arms secured to said projections, a rim carried by said arms, and coverings molded upon said arms and projections.

1,481,531. STEERING WHEEL. CHARLES W. BECK, Detroit, Mich., assignor to Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Sept. 20, 1922, Serial No. 589,475. Divided and this application filed May 21, 1923. Serial No. 640,589. 8 Claims. (Cl. 74—33.)

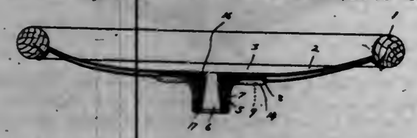


1. A steering wheel comprising a hub including a core having a bore, ribs formed on said core, a shell gripping said core and ribs, radially extending projections on said shell, arms secured to said projections, and a rim carried by said arms.

1,481,532. STEERING WHEEL. CHARLES W. BECK, Detroit, Mich., assignor to Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Sept. 20, 1922, Serial No. 589,475. Divided and this application filed May 21, 1923. Serial No. 640,590. 3 Claims. (Cl. 74—33.)

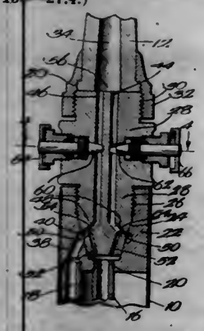
1. A steering wheel comprising a hub having an integral flange at one end, radially extending arms arranged

upon said flange, a rim carried by said arms, means for securing said arms to said flange, a cover plate concealing



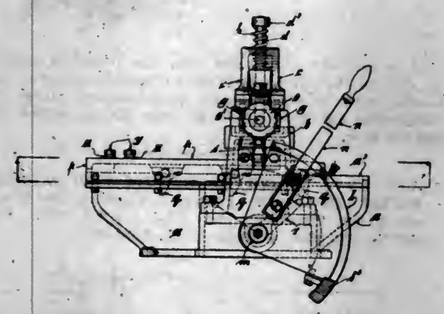
the joints between said arms and having portions engaging said flange, and means extending through said arms for securing said plate, arms, and flange together.

1,481,533. STEERING WHEEL. CHARLES W. BECK, Detroit, Mich., assignor to Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Sept. 20, 1922. Serial No. 589,475. Divided and this application filed May 21, 1923. Serial No. 640,591. 6 Claims. (Cl. 74—33.)



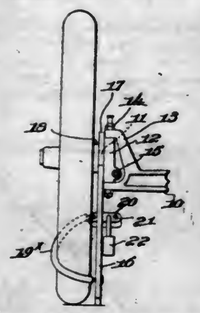
1. A steering wheel comprising a hub, an annular flange carried by said hub, said hub and flange having grooves of different depths formed therein, intersecting members engaging said grooves, a rim secured to said members, and means for securing said members to said flange.

1,481,534. STEERING WHEEL. CHARLES W. BECK, Detroit, Mich., assignor to Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 18, 1923. Serial No. 646,223. 11 Claims. (Cl. 74—33.)



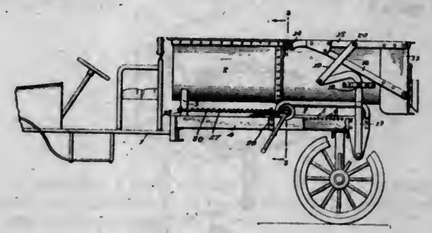
1. In a steering wheel, a hub having a shell and a core in said shell, a series of projections extending radially from said shell, and a series of spider arms carried by said projections.

1,481,535. WELDING TORCH. JOHN B. BURDETT, Glencoe, Ill. Filed Feb. 4, 1922. Serial No. 534,266. 14 Claims. (Cl. 158—27.4.)



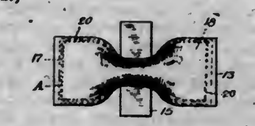
1. In a mechanism of the class described, a handle having two independent gas passages leading therethrough, a single gas passage, tip-carrying, delivery tube leading away from the handle, an independent separable gas control block interposed between the handle and the delivery tube, having a plurality of separated gas passages therethrough each communicating at one end with the delivery tube and at the other end with both of the passages in the handle, and selectively manipulatable means for closing one of said passages in the gas control block for the purposes set forth.

1,481,536. EMBOSSING AND LIKE MACHINE OR PRESS. ALEXANDER STIRLING BURNETT, Reddish, near Stockfort, and THOMAS COLLINS, Levenshulme, England. Filed Jan. 25, 1923. Serial No. 614,927. 4 Claims. (Cl. 101—3.)



1. Presses for embossing cardboard, millboard or the like or for printing or like purposes comprising a frame on which is mounted a platen or press-head to which downward movement is imparted by inclined or cam-members on a horizontally sliding member or members, located between the platen and the head of the press, a cam or cams being provided to impart movement to the sliding member or members and the arrangement being such that the cams or inclined surfaces impart pressure evenly at a plurality of points over the area of the platen or press-head, substantially as described.

1,481,537. VEHICLE LOCK. GEORGE A. CARNEY, Boston, Mass. Filed Nov. 1, 1921. Serial No. 512,150. 1 Claim. (Cl. 70—90.)



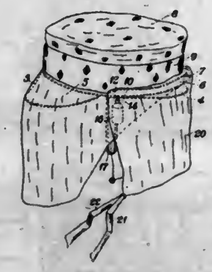
A vehicle lock of the class described consisting of a one piece brace bar having a fork at one end thereof the tynes of which are of appreciable length and adapted to straddle a stationary spindle of a vehicle wheel; a vehicle wheel; a chain, one end of which is permanently secured to the bar adjacent the other end thereof at a point outside the radius of said wheel, said bar having an opening intermediate said fork and the secured end of said chain at a point adjacent the inner periphery of said wheel, a block, having holes therein, secured to the other end of said chain and adapted to enter said bar opening, said chain embracing said wheel tire in a manner whereby radial dislodgement of the forked end of said bar is prevented; and a lock to retain said block in said opening.

1,481,538. DUMPING TRUCK. LEONARD CROOKE, Hagerstown, Md. Filed Feb. 1, 1923. Serial No. 616,238. 4 Claims. (Cl. 298—14.)

1. In a dumping truck or vehicle, the combination with a body and frame, of a pinion shaft journalled in bearings attached to the central part of the body and forming the axis about which the body turns when tipped, and parallel rack bars mounted on the frame with which pinions on said shaft engage and means for retaining the pinions in engagement with the rack bars at all times.

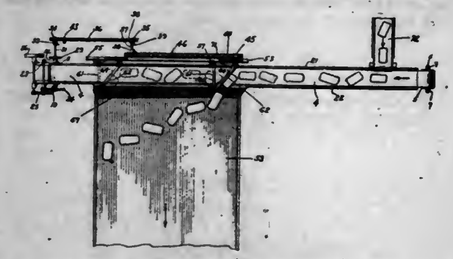
1,481,539. NECKTIE. SIGMUND DEICHES, Chicago, Ill. Filed Nov. 20, 1922. Serial No. 601,995. 3 Claims. (Cl. 2—82.)

1. In a bow necktie, folded front and back wing pieces, a closed fabric envelope contained in the front piece and conforming to the shape thereof, a bendable, rectangular wire loop contained in said envelope and conforming to the shape thereof, and a band around the middle of said wing pieces.



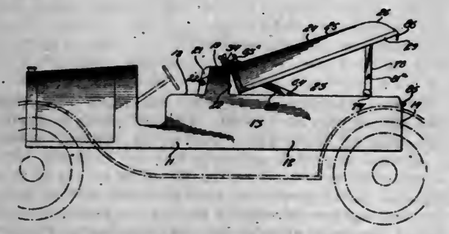
1,481,540. BRAKE-BEAM SUPPORT. FREDERIC T. DE LONG, Chicago, Ill., and ARTHUR W. HAWKINS, Muskegon, Mich., assignors to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 31, 1922. Serial No. 585,509. 21 Claims. (Cl. 188—218.)

9. In a brake beam support, an inwardly and downwardly inclined element secured to the brake beam, a member to be mounted on the truck spring plank, provided with a bearing for said element, said element and member being adapted to yieldingly resist rotation of the brake beam, and means for yieldingly resisting the application of the brake.



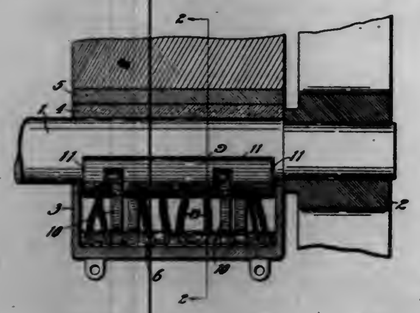
1,481,541. TRAVELING HEADDRESS. MARGARET EMILY RHODA DOUGLAS, London, England. Filed June 15, 1923. Serial No. 645,498. 2 Claims. (Cl. 2—116.)

1. A headdress comprising a crown, a band attached to the crown adjacent its lower edge, a wire attached to and encircling the lower edge of the band, a front peak and a rear peak attached to the lower edge of the band, a wire extending around the lower edge of the peaks, a semi-circular brim attached to the rear of the crown, a wire extending around the upper edge of the brim, a veil overlapping the front peak and having its



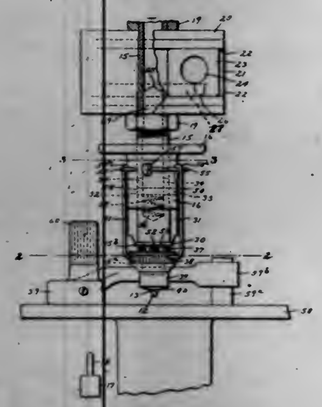
ends secured together at the rear of the crown, and a depending hood attached to the brim, overlapping the rear peak and covering the veil fastening means.

1,481,542. APPARATUS FOR UNLOADING CONVEYERS. GEORGE DUNSIETH, Jr., Ellwood City, Pa., assignor to Mathews Gravity Carrier Company, Ellwood City, Pa., a Corporation of Pennsylvania. Filed Nov. 9, 1922. Serial No. 599,830. 8 Claims. (Cl. 198—31.)



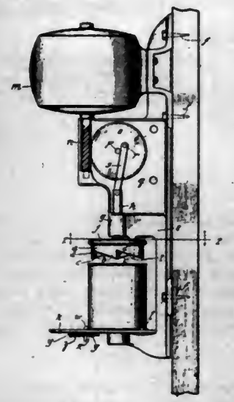
1. In a device of the class described, the combination, with a conveyer belt, and means for driving the same, of a transversely positioned deflecting plate arranged in proximity to the carrying surface of said conveyer belt, means for supporting said plate, and means for moving said plate longitudinally of the conveyer belt and in the opposite direction to the travel of said belt.

1,481,543. CONVERTIBLE VEHICLE BODY CONSTRUCTION. JOHN EKE, Philadelphia, Pa. Filed Jan. 19, 1922. Serial No. 530,254. 8 Claims. (Cl. 296—37.)



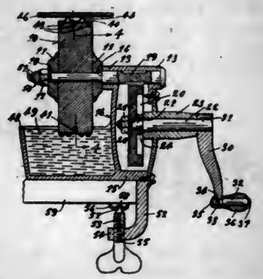
1. In a vehicle, a body providing an opening; a cover for the opening; supporting bars pivoted to the body; link bars pivoted, between their ends, to the supporting bars and having one end pivoted to the cover, and means on the other end for clamping them to the supporting bars.

1,481,544. LUBRICATOR. JOSEPH ELKINS, Blytheville, Ark. Filed Apr. 24, 1922. Serial No. 556,298. 3 Claims. (Cl. 64—24.)



1. In a lubricant feeding device for a car journal box, an arcuate pan, a pad carried thereby, wicks depending from said pan into the bottom of the journal box, and yielding supporting means for said pad and pan comprising leaf springs secured to the sides of said pan extending diagonally downwardly therefrom to the opposite side of the reservoir and each terminating in an upwardly curved foot adapted to engage the bottom and one side of the journal box.

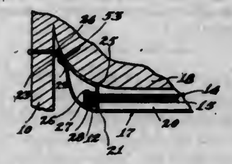
1,481,545. EYELET-SETTING MACHINE. ERNST F. H. ENNA, Copenhagen, Denmark. Filed Dec. 26, 1922. Serial No. 608,813. 6 Claims. (Cl. 218—14.1.)



1. An eyelet-setting machine, comprising a setting member adapted to cooperate with an anvil in partly spreading an eyelet barrel inserted in adjacent layers, a hammer adapted to cooperate with the anvil and with a concealing layer in clenching the eyelet on one of said adjacent layers, means for depressing said setting member and hammer successively so that the partial spreading of the eyelet precedes the clenching thereof and the clenching is effected wholly at one side of the concealing layer, said means including a reciprocating plunger, a separable connection between the hammer and the said plunger, and means for alternately releasing the hammer from and positively connecting it with the plunger.

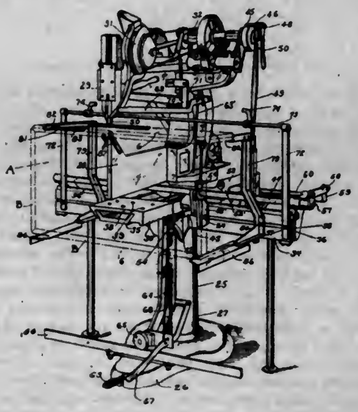
1,481,546. CAN OPENER. LEO BETHKE, Milwaukee, Wis., and HERBERT C. FOLLINGER, Chicago, Ill. Filed Dec. 22, 1920. Serial No. 432,409. 3 Claims. (Cl. 30—3.)

3. In a can opener, the combination with a frame, of a can support associated therewith, a plunger mounted to reciprocate in the frame above the support, a blade member carried by the plunger having a plurality of teeth, a drive shaft supported by the frame, a worm carried by said drive shaft, a worm gear wheel journaled on the frame, an eccentric pin carried by the worm gear wheel, a connection from the eccentric pin to the plunger, and means to rotate the vertical shaft.



1,481,547. VEGETABLE-PEELING MACHINE. JOHN E. GARRETTE, Cincinnati, Ohio, assignor of one-half to George M. Luce, Chicago, Ill. Filed July 13, 1921. Serial No. 484,484. 1 Claim. (Cl. 146—49.)

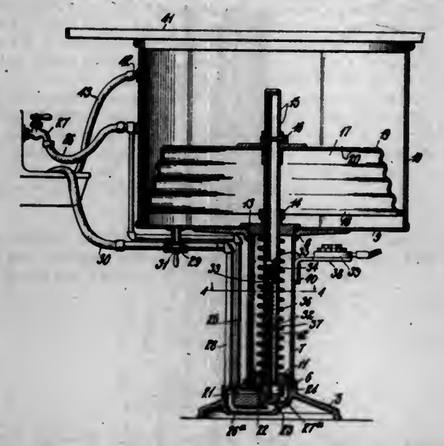
In a vegetable peeling machine, a rotor, a band thereon having a plurality of cutting projections, a water reservoir, said projections adapted to contact said water, a curved vertically slotted guard mounted over said cutter, a forwardly projecting support in front of said guard and means to operate said rotor, substantially as set forth and for the purposes specified.



1,481,548. SAFETY WINDSHIELD CURTAIN. WILLIAM F. GONGAWARE, Ocean Park, Calif. Filed Nov. 21, 1921. Serial No. 516,821. 3 Claims. (Cl. 290—85.)

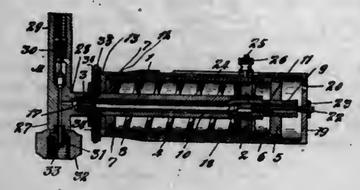
3. In a combination with a vehicle body, a windshield, a receptacle, a sheet of metal, having the end portions curved and flared to form a flange, the remaining end bent upon the flare and further bent to form a channel,

thus providing a guide-way for said windshield and said flange being perforated for the purpose of fastening said receptacle to a seat back.



1,481,549. AUTOMATIC RIVETING MACHINE. FREDERICK J. GREENE, Racine, Wis. Filed June 25, 1920. Serial No. 391,794. 3 Claims. (Cl. 218—3.)

2. An automatic riveting machine, comprising a standard provided with riveting mechanism, a transversely extending guide member mounted on the standard, a rock shaft of rectangular shape in cross section carried by and extending longitudinally of the guide member, another shaft extending parallel thereto, a reciprocating member for rocking the last mentioned shaft, a link and arm connection between the two shafts for transmitting motion from one to the other, a slidable bar mounted on the guide member, a rack and dog and bell crank means for transmitting the reciprocal motion of the reciprocating member to an intermittent motion of the slidable bar, said slidable bar provided with an outwardly extending guide arm, a slidable member mounted on the arm, a rack and dog and arm connection between the rectangular in-cross-section-shaft and the last mentioned slidable member for transmitting the rocking movement of the shaft to an intermittent movement of the slidable member, said arm connection slidably engaging the rectangular in-cross-section-shaft, and means on said slidable member and said slidable bar to receive interchangeable trunk part holding frames.



1,481,550. WASHING MACHINE. ALLEN E. HALL, Philadelphia, Pa., assignor, by mesne assignments, to Hall Wheel Corporation, a Corporation of Delaware. Filed Oct. 30, 1920. Serial No. 420,616. 9 Claims. (Cl. 68—15.)

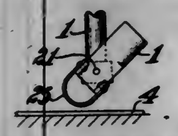
1. A washing machine having a tank and an agitator in the tank, including means operative by liquid under pressure to move said agitator in the tank; a discharge conduit to discharge the liquid from said means; and means optionally operative for directing said liquid after

it has operated said first means, either into said tank so as to serve as a rinsing liquid or discharging it through said discharge conduit; substantially as described.

1,481,551. PRESSURE GAUGE. WILLIAM P. HAMMOND, Passaic, and THEODORE A. HAMMOND, Rutherford, N. J. Original application filed Apr. 29, 1910, Serial No. 558,413. Divided and this application filed Oct. 30, 1915. Serial No. 58,887. 2 Claims. (Cl. 152—11.5.)

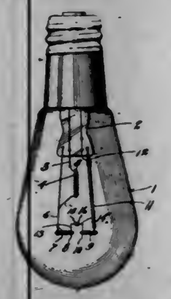
1. A pressure gauge including a pair of telescoping elements constructed for cooperation with each other to form a pressure chamber adapted to be placed in communication with the interior of the tire, yielding means resisting the telescoping action of the elements caused by pressure within the chamber formed thereby, a nipple upon one of the telescoping elements for engagement with the valve casing of the tire, an inwardly opening check valve mounted upon the opposite telescoping element and adapted to place the pressure chamber in communication with the outer atmosphere, a jacket carried by the first mentioned telescoping element and adjustable with respect thereto, and an abutment upon the jacket for engaging and opening the check valve to release the pressure when a predetermined pressure is reached.

1,481,552. PUMP. LEWIS H. HANEY, Los Angeles, Calif., assignor to Standard Deep Well Pump Co., Inc., Los Angeles, Calif., a Corporation of California. Filed July 14, 1922. Serial No. 575,081. 8 Claims. (Cl. 103—90.)



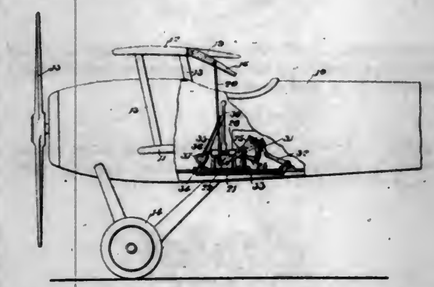
1. In a deep well pump, a coupling shell having a central fixed tubular bearing support, an elongated bushing fixed in said support, a short shaft rotatably mounted in the bushing, an impelling member having

a hub fixed upon each end of the short shaft, said impelling members each having a skirt thereon, said



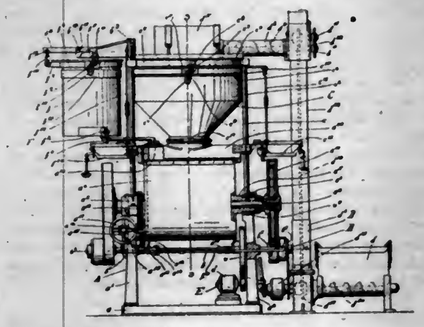
skirts surrounding end portions of the bushing, the external diameter of said skirts being substantially the same as the external diameter of the said hub.

1,481,553. QUICK-ACTING BOLT CLAMP. CHARLES V. HANSON, Fall City, Wash. Filed Oct. 20, 1921. Serial No. 509,156. 3 Claims. (Cl. 173—259.)



3. A quick acting bolt clamping device comprising a lever having wings pivoted at opposite sides of the bolt, and a resilient extension from one end of said lever adapted to engage the object to be held when the lever is alined with the bolt.

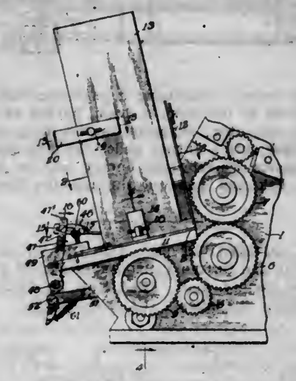
1,481,554. ELECTRIC-ARC LAMP. JOHN ALLEN HEANY, New York, N. Y., assignor to Heany Laboratories, Inc., New Haven, Conn., a Corporation of Connecticut. Filed June 11, 1917. Serial No. 174,106. 6 Claims. (Cl. 176—1.)



1. An arc lamp comprising a container, spaced electrodes therein, at least one of which is formed of a second class conductor, a heating element of highly refractory metal in intimate contact with said electrode, a normally closed shunt around the terminals of the electrodes and in series with the refractory heating element, and means to maintain said electrodes at proper arcing distance, said means being effective to break the shunt when the electrode is heated sufficiently to render the same conductive.

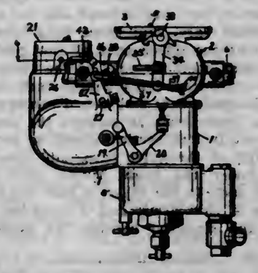
1,481,555. AIRPLANE CONSTRUCTION. WILLIAM F. HOLEKA, Sacramento, Calif. Filed Jan. 4, 1922. Serial No. 526,876. 2 Claims. (Cl. 244—29.)

1. In an airplane, a plane, a pair of ailerons mounted at the rear of said plane and disposed one at each end thereof, operating shafts carried by the plane and operatively connected to said ailerons to swing the same when said shafts are rotated, a pair of horizontally disposed aligned rock shafts journaled in the fuselage of the airplane, an operative connection between the outer ends of said rock shafts and said operating shafts whereby turning movement of said rock shafts will impart rotation to said operating shafts to swing the ailerons, a bevel gear segment secured at the inner end of each rock shaft, a bevel pinion interposed between said segments and in mesh therewith, a shaft upon which said pinion is fixed, a lever shaft connected to the pinion shaft to rotate the pinion when said lever shaft is rocked and thereby rotate the rock shafts in opposite directions, and lever operated means for swinging said pinion about the axis of said segments to rotate the rock shafts in the same direction.



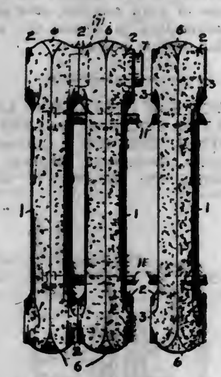
1,481,556. DOUGH MIXER. WILLIAM G. KIRCHHOFF, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 21, 1922. Serial No. 538,309. 5 Claims. (Cl. 107—4.)

5. In a device of the class described the combination of a dough mixer comprising a bin or trough, a mixer shaft extending revolubly thru the trough adapted to agitate the contents of the trough, gears mounted at both ends of the mixer shaft, a driven shaft having slots extending longitudinally of itself, gears mounted revolubly on the drive shaft, one each of which engages a gear on the mixer shaft, a clutch band fixedly connected with



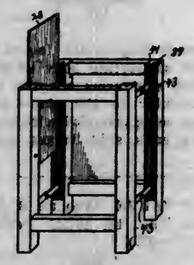
each of the second mentioned gears, clutch shoes fixedly mounted on the drive shaft one each adapted to bind upon one of the clutch bands, a gear revolubly mounted on each shoe, a shaft extending thru the last mentioned gear and adapted to revolve therewith the ends of the last mentioned shaft being threaded in opposite directions, blocks having threaded bores mounted on the opposite ends of said threaded shaft pivotally engaging the shoe, racks reciprocally mounted in the slots in the drive shaft each engaging one of the gears on the shoes, and a lever adapted to actuate the racks in such manner that each clutch shoe is brought into binding relation with its respective clutch band simultaneously with one another.

1,481,557. ENVELOPE-FEEDING MECHANISM. CLAUDE L. POST, Chicago, Ill. Filed Feb. 8, 1922. Serial No. 534,892. 12 Claims. (Cl. 271—2.)



1. In a device of the kind described and in combination, an envelope magazine, means for feeding the bottom envelopes successively from said magazine laterally of the remaining envelopes, independently movable means insertable between said bottom envelope and the envelope immediately thereabove while said bottom envelope is being fed, and drive means for actuating both of said means in a predetermined manner.

1,481,558. CARBURETOR. EUGENE C. RICHARD, Flint, Mich. Filed Dec. 11, 1918. Serial No. 266,176. 5 Claims. (Cl. 261—12.)

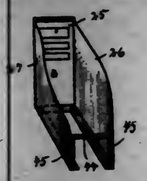


1. In a carbureter, the combination of a throttle valve provided with a stem projecting at the front of the carbureter, an arm on said stem, an air supply passage at one side of the carbureter provided with rearwardly offset hot and cold air inlets disposed in substantially the same plane, valves for said hot and cold air inlets provided with rearwardly projecting stems, the stem of one of said air inlet valves also projecting forwardly above the air supply passage which is provided with a bearing therefor, arms on the rearwardly projecting ends of said inlet valve stems, a link connecting said arms, said valves being disposed so that they are opened and closed alternately, an arm on the forwardly projecting stem, a link connected to such arm and slidably connected to said throttle valve arm, a spring disposed on said link of such strength as to actuate said air inlet valves and permit further actuation of the throttle valve, a heating member disposed in the carburetor in the path of the mixture, a heating medium connection for said heating member disposed above said air inlet passage, and a valve for said heating medium connection.

1,481,559. ENAMELED RADIATOR. ERNEST RICHARDSON, College Hill Borough, Pa. Filed July 5, 1921. Serial No. 482,303. 1 Claim. (Cl. 257—151.)

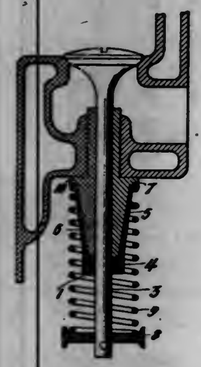
A unit for assembly in a radiator having a series of said units with abutting surfaces, the unit having its exterior enameled except on a surface designed to abut against a companion surface on another unit.

1,481,560. ARTICLE OF FURNITURE. SOREN RINGER, Chicago, Ill. Filed June 11, 1920. Serial No. 388,202. 3 Claims. (Cl. 45—162.)



2. An article of furniture, comprising a pair of frames, a plurality of pairs of toggle links connecting said frames and permitting the frames to be disposed in collapsible relation, side panels adapted to be detachably interposed between the sides of said frames, a detachable top and a detachable bottom associated with said frame structure, and means operating upon said toggles for drawing the frames toward each other to clamp the side panels snugly therebetween.

1,481,561. FILING UNIT. SOREN RINGER, Chicago, Ill. Filed June 30, 1920. Serial No. 392,920. 1 Claim. (Cl. 45—7.)

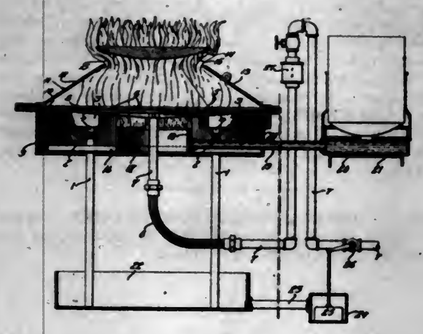


A filing unit, comprising integrally formed front and side walls having their lower edges inturned to provide bottom supporting flanges, said front wall being pro-

vided with a plurality of sight openings and having its upper edge rolled inwardly and downwardly to provide a downwardly opening groove adapted to receive a data card, a detachable bottom supported by said flanges,

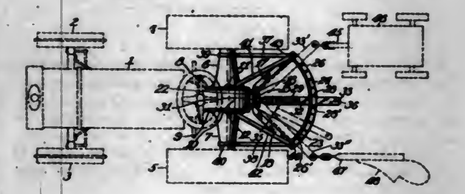
and a member unconnected to said bottom detachably connecting the rear ends of said side walls together to maintain the same in fixed relation, said member being adapted for disconnection to permit the separation of said side walls for nesting purposes.

1,481,562. DEVICE FOR PREVENTING LEAKAGE OF AIR AROUND THE STEMS OF VALVES OF INTERNAL-COMBUSTION ENGINES. CLAUDE HAMERTON ROWE, Husthwaite, Easingwold, England. Filed Apr. 13, 1920. Serial No. 373,476. 2 Claims. (Cl. 286—30.)



1. A washer supporting device for valves comprising an annular washer supporting body having radially disposed flexible arms, said arms adapted to be bent substantially perpendicular to the plane of said annular body and said arms being provided with out-turned flanges adjacent their free ends, said flanges constituting abutment members.

1,481,563. FLOAT VALVE. ADOLPH B. SCHIER, Milwaukee, Wis. Filed Aug. 16, 1922. Serial No. 582,141. 7 Claims. (Cl. 4—57.)

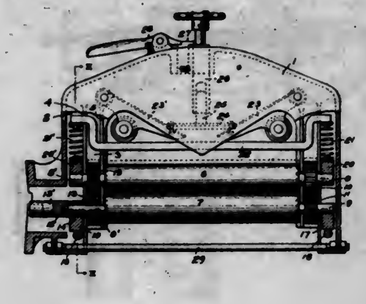


1. A float valve comprising a ball float, a resilient washer centrally attached thereto in a spaced relation therewith and an interposed flexible washer concentric with said resilient washer and of relatively greater diameter.

1,481,564. OIL BURNER. PALMER SCOTT, St. Davids, Pa. Filed Nov. 27, 1922. Serial No. 603,456. 5 Claims. (Cl. 158—91.)

5. An oil burner comprising a gasifying disk; means for feeding oil to the disk; a drum, having an opening, surrounding the disk; supports on the drum extending under the disk, and a burner under the disk and resting on the supports whereby the burner may be slid from under the disk and removed through the opening for cleaning.

1,481,565. ADJUSTABLE TRACTOR DRAWBAR. CLARK H. SELLARS and CLAIRE J. SELLARS, Guilford Township, Hendricks County, Ind. Filed Mar. 30, 1921. Serial No. 456,997. 3 Claims. (Cl. 280—33.12.)



1. An improved tractor draw-bar apparatus comprising a pair of guide bars with pin-holes therein, a frame arm and a brace rod and also an angle brace secured together at one end thereof and to one end of the guide bars, a frame arm and a brace rod and also an angle brace secured together at one end thereof and to the opposite end of the guide bars, said brace rods being arranged upon the top of the upper ones of the guide bars and said angle braces upon the tops of the brace rods, said angle braces extending convergently each towards the other from the guide bars and also divergently from the plane of said frame arms to support the arms and the brace-rods laterally and vertically and to prevent longitudinal shifting of the guide bars, said arms being approximately under the angle braces, said brace rods being parallel each to the other, a base bar fixed to the opposite ends of said arms, and a draw-bar pivoted to the base bar and extending between the guide bars.

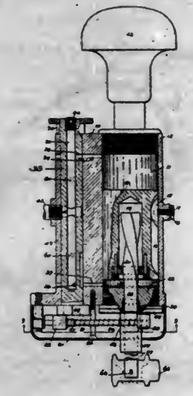
1,481,566. WRINGER. ROLF SELQUIST, Pittsburgh, Pa., assignor to Pittsburgh Gage & Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 9, 1921. Serial No. 483,397. 3 Claims. (Cl. 68—32.)

1. A wringer comprising a frame, an upper roll having gears attached at opposite ends thereof, a driving gear meshing with one of said gears, a lower roll having a gear attached at one end meshing with the remaining gear on the upper roll, a shaft projecting from the

opposite end of the lower roll, said driving gear being provided with a recess in which said shaft is journalled and supported, the upper roll being resiliently mounted for bodily movement and capable of movement a sufficient

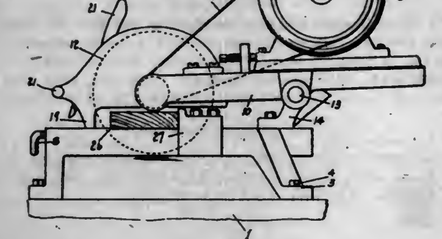
extent to disengage the teeth of the driving gear from its cooperating gear on the upper roll, whereby separation of the rolls a predetermined amount will prevent rotation of the rolls and remove the load from the driving means.

1,481,567. ORNAMENTAL PAPER AND PROCESS OF PREPARING SAME. GEORGE E. SENSENEY, Holyoke, Mass., assignor to The Marvellum Company, Holyoke, Mass., a Corporation of Massachusetts. Filed May 19, 1921. Serial No. 470,924. 10 Claims. (Cl. 91—68.)



1. The process of producing ornamental color effects upon paper, which consists in subjecting the paper sheet to distributed mechanical stresses adapted to produce local areas of relatively high penetrability; and then applying a color-modifying liquid to the treated sheet, whereby the non-uniform penetration of the liquid produces a variegated color effect.

6. The process of producing ornamental color effects upon paper which consists in crumpling or creasing the paper to produce irregular crease line areas of relatively high penetrability, then subjecting said sheet to an ironing operation to partially smooth out the surface thereof and then brushing or wiping a liquid color upon the surface of the sheet whereby the non-uniform penetration of color into the body of the paper and the uneven distribution of color upon the surface of the paper produces a variegated color effect.

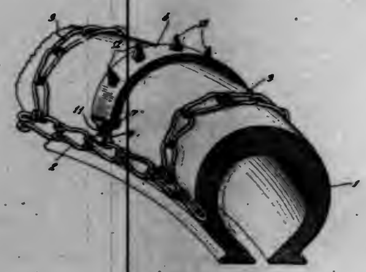


7. A colored ornamental paper sheet having line defining portions which are of relatively higher penetrability to a color modifying agent than other portions of said sheet, said paper sheet showing a variegated color effect due to the non-uniform absorption of a coloring agent in said different portions of said sheet.

1,481,568. VALVE GRINDER. EARL G. SMITH, Portland, Oreg., assignor of one-half to Albert B. Combs, Portland, Oreg. Filed Apr. 23, 1921. Serial No. 463,902. 5 Claims. (Cl. 121—3.)

1. A valve grinder having in combination a body member including a cylinder formed therein, a slidable piston within said cylinder including means for holding same against rotation, a rocking shaft projecting into said piston and outside of said cylinder, said shaft having a square end formed into a spiral which fits into a square hole in said piston, a flanged tool-holding sleeve secured on the rounded end of said shaft, a rotary valve within said body member having ports for admitting air from its interior to the opposite ends of said cylinder alternately, a notched disk secured to said valve, a pair of pawls adapted to engage the notch in said disc at opposite ends of the valve travel, a pair of plungers pivoted on said flanged sleeve, guides on said disc adapted to direct said plungers against said pawls and springs on said plungers adapted to rotate said valve after it is released by said plungers.

1,481,569. TRIMMING SAW. CARL E. TANNEWITZ, Grand Rapids, Mich., assignor to The Tannewitz Works, Grand Rapids, Mich. Filed Apr. 11, 1921. Serial No. 460,321. 2 Claims. (Cl. 143—6.)

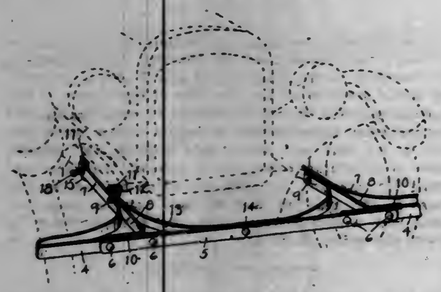


1. In a sawing machine, the combination with a bed, of a table, a saw frame pivotally mounted on said table, a saw mounted on the front end of said frame, a saw driving motor mounted on the rear end of said frame, a saw housing mounted on the front end of said frame, said housing being provided with a handle, a saw guard pivoted at its rear end within said housing and adapted when in its operative position to support the frame and guard the saw, and an automatic catch for locking said guard in its operative position, said housing being provided with a stop coacting with said table to limit the downward swing of the saw.

1,481,570. PULL-OUT DEVICE FOR TIRE CHAINS. ALICE F. TOFFEY, Jersey City, N. J. Filed Nov. 4, 1922. Serial No. 598,970. 1 Claim. (Cl. 152—14.)

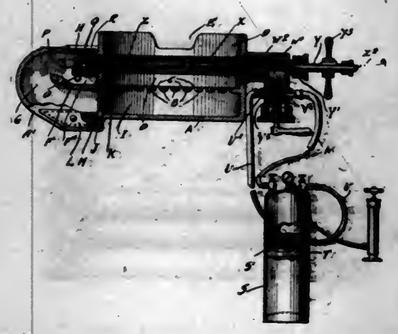
The combination with conventional non-skid tire chains of a pull-out device embodying a solid metallic strip of arcuate shape bifurcated at its opposite ends and adapted to embrace the tread surface of a tire and extend transversely thereof, metallic gripping projections extending from the medial portion of the tread surface of the metallic strip and rigid therewith, a clasp extending into the bifurcation at each end of the strip, and a pin passed

through each bifurcated end and through the interfitted clasp associated therewith to pivotally mount a clasp at each end of the strip with the clasps in position to de-



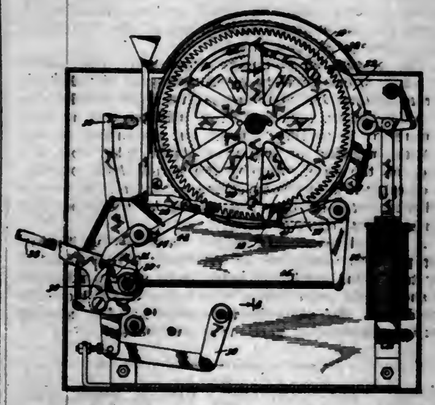
tachably engage with the circumferentially extending chain elements of the conventional non-skid chains for the purpose of demountably supporting the strip in co-operative relation with the chains and tire.

1,481,571. FASTENER FOR BELTS. JOHN TOMS, Kohimarama, Auckland, New Zealand. Filed Nov. 13, 1922. Serial No. 600,725. 2 Claims. (Cl. 24—33.)



1. An improved fastener for joining the ends of belts and the like comprising two pivoted gripping members curved in cross section and oppositely disposed and provided with right angled inwardly projecting ends and pivotally connecting said ends substantially as described.

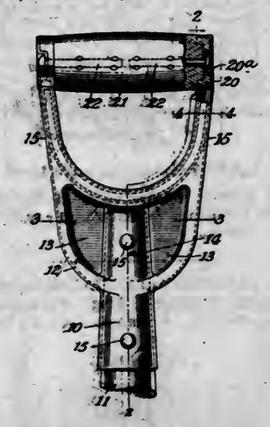
1,481,572. BUMPER FOR AUTOMOBILES. GROVER H. TRIPP, Allegan, Mich. Filed Aug. 20, 1923. Serial No. 658,294. 7 Claims. (Cl. 293—55.)



3. The combination with a frame member of an automobile, of a bumper provided with a supporting arm, an attaching bracket having a hook engaged within said frame member, an arm disposed at the side thereof, and a bolt disposed through the bracket arm engaging the side of the said frame member, said bolt being provided with a nut on the inside of the bracket whereby the bracket is clamped to the frame member, said bolt being disposed through said bumper supporting arm and provided with a clamping nut therefor.

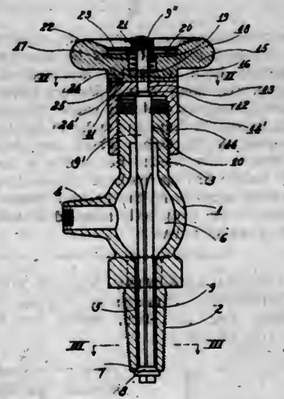
1,481,573. GAS GENERATOR AND BURNER. WILLIAM THOMAS VAN BRUNT, Redbank, N. J. Filed Nov. 20, 1920. Serial No. 425,297. 8 Claims. (Cl. 158—65.)

1. The combination of a gas generator and burner comprising a body portion, a retort supported in the body portion having an unrestricted inlet for oil and a valve controlled outlet for vapor, a burner, a conduit leading from the vapor outlet to said burner, a pad of absorbent material located in the bottom of said conduit.



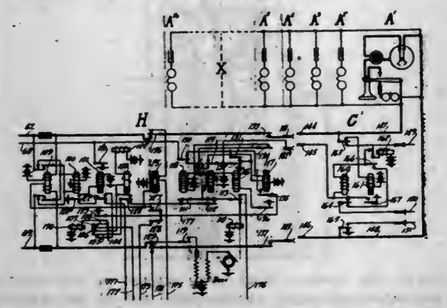
1,481,574. TIME RECORDER. THOMAS J. WATSON, Short Hills, N. J., assignor to Computing-Tabulating-Recording Co., New York, N. Y., a Corporation of New York. Filed Feb. 11, 1922. Serial No. 535,780. 13 Claims. (Cl. 234—48.)

1. A time recorder comprising a time controlled type wheel, a record support, means for taking a printed record from said wheel, means controlled by the advance of said wheel from its initial position for shifting said record support relatively to said wheel, and means for resetting said wheel to zero and restoring said record support to its initial position.



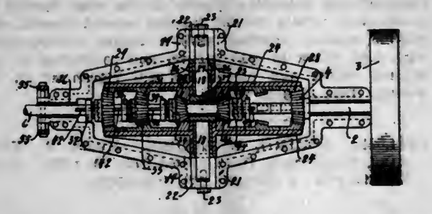
3. A time recorder comprising in combination, a time controlled type wheel, means for taking records therefrom at successive positions upon a record sheet, means for resetting said wheel to zero, and means for preventing the taking of a start record until the wheel has been reset.

1,481,575. SHOVEL HANDLE. LEWIS E. WEBSTER, Wyoming, Pa. Filed Oct. 17, 1921. Serial No. 508,242. 9 Claims. (Cl. 294—57.)



1. A sheet metal shovel handle, comprising a hollow body portion including a pair of spaced arm portions of hollow channel section, a shank portion integral with said body portion, said body portion having substantially flat portions and shaped to form an extended socket for the inserted shank.

1,481,576. VALVE. PETER WERTZ, Pittsburgh, Pa. Filed Oct. 5, 1922. Serial No. 592,518. 5 Claims. (Cl. 251—37.)

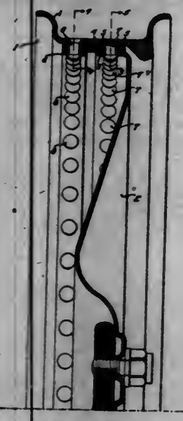


6. A valve comprising a casing provided with a passage therethrough, a valve seat formed in said casing at one end of the passage, a rod having a head at one end cooperating with said seat, and having its opposite end projecting through an extended bore in the casing, a rod having a snug fit in said bore for forming a substantially tight seal, a two-part actuating cap having a threaded engagement with the casing through which the rod projects, the inner part of the cap being rotatably mounted upon the rod and the outer part thereof being slidable but non-rotatable thereon, a shoulder forming an abutment on the rod disposed within the inner part of the cap, a seat on the said inner part coacting with the shoulder, an abutment on the extremity of the rod exteriorly of the outer part of the cap, the exterior face of the outer part of the cap being provided with a recess having bores of different diameters, a disk fitting the outer enlarged bore interposed between the last-named abutment and the cap, a compression spring disposed within the inner smaller bore interposed between the said disk and cap, and means for locking the two parts of the cap to each other for simultaneous rotative movement.

1,481,577. AUTOMATIC TELEPHONE SYSTEM. BERNARD D. WILLIS, Oak Park, and ARTHUR J. RAY, Chicago, Ill., assignors to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1920. Serial No. 427,177. 20 Claims. (Cl. 179—17.)

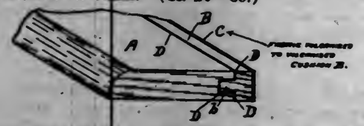
1. In a telephone system, a party line, a plurality of signals on said line, a source of ringing current, means for connecting said source of current to the line so as to operate said signals according to predetermined codes, means for disconnecting said source of current from said line, and means for rendering said disconnecting means inoperative except at the end of the code.

1,481,578. CHANGE-SPEED TRANSMISSION GEAR. REUBEN REINER WISE, Manteca, Calif. Filed Dec. 19, 1922. Serial No. 607,914. 3 Claims. (Cl. 74—59.)



1. A housing, a pair of duplicate multi-ring gears therein in confronting relation, a transverse shaft supported at opposite ends by the housing and rotatably supporting the multi-ring gears, an enlargement on the transverse shaft between said gears with a bore extending therethrough at right angles to the shaft, a second shaft extending through the bore and having bearing therein, and also in one end of the housing, a third shaft having bearing in the opposite end of the housing in alinement with the second shaft, a pinion on the third shaft engaging both ring gears, a plurality of loose clutch pinions on the second shaft each engaging another ring of the ring gears, and means for selectively connecting said loose pinions with said second shaft.

1,481,579. VEHICLE WHEEL. CLAUDE A. WITTER, Philadelphia, Pa., assignor to Hall Wheel Corporation, Philadelphia, Pa. Filed Feb. 16, 1923. Serial No. 619,397. 3 Claims. (Cl. 301—63).



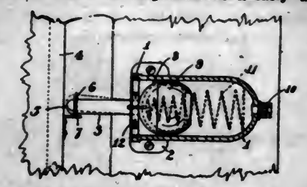
3. A wheel including a hub; a rim; a disk, extending from the hub, having a horizontal annular flange spaced from the rim; a resilient band embracing the flange and

extending to one side thereof; a metallic band embracing one side of the resilient band, and a metallic band embraced by the side of the resilient band opposite the

flange, the resilient band being secured at one side to the flange and to the exterior band and at the opposite side to the interior band and the rim.

1,481,580. STOP FOR DOORS AND WINDOWS. HARRY N. WRIGHT, Chicago, Ill. Filed Dec. 6, 1922. Serial No. 605,308. 1 Claim. (Cl. 20—69.)

A stop comprising a rigid member provided with a longitudinally extending groove on one edge thereof, in combination with a cushion member secured thereto, said cushion member provided with a tongue corresponding with and fitting in said groove, and consisting of vulcanized rubber and textile material vulcanized to the wearing face of said rubber.

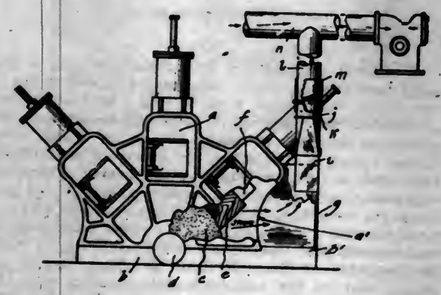


1,481,581. NOSTRIL EXPANDER. HENRY R. WOODWARD, Washington, D. C. Filed Oct. 18, 1922. Serial No. 595,294. 3 Claims. (Cl. 128—342.)

1. A nostril expander comprising similar opposite members and a connecting U-shaped portion, each side member having a part adapted to engage one of the fossæ of the nose when the expander is inserted therein, and a comparatively large nostril supporting loop beyond the said part, the loop being inclined outwardly and upwardly and away from the opposite loop on the other member, and the free extremity of the loop being of a form to prevent injury to the nostrils.

1,481,582. PNEUMATIC CHECK OR THE LIKE DEVICE. JOHN H. WOOLLISCROFT, Liverpool, England. Filed Apr. 22, 1920. Serial No. 375,783. 3 Claims. (Cl. 16—84.)

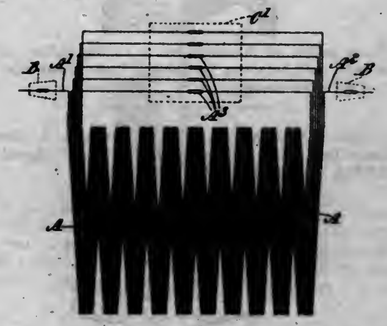
1. A door check comprising in combination a cylinder closed at one end, a piston rod adapted to receive the blow to be checked and free from all rigid attachment, a spherical piston rigidly mounted on said piston rod allowing a universal motion of the piston rod relatively to the axis of the cylinder and of displacement axially along said



cylinder, a one-way release valve at the inner end of said cylinder and means to retain said piston permanently inside said cylinder.

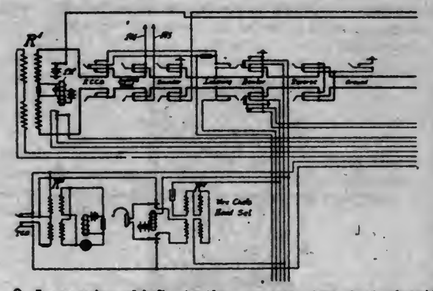
1,481,583. ELECTRICALLY-ILLUMINATED BUOY. MATT ANUNDI, Clatskanie, Oreg. Filed Sept. 26, 1923. Serial No. 664,913. 8 Claims. (Cl. 9—8.30.)

1. A buoy comprising a hollow body consisting of two oppositely disposed conic portions in abutment at their bases, a lantern head removably mounted on one conic portion, an electric lamp in said lantern head, a box-like battery holder supported centrally within the lower portion of the body, so spaced from the walls of the latter as not to be immersed in the water which may collect in the buoy-body during any inclination which it may assume, the battery holder having walls of substantial height, a battery element secured in the battery holder, a weight in the bottom of the buoy body adapted to hold it in upright position while afloat.



1,481,584. STEAM-REMOVING MEANS FOR PAPER-PULP GRINDERS. CHARLES A. BAXTER, West Linn, Oreg. Filed Aug. 23, 1922. Serial No. 583,796. 5 Claims. (Cl. 83—75.)

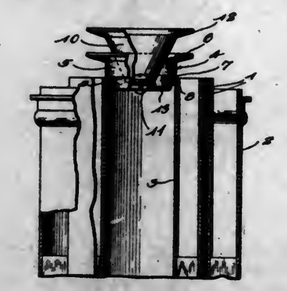
1. In combination with the housing of an operating device of the character described, such housing having crevices in its walls and a relatively large opening at one side, of a supplemental removable housing section, open



at one side in correspondence with said side opening of the main housing, and adapted to have its walls placed in abutment with the walls of the latter, thereby to enclose a space constituting a chamber of substantial dimensions; means for creating a draft from said chamber to the atmosphere, thereby creating a region of negative pressure in said chamber tending to draw in exterior air through said orifices of the main housing; such means adapted to be connected with and disconnected from said supplemental housing section, thereby to permit the removal of the latter.

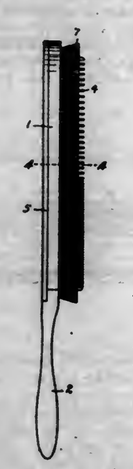
1,481,585. ELECTRIC REACTIVE WINDING. JAMES ROBERT BEARD, Benton, England, assignor to Electrical Improvements Limited, Newcastle-upon-Tyne, England. Filed Sept. 16, 1919. Serial No. 324,248. 6 Claims. (Cl. 175—360.)

6. In a reactive winding the combination of an insulated cable coiled in helical form such cable having a plurality of cores comparatively lightly insulated from each other the cores as a whole being surrounded by insulation sufficient to withstand the normal voltage to earth, connections between the cores joining them in series said connections being such that cores having comparatively large voltages between them are not adjacent in the cable, an outer metallic sheath forming an outer layer of the cable and means for supporting the turns of such metallic sheathed cable to withstand the stresses due to heavy currents.



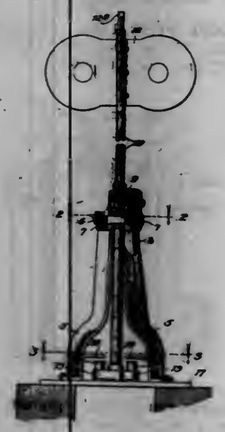
1,481,586. WIRE CHIEF'S TEST CIRCUITS FOR TELEPHONE SYSTEMS. WILLIAM A. BENSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 17, 1921. Serial No. 445,710. 18 Claims. (Cl. 179—175.)

2. In a wire chief's testing system, two test circuits each terminating in a manual cord and plug and each being provided with keys and associated testing apparatus, and a cord reverse key in each test circuit whereby the two test circuits may be interchanged with respect to said plugs.



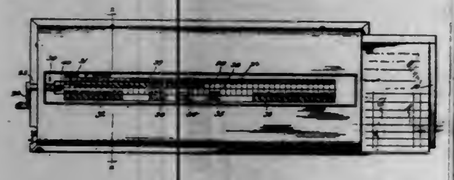
15. In a telephone system, a manual switchboard, means including a trunk line outgoing from said board and a train of serially related automatic switches for extending a connection to a subscriber's line, a circuit for energizing the cut-off relay of said subscriber's line, said circuit including a wiper in each of said switches, and means in the first of said switches controlled from said board for opening said circuit to deenergize said cut-off relay.

1,481,587. FLAME SPREADER. CHARLES H. BORCK, Jackson, Mich. Filed Dec. 28, 1922. Serial No. 609,428. 1 Claim. (Cl. 67—63.)



A flame spreader comprising a plurality of apertured vertically spaced cup-shaped members arranged one within the other and having their side walls radially spaced from each other, the upper edges of each of said members being directed laterally outward and upward to provide inclined peripheral flanges.

1,481,588. COMBINATION COMB AND BRUSH. HERBERT M. CHUBBUCK, Duluth, Minn. Filed June 4, 1923. Serial No. 643,284. 1 Claim. (Cl. 132—88.)

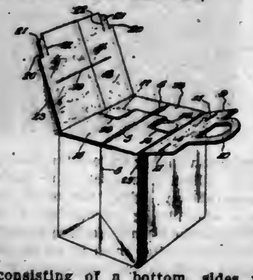


A combined comb and brush comprising a single piece handle and body portion, the latter having a central through slot extending longitudinally thereof for the reception of the comb, and the entire back of the body portion being stepped, a cover for said stepped portion of the body forming a continuation of the handle, and a second slot extending wholly about the first mentioned slot but not entirely through the back, and a row of brush bristles fixed within said surrounding slot and spaced from the comb, substantially as and for the purpose described.

1,481,389. SWITCH STAND. ARTHUR M. CORNELL, Chicago, Ill., assignor to Pettibone, Mulliken Company, Chicago, Ill., a Corporation of New York. Filed Oct. 20, 1923. Serial No. 671,453. 2 Claims. (Cl. 246—413.)

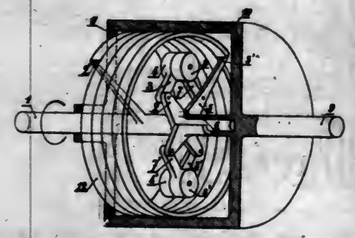
1. A switch-stand of the character described, having a double-crank on the lower end of the target-shaft with integral crank-arms extending at 180° apart and each provided with an upright connecting-rod stud, said shaft containing a socket in its lower end midway between said arms, and a bed-plate carrying the stand and having a pivot-stud projecting into the socket.

1,481,590. CALCULATING DEVICE. JAMES P. COUGHLIN, Kansas City, Mo. Filed June 13, 1922. Serial No. 567,989. 1 Claim. (Cl. 235—86.)



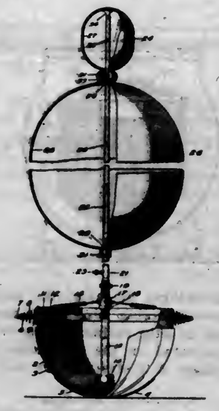
In a device of the class described, a casing having a sight opening extending longitudinally in its top, means above the sight opening parallel to the upper side thereof designating units relating to the quantities or measurements of commodities to be dispensed, means parallel to the lower side of the sight opening designating fractions of units relating to the quantites or measurements of the commodities to be dispensed, and a sheet movable relative to said opening and bearing at one side a numerical designation of the price of a unit quantity of the commodity, the said sheet, opposite to the numerical designation having parallel longitudinal lines of numerical designations, the upper line relating to the price of unit quantities, in multiple, of the commodity and bearing relation to the upper designating means first mentioned, the lower line of designating numerals indicating the selling price of fractional quantities of the commodity and cooperating with the lower designating means first mentioned.

1,481,591. CANDLE BASE. CLAUDE C. CRASWELL, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Feb. 20, 1922. Serial No. 587,929. 1 Claim. (Cl. 67—28.)



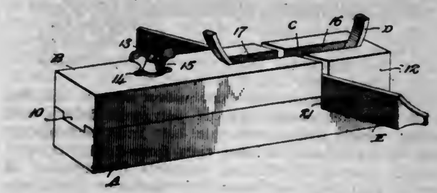
As an article of manufacture, a candle holder formed from wax and adapted to receive and removably support a wax candle.

1,481,592. COLLAPSIBLE BOX. BEULAH L. DOSIER, Eagle Pass, Tex. Filed Sept. 13, 1922. Serial No. 588,023. 4 Claims. (Cl. 229—54.)



3. A box consisting of a bottom, sides rising from the bottom, and flaps at the upper ends of all the sides, the flanges at two opposite sides being constructed to fold over the box and overlap and interlock, and the flaps at the remaining opposite sides being constructed to fold over the first mentioned flaps, and overlap and interlock, one of the last-mentioned flaps being provided at its free edge with a projecting handle member adapted to pass through and extend above the overlying flap.

1,481,593. CLUTCH. JEAN FIEUX, Paris, France. Filed Sept. 3, 1921. Serial No. 498,452. 1 Claim. (Cl. 192—105.)

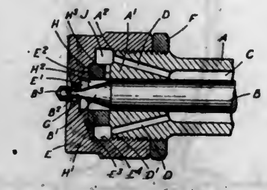


In a clutch, the combination of a driving shaft, a driven shaft, a drum fast to the driven shaft, a coiled friction spring arranged in the drum, a stop on the driving shaft engaging one end of said spring, an element loose on the driving shaft and having a stop engaging the other end of the spring, a centrifugally movable weight and arms pivotally connecting said weight to the driving shaft and to the last named stop.

1,481,594. PUNCHING BAG. ALFRED H. FITZGERALD, San Mateo, Calif. Filed June 27, 1922. Serial No. 571,235. 4 Claims. (Cl. 46—69.)

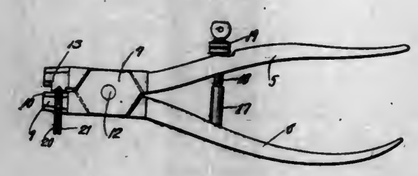
1. A portable punching bag comprising a bag, a stem for supporting the bag, a semispherical base in which said stem is mounted, and compression springs arranged on the outer surface of said base for effecting the quick recovery of the base when rocked by blows on the bag.

1,481,595. PISTON-RING-FILING DEVICE. JOHN A. FLANDERS, Tampa, Fla. Filed May 31, 1923. Serial No. 642,535. 7 Claims. (Cl. 29—76.)



1. In a piston ring filing device, a piston ring support, means for guiding a file element operating between the terminals of a piston ring supported thereby, and means coacting with such ring when the latter is pressed against the support to force the terminals thereof against respective faces of an operating file element, said means acting to maintain the alinement of the terminals of said ring with each other.

1,481,596. FIGURE WHEELED TOY. GEORGE HENRY FLETCHER and FRANK LEONARD MORGAN, Hoquiam, Wash. Filed Jan. 12, 1921. Serial No. 436,709. 9 Claims. (Cl. 46—45.)

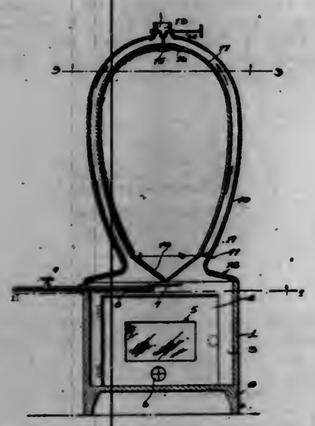


1. A figure wheeled toy comprising a plurality of longitudinally alined sections directly hinged one to another to swing freely in a lateral direction, each one of the terminal sections being provided with a pair of wheels located relatively nearer to its hinged connection than to its free end and at a distance from the hinged connection.

1,481,597. LIQUID-FUEL SPRAYER. ANDREW FORSTER, Cowes, Isle of Wight, England, assignor to J. Samuel White & Company Limited, East Cowes, Isle of Wight, England. Filed Feb. 4, 1921. Serial No. 442,517. 6 Claims. (Cl. 299—118.)

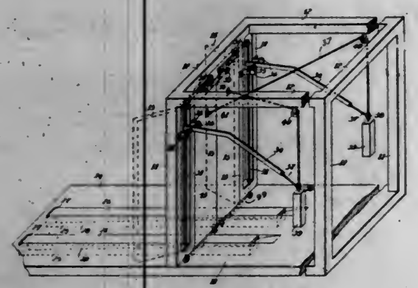
2. In a liquid fuel sprayer the combination of a hollow cylindrical sprayer body having a closed end with a circular flat end surface, a cap on the end of the sprayer body, an annular plate of less diameter than the end of the sprayer body disposed and carried between it and the cap so that an annular space is formed in advance of the closed end of the sprayer body and between it and the cap, the hole in the centre of the annular plate constituting a mixing chamber, a plurality of grooves formed in one face of the plate forming in conjunction with the flat surface against which the plate is held, a series of passages extending tangentially from the central opening in the plate to and through the outer periphery of the plate and serving for the flow of fuel from the annular chamber, a plurality of passages extending from the hollow interior of the sprayer body through the closed end thereof into the annular chamber and serving for the delivery of fuel into this chamber, and a central orifice leading through the end cap from the mixing chamber and serving as a nozzle for the sprayer as set forth.

1,481,598. JEWEL-SETTING TOOL. IGNAZIO GATTI, New York, N. Y. Filed Mar. 15, 1923. Serial No. 625,374. 1 Claim. (Cl. 81—7.)



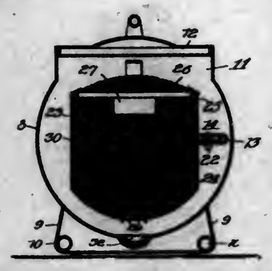
A gem setting tool of the class described comprising pivotally connected handles, one of said handles terminating in an anvil head, the top face thereof being gradually curved, the complementary handle terminating in a crimping head of substantially the same length as the anvil head, said crimping head having an inverted V-shaped bottom face shaped to conform to the curvature of the anvil head and adjustable means between the handles for limiting the pressure of said anvil and crimping heads.

1,481,599. STOVE. JACK GAUGHAN, Long Beach, Calif. Filed Aug. 2, 1922. Serial No. 579,277. 3 Claims. (Cl. 126—58.)



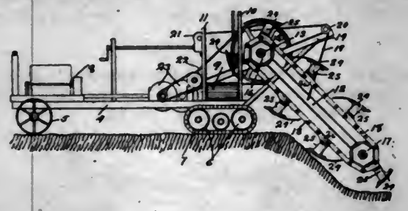
1. A stove of the class described comprising a base provided with a fuel compartment, an ovoidal outer casing formed upon the base having its upper end termi-

nating in a discharge flue, an ovoidal inner casing substantially spaced within the outer casing and provided



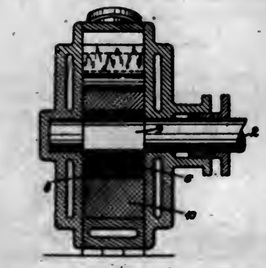
with a valve seat in its upper end and a valve adapted to be seated in said valve seat to close said inner casing and retain same air-tight.

1,481,600. AUTOMATIC GARAGE-DOOR OPERATOR. ALEXANDER H. GEIGER, Cheshire, Conn. Filed Apr. 25, 1922. Serial No. 556,475. 2 Claims. (Cl. 268—9.)



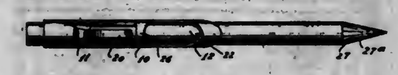
1. In a garage-door operating mechanism, a door, means to urge the door to open position, means to releasably hold the door in closed position, vehicle-actuated mechanism for releasing said holding means, a weight connected to said door for urging it to closed position, vehicle-operated means for raising said weight to permit said door to open, said weight-raising means being connected to said releasing mechanism whereby said weight will not only serve to close said door when the vehicle has left its actuating position, but will also serve to restore said door-holding means to holding position.

1,481,601. DISHWASHING MACHINE. SIGMUND L. GOLDMAN and HOLLING G. TUCKER, Chicago, Ill.; said Tucker assignor to said Goldman. Filed May 29, 1922. Serial No. 564,585. 5 Claims. (Cl. 141—9.)



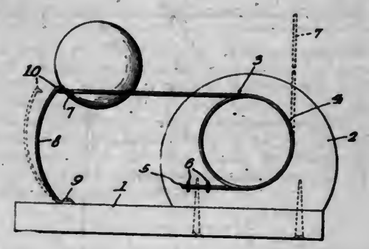
1. In a dish-washing machine, the combination of a casing, a water-conducting pipe of U-shape trunnioned at opposite ends in said casing, and a holder for dishes to be washed mounted on the trunnions of said pipe in a position in which it is straddled by said pipe.

1,481,602. EXCAVATOR. GEORGE H. GREIMANN, Garner, Iowa, assignor to Greiman Ditcher Company, Garner, Iowa, a Corporation of Iowa. Filed Nov. 5, 1920. Serial No. 421,898. 3 Claims. (Cl. 37—86.)



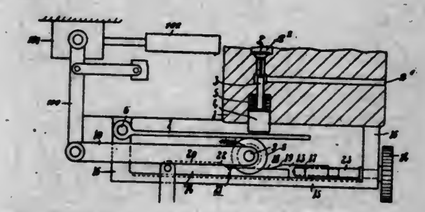
1. In an excavator, the combination with a link belt of the sprocket chain type, of polygonal driving and guiding wheels over which said belt runs, outstanding arms having bifurcated inner ends formed with integral laterally spaced link-forming elements incorporated as links in said belt, and excavating spades or blades rigidly secured to the outer ends of said arms.

1,481,603. SUPPORTING OF THE PISTON IN ROTARY ENGINES. MAX GÜTTNER, Schmolln, Germany. Filed Aug. 29, 1922. Serial No. 585,041. 6 Claims. (Cl. 74—109.)



1. Supporting of the piston in rotary engines comprising in combination a shaft, an eccentric of said shaft having a longitudinal groove with limiting surfaces at both ends, a straight slightly elastic body embedded in its longitudinal direction in said groove and a sleeve enclosing said eccentric and said straight elastic body.

1,481,604. COMBINATION PENCIL SHARPENER AND POCKET CLIP. LEAMAN S. HARVEY, Waterbury, Conn. Filed Nov. 12, 1921. Serial No. 514,551. 1 Claim. (Cl. 120—90.)



A blank to be used to form a tubular combination pencil sharpener and pocket clip, comprising an integral sheet of strip iron, said sheet having a pair of separated cut-out portions, a clip tongue extending into one of said cut-out portions, and the other cut-out portion having one edge sharpened to form a knife edge.

1,481,605. TOY GAME. JOSEPH J. HAYES, Elkhart, Ind. Filed Nov. 8, 1922. Serial No. 599,699. 1 Claim. (Cl. 46—59.)

In a toy game of the class described, the combination of a base, an upstanding extension affixed to the base, a wire spring having inwardly turned ends engaged in the base extension, means bracing the spring on the base extension, the spring having opposite coiled portions and having an outwardly extending loop portion of suitable size for receiving a ball, and a spring trigger affixed to the opposite end of the base from that on which the extension is positioned, said spring trigger having a suitably bent end to releasably engage the central portion of the spring loop described above.

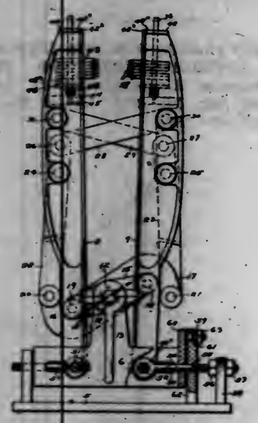
1,481,606. FUEL PUMP FOR INTERNAL-COMBUSTION ENGINES. KNUT JONAS ELIAS HESSELMAN, Saltsjo-Storangen, Sweden. Filed Oct. 3, 1922. Serial No. 592,106. 4 Claims. (Cl. 123—140.)

1. In a fuel pump arrangement for internal combustion engines, including a pump plunger, a pump chamber, a suction conduit and a valve controlling the connection between the pump chamber and the suction conduit, the combination with said valve, of means including rectilinearly movable cam elements and members cooperating therewith to control said valve so as to maintain same open during the first and last portions of the pressure stroke of the pump, said cam elements and said other members having a movement relative to each other proportionate to the pump movement, the said cam elements and said other members being adjustable relatively to each other while in operation.

1,481,607. APPARATUS FOR THE DISPLAY OF PICTURES, ADVERTISEMENTS, OR THE LIKE. CLAUDE WILLIAM HISCOCKS, Holborn, London, England. Filed Aug. 14, 1922. Serial No. 581,857. 2 Claims. (Cl. 40—132.)

1. The combination of a composite picture structure comprising an outer transparent sheet, a translucent sheet having a picture provided on its outer face, a second translucent sheet having a picture provided on its outer face and an inner translucent light diffusing sheet, said sheets arranged in the order specified, with means for alternately directing light against the outer and inner sheets.

1,481,608. WICK. LAWRENCE R. HOWARD, Chandler, Ariz. Filed Apr. 27, 1920, Serial No. 377,109. Renewed June 21, 1923. 2 Claims. (Cl. 67—70.)

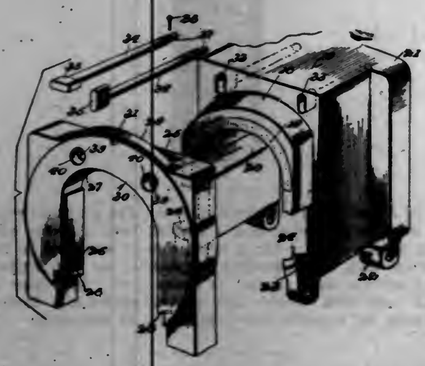


1. An article of manufacture comprising a bottom wick, a wick carrier comprising a tubular band therefor having locking slots, a burner wick, a band connected to the burner wick and depending therebelow, the said depending portion being adapted to embrace the upper edge of the said wick carrier and having projections formed therein for engaging the locking slot of the latter.

1,481,609. SPRING SPREADER FOR VEHICLE SPRINGS. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr. Filed Mar. 7, 1923. Serial No. 623,508. 8 Claims. (Cl. 81—3.)

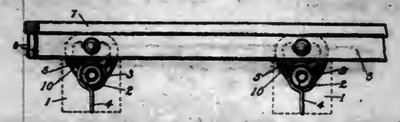
1. In a device of the character described comprising a base, a pair of standards pivoted thereon for swinging movement toward and from each other, means for forcibly

moving said standards toward each other, spring leaf spreading means carried by said standards, longitudinally



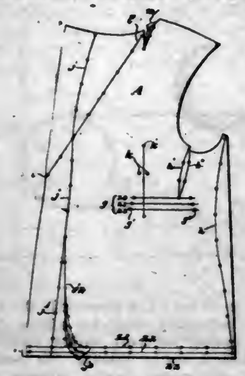
disposed bolts engaged with the pivots of said standards and means for adjusting said bolts longitudinally with respect to the base.

1,481,610. PROCESS FOR FINISHING WOOD. FRANK KORTESKI, Bay City, Mich., assignor of one-half to Joseph A. Pacyneki, Bay City, Mich. Filed Feb. 4, 1922. Serial No. 534,279. 2 Claims. (Cl. 91—68.)



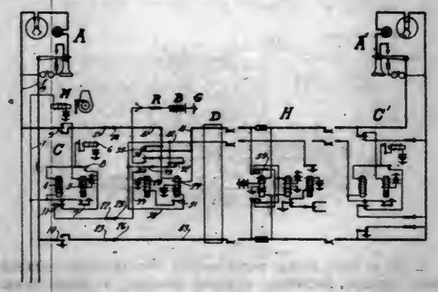
1. A process for graining wood or other material which consists in applying a filler coat, then applying shellac, rubbing thoroughly, next applying a mixture of metal dust and varnish, and covering with a coat of transparent protective medium.

1,481,611. LOCOMOTIVE DRIVING BOX. ARTHUR T KUEHNER, Elkridge, Md. Filed Nov. 20, 1919. Serial No. 339,347. 13 Claims. (Cl. 64—25.)



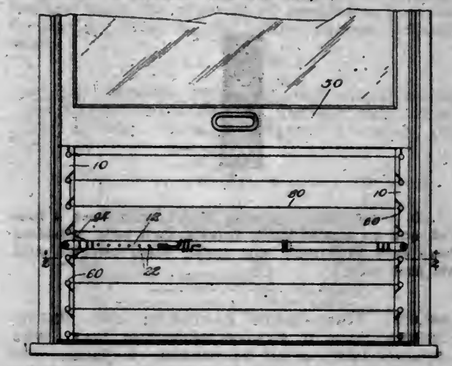
1. A journal box including a box body, a face plate seating against the outer side of the box body, and means securing the plate to the box body, said means being rotatable to a position whereby such means may be retracted to free the plate for removal in a vertical plane parallel to the adjacent face of the box body.

1,481,612. RAILWAY CONSTRUCTION. WILLIAM GRAHAM LUCAS, Orbisonia, Pa. Filed July 30, 1923. Serial No. 654,725. 18 Claims. (Cl. 238—60.)



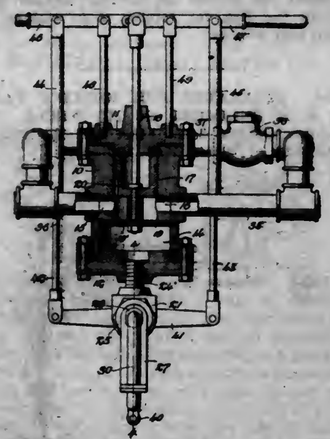
2. A railway construction comprising ties having spiral spring elements therein and projecting thereabove and rails which include each a head and two webs the latter designed to receive therebetween said elements and the head designed to rest thereon.

1,481,613. CHART FOR DRAFTING GARMENTS. CHARLES T. MACKEY, Chicago, Ill. Filed May 17, 1922. Serial No. 561,776. 2 Claims. (Cl. 33—12.)



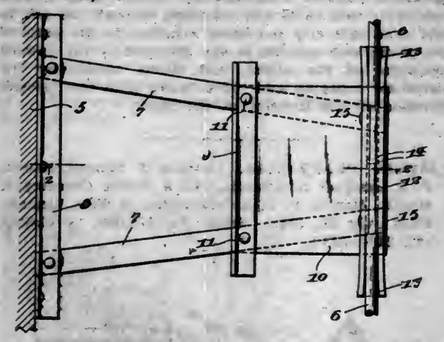
1. A pattern of given peripheral outline, a scale at the bottom of the pattern for indicating length and width of garment, and a second scale parallelly disposed with respect to the first mentioned scale for proportionally indicating changes in garment construction, due to variation in garment length.

1,481,614. MEASURED-SERVICE TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1920. Serial No. 423,155. 9 Claims. (Cl. 179—9.)



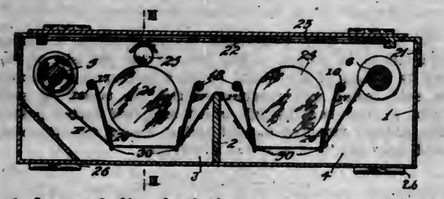
2. In a telephone system, a subscriber's line, a rotary line switch for extending said line when calling, said switch having two line wipers and a test wiper, a holding circuit for said switch including said test wiper, an individual meter for said line connected to said circuit, a booster battery, and means for connecting said battery in the holding circuit to operate said meter.

1,481,615. CURTAIN-PROTECTING DEVICE. AUGUST E. MEYER, Dixon, Ill. Filed Aug. 23, 1922. Serial No 583,776. 4 Claims. (Cl. 156—38.)



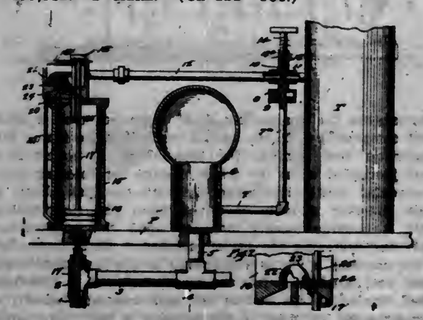
2. A device of the character described comprising a pair of vertical members, having means for lacing a string thereon to form a grating between said members, and adjusting means joining said members and comprising two horizontally arranged overlapped members, with means for yieldingly holding them in various adjustments and means on said adjusting means for taking up the slack in the string caused by the adjustment of the vertical members toward each other.

1,481,616. VALVE MECHANISM FOR AUTOMATIC TRAIN-CONTROL APPARATUS. ROBERT L. MILLER, Spokane, Wash., assignor to Otis Automatic Train Control, Inc., Spokane, Wash., a Corporation of Washington. Filed Mar. 6, 1922. Serial No. 541,552. 2 Claims. (Cl. 246—190.)



1. In automatic train control apparatus, a valve mechanism operable at predetermined times to effect a reduction in train line pressure, a rotatable ramp engageable shoe having a normal perpendicular position and operable when rotated in either direction from its normal position to initiate operation of said valve mechanism, a pair of arms extending from said shoe, a pair of levers mounted on said valve mechanism and telescoping connections between related arms and levers whereby one of the latter is operable to restore said shoe to normal position following its rotation in one direction and the other is operable to restore the same to normal position following its rotation in the other direction.

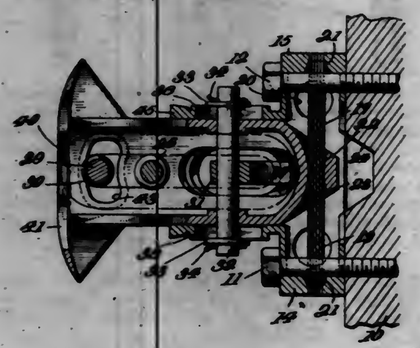
1,481,617. SUPPORT FOR ELEVATED CABLE TRACKS. JOSEPH F. MONTINE, Chicago, Ill. Filed Aug. 11, 1922. Serial No. 581,173. 5 Claims. (Cl. 104—115.)



3. A support for an elevated cable track comprising a seat for said track consisting of a member having a longitudinal channel to hold the track, said member having downward bends at its ends and also intermediate its ends, the intermediate bend forming a depression in the channel to hold the track against longitudinal slippage, said channel being flared at its ends, and its side walls intermediate its ends being clinched over the track, and a base member supporting the seat member.

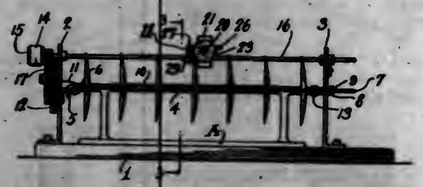
1,481,618. FILM-DEVELOPING APPARATUS. HENRY CHARLES FRANK MORANT, Hawthorn, Victoria, Australia. Filed Oct. 22, 1920. Serial No. 418,666. 5 Claims. (Cl. 95—90.5.)

1. Improved film developing apparatus comprising a container for developing solution and having means for manipulating the film, said container having means to permit observation of the film and means to prevent passage of actinic light rays and a lamp arranged to project nonactinic light rays on the film.



1,481,619. PNEUMATIC WATER LIFT. LOUIS E. MORRISON, Salida, Colo. Filed July 27, 1920. Serial No. 399,362. 1 Claim. (Cl. 121—164.)

In an apparatus of the class described a cylinder, a piston operable in said cylinder, a rod extending through the cylinder to which said piston is fixed, a compressed



air supply, means for connecting said supply with said cylinder, a valve for controlling the air supply to the cylinder, a trip rod equipped with an obliquely and upwardly disposed longitudinally slotted arm, a stud carried by said valve and extending through the solt in said arm, said trip rod being arranged in the path of the piston and movable in one direction by the upward movement of the piston, and means carried by the piston for engaging said rod to move it in the opposite direction on the lowering of the piston.

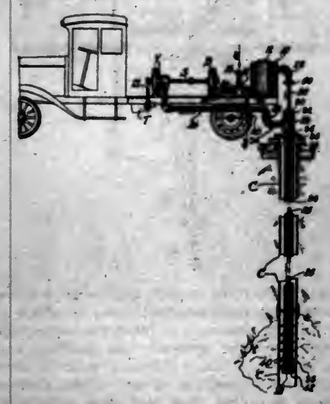
1,481,620. DRAFT GEAR. CHARLES T. NELSON, Manila, P. I., assignor to Atlantic Gulf & Pacific Company of Manila, Manila, P. I., a Corporation of West Virginia. Filed July 21, 1922. Serial No. 576,588. 4 Claims. (Cl. 213—188.)

1. A draft gear comprising in combination, a casing adapted to be bolted to the face of the end sill of the car by means of horizontal bolts, a leaf spring mounted in said casing and retained therein by means of said bolts, a draw bar through which said leaf spring passes and slidably mounted in said casing, means for attaching said draw bar to a coacting draft gear.

1,481,621. DISK SHARPENER. JOHN H. NEUMAN, Providence Township, Buena Vista, Iowa. Filed Jan. 24, 1922. Serial No. 531,445. 1 Claim. (Cl. 51—104.)

Apparatus for sharpening disks mounted upon a disk shaft comprising a frame, means carried by the frame for supporting and turning the disk shaft, a noncircular shaft journaled upon the frame, means for rotating said noncircular shaft simultaneously with the disk shaft, a worm member slidably mounted upon the noncircular shaft, a housing loosely mounted upon the noncircular shaft and receiving the worm member, a shaft journaled in the housing, a worm wheel fixed to the last mentioned shaft and meshing with the worm member, a grinding wheel carried at the end of the last mentioned shaft, a curved handle bar fixed to the housing, a lever fulcrumed to the handle bar and a roller journaled upon the lever and arranged to rotate in a plane lying at a right angle to the plane in which the grinding wheel rotates.

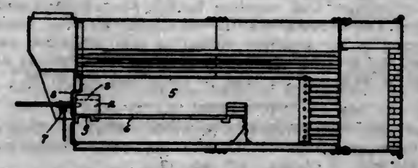
1,481,622. CARTRIDGE SHELL. SAMUEL A. NORTH, Bridgeport, Conn. Filed Mar. 2, 1921. Serial No. 449,020. 9 Claims. (Cl. 112—16.)



1. In a cartridge, a tubular shell body, a base, a base wad, and an elastic lining in said shell body extending above said base wad, said lining being integral with said shell body.

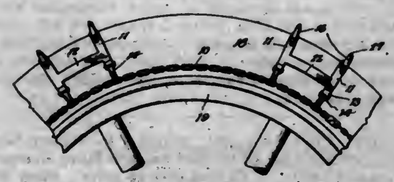
1,481,623. TIRE-CHAIN FASTENER AND TIGHTENER. JAMES W. OSBORN, Hemingford, Nebr. Filed Feb. 10, 1923. Serial No. 618,389. 2 Claims. (Cl. 24—68.)

1. A tire chain fastener including an arm member having a hook formed at one end for receiving a link of the tire chain, a locking lever pivoted to said arm member at the other end thereof, and adapted for association with the arm member to prevent disengagement of the link from the hook in locked position, and links connected with the intermediate portion of the rocking lever at one side thereof and connected with a link at the opposite end of said chain whereby in locked position a pull on the fastener from the chain will act on said arm member for moving the rocking member about its pivot with the link for forcing it in tighter relation with said arm member.



1,481,624. APPARATUS FOR MELTING PARAFFIN AND BASE SEDIMENT IN OIL WELLS. HERMAN S. RANKIN, Golden, Colo. Filed Apr. 15, 1921. Serial No. 461,621. 1 Claim. (Cl. 166—17.)

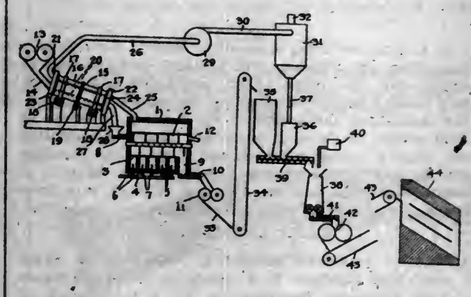
Apparatus for clearing oil wells comprising a furnace located at the top of the well, a blower, a pipe connecting the blower with the furnace for supplying a continuous flow of air to the latter, means connected with the pipe for delivering a continuous flow of fuel thereto in fluid form, means also located at the top of the well



for producing a partial vacuum and means for connecting the furnace with the vacuum source comprising a closed loop extending to the bottom of the well and through which the products of combustion from the furnace are caused to pass by the vacuum producing means.

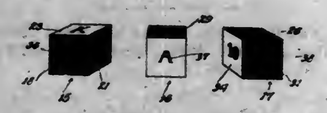
1,481,625. MIXING CHAMBER FOR OIL-BURNING FURNACES. PAUL SCHULTZ, Oakland, Calif. Filed Apr. 5, 1922. Serial No. 549,955. 1 Claim. (Cl. 158—4.)

In a longitudinally arranged oil burning furnace, a bottom wall, side walls and a top wall within the furnace forming a furnace combustion chamber, a horizontal grate positioned about midway of the height of the combustion chamber, a door at the end of said combustion chamber, an oil burner projecting through said door, an element for protecting the flame issuing from the burner supported adjacent said door and on said grate, said element being constructed of fire brick and comprising two vertical walls diverging from said burner, a top wall connecting said side walls, a bottom plate forming a bottom wall fitting between said diverging walls and a third vertical wall connecting the ends of said first mentioned vertical wall, said diverging vertical walls having air inlet openings formed therein rearwardly of the point at which the flame issues from the burner, said third vertical wall having an opening therein for the burner.



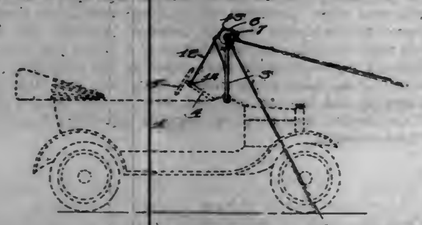
1,481,626. NONSKID CHAIN. ALBERT G. SHELLER, Claysville, Pa.; Ella S. Sheller administratrix of said Albert G. Sheller, deceased. Filed Nov. 10, 1921. Serial No. 514,294. 1 Claim. (Cl. 152—14.)

In a non-skid chain, a plurality of unitary sheet metal saddle members each including a pair of spaced converging end plates bowed to fit the transverse curvature of a tire and joined by a pair of longitudinally curved side bars extending between the end portions of said plates, the ends of the plates being continued beyond the ends of said bars to form loops, links carried by said loops, a pair of spacel calks rising from each of said end plates near the ends of said bars, and side members engaged by said links for supporting the saddle members on a tire.



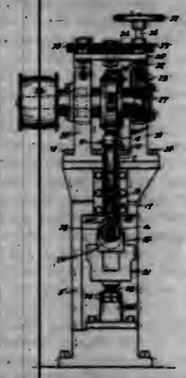
1,481,627. TREATING OF COAL AND MANUFACTURE OF BRIQUETTES. CHARLES HOWARD SMITH, Short Hills, N. J., assignor to International Coal Products Corporation, Richmond, Va., a Corporation of Virginia. Filed Aug. 9, 1920. Serial No. 402,153. 9 Claims. (Cl. 44—11.)

1. In the handling and treating of coal the method involving passing coal through apparatus comprising a crusher and dryer, passing a stream of hot products of combustion through the dryer in direct contact with the coal therein and employing said stream of hot products of combustion to entrain particles of dust within the coal and produced by the crusher and conveying the raw coal dust entrained to a dust separating means where the raw coal dust is collected, passing the dry coal from the drier to the interior of a retort and herein partially carbonizing the coal, crushing the partially carbonized coal, fluxing the same, adding raw coal dust obtained in the manner outlined prior to the termination of the fluxing operation, and forming briquettes from the fluxed material.



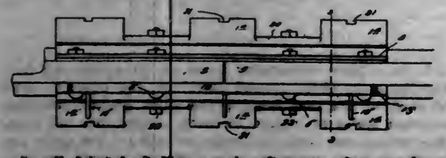
7. An apparatus of the class described comprising in combination with a furnace-retort having a retort wherein coal is partially carbonized and a furnace that provides a combustion chamber on the exterior of the retort for heating the latter, of an associated crusher and dryer arranged to crush coal and to dry the coal preparatory to the introduction of the coal into the retort, means between the associated crusher and dryer whereby dry crushed coal is fed to the interior of the retort, a dust collector, means extending from the combustion chamber of the retort to the dryer and from the drier to the dust collector whereby hot products of combustion from the combustion chamber can be passed into the dryer and in direct contact with the coal whereby dust particles that are within the coal or that are produced as a result of the crushing operation can be removed from the coal being dried, can be conveyed from the coal and can be separately collected in the dust collector, a second crusher, a fluxer, means for conveying partially carbonized residue from the interior of the retort into the second crusher, means for conveying the crushed partially carbonized residue to the fluxer, means for introducing the raw coal dust from the dust collector to a position where the coal dust is mixed with the crushed partially carbonized coal prior to the time that the coal passes from the fluxer, a briquetting press, and means for conveying the fluxed material from the fluxer to the briquetting press.

1,481,628. DICE GAME. JOHN B. SOUZA, Vallejo, Calif. Filed July 3, 1922. Serial No. 572,650. 2 Claims. (Cl. 46—56.)



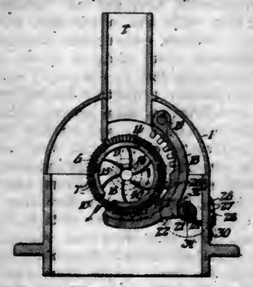
1. In a game comprising a set of three dice, all having the same three ground markings, the opposite sides of each of the dice bearing the same ground marking, and one series of indices for each of said dice, all three dice having the identical series of indices, the same one of the indices occurring on a different ground marking on the different dice, thus spreading one series of indices on the same ground marking over all three dice.

1,481,629. AUTOMOBILE LIGHT. WILLIAM E. STEELE, Olympia, Wash. Filed Jan. 24, 1923. Serial No. 614,690. 2 Claims. (Cl. 240—7.)



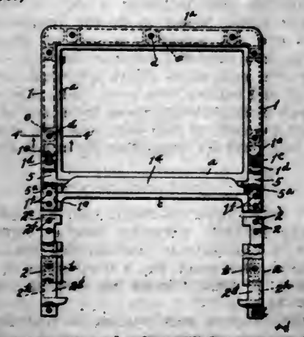
1. A lamp, including a housing, brackets for rotatably supporting the housing, said brackets being formed to clamp upon the frame of an automobile wind shield, said housing being formed with a narrow opening extending throughout the length of the housing, a source of light within the housing, a flexible member for rotating the housing in one direction, and a spring for rotating the housing in the opposite direction, the rotation of the housing changing the direction of light rays from the source of light in their projection beyond the housing.

1,481,630. FORGING MACHINE. MAXWELL H. SUSSMAN, Kew Gardens, N. Y., assignor to The Mohegan Tube Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 12, 1922. Serial No. 606,356. 5 Claims. (Cl. 78—14.)



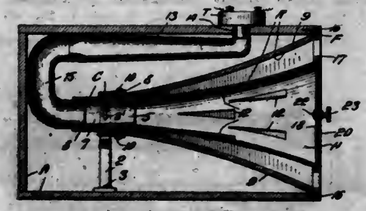
1. A forging machine comprising an anvil for receiving the article on which forging is to take place, an impact member mounted in registry with said anvil and freely movable relatively thereto, both linearly and rotatably, and means for delivering successive blows upon said impact member to one side of its major axis whereby said member is rotated about said axis to produce an even wear upon its impact receiving and impact delivering ends.

1,481,631. RAIL JOINT. EVERT E. SWIFT, Chillicothe, Ill. Filed July 20, 1923. Serial No. 652,744. 1 Claim. (Cl. 238—188.)



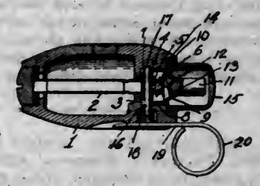
A rail joint including a pair of cooperating members, each member being formed of a relatively long casting provided in the central portion and at the ends with tie engaging extensions beyond the edge of the base flanges of the rails received in said members, said casting having cooperating base flange receiving recesses, upwardly extending walls on said members formed for engagement with the underside of said rail head, one of said members having a wheel bearing flange extending from the upwardly extending wall bevelled at the ends thereof, and stress receiving sections between the wheel flange side walls, and tie engaging extensions for distributing stress to said extensions in line with the central portion thereof and having spike receiving notches for receiving the spikes to secure the member to the respective ties, said members having portions depending below and between the tie extensions, securing means connecting the members carried by said depending portion, and securing elements connecting the upwardly extending walls and the rails for assembling the joints.

1,481,632. MILLING MECHANISM. JOHN W. TATUM, Fallsington, Pa. Filed Mar. 30, 1921. Serial No. 456,821. 7 Claims. (Cl. 83—14.)



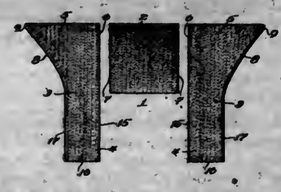
2. In a grinding mill, the combination with a casing; of a hollow cylindrical milling roller, rotatable in said casing, and including a metallic tubular shell having a circumferential series of teeth at its periphery, formed by respectively distinct blades, which may be individually removed and replaced, each tooth having a cutting edge parallel with the axis of said roller; said shell having a series of ventilating slots, each local to one of said teeth; and means arranged to supply compressed air to the interior of said shell, having a nozzle slot with which said roller slots are adapted to successively register as the roller turns; whereby said roller is ventilated, refrigerated and cleaned by the air blast issuing therefrom through said slots.

1,481,633. STOVE FRAME. THOMAS E. TAYLOR, Mansfield, Ohio, assignor to The Tappan Stove Company, Mansfield, Ohio, a Corporation of Ohio. Filed Feb. 16, 1923. Serial No. 619,403. 7 Claims. (Cl. 126—190.)



1. In a range, an underchannelled transversely ribbed oven front frame of cast metal provided with bolt receiving openings.

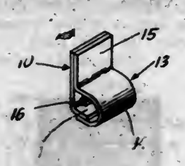
1,481,634. SOUND AMPLIFIER. ADOLPH A. THOMAS, New York, N. Y. Filed Nov. 16, 1922. Serial No. 601,287. 27 Claims. (Cl. 181—27.)



3. A sound-amplifier comprising a pair of nested diverging sound chambers, the walls of the inner chamber being of metal and the walls of the surrounding outer chamber being of non-metallic material, and means for controlling the relative proportion of sound waves issuing simultaneously out of said chambers.

1,481,635. IMPACT FIRING MECHANISM. HALSTEAD P. COUNCILMAN, Asheville, N. C., assignor to Secretary of War of the United States of America, trustee. Filed June 22, 1922. Serial No. 570,250. 4 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

2. A firing mechanism, including a casing, a ring slidable within the casing, a primer carrier slidable within the ring, a striker normally held against movement by the ring and releasable means for normally holding the ring and primer carrier against movement and isolating a primer from the main charge.

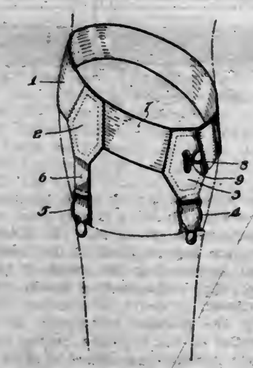


1,481,636. SWEATER. RICHARD H. DEIERT, Jersey City, N. J., assignor to The Chn. Zimmermann & Son Co., New York, N. Y., a Corporation of New Jersey. Filed May 10, 1922. Serial No. 559,725. 2 Claims. (Cl. 2—62.)

1. A sweater having a roll collar consisting of a straight edged back portion and front portions comprising an upper section with a straight inner edge connected with one edge of the back portion and a lower substantially straight edged section, fitted into the front of the sweater body and adapted to lie evenly therewith, the said straight edges of each section being in alinement with each other.

1,481,637. STRESS-BREAKING DENTAL ATTACHMENT. ARTHUR FEINBERG, New York, N. Y. Filed May 16, 1923. Serial No. 639,938. 6 Claims. (Cl. 32—12.)

1. A dental attachment embodying a slotted clasp part, a denture part comprising a loop, the free ends of which are bent into alinement and form two vertical tongues, one of which is adapted to pass through the slot of the clasp part and the other of which is adapted to rest against an

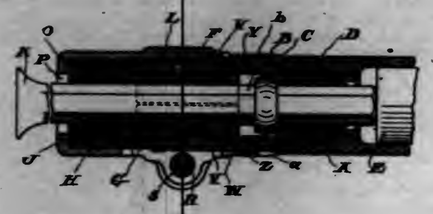


artificial denture, whereby slight movement between said artificial denture and clasp part is permitted without binding.

1,481,638. ACTION LOCK FOR FIREARMS. GEORGE H. GARRISON, Bridgeport, Conn. Filed June 1, 1920. Serial No. 385,705. 10 Claims. (Cl. 42—16.)

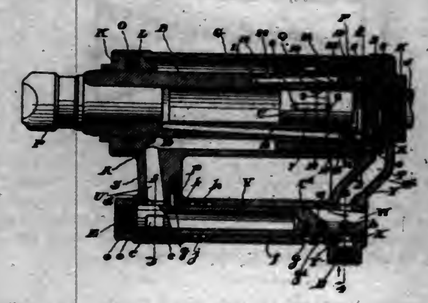
1. In a firearm of the type having a firing chamber, breech mechanism closing the firing chamber, and operating mechanism for said breech mechanism, the combination of a latch normally blocking said operating mechanism, a hammer, means connected with said hammer for moving the latter and withdrawing said latch from operative position, said means being so connected with the hammer so as to permit of a further movement of said hammer independently of said means.

1,481,639. GARTER. LEO H. HEIMERDINGER, Oak Lane, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed Nov. 10, 1920. Serial No. 422,994. 1 Claim. (Cl. 241—6.)



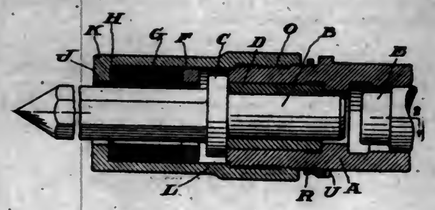
In a garter, the combination of a leg band adapted to encircle the leg in a plane substantially inclined to the horizontal, a plurality of stocking clasps and supporting means therefor secured to the leg band, the supporting means being of different lengths, in order to compensate for said inclination of the leg band, to support the clasp in substantially the same horizontal plane.

1,481,640. REVERSIBLE BOOKCASE. JOSEPH J. HUPPERT, New York, N. Y. Filed Oct. 26, 1922. Serial No. 597,200. 3 Claims. (Cl. 45—1.)



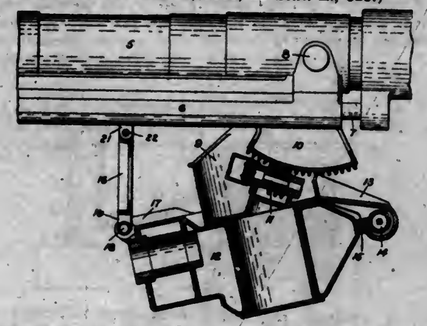
1. A bookcase having front and rear book compartments, and front and rear doors for closing said compartments, the rear door being flexible and adapted to slide vertically to open and close, a bearing supporting said bookcase at one corner thereof and upon which said bookcase is adapted to swing, an element adapted to be automatically rotated as the bookcase swings on the said bearing, and operative connections between said element and said rear door whereby the latter is caused to move vertically as the former rotates.

1,481,641. TIE-TAMPER FRONT-END CONSTRUCTION. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 9, 1920. Serial No. 422,845. 3 Claims. (Cl. 121—32.)



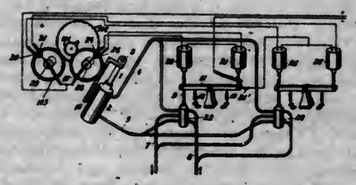
1. A fluid actuated tie tamper of the hammer type, having a fluid pressure cylinder, a tamper steel having a collared shank adapted to extend into the cylinder in position to receive the impact blows of the hammer, a split bushing loosely surrounding the shank of the steel forwardly of said collar and extending loosely into the front end of the cylinder, a sleeve surrounding the steel and extending into the cylinder rearwardly of said collar, whereby the collar on the steel has limited movement between said split bushing and sleeve, a split bushing retaining elastic buffer loosely mounted on the shank of the steel forwardly of said bushing yieldingly holding the split bushing in its rearmost position in the front end of the cylinder, a split metallic buffer washer in front of the said buffer, a barrel nut enclosing said buffer and washer and extending over the front end of the cylinder, and means for retaining said barrel nut in position on the cylinder.

1,481,642. COMBINATION RIVETER. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 422,588. 7 Claims. (Cl. 121—9.)



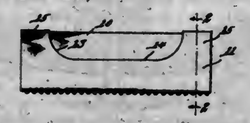
1. A combination riveter and holder-on, comprising a casing having handle extensions at each end, a fluid operated riveting hammer bodily movable in said casing, a single throttle valve mounted in said handle extensions for controlling both the operation of the hammer and the bodily movement of the hammer in the said casing and a sleeve forming a handle for actuating the said valve, whereby the machine may be used either as a holder-on or as a riveter.

1,481,643. PERCUSSIVE-TOOL FRONT-END CONSTRUCTION. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 26, 1920. Serial No. 426,671. 4 Claims. (Cl. 121—32.)



1. A fluid actuated machine of the hammer type, having a fluid pressure cylinder, a working tool in the form of a steel having a collared shank adapted to extend into the cylinder in position to receive the impact blows of the hammer, a collar loosely surrounding the shank of the steel forwardly of said fixed collar on the steel and adapted to receive the impact of the steel as it is driven forward, a sleeve surrounding the shank of the steel rearwardly of said fixed collar and extending into the cylinder, whereby the fixed collar on the steel has limited movement between the sleeve and loose collar, a collar retaining buffer loosely mounted on the shank of the steel and adapted to contact with said loose collar and cushion the blow of the steel, a barrel nut forming a front head enclosing said buffer and collar and secured to the front end of the cylinder, the said barrel nut having an opening in its front end to permit the passage of the working end of the steel, and means for retaining the barrel nut in position on the cylinder.

1,481,644. CRADLE LOCK FOR GUN CARRIAGES. BRYAN P. JOYCE, Davenport, Iowa. Filed Sept. 6, 1923. Serial No. 661,264. 8 Claims. (Cl. 89—37.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

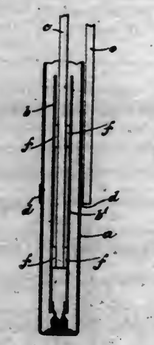


8. In an adjustable cradle lock for gun carriages, a swinging member, means for pivotally mounting said swinging member on said gun carriage and said cradle and means for adjusting the position of said swinging member with respect to said gun carriage and said cradle.

1,481,645. ELECTRIC TELECONTROL ARRANGEMENT FOR POWER DEVICES. PAUL KAMINSKI, Berlin-Pankow, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 24, 1921. Serial No. 495,143. 9 Claims. (Cl. 89—41.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

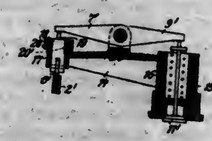
1. In combination with a power device adapted to be operated by a pressure-medium and to move a heavy object into a desired position, an electric telecontrol arrangement comprising; a device for controlling the action of the said pressure-medium, a primary electromagnet arrangement for affecting the said controlling device to produce a rapid action of the pressure medium, a secondary electromagnet arrangement for operating the said controlling device to produce a slower action of the pressure medium, a coarse adjustment receiver cooperating with the primary magnet arrangement, and a fine adjustment receiver cooperating with the secondary electromagnet arrangement.

1,481,646. COMB. JOSEPH F. KELLY, Fort Dodge, Iowa, assignor of one-half to Harry J. Martin, Fort Dodge, Iowa. Filed Nov. 29, 1921. Serial No. 518,610. 5 Claims. (Cl. 132—28.)



1. The combination with a comb, of a device adapted to receive the comb and having perforations along one edge for the passage of the comb teeth and a recess along its opposite edge, the inner edge of the recess being substantially flush with the back edge of the comb when the latter is in position for use.

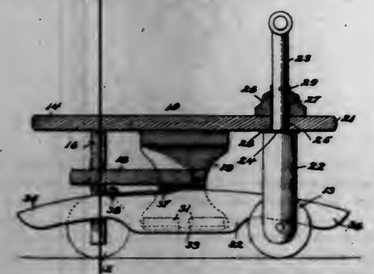
1,481,647. PROCESS OF MAKING WATER-COLOR PRINTS. LEWIS E. KELLY, Oakland, Calif., assignor to Herbert E. Bovenizer and H. Lucille Bovenizer, both of Oakland, Calif. Filed Feb. 11, 1922. Serial No. 535,751. 2 Claims. (Cl. 41—25.)



1. The process of making plates for multi-color printing which consists in first taking a zinc plate of the picture to be printed, taking a wax impression from said zinc plate, taking different plaster of Paris impressions of different parts of said wax impression and, taking rubber impressions of said plaster of Paris impressions, respectively.

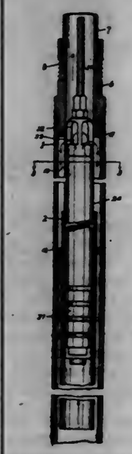
1,481,648. ELECTRODE. ISAAC H. LEVIN, New York, N. Y. Filed Feb. 26, 1920, Serial No. 361,419. Renewed June 16, 1923. 6 Claims. (Cl. 204—4.)

1. An electrode embodying therein a body portion and a terminal bar mechanically and electrically connected with said portion well within the edges thereof, whereby an effective distribution of the current is secured through the tendency of the current to concentrate toward the edges of the operative area of the electrode, the thickness of said bar being relatively greater than that of said body, and being so proportioned as to its cross-sectional area as to cause said bar and said body to have substantially the same relative electrical capacity.



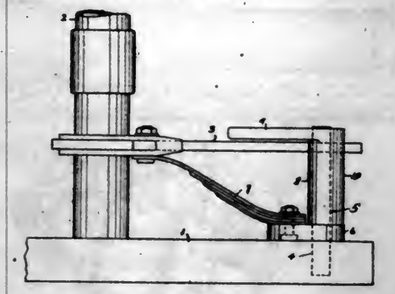
1,481,649. REVERSING GEAR FOR TWO-STROKE CYCLE INTERNAL-COMBUSTION ENGINES. HERMANN MICHEL, Holstein, Germany. Filed Oct. 26, 1922. Serial No. 596,974. 5 Claims. (Cl. 123—90.)

1. In a valve gear for two-stroke cycle internal combustion engines, a valve, a cam disk carrying a plurality of cams for a plurality of cycles, and a valve operating lever adapted to be operated on one side of its fulcrum



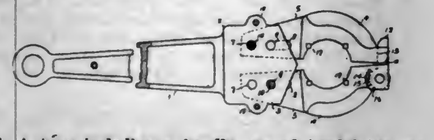
by said cams and the other side thereof being adapted to operate said valve and means for shifting said lever circumferentially of said disk.

1,481,650. TOY CONSTRUCTION. JOHN J. MURPHY, Norwich, Conn. Filed Dec. 2, 1920. Serial No. 427,736. 2 Claims. (Cl. 208—165.)



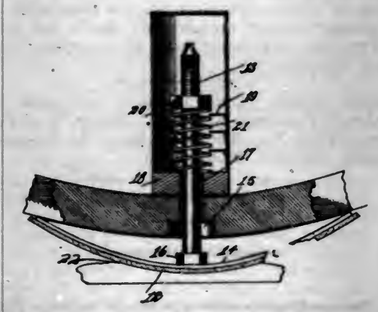
1. In a device of the character described, a platform, a group of wheeled supporting members and a group of rocker supporting members, said wheeled supporting members being united to the platform at points adjacent the extremities thereof, and said rocker supporting members being united to the platform at points adjacent the longitudinal center thereof.

1,481,651. PUMP. JEDDY D. NIXON, Houston, Tex., assignor to Howard F. Smith, Harris County, Tex. Filed Dec. 8, 1921. Serial No. 520,823. 2 Claims. (Cl. 103—220.)



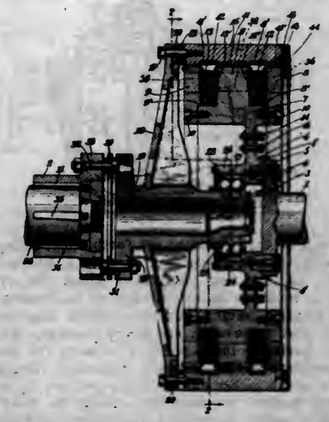
1. A pump including a standing barrel, a working barrel anchored within the standing barrel and spaced therefrom to form a sediment pocket, a valve anchor within the working barrel and spaced therefrom forming a sediment pocket between them, a standing valve fixed to the upper end of said anchor, a reciprocating plunger within the working barrel above said valve, means for centering the working barrel within the standing barrel, said centering means including a spider formed with legs, rings connecting said legs at the upper and lower ends, said legs being supported by the upper end of the working barrel, the lower ring surrounding the working barrel and the upper ring being anchored in the standing barrel.

1,481,652. PIPE-ROTATING ATTACHMENT. JEDDY D. NIXON, Houston, Tex., assignor to Howard F. Smith, Harris County, Tex. Filed Mar. 6, 1922. Serial No. 541,610. 8 Claims. (Cl. 255—35.)



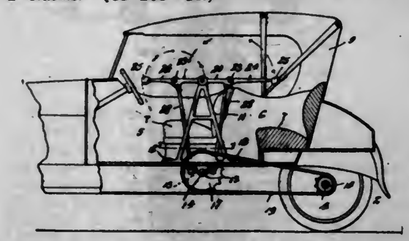
1. A device of the character described, including a tong, an anchor block, and a leaf spring supporting said tong on said block.

1,481,653. DOUBLE-ACTING TONG. JEDDY D. NIXON, Houston, Tex., assignor to Howard F. Smith, Harris County, Tex. Filed Mar. 6, 1922. Serial No. 541,611. 2 Claims. (Cl. 81—66.)



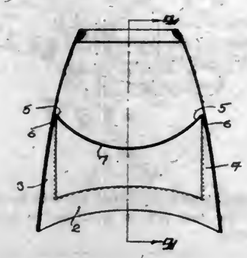
1. A tong including a handle, spaced headplates carried by one end of the handle, and extending laterally each way beyond the handle, a pair of jaws formed with similar shanks which fit between the extended portions of said plates, each shank having a bearing and an oblong slot, a bearing pin carried by the head-plates, and passing through the bearing of one shank and forming a stationary pivot bearing therefor, and a bearing pin carried by said plates and passing through the slot of the other shank, the respective pins forming the only means for connecting the jaws to the handle, means for securing the jaws around the object to be turned.

1,481,654. TIRE ALARM. OWEN H. THOMAS, Osage City, Kans. Filed Oct. 17, 1922. Serial No. 595,123. 4 Claims. (Cl. 116—34.)



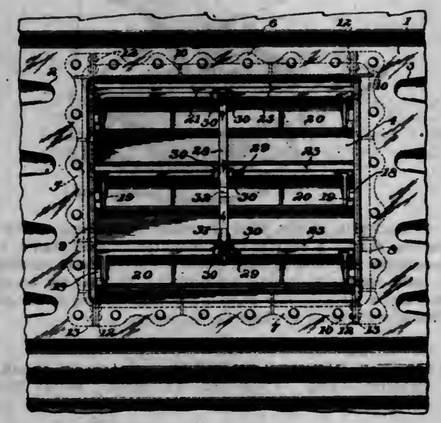
3. The combination with an automobile wheel and its inflatable tire, of a spring plate interposed between the rim of the wheel and said tire, said plate being bowed to press its normal concave side toward the center of the tire, the radius of the bowing being less than the radius of the wheel, a stem extending through the rim of the wheel, and carried by the center of said spring, a housing surrounding the inner end of said stem, sounding reeds projecting radially inward from the sides of the housing and a light spring arranged between said nut and the outer end of the housing, said spring having a diameter greater than the distance between the reeds taken diametrically across the housing.

1,481,655. ELECTROMAGNETIC COUPLING. MILTON E. THOMPSON, Ridgway, Pa. Filed May 20, 1922. Serial No. 562,290. 16 Claims. (Cl. 172—284.)



1. In a magnetic coupling a pair of energizing coils wound circumferentially of the coupling members and relatively oppositely, said coils being, relatively, remote from the axis of the coupling and close together.

1,481,656. TOY VEHICLE. WILLIAM J. TRAHANT, New Oreans, La. Filed Aug. 14, 1922. Serial No. 581,611. 2 Claims. (Cl. 208—34.)

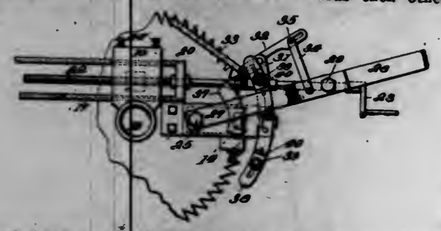


1. An occupant steered wheeled vehicle including a body provided with a floor and having front steering and supporting wheels and rear driving and supporting wheels, said body having front and rear seats with the front seats spaced apart to provide an aisle therebetween, a standard mounted in said aisle and fixed upon the floor of the body, a crank shaft journaled transversely of the body beneath its floor, a lever arranged longitudinally of the body and pivoted between its ends to the upper end of the standard upon a horizontal axis, said lever being provided with handle bars at its ends operable by the occupants of said front and rear seats for rocking said lever, transmission rods connected to said lever forwardly and rearwardly of its pivot and connected to the crank shaft for rotating the latter when the lever is rocked, and means to transmit the rotation of the crank shaft to said rear driving wheels, said handle bars being pivoted to the lever for folding upwardly toward each other and onto the lever when not in use.

1,481,657. PETTICOAT AND PANTALET COMBINATION. ANNA L. VILANDRER, New York, N. Y. Filed July 25, 1922. Serial No. 577,404. 7 Claims. (Cl. 2—42.)

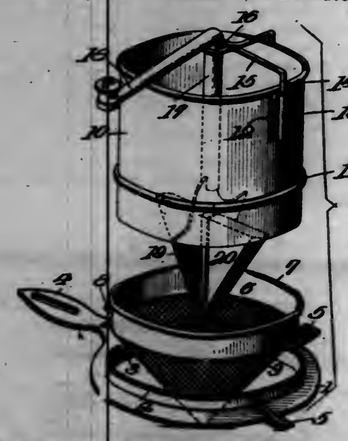
1. A skirt having a continuous side wall formed of a single thickness of material having an independent front centrally located shadow panel extending from the lower edge of said skirt to a point just below the abdominal portion of the skirt whereby only one thickness of material of the garment will cover the abdomen of the wearer, and a panel of like formation and extent on the back of said skirt opposite said first panel.

1,481,658. VENTILATOR. WILLIAM E. WINE, Toledo, Ohio. Filed July 19, 1922. Serial No. 575,923. 3 Claims. (Cl. 189—62.)



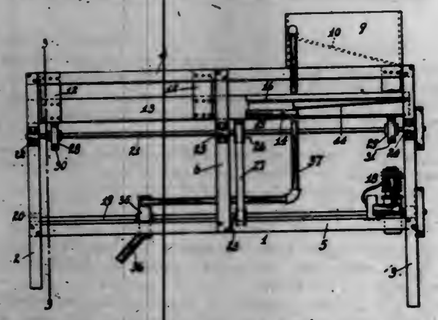
1. A ventilator comprising a frame consisting of two side pieces and an upper and lower rail, upright spaced flanges formed on said upper rail and downwardly extending spaced flanges formed on said lower rail, said side pieces provided with outwardly extending spaced flanges and the said flanges of the several parts registering when said frame is assembled, said side pieces also provided with flanges near their ends to be secured to the end pieces of the upper and lower rails.

1,481,659. SAW SET. JAMES L. ALLEN, Memphis, Tenn. Filed Dec. 18, 1922. Serial No. 607,590. 6 Claims. (Cl. 76—68.)



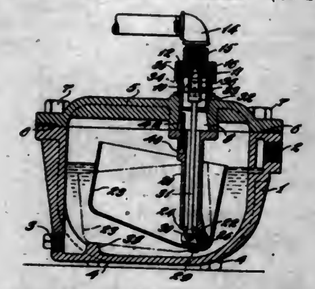
5. A saw set comprising a frame having adjustable anvils spaced apart and between which the saw is adapted to be placed for setting the teeth thereof, a spring pressed punch mounted in each of said anvils, a lever having arms pivotally mounted on said frame, cams

carried by the arms of said lever cooperating with said punches for moving said punches towards each other



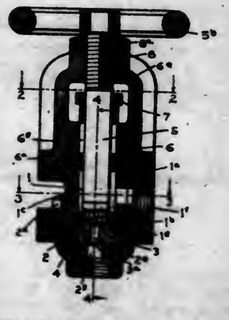
and feeding mechanism operated by said lever for moving the teeth of the saw set in position to be operated on by said punches.

1,481,660. VEGETABLE OR FRUIT STRAINER. EDWARD A. BEACH, Altoona, Pa. Filed Sept. 1, 1923. Serial No. 660,629. 3 Claims. (Cl. 146—175.)



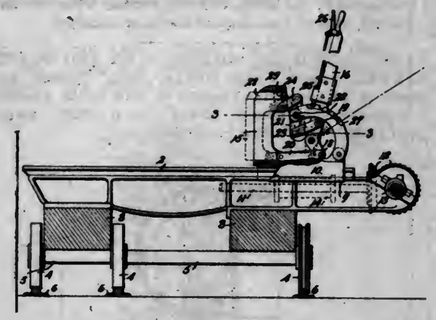
1. A device of the kind described comprising a supporting frame, a conical sieve mounted in said frame, a receptacle mounted in said sieve, a stirrer shaft carried by said receptacle having a bifurcated blade at its lower end and a blade loosely mounted in said bifurcation, said blades conforming in shape to the screen.

1,481,661. METAL SEPARATOR. EDGAR G. CASAD, Oakland, Calif. Filed Feb. 13, 1922. Serial No. 535,973. 7 Claims. (Cl. 83—88.)



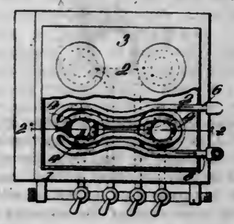
1. In an ore separator, a frame, an inclined trough mounted on said frame, a tray in the bottom of said trough and extending longitudinally thereof, the bottom of said tray being corrugated, means whereby one side of said trough is reciprocated and the other side thereof is gyrated, said reciprocation being substantially transversely of said trough.

1,481,662. STEAM TRAP. THOMAS J. COOKSON, Cleveland, Ohio, assignor to Ohio Blower Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 19, 1918. Serial No. 267,497. 2 Claims. (Cl. 137—103.)



1. A trap of the character set forth, comprising a casing from the top wall thereof depends a tubular outlet extension, an open top shell into which the extension projects to within a short distance of the bottom of the shell, a member having laterally spaced flanges within the shell and removably connected thereto, the outlet extension having a lug depending between the flanges of said member, bearing screws threaded through the flanges of said member and entering recesses in the sides of the lug thereby to pivotally connect the float to the extension, a valve controlling the outlet, and operative connections between the valve and said member.

1,481,663. VALVE. EDWIN H. DAVIS, Battle Creek, Mich., assignor to American Steam Pump Company, Battle Creek, Mich., a Corporation of Michigan. Filed Apr. 4, 1921. Serial No. 458,377. 7 Claims. (Cl. 251—139.)

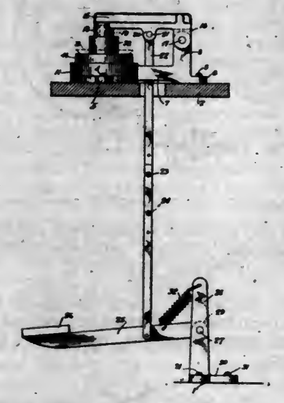


2. A valve comprising a body having an axial chamber, an outlet communicating with said chamber, and upper and lower flanges; a bottom member having a peripheral flange; an axial opening and a recess in its upper side; means for detachably securing the bottom member to the body; a disk in the recess in the bottom member having an axial fluid passage communicating with the axial opening of the bottom member and the chamber in the body; a smaller disk within the body member adapted to close said fluid passage; a yoke bonnet member; means for attaching the bonnet member to the body, said bonnet member having a stuffing box and a valve stem guide above the stuffing box; and a valve stem extending through the stuffing box and guide into the chamber and adapted to engage the smaller disk and hold it against the fluid pressure to control the flow of fluid between the disks, substantially as described.

1,481,664. HEADBLOCK FOR SAW CARRIAGES. AARON C. DICKINSON, Fraser Mills, British Columbia, Canada. Filed July 7, 1922. Serial No. 573,396. 6 Claims. (Cl. 143—122.)

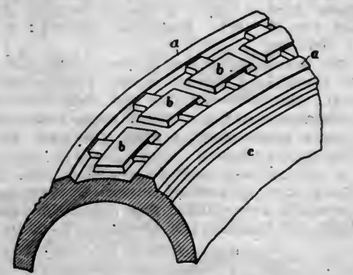
1. An adjustable face for a saw carriage head-block, said face comprising the combination with a head-block having a space extending from front to back through its width, and from adjacent the top to adjacent the bottom, an adjustable face member slidably mounted within said space, means for projecting this face member from the front face of the head-block and for withdrawing it within the same, and means for securing it in any desired position of adjustment.

1,481,665. WATER HEATER FOR STOVES. WILLIAM J. ELLIOTT, Brooklyn, N. Y. Filed Feb. 10, 1922. Serial No. 535,576. 1 Claim. (Cl. 126—53.)



The combination with a gas or vapor stove, of an auxiliary top having a marginal substantially vertically disposed flange adapted to rest on said stove to hold said top spaced therefrom, of a water coil arranged under said top and supported thereby formed of a single piece of pipe having its ends extended through one flange of said top, the intermediate portions of said pipe being bent to form one or more substantially circular portions arranged in the same horizontal plane with the other portion of said pipe and adapted to be disposed over the burners of said gas or vapor stove.

1,481,666. YIELDABLE GATE. JOSEPH P. FRANCIS, Oklahoma City, Okla. Filed Jan. 6, 1923. Serial No. 611,036. 3 Claims. (Cl. 39—5.)

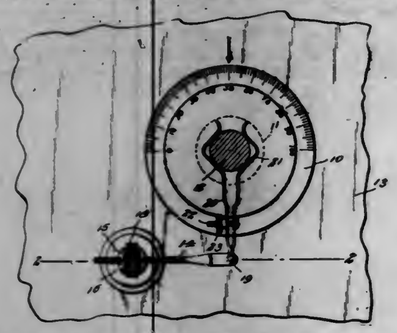


1. A gate of the character described comprising a longitudinally extending bar, a plurality of yieldable panels extending therefrom, means for mounting said bar to swing, spring means tending to maintain said bar in a vertical position and detachable engaging means between the free end of said bar and a portion of the spring means.

1,481,667. MEANS FOR SETTING NONBREAKABLE WATCH CRYSTALS. JOSEPH GOTTLIEB, Brooklyn, N. Y. Filed May 5, 1922. Serial No. 558,818. 4 Claims. (Cl. 29—84.)

1. A device for setting non-breakable crystals including a die having recesses of various diameters in opposed faces thereof, shoulders on opposed faces of said die, and a punch adapted to operate into said die, the operating face of said punch being convex.

1,481,668. NONSKID TIRE. OTTO IHLAU, Hanover, Germany, assignor to Continental Caoutchouc- und Gutta-Percha-Compagnie, Hanover, Germany, a Firm. Filed July 27, 1921. Serial No. 487,926. 2 Claims. (Cl. 152—14.)



2. A skid-resisting tire having on its tread a plurality of transversely spaced continuous circumferential ribs and intermediate cruciform blocks, the circumferentially extending portions of the blocks having a greater transverse width than the continuous ribs, and constituting an interrupted mid rib of substantially the same elevation as the transversely spaced continuous ribs, and the transverse portions of said cruciform blocks extending between said continuous ribs and the circumferentially extending portions of the blocks.

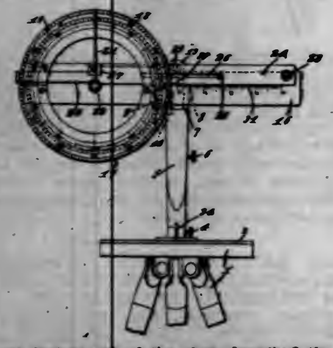
1,481,669. ADJUSTING DEVICE APPLICABLE TO DIAL-CONTROLLED INSTRUMENTS FOR WIRELESS TELEGRAPHY AND TELEPHONY. WILLIAM N. JUSTICE, Baltimore, Md. Filed June 9, 1922. Serial No. 566,976. 1 Claim. (Cl. 74—7.)

The combination with a rotatably mounted member, of a pivotally mounted bearing spaced from said member and including spaced bearing arms, a threaded arm

slidable through openings in the bearing arms, a rotatable adjusting member positioned between the bearing arms and threadedly engaging the threaded arm, whereby

the latter may be moved longitudinally and means secured to the threaded arm and rotatably mounted member, whereby the latter may be adjusted.

1,481,670. SHINGLE. JAMES ARCHIBALD MACALLISTER and ELISHA FREDERICK STOCKUM, Ashland, Wis. Filed Apr. 15, 1922. Serial No. 552,920. 3 Claims. (Cl. 108—8.)



3. A shingle comprising a wooden core coated with stucco.

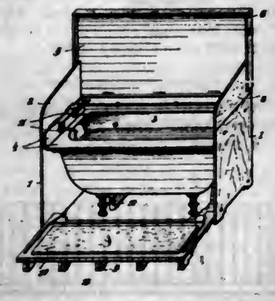
1,481,671. YEAST COMPOUND AND PROCESS OF MAKING THE SAME. THOMAS J. ALLEN, Eureka Springs, Ark., assignor to The Yeastole Company, Eureka Springs, Ark., a Corporation of Arkansas. Filed July 7, 1921. Serial No. 483,070. 8 Claims. (Cl. 195—20.)

1. The process of making a yeast compound consisting in preparing a starter, mixing a cereal meal with charcoal, heating the mixture and then allowing it to cool, adding the starter to the mixture, maintaining the whole at a temperature at which the yeast will grow, then drying the product.

1,481,672. TRANSIT. PIERCE BUTLER ANDERSON, Brownsville, Tenn. Filed Sept. 19, 1922. Serial No. 589,174. 3 Claims. (Cl. 33—65.)

1. In an instrument of the class described the combination with an angularly adjustable member and movable sights thereon normally disposed at a known distance apart, of means for indicating the extent of movement of one of the sights when shifted from its normal position, said means including cooperating fixed and movable graduations, a dial, and a pointer operated by the movement of the sights and cooperating with the dial to indicate minute fractions of units or measure.

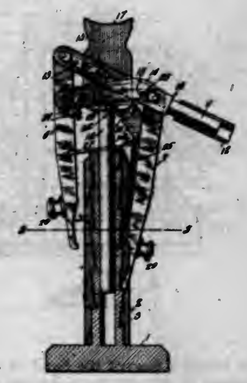
1,481,673. COMBINED ROLL-HOLDING AND PLATE CAMERA. JEAN LOUIS BAILLE, Paris, France, assignor to Societe Baille-Lemaire et Fils, Paris, France, a Corporation of France. Filed Feb. 6, 1923. Serial No. 617,369. 3 Claims. (Cl. 95—31.)



1. In a film photographic apparatus, a tension roller for the film arranged at the upper or lower part of the apparatus, an axis supporting this roller, a lever secured at each end of the said axis, an axis of rotation for each lever, resilient means acting on each lever for bringing back the rollers inwardly, means for moving the rollers outwardly when the apparatus is closed.

1,481,674. HOSE CLIP. FREDERICK JOHN TREVALLON BARNES, Hamilton, near Brisbane, Queensland, Australia. Filed Jan. 6, 1922. Serial No. 527,452. 4 Claims. (Cl. 24—19.)

1. In a hose clip, a tension piece having a portion thereof curved to conform with the contour of the hose and having openings in the ends thereof, a hose embracing band having a curved portion and extended and substantially parallel ends engaging with the opening in the tension piece, one of the openings in said tension piece being disposed in a plane substantially tangential to the band and the other opening being disposed in a plane substantially radial of the curved portion of the band, and means for tightening said band.

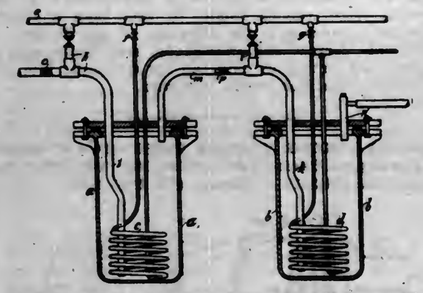


1,481,675. BATH. KENNEDY BERESFORD, Meran, Italy. Filed Feb. 7, 1923. Serial No. 617,616. 3 Claims. (Cl. 4—175.)

1. In a bath the combination of a bath tub and a casing enclosing the same, the said casing comprising side walls, wings hinged to the upper edges of the side walls and adapted to be folded upwards into a substantially

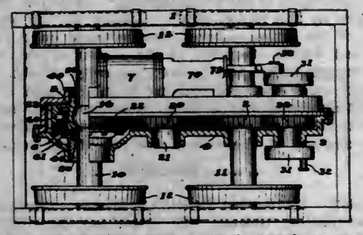
vertical position, a front wall adapted to be folded downwards into a position inclined to the horizontal and a lid adapted to be folded upwards into a substantially vertical position, this lid being adapted to engage with the rear edges of the said upwardly folded wings.

1,481,676. AUTO JACK. DEALEY F. BISHOP, Greenville, Tex. Filed Apr. 30, 1923. Serial No. 635,652. 7 Claims. (Cl. 254—109.)



5. In a lifting jack an upright stationary column provided on its opposed faces with a pair of racks the teeth of one alternating with those of the other, a column movable vertically relative to the stationary column and supported thereby, a lever fulcrumed on said movable column, a pair of main pawls pivoted to and depending from said lever on opposite sides of the columns, and adapted to engage said racks, yielding means to force said pawls into engagement with said rack, auxiliary pawls pivoted at one end to said main pawls below the pivotal connection of the main pawls with the lever, said auxiliary pawls facing in opposite directions, said auxiliary pawls having notches in their free ends, pins on said lever for engagement by the notched ends of said pawls when the vertical column is to be lowered, said auxiliary pawls having notches in their lower edges intermediate their ends, and a crank shaft to engage said intermediate notches when the movable column is to be raised, thereby disengaging the notches of the said auxiliary pawls from said pins.

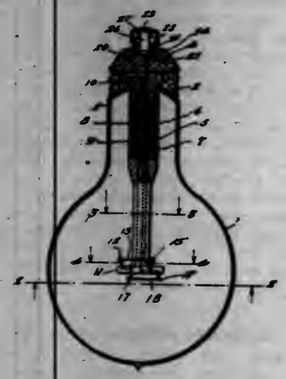
1,481,677. SHELL FUSE. ARTHUR E. BLASHILL, Westmount, Quebec, Canada. Filed July 3, 1917, Serial No. 178,516. Renewed Mar. 2, 1922. Serial No. 540,666. 25 Claims. (Cl. 102—37.)



8. In a shell fuse the combination with the body thereof having an axial magazine extending substantially throughout the axial length thereof, a pair of chambers arranged in parallelism with the axis and in the same diametric line, a flash hole leading from the magazine through the body, in the same annular plane as one of the pellet chambers, an annular explosive chamber within the base of the body, a pair of explosive chambers disposed parallel to the axis and extending substantially throughout the body from the annular chamber to the top and in a diametric plane at right angles to the diametric plane of the pellet chambers, passages effecting communication between the magazine and the explosive chambers, fixed and movable time rings, each having a time groove in the underside thereof the lower being movable and the upper fixed, the said upper time ring partially enclosing the top of the said body and having a detonator chamber in alignment with and eccentric to one of the pellet chambers, and having a lateral flash hole communicating with the magazine, time and percussion pellets in the pellet chambers, the percussion pellet having an eccentric firing pin at one end and in juxtaposition with the detonator chamber; shear pins rigidly temporarily retaining the pellets in fixed position spaced from the bottom of the chambers; a yielding resistance retaining the percussion pellet away from the detonator; a detonator carried by the lower end of the time pellet, a firing pin on the bottom of the chamber of the time pellet and such time pellet having a flash slot in its side communicating with the detonator, and registering with the flash hole in the wall of the body, and the said body having a flash hole leading from a point in communication with the lower fuse ring to the magazine.

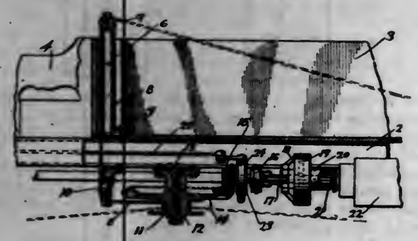
1,481,678. ESTERIFICATION OF OILS. EDWARD RICHARDS BOLTON and ERNEST JOSEPH LUSH, London, England, assignors to Technical Research Works, Limited, London, England. Filed Feb. 21, 1921. Serial No. 446,866. 4 Claims. (Cl. 87—4.)

1. A process of treating fatty oils which comprises heating an oil containing an undesirably large excess of free fatty acid, to a temperature of between 160 and 250° C., and while such oil is at said temperature, introducing thereinto, a current of vapor of glycerin mixed with steam, and continuing such treatment until a large fraction, at least, of the free fatty acid has been converted into glycerin of fatty acid.



1,481,679. LOCOMOTIVE. WILLIAM E. BOUSCHOR, Seattle, Wash. Filed Oct. 16, 1922. Serial No. 594,867. 4 Claims. (Cl. 105—115.)

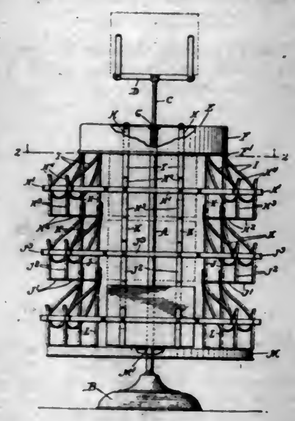
1. The combination with a bogie truck, a gear secured to a truck axle, a gear housing having supporting connection with another truck axle, a pinion meshing



with said gear and journaled in the housing above the plane of the truck axles, cranks connected with the outer ends of said pinion shaft, and an engine carried upon said housing at each side and connected with said cranks.

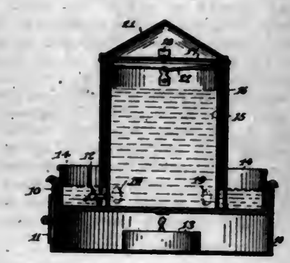
1,481,680. INCANDESCENT LAMP. CLYDE BRINDEL, Yorktown, Ind. Filed Jan. 10, 1921. Serial No. 436,189. 3 Claims. (Cl. 176—26.)

1. In an incandescent lamp, a base, a filament, a feed wire connected to one end of said filament, a supporting sleeve carried axially by said base, a second feed wire connected to the other end of said filament, a removable contact cap carried by said sleeve and a contact pin carried by said cap for movement into engagement with said second feed wire.



1,481,681. MOTOR VEHICLE HOIST. DON C. BRYAN, Huntington Beach, Calif. Filed May 16, 1922. Serial No. 561,541. 1 Claim. (Cl. 254—166.)

In combination with a motor vehicle and the transmission gear thereof, a pinion shift and a clutch disposed parallel and to one side of the axis of the vehicle and connectible to the transmission to be driven thereby, a brake on the pinion shift, a pinion on the shaft in front of the brake, a bevel gear mounted on a vertical axis and within the sides of the chassis of the vehicle and engaging the pinion and forwardly of the transmission, said bevel gear having a hub portion forming a winding drum, and a cable leading to and from the drum to be wound on and from the drum, the bevel gear being disposed at the rear of the cab of the vehicle.

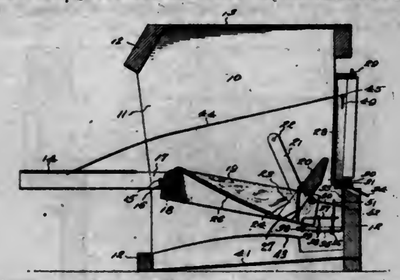


1,481,682. HAIR-NET DISPLAY RACK. BENJAMIN J. BUCKINGHAM, Chicago, Ill. Filed Jan. 21, 1922. Serial No. 530,765. 8 Claims. (Cl. 211—20.)

1. A display pocket and yielding means adapted to hold the contents thereof against the front of said pocket and in upright position thereagainst, said yielding means comprising a loop leaf spring forwardly and

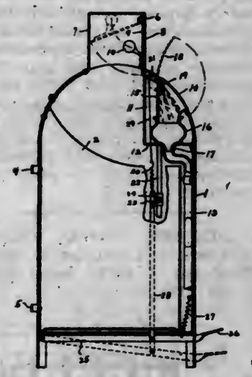
downwardly inclined toward the front of said pocket and adapted directly to engage the contents of the pocket.

1,481,683. POULTRY FOUNTAIN. JOHN D. BUMP, Cameron, N. Y. Filed June 27, 1922. Serial No. 571,328. 1 Claim. (Cl. 119—73.)



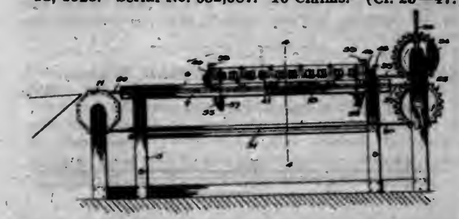
An automatic drinking fountain comprising a trough, a tank open at the upper end and connected at its lower end water tight to the bottom of the trough, a laterally directed draw off device connected to the tank below the line of the rim of the trough, and a hood closed at the upper end and enclosing the tank and bearing loosely at its lower edge upon the bottom member of the trough, said hood having a downwardly opening recess to engage over said draw off and with a plurality of transverse apertures with their upper edges below the line of the upper edge of the trough.

1,481,684. TRAP NEST. EDWIN ALFRED BURR BUTTERFIELD, Molalla, Oreg. Filed June 9, 1922. Serial No. 567,130. 3 Claims. (Cl. 119—47.)



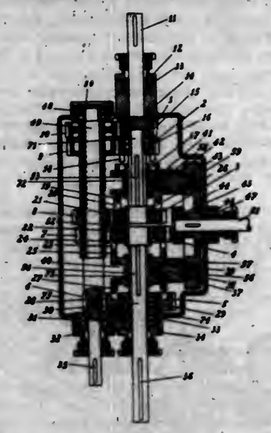
1. A trap nest comprising a housing, a pivotally mounted normally open entrance door, a normally closed exit door, a nest movable within the housing and having one end pivotally connected to one end of the entrance door, whereby the latter will be closed when the nest is occupied by a hen, a latch for holding the exit door in closed position, means operated by the weight of an

egg for actuating the latch to release the exit door, and a rod having one end connected to the entrance door



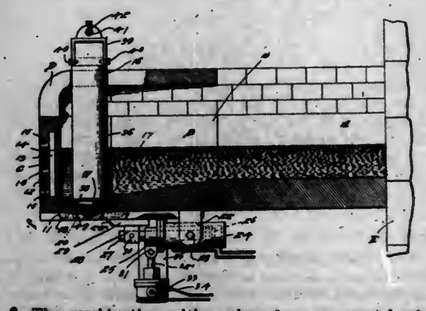
and its opposite end slidingly engaging the exit door, whereby the exit door will be closed by the opening of the entrance door.

1,481,685. GARBAGE CAN. GEORGE W. BURROWS, Houston, Tex. Filed Aug. 13, 1921. Serial No. 491,080. 5 Claims. (Cl. 220—1.)



1. A device of the character described, including a surrounding casing or shell having an entrant opening, a removable garbage receptacle in said shell underneath the opening, a hinged shutter normally hanging vertically and closing said opening, a separate removable compartment within the shell, forming a cuspidor, a hinged cover for said cuspidor, a hinged lever, one end of which is formed into a pedal and a connection between said lever and said cover, through which the lever may be operated to open the shutter.

1,481,686. PLASTIC MOLDING MACHINE. JAMES FREDRICK CALDWELL, Los Angeles, Calif. Filed Apr. 14, 1923. Serial No. 632,087. 10 Claims. (Cl. 25—47.)

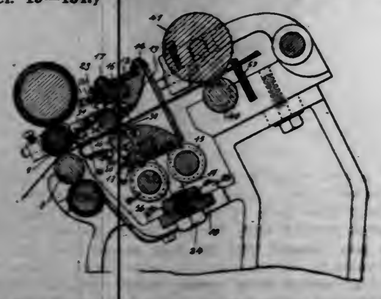


7. A molding machine comprising a frame, a series of bottom walls carried thereby, pairs of partitions arranged between the bottom walls and having means whereby the same are supported in slightly inclined positions when collapsed, cables connected to the series of bottom walls for moving the series of bottom plates longitudinally of the frame and for returning the same to their operative positions, end walls hinged to the frame and adapted to contact with the ends of said partitions whereby to cooperate with the same in defining compartments, means whereby to swing the end walls outwardly, and cores received in said compartments to define openings in the blocks formed.

1,481,687. CHANGE-SPEED GEAR. TITO L. CARBONE, Zurich, Switzerland. Filed Dec. 23, 1919. Serial No. 346,908. 1 Claim. (Cl. 74—59.)

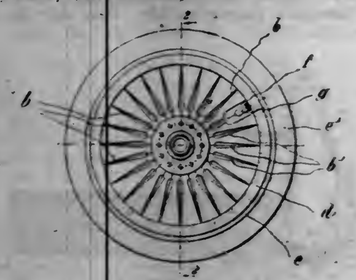
In a change speed gear, a pair of coaxially mounted shafts one having a fixed gear and the other having a plurality of loose gears of various diameters, a third shaft mounted parallel with the pair of shafts and having a fixed gear engaged with the first named fixed gear, and fixed gears of various diameters respectively engaged with the first named loose gears, clutch elements slidably mounted each between a pair of the first named loose gears and on the same shaft therewith and for rotation by said shaft, a cam arranged for partial rotation and having cam grooves, tappet members engaging said cam grooves, tappet members respectively engaged to said clutch elements, pivotally mounted members arranged between the cam and the clutch elements and on which said tappet members are mounted, and means to operate said cam, the cam grooves of the cam being so constructed and arranged as to enable the clutches to be progressively shifted whereby one groove engages and disengages two gears.

1,481,688. GLASS-DELIVERING APPARATUS. JOHN W. CARNAHAN, Blackwell, Okla. Filed July 26, 1919. Serial No. 313,516. 19 Claims. (Cl. 49—55.)



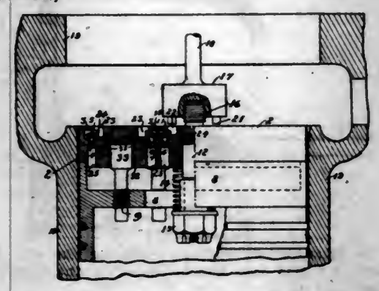
8. The combination with a glass furnace snout having a discharge opening, of a knife cutting off the glass discharge through the opening, and means for shifting the

knife transversely across the opening and then lowering the knife away from the discharge opening and returning it to its initial position.



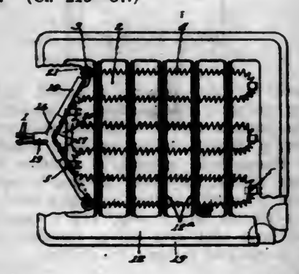
19. The combination with a glass furnace snout having a discharge opening in its bottom, of an annular bushing of refractory material disposed in said discharge opening and through which the glass passes, a metallic plate in the bottom of the snout having an outwardly and downwardly flared opening larger than the opening of the bushing, means for cooling said plate, a vertically shiftable plug disposed within the snout and having its lower end reduced to form a portion fitting the lower end of the bushing, a shoulder above said bushing, adapted when the plug is lowered, to rest on the bushing and cut off the flow of glass therethrough, the lower end of the plug having the form of an inverted cone, and a knife disposed against the metallic plate and reciprocable across the axis of the opening therethrough and below the conical lower end of the plug when the latter is lowered to thereby cut off the thread of glass depending from the extremity of the plug when the plug is lowered.

1,481,689. DRAWING MECHANISM FOR TEXTILE ROVINGS. FERNANDO CASABLANCAS, Sabadell, Spain. Filed May 25, 1921. Serial No. 472,453. 4 Claims. (Cl. 19—154.)



1. In a drawing mechanism for textile rovings, drawing rollers, feeding means placed close to said drawing rollers adapted to move in a direction toward said drawing rollers for positively feeding the roving to the drawing rollers, said feeding means also mounted to rotate around the axis of the roving for imparting a false twist to the roving, and means to rotate said feeding means and simultaneously to move said feeding means towards the drawing rollers.

1,481,690. VEHICLE WHEEL. ANDRÉ MARIUS CAUSSE, Paris, France. Filed Mar. 29, 1922. Serial No. 547,699. 2 Claims. (Cl. 301—64.)

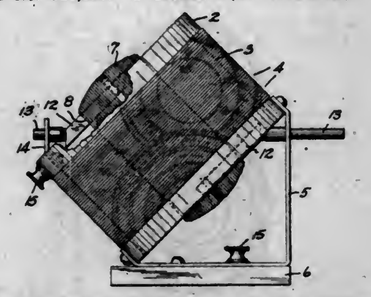


1. A wheel comprising a hub, a felly, a series of intermediate spoke sections secured to said hub and said felly and having a flaring contour so that said spoke sections have abutting edges intermediate said hub and felly, said spoke sections having cut-out portions adjacent said abutting edges.

1,481,691. COMPRESSION PUMP. LEWIS CREW and WILLIAM FREDERICK JENNINGS, London, England. Filed Dec. 9, 1922. Serial No. 605,798. 3 Claims. (Cl. 277—60.)

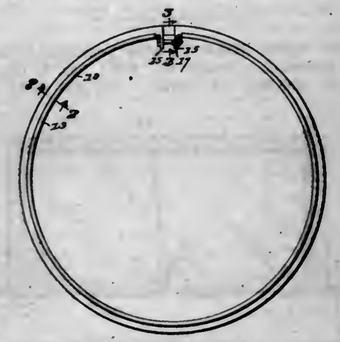
1. In a compression pump, in combination, a plurality of ring valves, one of said valves being centrally disposed with respect to the remaining valves that are disposed equidistantly from and around said central valve, a disc formed with a central housing for said central valve and similar housings disposed equi-distantly from and around said central housing for the remainder of said valves, a plurality of studs formed by the intersection of said housings, a resiliently mounted cover plate for the central valve, a plurality of fixed cover plates for the remaining valves, locking and interengaging projections on said fixed cover plates and said central cover plate and means for raising and rotating said central cover plate to rest on the aforesaid studs whereby said projections are disengaged permitting removal of the cover plates, substantially as described.

1,481,692. ELECTRIC STOVE. CLAUDE H. COOK, HARRY J. LEWIS, and CHARLES E. LEWIS, Cleveland, Ohio. Filed Aug. 4, 1921. Serial No. 489,828. 21 Claims. (Cl. 219—37.)



1. An electric stove, comprising a heating element, a plate member therefor formed of non-conducting heat-resisting material, detachable legs for engaging and supporting said plate member, and a brace plate having positive interlocking and detachable connection with said legs.

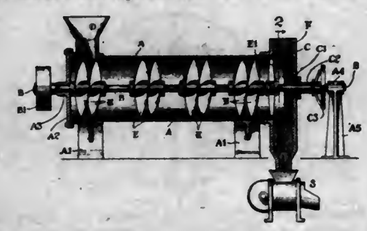
1,481,693. TROLLEY-WIRE GUARD. GEORGE W. CRESCH, Twila, Ky. Filed June 26, 1923. Serial No. 647,860. 4 Claims. (Cl. 191—35.)



1. A trolley wire guard, comprising a flexible support, means for suspending said flexible support along the trolley wire, means provided in conjunction with said flexible support for tensioning it, and insulating plates suspended from the flexible support.

1,481,694. VARIOCOUPLER. ERNEST G. DANIELSON, San Francisco, Calif., assignor to Elmer T. Cunningham, San Francisco, Calif. Filed Nov. 8, 1921. Serial No. 513,857. 4 Claims. (Cl. 171—119.)

1. In combination, a pair of coils relatively movable so as to vary the extent of coupling, means for rotatably mounting the movable coil within the stationary coil, comprising bars fastened to the inside of the movable coil at diametrically opposite points and extending beyond the coil, rotatable shafts fastened to these bars, the axis of the shafts being oblique to the axes of both coils, and a bearing for one of said shafts carried by the stationary coil.

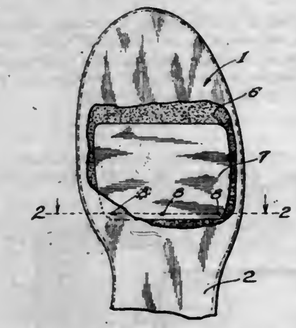


1,481,695. DEMOUNTABLE RIM. THOMAS DOOTSON, Everett, Wash. Filed Sept. 19, 1922. Serial No. 589,170. 1 Claim. (Cl. 301—35.)

A demountable tire rim comprising a continuous band provided at one of its side edges with a depressed channel having a recess which spaces the ends of the channel from each other, the continuous band having at one edge a continuous flange, the channel portion having at its outer edge an upturned lip which extends the full length of the channel portion and which terminates at its ends at the opposite side edges of the recess, a detachable band adapted to fit snugly in the depressed channel and completely filling the same, said detachable band being split transversely and having inwardly disposed ears which extend through the recess, the outer surfaces of the ears being flush with the extremities of the ends of the split band and an draw bolt passing transversely through the ears and adapted to draw the inner surfaces of the ears in close contact with each other whereby the ends of the split band may be brought in contact with each other.

1,481,696. SEPARATION OF GARLIC FROM WHEAT. DAWSON W. DURRETT, Clarksville, Tenn. Filed June 1, 1923. Serial No. 642,841. 10 Claims. (Cl. 130—18.)

1. In an apparatus of the kind described, the combination of walls forming a chamber having an inlet and an outlet the wall around the outlet being plurally edged, a disc placed loosely across the outlet and across said plural edging, means for yieldingly pressing the disc against the part of the wall surrounding the outlet, and means in the chamber for moving mingled grain and garlic toward and against said disc with sufficient force

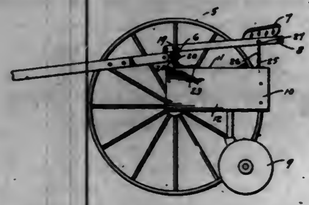


to press the grain and the garlic outward between the disc and the chamber wall, whereby in passing between the disc and said wall the wheat kernels are not injured and the garlic is crushed, ruptured or lacerated, substantially as described.

1,481,697. CONCENTRATION OF METALLIC VALUES OF ORES, METALLIFEROUS RESIDUES, AND THE LIKE. WILLIAM HENRY DYSON, Normandy, near Guildford, and LESLIE AITCHISON, Birmingham, England. Filed Oct. 4, 1921. Serial No. 505,362. 12 Claims. (Cl. 23—13.)

1. The process for the separation of a metal of the tungsten group from metalliferous materials containing such a metal in oxidized form which comprises heating the oxidized material out of contact with any carbon or sulphur bearing reducing agent in the dry way in a halogen atmosphere at such a temperature as to bring about the direct conversion of the oxidized metal of said group into a halogen derivative and effect the volatilization thereof.

1,481,698. FOOT-SOLE PROTECTOR. JOSEPH S. EDWARDS, Los Angeles, Calif. Filed May 11, 1921. Serial No. 468,601. 1 Claim. (Cl. 36—30.)

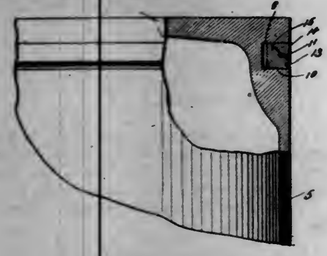


A shoe having a metallic protecting plate embedded in the sole thereof to extend over the ball of the foot, its rear edge terminating at the rear of the ball of the foot along a line short of the line of natural bend in the foot when walking, and its forward edge terminating short of the toe portion of the sole.

1,481,699. FENDER. REUBEN N. EVANS, Dell Rapids, S. Dak. Filed Dec. 24, 1921. Serial No. 524,580. 2 Claims. (Cl. 97—179.)

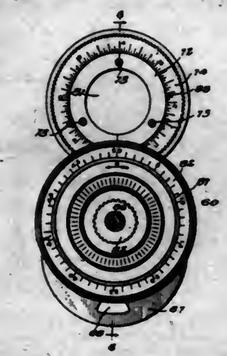
1. An operator's fender for agricultural implements embodying an implement including a driver's seat, a body member disposed adjacent the seat, said body member having downwardly divergent sides, braces disposed

within the forward and rear ends of the body member and secured to said sides and said body member, a bracket carried by one end of said body member for engagement with a portion of the implement, and a chain connected



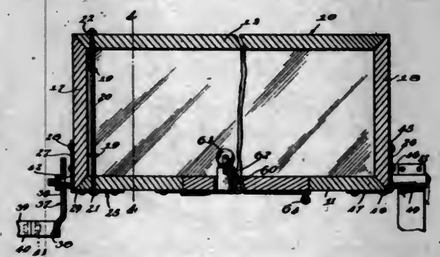
to the opposite end of said body member for engagement with a portion of the implement adjacent the seat, said bracket and chain being adjustable longitudinally of the body member.

1,481,700. METHOD OF DISPENSING ICE CREAM. SEVERT M. FATLAND, Charleston, Wash. Filed Dec. 8, 1922. Serial No. 605,626. 2 Claims. (Cl. 206—56.)



1. The method of dispensing ice cream, which includes placing the ice cream in an elongated rigid tube, cutting off a section of the tube and contents as desired, and inserting a closure in one end of the section, and employing said closure to function as a follower.

1,481,701. PISTON RING. JOHN B. FECHT, Rockwell City, Iowa. Filed Nov. 25, 1919. Serial No. 340,646. 4 Claims. (Cl. 74—109.)

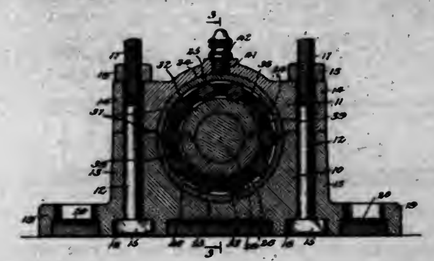


1. A piston ring having a plurality of coacting sections, one of said sections being expansible, the other section being contractile and said sections having contacting inclined walls extending upwardly and inwardly toward the top of the piston whereby the ring will contract on exhaust strokes of the piston to reduce friction between the ring and the cylinder wall.

1,481,702. BELT CALCULATOR. GUSTAV RICHARD FICKERT, Hoboken, N. J. Filed May 26, 1922. Serial No. 563,849. 4 Claims. (Cl. 235—113.)

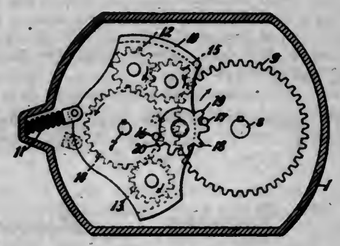
1. A belt calculator for determining belt stretch, comprising two movable graduated members adapted to be set in a predetermined relation to one another, one graduated to represent lengths of belt, the other indicating belt stretch for the different lengths of belt to give the proper tension, and trains of gears for the different factors of stretch associated with one of the movable members and adapted to be selectively associated with the other movable member to operate the belt stretch scale to indicate belt stretch when the belt scale is moved to indicate a length of belt.

1,481,703. SIGN. HARRY CHARLES FORBES and PAUL EDWARD SHERRILL, Chicago, Ill. Filed Dec. 6, 1922. Serial No. 605,256. 3 Claims. (Cl. 40—129.)



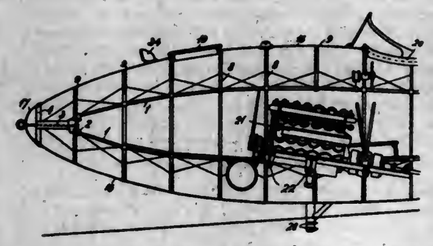
1. In a sign, a sign casing and a mounting therefor including a shouldered stud at one end of said casing, a smooth trunnion at the opposite end of said casing, a standard coacting with the shouldered stud, a nut threaded on the stud and coacting with the standard for holding the sign box against longitudinal displacement and a bracket having clamped bearings cooperating with the trunnion for holding the trunnion and the sign box against rotation.

1,481,704. TOY VEHICLE. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn. Filed Dec. 16, 1920. Serial No. 431,202. 3 Claims. (Cl. 280—875.)



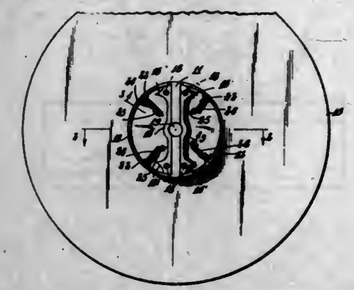
1. In a toy vehicle, a sectional tongue member comprising a plurality of elongated strip members secured together to form one section of said tongue member, and another strip member having one end secured to an end of said section in overlapping relation.

1,481,705. BEARING. MANUEL G. GIMENO, Bayonne, N. J. Filed May 2, 1922. Serial No. 558,020. 2 Claims. (Cl. 64—62.)



1. A bearing or journal for a shaft or axle comprising a pair of separable housing sections adapted to be associated with each other, an outer wear element comprising a pair of separable semi-cylindrical sleeve sections adapted to be associated with each other and arranged within the housing, a common means for clamping the housing and wear element sections together for retaining said wear element sections positioned within the housing sections, an inner wear element comprising a pair of semi-cylindrical sections having interengageable means for locking the same on the shaft or axle for movement therewith, said locking means being engageable and disengageable by relative axial movement of the inner wear element sections, complementary annular flanges at the opposite extremities of the inner and outer wear elements, and anti-friction rollers interposed between the confronting peripheral faces of the inner and outer wear elements and retained therein against axial displacement by the complementary end flanges of said elements.

1,481,706. REVERSING MECHANISM. ADAM M. GOODWIN, Wilkinsburg, Pa. Original application filed Aug. 9, 1920, Serial No. 402,272. Divided and this application filed Oct. 25, 1921. Serial No. 510,257. 9 Claims. (Cl. 74—50.)



8. Reversing mechanism comprising a movable bracket, a driven shaft, an engaging member thereon, driven members rotatably mounted in said bracket and arranged to engage one at a time with the member on the driven shaft for driving said shaft in opposite directions of rotation, a segmental pinion, and a projection on the engaging member of the driven shaft arranged to actuate said segmental pinion for causing it to act upon the bracket to alternate the engagement of the rotatably mounted members on the bracket with the engaging member on the driven shaft.

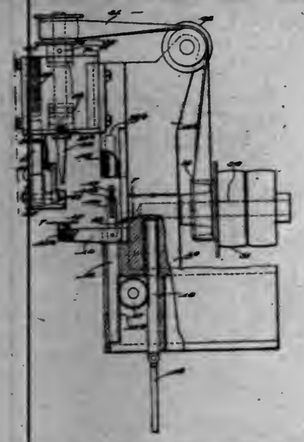
1,481,707. HULL OR BODY CONSTRUCTION OF SHIPS, AIRCRAFT, AND MOTOR ROAD VEHICLES. GUSTAVUS GREEN, Twickenham Green, England. Filed Apr. 9, 1923. Serial No. 630,911. 6 Claims. (Cl. 244—2.)

1. A framing for hulls of vessels and bodies of vehicles and aircraft comprising longitudinal frame members conformed to the shape of the hull, hoops encircling said members at intervals, plummer blocks secured on said hoops and each surrounding a longitudinal member, a second series of hoops surrounding the first, and tension members joining inner and outer hoops.

1,481,708. FILM-WINDING REEL. ALFONSO GUERRA, Laredo, Tex. Filed Dec. 14, 1922. Serial No. 606,772. 5 Claims. (Cl. 242—74.)

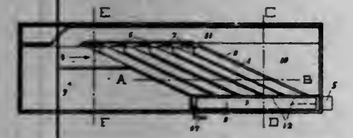
3. In a film winding reel, a drum having a longitudinal slot, and resilient film gripping means within the drum, comprising a gripper bar, a pair of parallel links on which said bar is mounted, and a spring urging said gripper bar to operative position.

1,481,709. PIPE. GEORGE F. HAUF, Chicago, Ill., assignor to Robertson Brothers Manufacturing Company, a Corporation of Illinois. Filed Apr. 22, 1921. Serial No. 463,468. 2 Claims. (Cl. 137—75.)



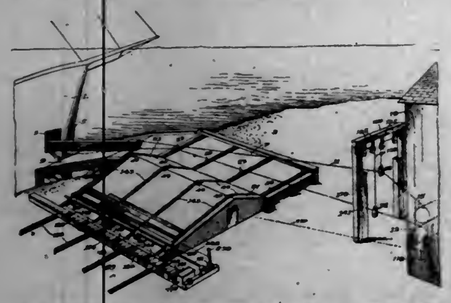
1. A method of making a pipe section which comprises folding over one edge of a sheet metal blank to form two parallel adjacent layers of metal, rolling the sheet into a tube having the two parallel layers of metal at one end, and bending outwardly both layers into a projecting reenforcing bead.

1,481,710. APPARATUS FOR CUTTING AND HEADING RIVETS. AUGUSTUS HECK, Cambridge, Mass. Filed May 13, 1921. Serial No. 469,142. 12 Claims. (Cl. 78—48.)



1. Apparatus of the kind described comprising a material support, and meachanism co-operative therewith

for first cutting off rivets and then heading the same, said mechanism consisting in a heading device, and a

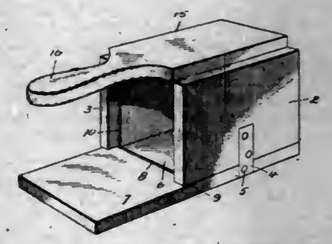


cutting-off device mounted for adjustment to different positions with respect to the heading device.

1,481,711. COUNTING MONEY, TOKENS, OR THE LIKE, OF THE SAME SIZE. GERRIT HOLTLAND, Enschede, Netherlands. Filed Mar. 30, 1921. Serial No. 456,872. 5 Claims. (Cl. 133—8.)

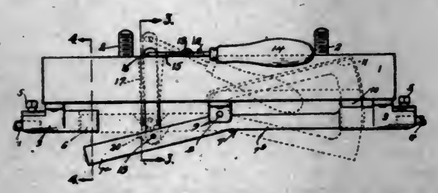
1. In a device for counting coins or tokens of the same size, a plurality of stepped magazines, the breadth of which is equal with the diameter of the coins, a receptacle supplying the coins to be counted, the bottom of which is formed by said stepped magazines, a vertical rim less high than the thickness of the coins provided on the entire length of said magazines and a movable closure at the ends of said magazines.

1,481,712. SHIP-UNLOADING APPARATUS. FRANK P. HUCKINS, Newton, Mass. Filed Jan. 29, 1923. Serial No. 615,459. 23 Claims. (Cl. 214—4.)



1. Apparatus of the character described, comprising, in combination, a platform, means for drawing lumber from a ship onto the platform, a conveyer for carrying the lumber from the platform, means for moving the conveyer to positions above and beneath the upper surface of the platform, a ramp conveyer for carrying the lumber from the platform conveyer, an inclined support for receiving the lumber from the ramp conveyer, means for measuring the lumber, and means for transferring the lumber piece-by-piece from the support to the measuring means.

1,481,713. GAME. ANTON HULSMANN, San Francisco, Calif. Filed Oct. 7, 1922. Serial No. 593,075. 2 Claims. (Cl. 46—63.)

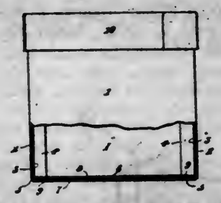


1. In a game of the character described, a map of the United States of America, hexagonal playing pieces, one of said playing pieces having the numerals 17, 18 and 19 thereon, each of said numerals occurring twice and on opposite faces, the other of said playing pieces having dots thereon, said dots indicating the numbers 1 to 5, and a 0 also formed thereon, substantially as and for the purpose described.

1,481,714. CIGAR PRESS. ANDREW M. JAMISON, Spartanburg, S. C. Filed Mar. 1, 1923. Serial No. 622,087. 11 Claims. (Cl. 100—57.)

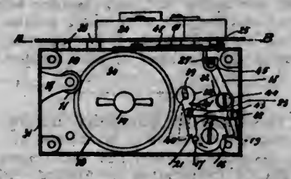
1. A cigar press for the purpose set forth comprising a body portion open at its front and top and provided with a back wall hinged to the rear end of the bottom of the body portion, and a compressing element hinged at its rear end to the top of the back wall and operating in the top of said body portion when said element is shifted to operative position.

1,481,715. TROLLEY SWITCH. CHARLES B. JENKINS, Morgantown, W. Va. Filed July 25, 1923. Serial No. 653,767. 5 Claims. (Cl. 191—39.)



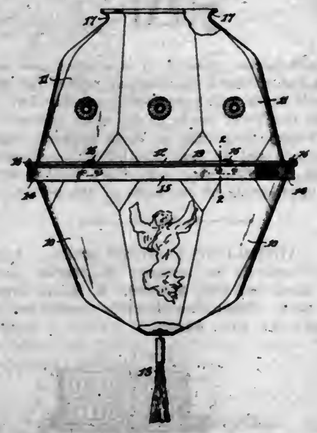
1. In a switch of the character described, a base of electrical insulating material, socket members mounted on the base and provided with contact elements, a blade rockably mounted intermediate its ends on the base and disposed to be moved into and out of contact with the contact elements of one of the socket members in accordance with rocking of said blade, the blade being provided with a member disposed to be in contact with the contact elements of the other socket member at all times, and manually operated means mounted on said base for rocking the blade in either direction.

1,481,716. COMBINED CLINOMETER, PLUMB, AND LEVEL. HARRY R. KETCHUM, Tipler, Wis., assignor of one-third to James W. Pinch, Tipler, Wis. Filed Sept. 12, 1921. Serial No. 500,077. 1 Claim. (Cl 33—215.)



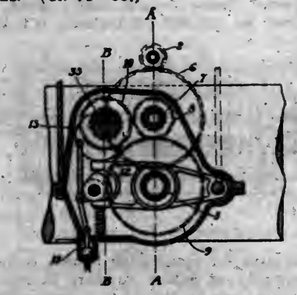
An instrument of the class described consisting of spaced parallel longitudinal bars, a lattice work connection between and integral with the bars and including a ring, said ring being of substantially the same width as said bars, the ring and bars coinciding at substantially diametrically opposite points of the ring, the ring having an arm spanning and integral with it at one of its sides and connected therewith at substantially diametrically opposite points, a second arm disposed at the opposite side of the ring and connected therewith at substantially diametrically opposite points, the second arm being detachably secured to the ring, an indicator intermediate the arms and protected thereby, trunnions extending outwardly from the indicator, and plugs screw threaded in said arms to constitute bearings for said trunnions.

1,481,717. COLLAPSIBLE BOX AND CRATE. FRANK T. LAHEY, Akron, Ohio. Filed Nov. 29, 1922. Serial No. 604,064. 5 Claims. (Cl. 229—41.)



5. In a box structure, a box formed of separate vertical, top and bottom walls, said top and bottom walls having inwardly extending grooves at the edges thereof, flanges carried by the upper and lower edges of the vertical walls received in the grooves when the walls are assembled in such a manner that external pressure applied to the vertical walls in a direction toward the center of the box will prevent separation of said vertical, top, and bottom walls, and means for providing such pressure.

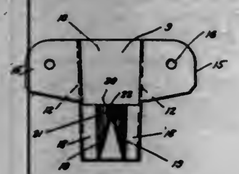
1,481,718. PHOTOGRAPHIC CAMERA. ANGELO LEGNANI, Turin, Italy. Filed Nov. 10, 1922. Serial No. 600,094. 5 Claims. (Cl. 242—71.)



3. In a roll film camera, a film supply spool, a resiliently actuated film winding spool, a film controlling roller engaging the film between the film supply spool and the film winding spool provided at one end with two projections, a pivoted lever normally engaging one of said projections to prevent rotation of the controlling roller, a second lever normally out of engagement with the second projection movable to temporarily engage the second projection to hold the controlling roller against rotation, means for swinging the first pivoted lever out of engagement with the first projection and for swinging the second lever into engagement with the second projection, and means for returning the levers to their normal positions, the return of the first lever to normal position being retarded whereby a single rotation of the controlling roller is permitted.

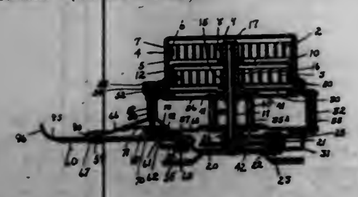
1,481,719. LAMP GLOBE. SIK KONG LUI, Honolulu, Territory of Hawaii. Filed Oct. 9, 1922. Serial No. 593,271. 2 Claims. (Cl. 240—100.)

1. In a lamp globe, a lower portion having an upstanding annular rim, an annular coupling member having spaced vertical sides and disposed within the rim of the lower portion, means for connecting one side of the coupling member to the rim of said lower portion, an upper portion adapted to be engaged with a globe supporting device and having a downwardly directed rim, and means for coupling the rim of the upper portion to the other spaced side of the coupling member.



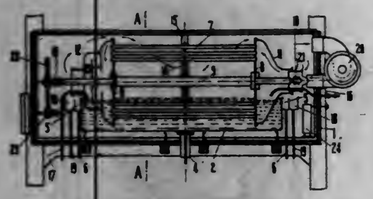
1,481,720. TOOTHED GEARING. FREDRIK LJUNGSTRÖM, Lidingö-Brevik, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden, a Corporation. Filed Aug. 17, 1922. Serial No. 582,549. 5 Claims. (Cl. 74—58.)

1. In toothed gearings, toothed wheels adapted, by radial adjustment in relation to each other, to be brought into and out of mutual engagement, toothed rims fixed coaxially on said wheels and having an outer diameter



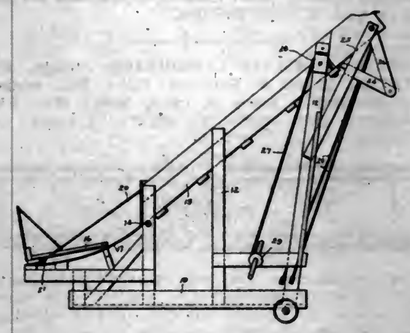
greater than that of the corresponding wheel and adapted, when the wheels are to be brought into engagement, to strike one another first and then to turn the toothed wheels into meshing relation.

1,481,721. STAKE SOCKET. HORACE E. MARTIN, Athens, Ga. Filed Mar. 26, 1923. Serial No. 627,732. 2 Claims. (Cl. 296—43.)



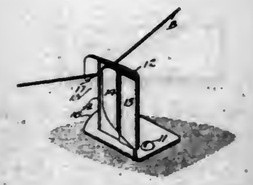
1. A stake socket formed of a single piece of sheet metal and comprising a rectangular pocket for the stake having back parts which project inwardly towards each other from the lower parts of its sides and which have rearwardly projecting lugs on their adjacent edges, said lugs being adapted to bear against the underside of a wagon body, and fastening lugs which project outwardly from the upper parts of the sides of the pocket.

1,481,722. AUTOMATIC FISHING REEL. ALFRED D MAURY, Ilion, N. Y., assignor to Martin Automatic Fishing Reel Co., Inc., Mohawk, N. Y., a Corporation of New York. Filed June 5, 1922. Serial No. 566,030. 5 Claims. (Cl. 242—84.3.)



1. In an automatic fishing reel, a rotary line spool, a spring for actuating the movements of said spool, a drum for tightening said spring, an auxiliary drum disposed within the first named drum, a spring located within said auxiliary drum, means for connecting said springs, whereby the force of said springs will co-operate to revolve said spool.

1,481,723. APPARATUS FOR EVAPORATING LIQUIDS. FRANCO MERZ, Vercelli, Italy. Filed May 19 1920. Serial No. 382,538. 7 Claims. (Cl. 159—10.)



1. An apparatus for evaporating liquids, comprising a casing, a plurality of hollow members in said casing, means for wetting one surface of said members with the liquid to be treated, means for wetting the other surface of said members with an absorbing liquid, and means for causing a gas to circulate through said casing in contact with said surfaces.

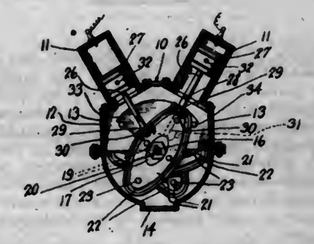
1,481,724. STACKER. WILLIAM A. MINNIEAR, Danbury, Nebr. Filed Nov. 30, 1921. Serial No. 518,893. 1 Claim. (Cl. 214—103.)

A stacker having a base or supporting frame, an elevator platform pivotally mounted at one end upon said frame, a stationary lead or guide shoe in communication with the pivoted end of the platform, means for varying the inclination of the platform, a carrier for traversing said shoe and platform, and hoisting cables longitudinally traversing the platform and provided with means for detachably engaging the carrier, the platform having a sheet metal floor and being provided at its upper end with a downwardly inclined cradle or carrier rest of which the bottom is formed by a continuation of the floor of the platform.

1,481,725. CORD CUTTER. GEORGE W. MOORE, Jamaica, N. Y. Filed June 9, 1922. Serial No. 567,044. 1 Claim. (Cl. 30—14.)

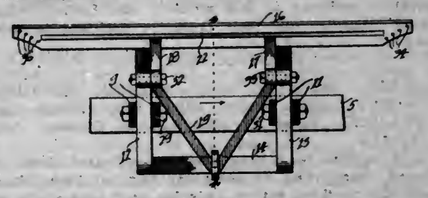
As a new article of manufacture, a cord cutter, comprising a standard having at its lower end a right angular flange forming a base and provided in one vertical edge with an upwardly extending oblique slot, the standard being bent upon itself to form a member lying on the side of the standard opposite that from which the base extends and terminating short of the edge of the standard having the slot, said member being transversely curved and forming a clamping member coacting with the body of the standard for clamping a blade therebetween by the resiliency of said member.

1,481,726. VENTILATOR FOR DRY KILNS. LA FAYETTE MOORE and CHARLES J. WILLIAMS, Jr., Jacksonville, Fla., assignors to Moore Dry Kiln Company, Jacksonville, Fla., a Corporation of Florida. Filed Nov. 20, 1920. Serial No. 425,590. 5 Claims. (Cl. 98—5.)



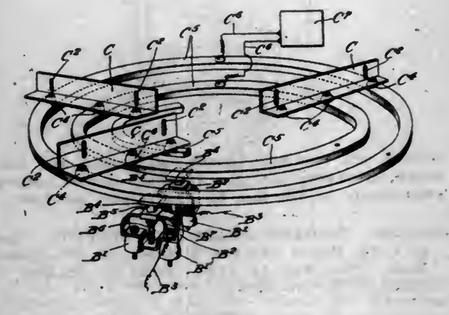
1. A dry kiln ventilator including a rectangular frame having an overhang at the top and a valve suspended

from the overhang and means for changing and adjusting the position of the suspended means to variably



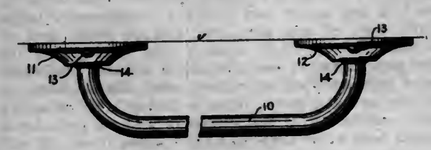
space the valve from the frame in or out according to the vertical plane with respect to the frame in which it is desired to suspend the valve.

1,481,727. ENGINE. OLAND A. MOORE, Bethel, Mo. Filed Jan. 27, 1920. Serial No. 354,420. 1 Claim. (Cl. 74—14.)



The combination with an engine including pistons, piston connecting rods and a drive shaft, of a plurality of spaced transversely disposed bars, bearings secured to said bars and being adapted to receive the drive shaft, a counter sunk plate secured upon each side of the bars and being provided with a groove, an elliptical shaped disk disposed between each pair of bars and being detachably secured to the drive shaft, plates secured to the opposed side edges of the disks and being designed to extend around the periphery thereof, and there being a groove disposed adjacent the periphery thereof, a forked end for each connecting rod, and anti-frictional elements carried on each side of each fork, the inner anti-friction elements engaging the grooves of the plates on the disks and the outer anti-friction elements engaging the groove of the countersunk plates, as and for the purpose specified.

1,481,728. SAW CLAMP. PURLEY V. MORGAN, Stockton, Calif., assignor of one-fifth to John A. Olsen, Stockton, Calif. Filed Feb. 21, 1922, Serial No. 538,327. Renewed Dec. 5, 1923. 2 Claims. (Cl. 76—78.)

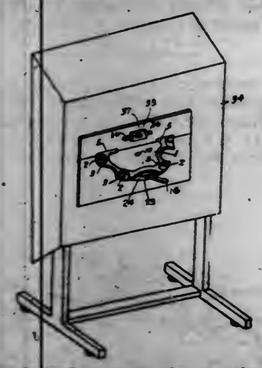


1. In a saw clamp, the combination of U shaped members, a jaw pivoted to one leg of each of said members, a V shaped member attached to said pivoted jaw, a cross member connecting said U shaped members, a screw in said V shaped member, said screw being adapted to contact said cross member and reenforcing means formed integral with each of said jaws for the purpose of preventing distortion thereof.

1,481,729. ELECTRICAL COLLECTOR FOR LOCOMOTIVE CRANES AND THE LIKE. HENRY T. NARZISSE, Chicago, Ill., assignor to Link Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1922. Serial No. 528,556. 10 Claims. (Cl. 191—9.)

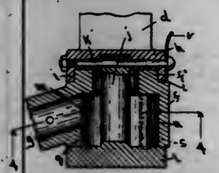
1. In an electrically operated mechanism, a supporting base, a platform rotatably mounted thereon, a flat surfaced collector ring mounted beneath said platform and adapted to rotate therewith, a flat surfaced shoe mounted upon said frame, and yielding means for pressing it upwardly against said ring.

1,481,730. TOWEL RACK OR LIKE FIXTURE. ERASTUS G. OAKLEY, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn. Filed Oct. 19, 1921. Serial No. 508,641. 9 Claims. (Cl. 45—32.)



1. In combination, a tubular member, an exterior shoulder provided thereon by reversely folding the wall thereof, and a plate member having an opening receiving said tubular member, and having an annular flange about the opening abutting the wall of the tubular member, the edge of the latter being spun over said flange to secure the members together with the surface of the plate member clamped tightly against the shoulder.

1,481,731. FLASH DEVICE. BAXTER B. OGIER, Youngstown, Ohio. Filed July 5, 1922. Serial No. 572,926. 3 Claims. (Cl. 67—28.)

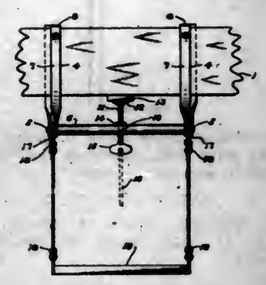


1. In a flash machine, the combination of a revolving plate, a plurality of primary recesses, a plurality of recesses formed within said primary recesses, a vertical wall portion of a flash cabinet, means for closing openings in said vertical wall portion so as to eliminate danger of the flash from igniting flash compounds in other receptacles of a revolving plate which are back of said vertical wall portion, an electrode positioned above a

recess for containing flash powders, a second electrode connecting said disc, means for causing a spark to jump

between said electrodes, means for rotating said disc, means for holding said disc from undesirable rotation, substantially as described for the purpose set forth.

1,481,732. TROLLEY WHEEL AND SUPPORT. SAM K. PAIGE, Boston, and SAM K. PAIGE, Jr., Winchester, Mass. Filed Mar. 14, 1923. Serial No. 624,899. 9 Claims. (Cl. 191—60.1.)



2. A trolley wheel support comprising a fork adapted to carry the trolley wheel, a socket in which said fork has a swivel bearing to turn about an axis approximately perpendicular to the axis of the wheel, and a spring for normally holding the fork in a neutral position, said swivel bearing being provided by a hollow cylindrical rib secured to one of the parts constituted by said fork and socket, and fitting a complemental recess in the other of said parts, but said rib being open at one side with shoulders flanking this opening, and the other part having an eccentric recess with end abutments spaced approximately to register with the shoulders of said rib, and the spring being a curved strip of spring metal confined within the interior of said rib and having its ends bent outward through the opening in the rib and into engagement with the said abutments.

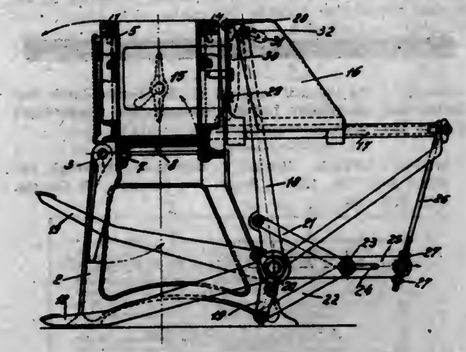
1,481,733. CONTAINER. ARCHIBALD W. PAULL, Wheeling, W. Va., assignor to Wheeling Stamping Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Jan. 19, 1923. Serial No. 613,641. 3 Claims. (Cl. 15—135.)

1. A collapsible tube having a discharge orifice in an end wall thereof, foraminous distributing means engaging said end wall and extending across said discharge orifice and a flange integral with said tube, the peripheral edge portion of said distributing means being held between said flange and end wall, substantially as described.

1,481,734. SWING. WALTER R. PAXSON, Jenkintown, Pa. Filed Mar. 6, 1922. Serial No. 541,390. 1 Claim. (Cl. 155—58.)

In a device of the character described, two pairs of tongs, means for pivotally securing the arms of the respective pairs of tongs together and for holding the tongs in spaced relation, said securing and spacing means being adapted for reception of a swing suspended therefrom, the arms of the tongs being provided at their upper ends with elements adapted for engagement with the cross member of a doorway casement, and pressure applying means carried by said securing and spacing means and disposed to apply pressure to the underface of the cross member.

1,481,735. CHAIN PUMP. FREDERICK G. PECK, Bradford, Pa. Filed Mar. 2, 1921. Serial No. 449,151. 3 Claims. (Cl. 198—141.)



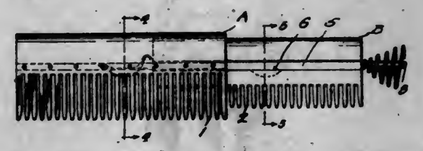
1. The combination of a chain having links of relatively heavy material, and buckets secured to alternate links of said chain and made of resilient material, said buckets having body portions of substantially cylindrical form and having longitudinal recesses in each of the sides thereof extending inwardly from the cylindrical periphery of said buckets and into which the sides of the link may enter, whereby the cylindrical sides of said buckets serve to guide the sides of the links into their operative positions in said recesses, said buckets being forced laterally into their operative positions in said links.

1,481,736. MACHINE FOR MAKING BUILDING BLOCKS. PIERO PENCH, Milan, Italy. Filed Aug. 28, 1922. Serial No. 584,841. 6 Claims. (Cl. 25—41.)

1. A machine for making solid or perforated blocks of pressed cementitious or analogous material including a mold box provided with a swinging wall adapted to be swung into a position substantially parallel with the bottom of the box after a block has been molded, a horizontally movable core adapted to enter and be withdrawn from said box, the bottom of said box being vertically

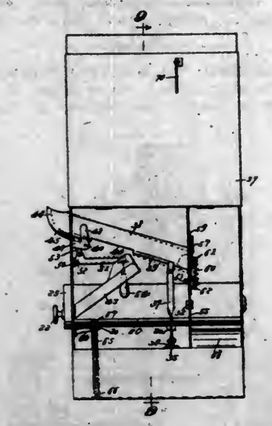
adjustable to accommodate blocks of various thicknesses, the ends of said box including swinging doors hinged

to the swinging wall and provided with cavities, and plates arranged in said cavities and provided with means for supporting the bottom of the box.



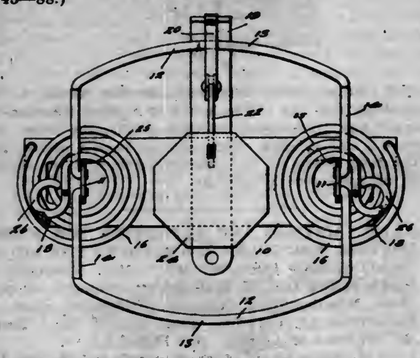
1,481,737. COAL-LOADING MACHINE. MIKE PERSECH, Walsen, Colo. Filed Apr. 6, 1922. Serial No. 550,047. 28 Claims. (Cl. 198—7.)

1. A coal mining machine including a motor truck adapted for travel adjacent a coal pile, a mounting section adjustably mounted on the truck, a frame member rearwardly slidable on the mounting section, a rearwardly shiftable slide upon said frame member and a coal-gathering scoop slidable on the frame member forwardly of said slide during the coal-gathering operation.



23. In a coal loading machine, a mounting section, a frame member adapted for sliding movement upon said mounting section, a slide adapted for travel upon the frame member and a coal-gathering scoop mounted upon the frame member above the slide.

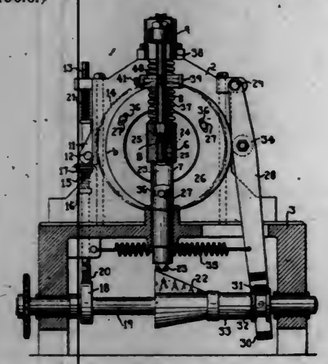
1,481,738. COMB. STEPHEN G. PHILLIPS, New York, N. Y., assignor of one-half to Norton E. Parris, New York, N. Y. Filed Apr. 10, 1923. Serial No. 631,147. 1 Claim. (Cl. 132—14.)



A comb of the class described including an inner comb member and an outer hollow comb member adapted to receive the inner comb member, one of said comb members provided with longitudinally extending ribs, the other member provided with longitudinally extending grooves for receiving the ribs, said member provided with the grooves having an indenture in one of said grooves, and a resilient member on the other comb member adapted to engage said depression in said groove when the inner comb member is disposed within the outer comb member so that the teeth of the inner comb member will be aligned with the teeth of the outer comb member in the manner and for the purpose specified.

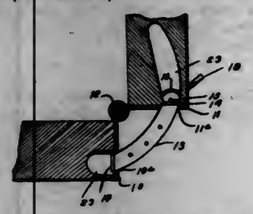
1,481,739. CHECK-CONTROLLED APPARATUS. EDWARD D. POLHAMUS, Ashland, and JAMES W. LUSBY, Grayson, Ky. Filed Jan. 31, 1923. Serial No. 616,106. 6 Claims. (Cl. 194—48.)

1. In a check controlled apparatus, a movably mounted dispensing device, a latch for holding the dispensing device inoperative, a coin tube, means for oscillatably mounting the coin tube, a weighted element connected to the tube on one side of its fulcrum to overcome the weight of that part of the tube on the opposite side of the fulcrum, means connected to the unweighted end of the tube for moving the latch to release the dispensing device, a guard at the end of the tube for arresting a check at the end of the tube to permit the weight of the check to overcome the gravity of the weight, means for slidably mounting the guard, means for limiting the downward movement of the guard, means for holding the guard in normal position and in engagement with said means, and means on the dispensing device carried into engagement with the guard for moving it when the dispensing device has effected a delivery, thereby releasing the check and permitting the latch to become operative when the dispensing device is returned to normal position.



1,481,740. TRAP. BERTRAM J. RAY, Delta, Colo. Filed Nov. 27, 1922. Serial No. 603,550. 1 Claim. (Cl. 43—88.)

A trap comprising a base, a pair of jaws pivotally mounted thereon, said jaws including substantially flat contacting portions and spaced pivotally mounted arms extending from the ends of the contacting portions, means including a pivotally mounted bait pan for holding the jaws in set position for release by an animal, conical



coiled springs surrounding the spaced arms and having their largest ends secured to the base for forcing the jaws closed when the holding means is released and lugs secured to the upper restricted convolutions of the springs for engagement with the base, whereby the springs will be substantially level when the trap is set.

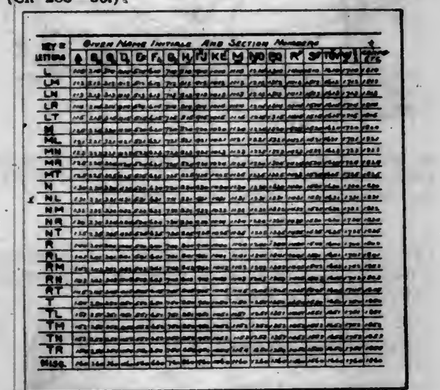
1,481,741. METHOD OF MANUFACTURING PISTON RINGS. FREDERICK RAY, Short Hills, N. J. Filed May 27, 1920. Serial No. 384,604. 3 Claims. (Cl. 29—156.6.)

1. The method of condensing the metal of the inner circumference of a piston ring so as to give substantially uniform radial pressure at all points of the circumference when in use, which consists in so varying the intensities of the condensing forces that the intensity of the condensing force at any point is proportional to unity minus the cosine of the angle between the split of the ring and the point which is being condensed, plus a constant.

1,481,742. STOP HINGE. MAHLON S. RILEY, Grand Rapids, Mich. Filed May 6, 1921. Serial No. 467,313. 2 Claims. (Cl. 16—82.)

1. A hinge having relatively movable leaves, a bar extending from one of the leaves in a plane transversely thereof and transversely of their pintle, the other leaf having a slot through which said bar loosely passes, and a fastening means on the attaching surface of the slotted leaf engageable with said bar.

1,481,743. METHOD AND APPARATUS FOR PRESSING DISK SOUND RECORDS WITHOUT THE AID OF HEATING AND COOLING MEDIUMS. THEODORE C. ROBERTS, New York, N. Y., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn., a Corporation of Delaware. Filed May 6, 1921. Serial No. 467,364. 62 Claims. (Cl. 18—48.3.)



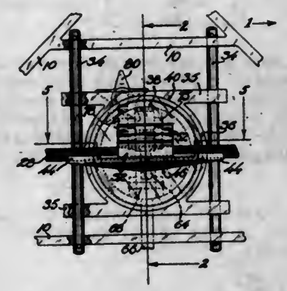
1. In the manufacture of sound records and the like, the method of forming the records, which includes molding them between matrices heated solely by heat from the record stock.

11. A sound-record matrix comprising a thin record-forming shell separated from its support by thermal-insulation.

31. A matrix for forming hot thermoplastic material, having its thermal conductivity so proportioned and distributed to the thermal capacity of the thermoplastic material that the matrix initially assumes the temperature of the hot thermoplastic material.

1,481,744. INDEX. ROBERT C. RUSSELL, Pittsburgh, Pa. Filed Sept. 26, 1921. Serial No. 503,287. 3 Claims. (Cl. 283—36.)

1. An index comprising a series of sections each section comprising a plurality of consecutively numbered pages, the pages in any one section bearing the same section number which is different from any other section number, and said pages designated to contain sur-names and other data, and an element having a series of given-name initial letters having numerical equivalents, said element also having thereon a series of sur-name key letters *l*, *m*, *n*, *r*, *t* and combinations of each of said key letters with each of the others, each of said key letters having a numerical equivalent and the combined key letters having combined numerical equivalents, the association of the given-name numerical equivalents with the numerical equivalents of the key letters or combinations of key letters forming numbers on said element representing numbers of sections where names being searched may be found.

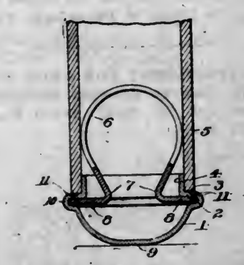


1,481,745. BASE FOR POSTS. JOSE R. C. RUYBAL, Alamosa, Colo. Filed Jan. 14, 1922. Serial No. 529,136. 3 Claims. (Cl. 72—84.)

1. In a device as herein set forth, the combination of a body portion or shank, fastening devices embedded in

the shank and having looped ends extending above the top of the shank at opposite sides thereof, a post adapted to be seated at the upper end of the shank and between said looped ends, means for securing said looped ends to the post, and a metal point projecting upwardly from the top of the shank to additionally secure the post in place.

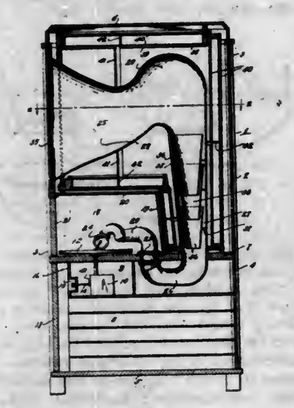
1,481,746. AERIAL TRAMWAY SYSTEM. EDWARD H. SACKETT, Arvada, Colo. Filed June 26, 1922. Serial No. 570,921. 13 Claims. (Cl. 104—115.)



3. In an aerial tramway, a track member, a carrier thereon, a grip on the carrier, a traction cable engaged by the grip, and a roller over which both the grip and the traction cable are adapted to pass.

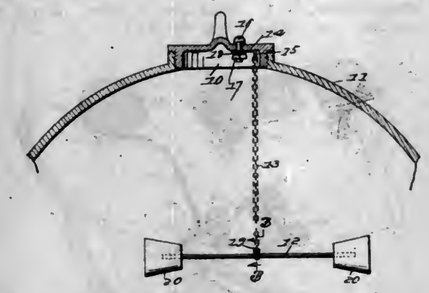
1,481,747. REFINING OF FERROCHROME. WILLIAM R. SALTRICK, Purley, England, assignor to Robert Wickersham Stimson, New York, N. Y. Filed Jan. 17, 1923. Serial No. 613,292. 5 Claims. (Cl. 75—1.)

1. A process for refining molten ferro-chrome to produce an alloy of low carbon content, comprising, subjecting molten ferro-chrome to the action of a gaseous mixture containing both hydrogen and steam.



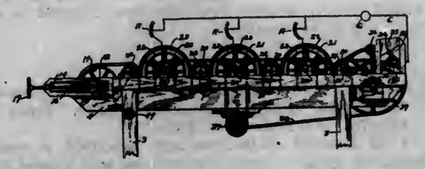
1,481,748. CASTER. GEORGE A. SCHULTE, Newark, N. J. Filed Aug. 18, 1922. Serial No. 582,786. 6 Claims. (Cl. 16—42.)

1. A dome caster having an annular flange to extend into and engage the inner walls of the socket in the furniture leg, there being an external ledge on said caster at the base of said flange on which the base of said leg may rest.



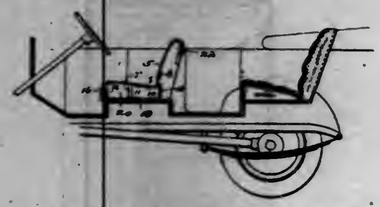
1,481,749. TALKING MACHINE. CARL SCHABIC, Urbana, Ohio. Filed Apr. 28, 1920. Serial No. 377,219. 1 Claim. (Cl. 181—27.)

In a talking machine, an amplifier, a housing extending around the amplifier, and spaced therefrom to provide a chamber, sound resonating boards disposed in spaced relation and located in the chamber and adjacent its inner walls, bridge pieces connecting the innermost boards and



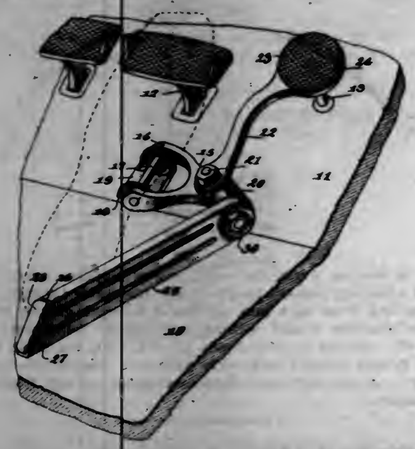
amplifier, and bridge pieces arranged in the space between said boards and connecting the confronting faces thereof.

1,481,750. SAFETY TANK CAP OR STOPPER. HOLLIS J. SEVIGNY, Sanford, Me. Filed Dec. 11, 1919. Serial No. 344,012. 1 Claim. (Cl. 220—39.)



A limiting device for tank caps or stoppers consisting of a limiting element longitudinally insertable through the opening fitted with said cap but of a length greater than the diameter of said opening, said element being provided with enlarged buoyant heads of cushioning material, and a flexible element terminally connected respectively with the cap and with an intermediate point on said limiting element.

1,481,751. ELECTROLYTIC SEPARATOR. WILLIAM A. SHARPE, Denver, Colo. Filed Apr. 29, 1922, Serial No. 557,288. Renewed Oct. 30, 1923. 14 Claims. (Cl. 204—15.)



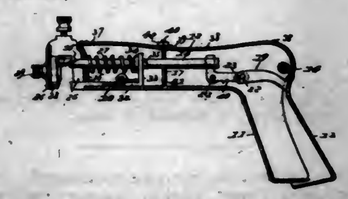
1. An electrolytic ore separator, comprising a plurality of electrolytic cells, a cathode in each cell, and a common anode comprising an endless belt conveyor.

1,481,752. ADJUSTABLE SLIP COVER FOR AUTOMOBILE SEATS. JENNINGS D. SMITH, Tampa, Fla. Filed Sept. 28, 1922. Serial No. 591,030. 2 Claims. (Cl. 155—182.)

1. A seat cover formed from a single piece of material foldable transversely of its length to provide back and seat covering portions, the line of fold being shiftable to increase or decrease the depth of the back portion, rows of anchoring straps attached to the cover substantially central of its length in spaced, transverse, and longitudinal alignment, a row of straps attached to the cover spaced from its lower end, straps attachable to a selected row of the first mentioned anchoring straps and to the last mentioned row for securing the cover taut over the cushion surface against transverse displacement, and straps attached to the cover spaced from either edge thereof, and means for attaching the free ends together to further secure the cover to the cushion and to prevent its longitudinal displacement.

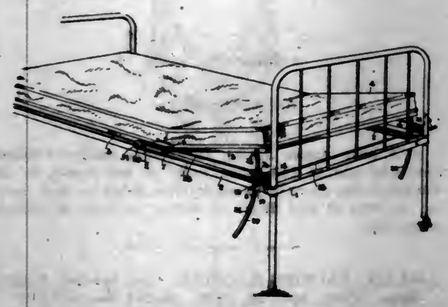
1,481,753. THROTTLE CONTROL. WALTER J. SPIRO, White Plains, N. Y. Filed Jan. 2, 1923. Serial No. 610,216. 13 Claims. (Cl. 74—81.)

1. A pivoted throttle control lever, an operating member extending rearwardly from the free end thereof toward the axis of the lever pivot, and an oppositely extended control member upon the lever disposed to contact with an accelerator.



1,481,754. KNOT-TYING DEVICE. MARTIN STALSON, Minneapolis, Minn. Filed Oct. 12, 1920. Serial No. 416,375. 3 Claims. (Cl. 289—17.)

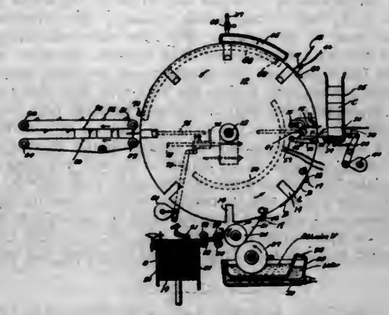
1. In a device of the character described, a housing having an opening formed through one wall thereof, a lever fulcrumed at one end within the housing in a plane contiguous to the inner face of the said one wall, said lever having the free end thereof protruding from the housing, a spring disposed within the housing and yieldingly maintaining said lever in a plane extending in contiguous parallel relation to the said one wall of the housing, and a needle secured at its one end to said lever and being of a length to extend through said opening beyond the plane of the outer face of the said one wall



when the lever is in the said position in respect to the said wall and to be retracted into the housing when the lever is swung a determined distance about its fulcrum against the action of the spring, said needle having a transverse slot in the normally projecting portion thereof and being split from the slot to the free end thereof.

1,481,755. SAW SET. ALOIS STAUBACH, Crestline, Ohio. Filed Feb. 1, 1923. Serial No. 616,297. 3 Claims. (Cl. 76—69.)

1. A saw set having a hollow stock extended to form a stationary grip member, a movable complemental grip member mounted upon the stock, a bit carrying plunger mounted in the stock, an anvil block arranged in the path of movement of said plunger, operative connections between said movable grip member and the plunger, a retracting spring in surrounding relation to the plunger, and a saw blade engaging clamp slidably mounted in the stock and provided with a right-angularly disposed ear through which the plunger extends, the plunger being provided with a transverse pin abutting said ear on one side and with a collar abutting the ear on the other side and receiving the thrust of the spring.



1,481,756. ATTACHMENT FOR BEDS, CHAIRS, AND THE LIKE. SAMUEL EDDWARD STICKLE, Fort Rock, Oreg. Filed Dec. 27, 1922. Serial No. 609,259. 2 Claims. (Cl. 5—74.)

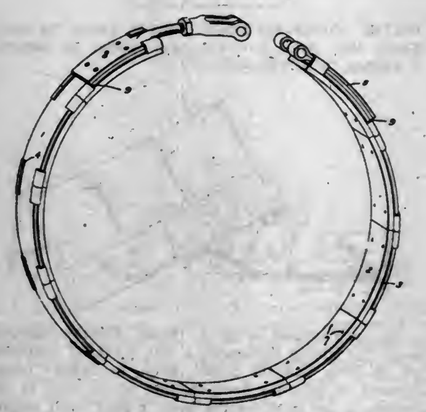
1. In a device of the character described, a holder attachable to a stationary support, said holder comprising a base provided at one end with a pair of upstanding spaced flanges and at its other end with an upstanding

stud, said base having a guide slot formed therethrough to extend diametrically of the stud, a shaft journaled in said flanges, a worm carried by said shaft and adapted to rotate between said flanges, a worm gear having a threaded bore loosely receiving said stud and having teeth on its outer periphery in engagement with said worm, and a rack bar extending slidably through said guide slot and having teeth in one edge thereof in engagement with the threads on the bore of said gear, said rack bar being adapted at one end for attachment to a swingingly supported member whereby rotation of the worm will occasion swinging movement of said swingingly supported member.

1,481,757. ART OF PRODUCING TIGHT-WRAPPED PACKAGES FOR PRESERVING COMMODITIES. JOHN STOODELL STOKES, Huntingdon Valley, Pa., assignor to Stokes & Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 26, 1922. Serial No. 571,029. 68 Claims. (Cl. 93—4.)

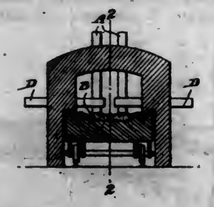
1. A moisture-proof package comprising a carton containing a commodity, an outer paper wrapper coated on one surface with a thin layer of material impervious to oily or greasy substances, and a coating of waxy adhesive securing the wrapper to the carton.

1,481,758. FLY SWATTER. LOUIS C. STUKENBORG, Memphis, Tenn. Filed July 31, 1922. Serial No. 578,797. 1 Claim. (Cl. 43—137.)



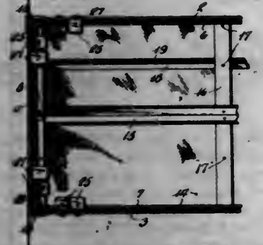
A device of the character described comprising a reticulated body having its lower end bent upon itself to form a pocket and being provided with an elongated opening arranged midway the ends thereof at the juncture of the body portion with the bent portion, a T-shaped handle having its horizontal portion received in the pocket and its vertical portion passing through the elongated opening, and a flexible band surrounding the pocket as and for the purpose specified.

1,481,759. FILM-DEVELOPING TUBE. ROKUMON SUGIURA, Tokyo, and KISO OKIMOTO, Tokyo-Fu, Japan. Filed Oct. 15, 1921. Serial No. 507,919. 5 Claims. (Cl. 95—90.5.)



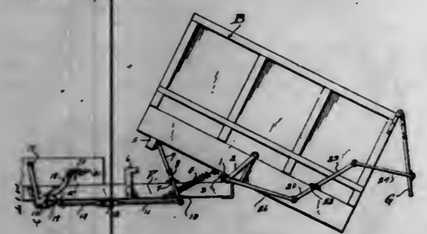
1. In a device of the character described, a flexible tube having open ends, means for introducing developing solution into said tube, and removable means adapted to embrace and close the open ends of the tube to close the latter and also adapted to embrace and clamp the extremities of a film disposed in said tube whereby to prevent displacement of either end of said film with respect to the tube.

1,481,760. BRAKE BAND. ALVIN H. SWEET, Los Angeles, Calif., assignor, by direct and mesne assignments, to Title Guarantee and Trust Company, trustee, Los Angeles, Calif. Filed Apr. 30, 1923. Serial No. 635,553. 5 Claims. (Cl. 188—249.)



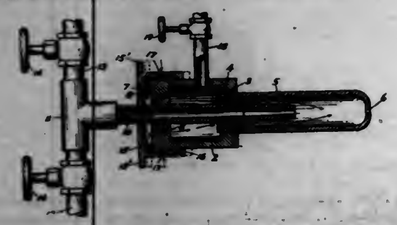
5. In combination, a brake band; a lining comprising a plurality of independent sections adapted for engaging one edge of said band by transverse sliding; and means for retaining said lining in said band in alignment therewith and preventing circumferential motion relative thereto.

1,481,761. PROCESS FOR ELECTROTHERMIC PRODUCTION OF ZINC. FILIP THARALDSEN, Christiania, Norway. Filed May 25, 1922. Serial No. 563,613. 3 Claims. (Cl. 204—64.)



1. The process of electrothermically producing zinc consisting in first heating a charge of zinc oxide and carbon by radiation from an electric arc, and then subjecting the charge to the direct passage of the electric current therethrough.

1,481,762. COUNTER GUARD. JAMES E. TORBERT Faunsdale, Ala. Filed Mar. 16, 1923. Serial No 625,495. 2 Claims. (Cl. 211—12.)

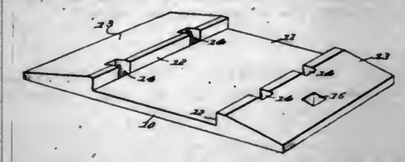


1. A device of the character described, comprising a frame formed of similarly arranged inner and outer sections, a screen cover over said frame and secured between said sections, portions of said sections being disposed in slightly spaced relation, plates slidable between said portions of the sections, clamping ears carried by said plates, and means passed through said sections and plates for adjustably securing said clamping ears to clamp said frame on a table top.

1,481,763. DUMPING BODY. MOSES LEROY TRIMMER, Craig, Mo. Filed Nov. 11, 1922. Serial No. 600,287. 7 Claims. (Cl. 298—17.)

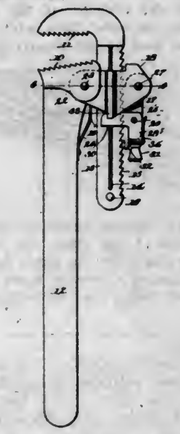
1. In combination with a frame, a body mounted thereon for sliding movement, a link pivotally connected with the body and the frame, means to impart tilting movement to the body upon shifting of the bouy in one direction, a tail gate for the body, a rock shaft carried by the body and provided with a rock arm, a link pivotally engaged with the rock arm and with the frame, the pivotal connection between said last named link and frame being common to the pivotal connection between the first named link and the frame, and an operative connection between the rock arm and gate to cause said gate to move into open position upon shifting of the body in one direction.

1,481,764. GAS BURNER. REESE E. WEAVER, Los Angeles, Calif., assignor of one-half to Frank M. Weaver, Los Angeles, Calif. Filed June 22, 1922. Serial No. 570,189. 2 Claims. (Cl. 158—74.)



1. A burner provided with a mixing chamber having a nipple projecting therefrom, a fuel pipe extending into the mixing chamber nipple, means for supplying fuel to said pipe, an air regulating means arranged at one end of the chamber and constructed and disposed so as to provide a circuitous course for the admission of air to the mixing chamber and to prevent inrush of air and the extinction of the flame.

1,481,765. GUARD RAIL. LESTER M. WENTLING, Foxburg, Pa., assignor of one-eighth to Ralph Jones, one-eighth to G. R. Reichart, and one-eighth to R. M. Monroe, all of Parkers Landing, Pa.; one-eighth to C. E. Harrington, Kittanning, Pa., and one-eighth to Albert Nevel, Foxburg, Pa. Filed Jan. 25, 1923. Serial No. 614,812. 2 Claims. (Cl. 238—17.)



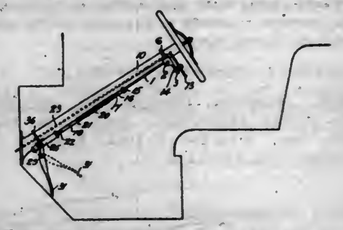
1. In a guard rail, the combination with bed plates provided with depressed seats including terminal shoulders, of a track raial with its base engaging the bottoms of the seats, with one edge of the base in engagement with corresponding terminal shoulders at the outer portions of the bed plates, means retaining the outer edges of the base in engagement with the outer shoulders, a guard rail with its base engaging between the inner edge of the track rail and the shoulders at the inner ends of the bed plates, and means for retaining the guard rail base in engagement with the inner shoulders and fastening the bed plates to the ties, said guard rail provided with a lateral wing extending longitudinally thereof and conforming throughout its length with and engaging the fish plate receiving recess of the track rail, thereby retaining the track rail in position and yet permitting it to expand and contract longitudinally in parallelism with the guard rail without effecting any change of the guard rail with relation to a frog adapted to oppose the guard rail.

1,481,766. TIE PLATE. LESTER M. WENTLING, Foxburg, Pa., assignor of one-half to Charles L. Goughler and Edward Rumbaugh, Foxburg, Pa., Lloyd Stewart, Parkers Landing, Pa., and Charles W. Pfaff, Emlenton, Pa. Filed Jan. 25, 1923. Serial No. 614,813. 1 Claim. (Cl. 238—304.)

As an article of manufacture, a tie plate provided with a track rail base receiving seat and opposite terminal enlargements, and opposed shoulders caused to be formed by the enlargements and constituting the thickest portion of the tie plate and also laterally bounding the seat, the under face of the tie plate being smooth and unobstructed, said tie plate having spike receiving openings immediately adjacent where the enlargements merge into the shoulders, said spike receiving openings breaking into the seat, whereby the heads of the spikes may be directed inwardly and toward the opposite sides of the track rail base, the walls of the openings acting to prevent the spikes from working laterally away from the track rail base, said spike receiving openings being transversely staggered, thereby minimizing the tendency of the spikes to split the tie and thereby preventing the tie plate from twisting in case the spikes loosen, said tie plate being supplemented with an additional spike opening formed through one of the enlargements intermediate of and disposed offset relatively to certain of the first openings to receive additional securing means and thereby prevent twisting of the tie plate in case the other fastening means loosen and become detached.

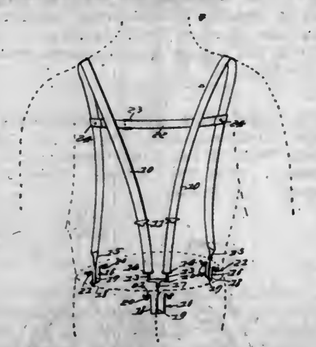
1,481,767. WRENCH. WILLIAM H. WIBBERT, Kingston, N. Y. Filed June 19, 1922. Serial No. 569,193. 3 Claims. (Cl. 81—139.)

1. A wrench including a pair of serrated jaws one of which has a shank and is movable relatively to the other jaw, means for holding and releasing said movable jaw, said means comprising a pivotally mounted guide in which the shank moves, a member having serrations pivotally connected to said guide, serrations on said shank, the serrations of said member being engageable with the serrations of said shank, and a frictionally controlled yoke pivoted to said member for holding the serrations of said member in engagement with the serrations of said shank and allowing their disengagement.



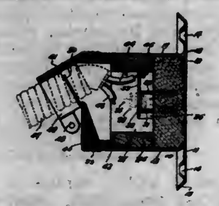
1,481,768. NUMBER PLATE FOR AUTOMOBILES. FRANK J. WILLIAMS, Macy, Ind. Filed Jan. 9, 1923. Serial No. 611,616. 1 Claim. (Cl. 40—63.)

In a device of the class described, a main plate having characters, the plate being provided with openings and with notches in one of its edges, and an auxiliary plate having means for engaging certain of the openings and certain of the notches, the openings being spaced at equal distances apart, throughout the entire length of the main plate and the notches being spaced at equal distances apart throughout the entire length of the main plate, to permit the auxiliary plate to be shifted longitudinally of the main plate, and to permit the main plate to be cut off at the desired length, depending upon the number of characters on the main plate.



1,481,769. FOOT ACCELERATOR FOR MOTOR VEHICLES AND THE LIKE. HENRY JAMES WILLIAMS, Palmerston North, New Zealand, assignor of one-third to Nathanael Isaiah Wilhelm Brown and one-third to Charles Abel Peters, both of Palmerston North, New Zealand. Filed May 10, 1922. Serial No. 559,965. 6 Claims. (Cl. 74—39.)

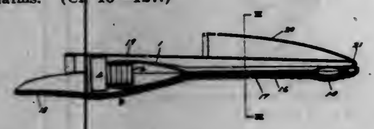
1. An accelerator comprising hand operable control mechanism, a foot pedal actuating means connecting said control mechanism and said foot pedal comprising a spindle secured against longitudinal movement, a pin arranged through the spindle, a tube associated with the spindle and having helical grooves engaged by said pin,



a spring about the tube and means adapted to compress the spring so as to rotate said spindle upon the depression of said foot pedal.

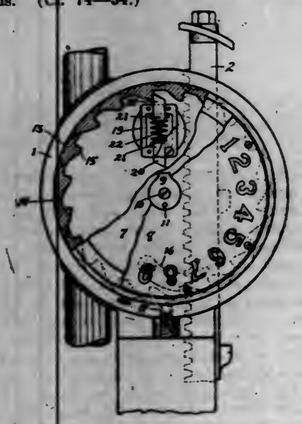
1,481,770. INVISIBLE TROUSER SUPPORTER. CHRISTIAN J. WINTER, Dubuque, Iowa. Filed June 9, 1922. Serial No. 566,995. 1 Claim. (Cl. 241—25.)

A garment supporter of the type indicated having shoulder straps, an equalizing element connecting the shoulder straps at their front ends and provided with a button engaging clasp, button engaging clasps adapted for engagement with buttons at the sides of the garment, the last of said clasps being carried by the rear ends of the shoulder straps, all of said button engaging clasps consisting each of a single blank of wire doubled upon itself as its center to form an attaching eye and having return side arms and an intermediate stem portion parallel with said side arms and forming loops in connection with the latter, the side arms terminating in upwardly open clips adjacent to the plane of the attaching eye, and sleeves engaging the loops formed by the side arms to hold said loops in proper relation with the stem.



1,481,771. ELECTRICAL FLUSH RECEPTACLE. WILLIAM R. WORKMAN, Auburn, N. Y. Filed Nov. 5, 1921. Serial No. 513,094. 4 Claims. (Cl. 247—15.)

2. A casing for enclosing the insulated body portions of electrical receptacles and the current conducting parts thereof, comprising a circular flush wall engaging face plate, a cylindrical open ended casing body extending



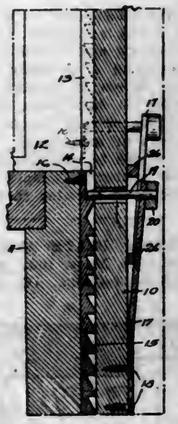
rearwardly from the face plate and in alignment with an opening in the latter, and a closure for the rear open end of said casing body and having an opening therein for the insertion inwardly to the same of the conductors of a current supply circuit.

1,481,772. WASHING DEVICE FOR AUTOMOBILES AND OTHER PURPOSES. CHARLES M. ZELL, The Dalles, Oreg. Filed Dec. 8, 1922. Serial No. 605,671. 2 Claims. (Cl. 15—127.)

1. A washing device of the class described comprising a flexible bag having a liquid delivery opening in one end thereof, a central chamber formed in said bag, said chamber divided longitudinally into two compartments, a series of separate communicating compartments surrounding said chamber, outlet openings in the bottom of said bag, and a hand engaging means secured to the top of the bag.

1,481,773. COUNTER FOR DISPENSING PUMPS. GEORGE U. BRAKE, Fort Wayne, Ind., assignor to Tokheim Oil Tank and Pump Company, a Corporation of Indiana. Filed May 14, 1921. Serial No. 469,749. 2 Claims. (Cl. 74—54.)

1. In a mechanism for a counter, a shell having a fixed head at one end, a toothed rotor in the other end of the shell and forming a closure therefor, said rotor being revoluble in one direction only; a second rotor revoluble in both directions and supported in the shell; a pair of radially disposed ratchets positioned in said second rotor diametrically opposite each other; each having means to limit its outward movement; a spring supported by and pressing both of said ratchets outwardly, said second rotor being located so that said ratchets alternately engage and actuate said toothed rotor when operated in one direction; and means for actuating said second rotor alternately in opposite directions.

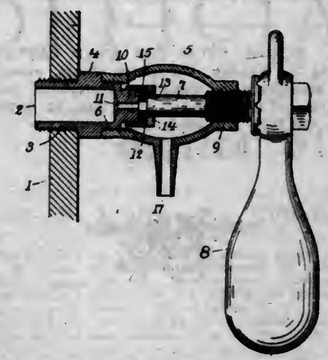


1,481,774. PISTON RING. SELMON G. COLE and ORA D. GINTHER, San Diego, Calif. Filed Mar. 18, 1922. Serial No. 544,865. 2 Claims. (Cl. 74—109.)

1. A piston ring adapted for use in the oil ring grooves of pistons having said oil ring groove in communication with the interior of the piston, comprising an expansible metallic ring adapted to be seated in the groove and adapted when seated to form between the back thereof and the opposed wall of the piston a chamber in communication with the interior of the piston, said ring being provided in its outer face with upper and lower rabbets, the upper wall of the lower rabbet and the lower

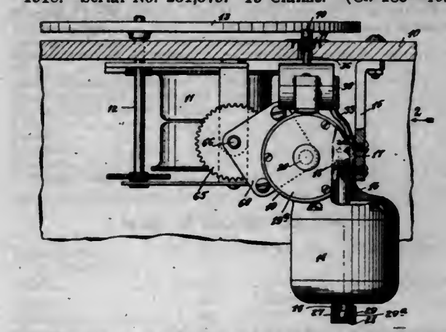
wall of the upper rabbet being at substantially right angles to the axis of the ring, the lower wall of the lower rabbet merging with the outer face of the ring at a point slightly spaced above the lower edge of the ring, the upper rabbet being in communication with said chamber.

1,481,775. WINDOW LOCK. DAVID W. MCKINNIS, Des Moines, Iowa, assignor of one-half to Howard W. Gould, Des Moines, Iowa. Filed Dec. 4, 1922. Serial No. 604,783. 1 Claim. (Cl. 292—170.)



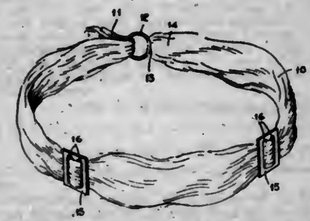
In combination with a window having casing members, sash receiving frame members, and sashes slidably mounted therein, toothed strips in the edges of the sashes, spring strips mounted on the exterior of the sash receiving frame members, dogs fixed on said spring strips extending through openings in the sash receiving frame members and adapted to coact with the toothed strips, and means for moving the dogs to inoperative position, comprising bars slidably mounted on the frame members between said frame members and the spring strips, and wedge elements on said bars adapted to move the springs outwardly, the bars being projected through the casing members.

1,481,776. COCK. WILLIAM W. RICH, West Somerville, Mass. Filed Dec. 10, 1921. Serial No. 521,451. 3 Claims. (Cl. 251—147.)



1. A gauge cock comprising a valve seat having an axial opening through it, a washer located upon said seat and having an opening through it in alinement with that of the valve seat, a cap having a hole through it in axial alinement with said openings and enclosing said washer, and a valve movable through said hole to present its end against said washer and having means for giving it a limited retreat from the washer, the annular space between the valve and the wall of the hole in the cap being less than the space between said washer and

valve-end when the latter is fully open, whereby the escape of steam when the valve is opened will meet with less resistance in passing between the washer and

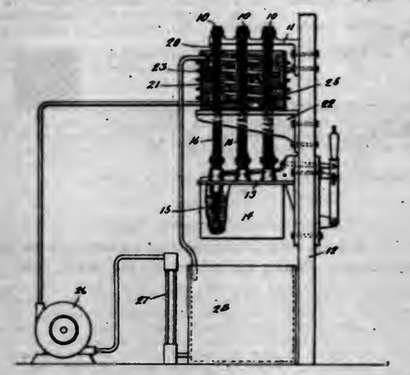


valve-end than in passing through said annular space, and the valve-end and washer will be protected against scoring and grooving.

1,481,777. MOTOR-WINDING APPARATUS. WILLIAM W. ROSENFIELD, New York, N. Y., now by judicial change of name William W. Laird. Filed Apr. 20, 1918. Serial No. 231,379. 19 Claims. (Cl. 185—40.)

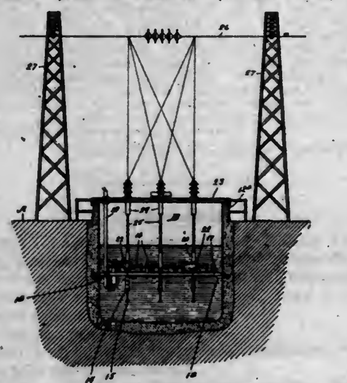
1. Winding apparatus for spring motors and the like, comprising in combination with a spring motor or the like and the winding shaft thereof, an electric motor, a driving shaft driven by the electric motor, and means for driving the said winding shaft from said driving shaft, said means being adjustable to permit of the electric motor driving the winding shaft through said means with the motor and driving shaft at different positions with respect to the winding shaft.

1,481,778. HAIR BAND. HENRY SALOMONS, New York, N. Y., assignor to Yvette Co., New York, N. Y., a Corporation of New Jersey. Filed Oct. 22, 1923. Serial No. 669,992. 3 Claims. (Cl. 132—46.)



1. The herein described hair band for use across the wearer's forehead and for confining her hair, said band being composed of a narrow strand of human hair, fastening means for the ends of the band, and keeper means applied to the portion of the band intermediate of its ends for holding the band in straight narrow form where it crosses the wearer's forehead.

1,481,779. CALCIUM ORTHO-BENZYLOXYBENZOATE. ERNEST A. WILDMAN, Richmond, Ind., assignor to Swan-Myers Co., Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 18, 1921. Serial No. 462,381. 1 Claim. (Cl. 260—111.)

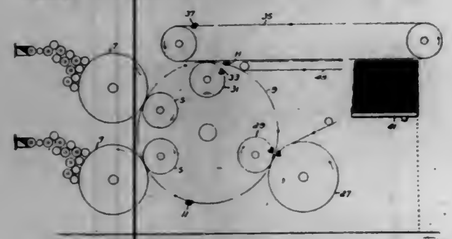


The calcium salt of ortho-benzyl-oxybenzoic acid.

1,481,780. ELECTRICAL DISTRIBUTION SYSTEM. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, jr., Brookline, Mass. Filed Jan. 2, 1920. Serial No. 348,858. 19 Claims. (Cl. 175—298.)

2. An electrical distribution system comprising a conductor of substantial length heated by the current carried thereby, an oil immersed switch electrically and thermally connected with said conductor, and cooling means for the system comprising a plurality of independent cooling units associated with said conductor along its length to abstract heat therefrom and from the system.

1,481,781. HIGH-POTENTIAL ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor to Sears B. Condit, Brookline, Mass. Filed Mar. 12, 1921. Serial No. 451,921. 12 Claims. (Cl. 200—150.)



1. An oil immersed electric switch having an oil receptacle comprising a pit sunk in the ground and having a lining of an oil-impervious material, and stationary and movable switch-members and an insulating liquid contained in said pit.

1,481,782. ALLOY FOR TURBINE BLADES. ITYRO ITTAKA, Sugamoachi, Japan. Filed Jan. 6, 1922. Serial No. 527,364. 1 Claim. (Cl. 75—1.)

An alloy for turbine blades, including copper as the main constituent, and subordinate constituents consisting of 5 to 7% of aluminium, 3 to 8% of nickel, and 1 to 3% of iron, and further characterized by the proportions of 90 to 96% of copper plus aluminium, 4 to 10% of nickel plus iron and accordingly 10 to 14% of nickel plus aluminium, substantially as set forth.

1,481,783. PRINTING PRESS. CHARLES AUSTIN MEISEL, Boston, Mass., assignor to Meisel Press Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 16, 1921. Serial No. 501,038. 5 Claims. (Cl. 101—183.)

1. In a press of the type having an orbitally movable sheet carrier, means for delivering the sheet from the carrier comprising a transfer cylinder inteiorly tangent to the sheet path and a delivery chain having a run exteriorly tangent to the path at that point.

1,481,784. SCREW STUD FOR SNAP FASTENERS. PERCY DE F. WARNER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 25, 1923. Serial No. 614,890. 3 Claims. (Cl. 24—213.)

1. A stud for snap fasteners, having a socket engaging element provided with a central depression with substantially parallel inner and outer walls and a perforated bottom and an external laterally extending base flange substantially in the plane of the bottom aforesaid, and a screw having a substantially cylindrical head accurately fitting within the depression and in relatively close contact with its inner wall and having its nickel or slotted portion extending nearly to the top of the depression and exposed therein.

Patents Nos. 1,481,785 to 1,482,375.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 318—No. 5. TUESDAY, JANUARY 29, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Jan. 3, 1924.*

Sara A. Devlin, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Kosmos Chemical Company, 120 East Sixth Street, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered February 24, 1903, No. 39,845, to Sara A. Devlin, 80 Henry Street, Detroit, Mich., and a notice of such declaration sent by registered mail to said Devlin at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Devlin, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Jan. 8, 1924.*

Michael Bellegay, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by Michael Bellegay, of 3201 Franklin Building, Chicago, Ill., and an application for patent filed by Michael Bulka, of 1934 North Avenue, Chicago, Ill., and the Office having failed to secure service on said Bellegay, notice is hereby given that unless said Bellegay, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Jan. 9, 1924.*

Dudley E. Mackey, his assigns or legal representatives, take notice:

An interference having been declared by this Office between W. Wm. Winberg, Fourth and Linden Streets, Wilmette, Ill., for registration of a trade-mark and trade-mark registered February 5, 1907, No. 60279, to Dudley E. Mackey, 254 East Street, Springfield, Ohio, and a notice of such declaration sent by registered mail to said Dudley E. Mackey at the said address, as well as to State College, Pa., the address given by the attorney of record, having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Dudley E. Mackey, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Jan. 19, 1924.*

Philip A. Luckett, his assigns or legal representatives, take notice:

An interference having been declared by this Office between Friedman & Friedman, 1808 De Kalb Avenue, Brooklyn, N. Y., for registration of a trade-mark and trade-mark registered January 9, 1917, No. 114,897, to Philip A. Luckett, Salisbury, Md., and a notice of such declaration sent by registered mail to said Philip A. Luckett at the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Philip A. Luckett, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Disclaimer.

1,283,224.—*Louis B. Larsen, Oscar J. Holmes,* and *Hans G. Larsen,* Chicago, Ill. MOTION-PICTURE MACHINE. Patent dated October 29, 1918. Disclaimer filed January 14, 1924, by the assignee, *Acme Motion Picture Projector Co.*

Hereby enters this disclaimer to—

"That part of the claim in said specification which is in the following words, to wit:

"7. In a portable motion picture machine, the combination of a closed rectangular casing, a lamp house arranged in the upper rear portion of said casing and having an open bottom, a laterally sliding plate fitting said bottom of the lamp house, and provided with a depending socket adapted to receive an incandescent lamp and a film feeding mechanism and associated optical system located in front of the lamp house, substantially as set forth."

Condition of Applications Under Examination at Close of Business January 18, 1924.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

THE H. D. LEE MERCANTILE COMPANY *v.* THEO WEISS AND CO., INC.

Decided September 27, 1921.

1. TRADE-MARKS—OPPOSITION—SUSPENSION OF PROCEEDINGS IN VIEW OF SUIT IN DISTRICT COURT.

Where the opposition proceeding had been suspended by the Examiner of Interferences on the ground that there was pending an equity suit in a United States district court by opposer against the applicant, apparently for alleged infringement of the mark in issue, and where the opposition proceeding was instituted prior to the equity suit and there was no showing that any testimony had been taken in the suit and no suggestion of its moving to an early termination, the order suspending the opposition proceeding was vacated by the Commissioner.

2. SAME—SAME—NEW TIMES FOR TAKING TESTIMONY.

Where the proceeding on a request made was suspended by the Examiner of Interferences before the opposer's time for taking testimony in chief expired, *Held* that opposer was justified in awaiting the outcome of his motion before proceeding with testimony, and on vacation by the Commissioner of the order suspending the proceeding new times should be set giving opposer at least as much time as that which elapsed between the request and the expiration of the former period.

3. SAME—SAME—LARGE NUMBER OF WITNESSES.

Where the applicant asked for an order requiring opposer to particularize regarding a large number of witnesses proposed to be called and their wide distribution and the alleged long time required for examining such witnesses, and also urged that applicant should be given notice longer than is allowed under the ordinary notice for taking testimony, so that it might investigate, *Held* that a longer notice was unwarranted, and the motion for particulars was denied.

APPEAL from Examiner of Interferences.

TRADE-MARK FOR OVERALLS.

The H. D. Lee Mercantile Company pro se.

Mr. Cyrus Kehr for Theo Weiss & Co., Inc.

FENNING, *Assistant Commissioner:*

This is an appeal from the action of the Examiner of Interferences suspending proceedings in a trade-mark opposition.

The notice of opposition was filed April 14, 1921, and in due course times were set for taking testimony. On July 25, 1921, opposer filed a request to suspend proceedings on the ground that there was pending a suit in the United States District Court for the Eastern District of Louisiana brought by opposer, as complainant, against the appellant here, as defendant, apparently for alleged infringement of the mark here in issue.

The Examiner of Interferences interpreted the decision in *Keller Tool Company* v. *Chicago Tool Company* at vol. 138 Manuscript Decisions, page 147, as controlling this case and suspended the opposition proceedings.

[1] In the Keller case the suit in the court was filed fourteen months prior to the cancellation proceedings which were suspended. Testimony had been taken in the equity suit, which was "apparently moving to an early termination." The circumstances of the present case are entirely different. The opposition proceeding was instituted prior to the equity suit. There is no showing that any testimony has been taken in the equity suit and there is no suggestion of its moving to an early termination. This brings the present case within *Interborough Brewing Company* v. *Standard Brewing Company*, 5 T. M. Rep. 108; 115 MS. D. 241.

[2] Opposer's time for taking testimony in chief was set to close August 6, 1921. The request for suspension of proceedings was filed July 25, 1921. No testimony has been taken and appellant now asks that the opposition be dismissed because of opposer's default. Opposer was justified in awaiting the outcome of his motion before proceeding with testimony, and new times should now be set giving opposer at least as much time as the interval between July 25 and August 6.

[3] Appellant also asks for an order requiring opposer to particularize regarding the large number of witnesses and their wide geographical distribution and the long time required for examining such witnesses, as set forth in the opposer's request for suspension. Appellant urges that because of the large number and wide distribution of witnesses to be relied on it should be given notice longer than is allowed under the ordinary notice for taking testimony, so that it might investigate. I know of no authority for such action and do not believe that such action is warranted in the present case.

The motion to dismiss the opposition is denied.

The order suspending the opposition proceedings is vacated.

The motion for particulars is denied.

U. S. Circuit Court of Appeals—Second Circuit.

KRANTZ MFG. CO., INC., *v.* METROPOLITAN ELECTRIC MFG. CO.

Decided January 8, 1923.

[286 Fed. Rep. 874.]

PATENTS—805,650, CLAIMS 1, 2, AND 5, FOR PANEL BOARD FOR ELECTRIC FUSES, HELD VALID AND INFRINGED.

The Krantz patent, No. 805,650, claims 1, 2, and 5, for an improved arrangement of electrical plug fuses on a panel board, which resulted in a more compact structure and a saving of materials and proved of commercial utility, *Held* valid and infringed.

APPEAL from the District Court of the United States for the Eastern District of New York.

Suit in equity for infringement of a patent by the Krantz Manufacturing Company, Inc., against

the Metropolitan Electric Manufacturing Company. Decree for plaintiff (282 Fed. 288), and defendant appeals. Affirmed.

Mr. C. P. Goepel for the appellant.

Mr. Drury W. Cooper, Mr. Victor S. Beam, and *Mr. Thomas J. Byrne* for the appellee.

Before ROGERS, HOUGH, and MANTON, Circuit Judges.

MANTON, *Cir. J.:*

Appellee sues for infringement of Krantz patent, No. 805,650, issued November 28, 1905. Below the patent was held valid and infringed as to claims 1, 2, and 5. The invention is for a panel board that is arranged with plug fuses and has for its object to improve the construction thereof. Heretofore fuse-plug receptacles were connected with the bus bars through means of cross bars protruding from the outside of the bus bars. With the new invention here considered, the protruding crossbars are done away with, and the receptacle for the fuse plugs is placed over the bus bars, thus saving material for crossbars and space on the panel board. The inventor also does away with joints between the bus bars and the crossbars formerly leading to the receptacles. The panel board comprises a plate or base made of insulating material, such as slate or marble, contact or connection pieces for attachment to the outside and incoming electrical circuits, longitudinal conducting bars called by the trade "bus bars" which are in electrical connection with the incoming circuits, a series of contact pieces or connections for the local or distribution circuits, crossbars for making connections between the bus bars and the local contact pieces or connections, fusible links so constructed and arranged between the bus bars and each of the local circuit terminals as to be melted and thereby open the circuit, if an excessive and dangerous electrical current is accidentally brought into the building, and receptacles for pieces, such as the ordinary screw plugs, for completing connection between any of the local circuits and the bus bars.

These elements were old and were commonly employed for many years. In electrical distribution circuits, two kinds are known: first, the two-wire circuit, of which one wire is the positive or outgoing conductor from the generator, and the other the negative or return wire for completing the circuit back to the generator; the other, the three-wire circuit, in which there are two generators supplying the three wires, the neutral wire serving as outgoing conductor for one generator and as return conductor for the other generator, when the loads on the two generators are uneven. When the loads are equal, no current flows through the neutral wire. In the three-wire circuit, the panel board has three bus bars, while in the two-wire circuit it has two bus bars. The panel board is standardized, so that a board was sent out completed as to bus bars, cross sections, and the like, and a man skilled in the art could make the proper connections with the outside circuit and with the electrical circuits by attaching the necessary wires to the various terminals upon the board.

Screw plugs for making electrical connection between bus bars and lateral contact pieces leading to the local consumption contacts were also standardized as to size and form. There are various forms of safety devices, but the fuse plugs are the ones considered in this patent. The inventor pointed out the desirability and economies of construction, so far as consistent with the purpose for which the panel board is put, and also safety in construction and arrangement. By the improvement in the panel board, the amount of marble or slate in the base board and the amount of copper in the bus bars and cross connections become less. This invention was in line with the desire or requirement of standardizaton, and the economy in size adapted the device for use in constricted places and is therefore practical. The essence of the invention lies in the use of a cross-connecting piece electrically straddling one bus bar and in electrical contact with the other, in combination with the fuse plug receptacles that are located directly above the bus bars. The claims held below to have been infringed are as follows:

1. In a panel board, the combination of bus bars, and crossbars between the bus bars, with fuse plug receptacles mounted upon said bus bars, and each having a branch line contact piece, one of said contact pieces adapted to be electrically connected to the bus bar beneath its receptacle by a fuse plug, and another adapted to be electrically connected to a crossbar by a fuse plug, but insulated from the bus bar beneath its receptacle.

2. In a panel board, the combination of bus bars and fuse plug receptacles mounted thereon, with a crossbar connected to one of said bus bars and passing into a receptacle on the opposite bus bar.

5. In a panel board, the combination of bus bars and fuse plug receptacles mounted thereover, with a cross bar connected to one of said bus bars and passing into a receptacle on the opposite bus bar, but out of contact with said bus bar, and a branch line contact piece entering said receptacle from the opposite side thereof and adapted to be put into connection with the crossbar, but insulated from the bus bar.

The inventor did not limit himself to the precise details of construction shown in the drawings or specifications as to the receptacle or panel board, but the construction is referred to as follows: The receptacles are made of porcelain or other insulating material, and inside of each is put a conducting metal screw shell F, properly threaded to receive the screw plug G that contains the fuse. By running a short bent contact piece D from the local circuit terminal to the contact-screw shell F, that terminal will be in electrical contact with the screw plug G, when the same is inserted in the shell F. The receptacle C is mounted directly above the bus bar B, the screw shell F is maintained at a considerable distance above the bus bar B, and hence, when the screw plug G is in place, it is quite out of contact with the bus bar; hence the circuit is not completed by contact of the screw plug G with the bus bar. To the left of Figure 3, there is shown a contact screw L projecting down from the upper part of the receptacle and engaging with the bus bar immediately beneath it, but insulated from the contact piece D by an air space or opening *d*, so as to be out of direct contact with the latter. By this means the circuit is completed from bus bar B^1, up through the contact screw L, to the screw plug G, through the fuse contained in the latter to the screw shell F, thence through the lateral contact piece D to the local circuit terminal at the left. The recepacle C has openings at either side, one for the entrance of the contact piece D, the other for entrance of "a connecting piece E," which is in direct contact with the bus bar L, and extends laterally therefrom across through an opening in the opposite shell or receptacle C^1, where it is fastened firmly in position by a contact screw L^1, which holds it in position above, but out of electrical contact with, the second bus bar B^1; it being maintained in firm mechanical union therewith (though out of electrical contact) by the screw L^1 which projects downward from the right-hand screw shell F^1, which latter screw extends to a layer of insulation that overlies the right-hand bus bar B. In mechanical and electrical arrangement the right-hand receptacle C^1 is similar to the left-hand one, except that the shortness of the contact screw L^1, a layer of insulation above the right-hand bus bar B, and a slight air space between that insulation and the bus bar, together act to insulate that bus bar from the screw shell F^1. A short bent contact piece D^1 entering the right-hand shell C^1 connects the screw shell F^1 with the right-hand local-circuit binding post. When a screw-plug is inserted in the right-hand shell its end presses against the contact screw L^1 and so completes the circuit between the right-hand binding post, through lateral contact piece D^1, screw shell F^1, contact screw L^1 to the connecting piece E^1, thence to the left-hand bus bar B^1, the contact screw L, the screw fuse plug G, the left-hand screw shell F, the left-hand contact piece D, to the left-hand local circuit binding post. It is provided that by a modification and construction the next two pairs of local circuit binding posts on the upper part of the board D^1, D^2, may be cross-connected to the lower pair D, D, through a duplicate connecting piece E^2, thus adjacent local consumption circuit terminals may be of opposite polarity, so that a series of complete circuits may be connected up on each side of the panel board.

Appellant distinguishes between its two-wire and three-wire devices in considering its claim of noninfringement. It says it may draw a distinction between "on," "upon," and "thereover," as used in the claim, and the word "above," which it uses to describe the position of its fuse receptacle with its bus bar. It claims its two-wire panel is like Johnson's patent, No. 685,613, of the prior art, and its three-wire like Klein's, No. 636,905, of the prior art. But the Johnson device is a spread-out panel, having none of the advantages of the panel of the patent in suit, and the claims sustained below will not read upon it. Appellant's device is a narrow and economical panel, having the advantages of the Krantz patent. The claims sustained will read upon appellant's as upon the Krantz patent. The Johnson panel, so far as the record goes, was not used, but the appellant's device is in large commercial use.

We are satisfied that Krantz produced a more narrow and economical panel and board, and the new invention saved material and space on the panel board. The Johnson panel is not as economical of material or space. The Krantz patent and device with its two parallel rows of receptacles are arranged, so that the positive and negative wires of each set of contacts are joining and lead out immediately, without the use of excess material from the pair of fuse plugs or receptacles. The prior art shows the bus bars running one way and the rigid crossbars running at right angles thereto allowing the use of double-pole switches in the distribution circuits; that is, contiguous conductors of opposite polarity, and this is to be observed in the Sargent, Bossert, Johnson, and prior Krantz patent, as well as the Klein patent, No. 636,905. Others that have narrower panels with the fuse-plug receptacles over the bus bars, but with no crossbars entering the receptacles, such as the Hundhausen patent, No. 654,310, and the Klein patent, No. 29,154, attempt to arrange the circuits in a particular manner. Johnson has crossbars which are shorter than the standard form, and Klein has crossbars which are larger than those of the prior standard panels. In the Johnson patent, the fuse holder and a portion of the crossbar is elevated or raised to a plane above that of the fuse bar. The fuse holder is not on, upon, or over the bus bar in any sense, and is only above the bus bar in the sense that it is in a plane higher than that of the bus bar. The Johnson device has no shortening of the crossbars, as has the Krantz device, or as in appellant's device. The immediate supports for the fuses are in effect crossbars, and Johnson has therefore protruding crossbars differentiated by Krantz, and is not a narrow panel. Johnson introduced additional parts, and did not save parts. The Klein patent shows a panel of the spread-out variety, and introduces additional length to the crossbars by having certain of them start in the opposite direction from that in which other corresponding branch line contact lies, thereby bringing in additional parts and length to the crossbars, all of this to provide a combination double-pole switching and fusing arrangement. The removable fuse holder is part of the crossbar, and Klein has this protruding crossbar, as has Sargent and Bossert. In both the appellant's and appellee's devices, the path of the circuit is direct to the fuse receptacle and contact piece. That the combined switch and fuse holder of Klein is over the bus bar is only incidental, and nothing is gained, but rather a loss is introduced thereby. Neither the Johnson nor Klein device is described by the claims in suit. The appellant's panel is narrow and economical, and is a saving in material and space, as is stated to be the object of the improvement invented by Krantz, and we think infringes as to claims found infringed below. There is novelty and utility in the invention, and the patent in suit is held valid and infringed.

Decree affirmed.

Austin, Poor & Co., their assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Ireland Bros. Inc., of 102 Franklin Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Austin, Poor & Co., of 72 Leonard Street, New York, N. Y., No. 54,319, dated June 26, 1906, and the notice of such proceeding sent by registered mail to the said address having been returned by the post office authorities as undeliverable, notice is hereby given that unless said Austin, Poor & Co., their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, JANUARY 29, 1924.

[Vol. 318. No. 5.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 141,536. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) Societe Anonyme Des Aeroplanes G. Voisin, Paris, France. Filed Dec. 27, 1920.

AVIONS VOISIN

Particular description of goods.—Aeroplanes, Together with Their Detached Pieces and Accessories—Namely, Propeller Screws, Rudders, Supporting Wings and Planes, Frames or Fuselages and Featherings; Automobiles, Motor Cycles, Together with Their Detached Pieces and Accessories—Namely, Metal and Wood Vehicle Bodies, Hinged Windows, Metal or Wood Wheels.

Claims use since Dec. 9, 1919.

Ser. No. 151,551. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) Benjamin Klein, Chicago, Ill. Filed Aug. 8, 1921.

KLEIN'S VER SET

Particular description of goods.—Scissors Gauges.

Claims use since July 1, 1921.

Ser. No. 152,018. (CLASS 6. CHEMICALS, MEDICINES. AND PHARMACEUTICAL PREPARATIONS.) The Luzanne Company, Phoenix, Ariz., and Los Angeles, Calif. Filed Aug. 22, 1921.

MAGI

Particular description of goods.—Facial Cream.

Claims use since Feb. 9, 1921.

Ser. No. 152,328. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) The International Derrick & Equipment Company, Columbus, Ohio. Filed Aug. 29, 1921.

IDECO

Particular description of goods.—Derricks and Complete Drilling Derrick Equipment and Parts Thereof, Comprising Walking Beams, Crown Blocks, Iron and Steel Sheave Pulleys, Storage Tanks, Water Towers, Bull Wheels, Calf Wheels, Band Wheels, Engine Houses, Pitmen, Sucker Rods, Drilling Rigs, Drilling Machines, Pumping Machines, Forge Boxes, Tool Boxes, Substructures for Drilling Derricks, Unloading Platforms, and Buildings.

Claims use since Apr. 1, 1921.

Ser. No. 154,523. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Maple Grove Candies, Inc., St. Johnsbury, Vt. Filed Oct. 24, 1921.

Maple Grove

Particular description of goods.—Maple Cream, Maple Sirup, Maple Sugar in Bulk, Sauce for Ice Cream, and Maple Honey.

Claims use since summer of 1915.

Ser. No. 164,421. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. Glemby's Sons Co., Inc., New York, N. Y. Filed May 24, 1922.

WINSOME

Particular description of goods.—Hair Nets.

Claims use since May 1, 1922.

Ser. No. 164,422. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. GLEMBY'S SONS CO., INC., New York, N. Y. Filed May 24, 1922.

GAYETY

Particular description of goods.—Hair Nets.
Claims use since May 1, 1922.

Ser. No. 164,632. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CROFTS & REED CO., Chicago, Ill. Filed May 29, 1922.

SUPREMA

No particular claim is made to the representation of the cake of soap appearing on the drawing apart from the mark shown.
Particular description of goods.—Toilet Soap.
Claims use since May 13, 1922.

Ser. No. 165,424. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SPOKANE VALLEY GROWERS UNION, Opportunity, Wash. Filed June 12, 1922.

PINELAND
BRAND

The word "Brand" does not form a part of the registration sought apart from the mark shown in the drawing.
Particular description of goods.—Fresh Apples.
Claims use since October, 1921.

Ser. No. 165,557. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HENRY W. PEABODY & CO., New York, N. Y. Filed June 15, 1922.

SHEBA

Particular description of goods.—Figs in Natural Condition, Pressed or Pulled.
Claims use since May 29, 1922.

Ser. No. 165,558. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HENRY W. PEABODY & CO., New York, N. Y. Filed June 15, 1922.

Particular description of goods.—Figs in Natural Condition, Pressed or Pulled.
Claims use since May 29, 1922.

Ser. No. 166,102. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE ERNEST REICH COMPANY, Chicago, Ill. Filed June 26, 1922.

Tearless Mincer

The word "Mincer" apart from the trade-mark is disclaimed.
Particular description of goods.—Household Utensils—Namely, Devices for Mincing, Cutting, Chopping Fruits, Nuts, Berries, Cabbage, Lettuce.
Claims use since February, 1922.

Ser. No. 166,257. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PAASCHE AIR BRUSH COMPANY, Chicago, Ill. Filed June 29, 1922.

PAASCHE AIR

No claim is made to the words "Air Devices" or to the representation of a pneumatic tool apart from the trade-mark as shown by the drawing.
Particular description of goods.—Air-Brush Painting Outfits and Replacement Parts Thereof and Pneumatic Polishing, Rubbing, and Abrading Machines.
Claims use since July, 1919.

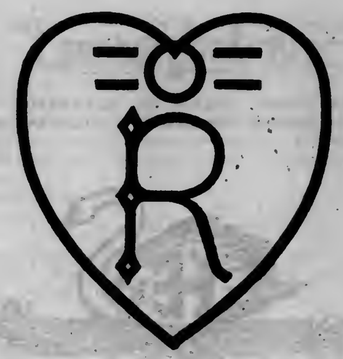
Ser. No. 166,898. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NATIONAL EGG PRODUCTS COMPANY, Los Angeles, Calif. Filed July 14, 1922.

MELLOCREME

Particular description of goods.—Gelatinous Powder for Making Ice Cream, Gravies, and Custards.
Claims use since June 14, 1922.

Ser. No. 167,170. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FEDERAL PURE FOOD COMPANY, Chicago, Ill. Filed July 21, 1922.

TOOTSWEET



Particular description of goods.—Compound to be Used in Preparing the Filling for Pies and in Preparing Puddings, Cakes, and Desserts.
Claims use since February, 1918.

Ser. No. 167,845. (CLASS 32. FURNITURE AND UPHOLSTERY.) HECHT'S FURNITURE HOUSE, Baltimore, Md. Filed Aug. 5, 1922.

PERFHECHTION

Particular description of goods.—Household Furniture—Namely, Beds, Dressers, Vanity Dressers, Chiffarettes, Chairs, Chiffarobes, Benches, Rockers, Cedar Chests, Buffets, China Closets, Serving Tables, Tables, Settees, Couches, and Bookcases.
Claims use since Jan. 2, 1922.

Ser. No. 168,982. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WILLIAM T. ROUTH, McRae, Ga. Filed Sept. 1, 1922.

Particular description of goods.—Ironworkers' Tools, Comprising Blacksmiths' Chisels, Tongs, Swages, Punches, Hammers, Gouges, and Drills.
Claims use since March, 1921.

Ser. No. 169,911. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PEDRO LUPI, Barcelona, Spain. Filed Sept. 25, 1922.

The descriptive and geographical reading matter on the mark is hereby disclaimed—Namely, "1/4 Gallon Guaranteed Full Measure. This oil being strictly pure is therefore recommended for medicinal and all other purposes for which olive oil is used. Brand. We guarantee the absolute purity of our oil and its perfect preservation. Keep the oil in a cool and dry place. 1/4 Galon Medida Garantida Siendo este aceite absolutamente puro es recomendado en todas partes para uses medicinales y en general para todos aquellos en que se emplee Aceite de Oliva. Garantizamos la absoluta pureza de nuestro Aceite de Oliva y su perfecta conservacion Guardese en Lugar frio y seco."
Particular description of goods.—Olive Oil.
Claims use since May, 1919.

Ser. No. 170,121. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE CANFIELD RUBBER COMPANY, Bridgeport, Conn. Filed Sept. 30, 1922.

"SNOWYTE"

Particular description of goods.—Dress Shields.
Claims use since Mar. 13, 1907.

Ser. No. 170,242. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) EASTERN HAIR NET TRADING CO., New York, N. Y. Filed Oct. 3, 1922.

Turbanet

Particular description of goods.—Hair Nets.
Claims use since 1912.

Ser. No. 170,642. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) GOLDENBERG'S, Washington, D. C. Filed Oct. 12, 1922.

SMART SET

Particular description of goods.—Linen Piece Goods, Bed Sheets, Pillowcases, Textile Tablecloths, Napkins, Doilies, Woolen Piece Goods, Cotton Piece Goods, Lace in the Piece, Textile Towels, Wash Rags, Handkerchiefs, Silk Piece Goods, Velvet Piece Goods, Ribbons in the Piece, Percales in the Piece, Textile Linings in the Piece, Textile Blankets, Textile Comforts, Textile Rugs, Calicoes in the Piece, Carpets, Crêpe Cloth in the Piece, Hair Nets, Veilings, Portières, Window-Shade Cloth, Chiffon in the Piece, Serge in the Piece, Cheviots in the Piece, Ginghams in the Piece, Chambrays in the Piece, Lace Curtains, and Canvas.

Claims use since Mar. 1, 1922.

Ser. No. 170,645. (CLASS 32. FURNITURE AND UPHOLSTERY.) GOLDENBERG'S, Washington, D. C. Filed Oct. 12, 1922.

SMART SET

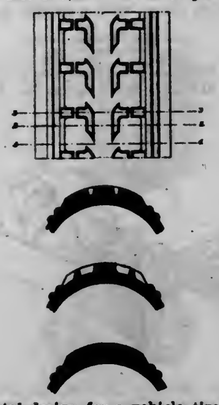
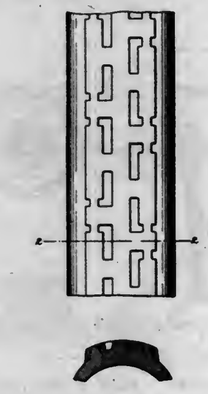
1. In a chain link, a length of wire formed intermediate its ends with a pair of eyes and with an integral cross part which extends across the base of each eye, the wire beyond the cross part having its end portions shaped to form a bow.

DESIGNS



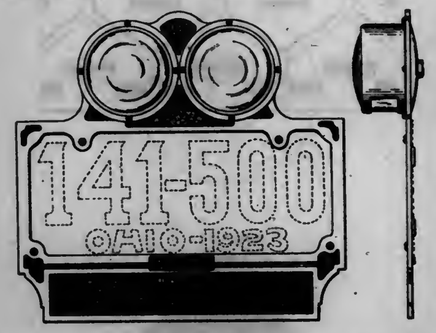
JANUARY 29, 1924.

63,839. DOLL. SUSIE M. ATTERHOLT, West Albany, N. Y. Filed Sept. 28, 1923. Serial No. 7,354. Term of patent 7 years.



The ornamental design for a doll, as shown.

63,840. VEHICLE TIRE. FLOYD G. BEAN, Minneapolis, Minn., assignor to Blekre Tire & Rubber Company, St. Paul, Minn., a Corporation of Iowa. Filed Nov. 22, 1921. Serial No. 517,123. Term of patent 7 years.

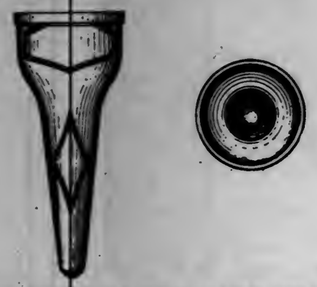


The ornamental design for a vehicle tire, as shown.

63,841. VEHICLE TIRE. EDGAR OLIVER BLEKRE, Minneapolis, Minn. Filed Dec. 15, 1920. Serial No. 430,976. Term of patent 7 years.

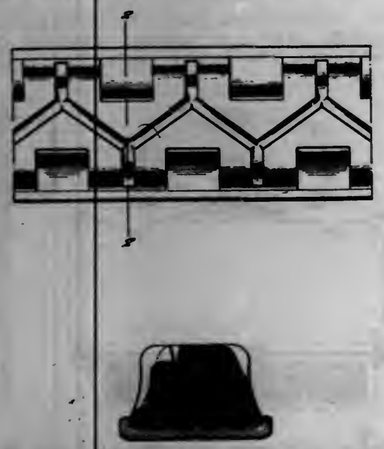
The ornamental design for a vehicle tire, as shown.

63,842. COMBINATION LAMP AND LICENSE-PLATE HOLDER. WESLEY E. COCHRAN, Cleveland, Ohio. Filed Nov. 13, 1922. Serial No. 4,273. Term of patent 3½ years.



The ornamental design for a combination lamp and license plate holder, as shown.

63,843. TEAPOT OR SIMILAR ARTICLE. GEORGE E. CURTISS, New Britain, Conn., assignor to Landers, Frary and Clark, New Britain, Conn., a Corporation of Connecticut. Filed Apr. 13, 1922. Serial No. 1,723. Term of patent 14 years.

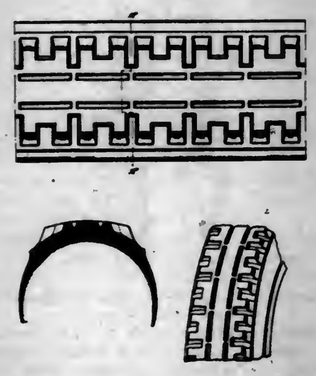


The ornamental design for a teapot or similar article as shown.

63,844. ICE-CREAM CONE. ISRAEL DICKSTEIN and BENJAMIN A. SHINDELL, New Haven, Conn., assignors to Connecticut Cone Co., Inc., New Haven, Conn., a Corporation. Filed July 19, 1923. Serial No. 6,805. Term of patent 3½ years.

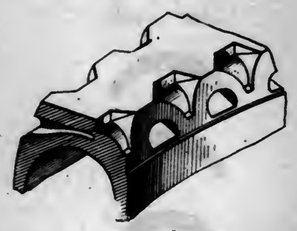
The ornamental design for an ice cream cone as shown.

63,845. SOLID TIRE. FRED D. FOWLES, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Company of Massachusetts. Filed Oct. 25, 1923. Serial No. 7,587. Term of patent 7 years.



The ornamental design for a solid tire as shown.

63,846. DOLL. JOHN J. GILLOOLY, New York, N. Y. Filed Oct. 18, 1923. Serial No. 7,538. Term of patent 14 years.

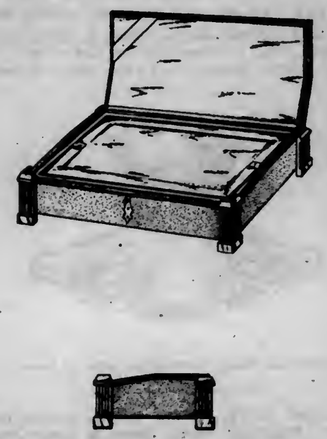


The ornamental design for a doll, as shown.

63,847. CORD TIRE. ALFRED A. GLIDDEN, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1923. Serial No. 7,598. Term of patent 7 years.

The ornamental design for a cord tire as shown.

63,848. TIRE TREAD. BERNARD GRANVILLE, New York, N. Y. Filed Mar. 7, 1921. Serial No. 450,485. Term of patent 7 years.



The ornamental design for a tire tread, as shown.

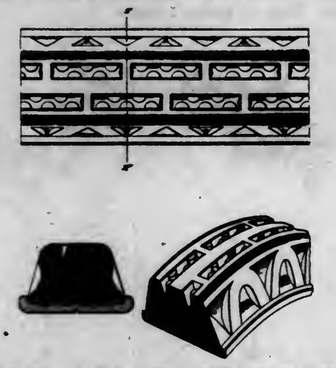
63,849. GOBLET. ALFRED B. GUNTHEL, Sea Cliff, N. Y., assignor to Société Anonyme des Cristalleries du Val St. Lambert, Val St. Lambert, Belgium. Filed Sept. 28, 1923. Serial No. 7,359. Term of patent 7 years.

The ornamental design for a goblet substantially as shown.

63,850. JEWELRY BOX. SAMUEL HELLER, New York, N. Y., assignor to L. Heller & Son, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 15, 1923. Serial No. 7,502. Term of patent 7 years.

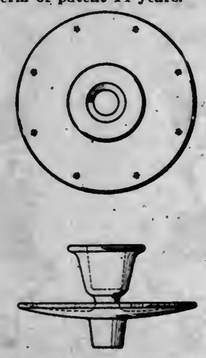
The ornamental design for a jewelry box as shown.

63,851. GLOBE FOR LIGHTING FIXTURES. NICHOLAS KOPP, Pittsburgh, Pa. Filed Feb. 9, 1922. Serial No. 615. Term of patent 7 years.



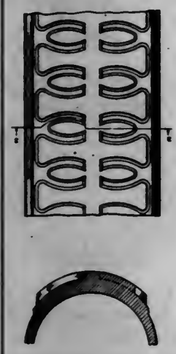
The ornamental design for a globe for lighting fixtures, as shown.

63,852. JUG. ABRAHAM MILLEN, Boston, Mass., assignor to American Syrup Co., Boston, Mass., a Corporation of Massachusetts. Filed Mar. 23, 1923. Serial No. 5,570. Term of patent 14 years.



The ornamental design for a jug, as shown.

63,853. SOLID TIRE. ROBERT MUIR, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1923. Serial No. 7,589. Term of patent 3½ years.



The ornamental design for a solid tire as shown.

63,854. COMBINED CANDLE HOLDER AND BOBACHE. CALVIN B. ROE, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Dec. 21, 1922. Serial No. 4,653. Term of patent 14 years.

The ornamental design for a combined candle holder and bobache, as shown.

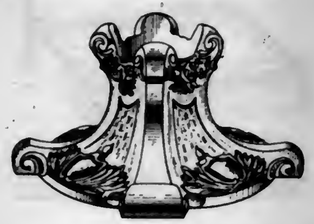
63,855. TIRE. HENRY G. SCHMIDT, Norwalk, Conn., assignor to The Norwalk Tire & Rubber Company, Norwalk, Conn., a Corporation of Connecticut. Filed May 10, 1922. Serial No. 2,160. Term of patent 3½ years.

The ornamental design for a tire, as shown.

63,856. GOBLET OR SIMILAR ARTICLE. SAMUEL TRIPPI, Buffalo, N. Y. Filed Mar. 12, 1923. Serial No. 5,440. Term of patent 7 years.

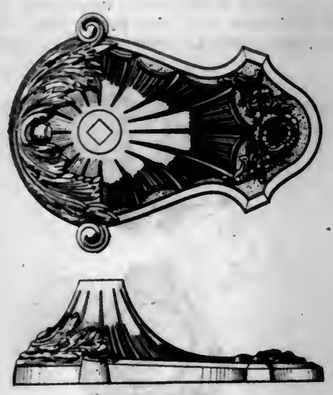
The ornamental design for a goblet or similar article, as shown.

63,857. DOLL. FLORENCE KYLE WATSON, Bluefield, W. Va. Filed July 27, 1923. Serial No. 6,883. Term of patent 14 years.



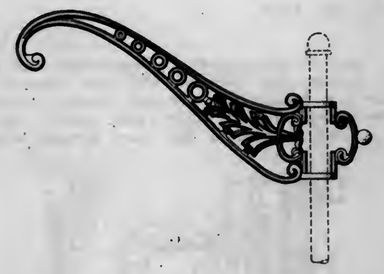
The ornamental design for doll as shown.

63,858. FIREPLACE HEATER. WILLIAM W. WEIR, Alameda, Calif. Filed Sept. 13, 1923. Serial No. 7,194. Term of patent 14 years.



The ornamental design for a fireplace heater substantially as shown.

63,859. LAMP BASE. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 31, 1923. Serial No. 7,126. Term of patent 7 years.



The ornamental design for a lamp base, as shown.

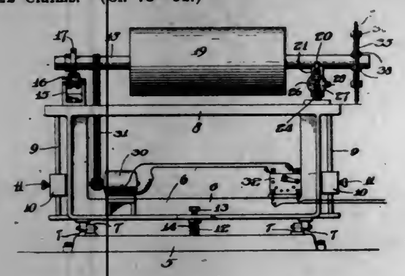
63,860. LAMP BASE. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 31, 1923. Serial No. 7,127. Term of patent 7 years.

The ornamental design for a lamp base, as shown.

63,861. BRACKET ARM FOR BRIDGE LAMPS. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 31, 1923. Serial No. 7,128. Term of patent 7 years.

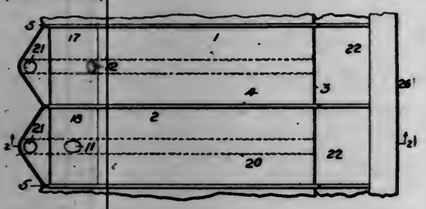
The ornamental design for a bracket arm for bridge lamps, as shown.

63,862. LAMP FIXTURE, STANDARD, OR HANGER. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 31, 1923. Serial No. 7,129. Term of patent 7 years.



The ornamental design for a lamp fixture, standard or hanger, as shown.

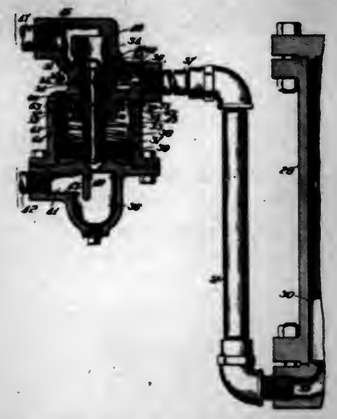
PATENTS



GRANTED JANUARY 29, 1924.

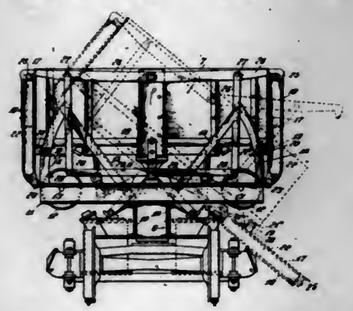
1,481,785. BALANCING MACHINE. NICHOLAS W. AKIMOFF, Philadelphia, Pa., assignor to Vibration Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 26, 1918. Serial No. 231,017. 22 Claims. (Cl. 73—51.)

1. In a machine for determining the location and value of static and dynamic unbalance existing in a rotatable machine element, means for rotatably supporting said machine element whereby the same may be permitted to oscillate in two degrees of freedom, means for alternatively suppressing the oscillation in either degree at will, and means for arbitrarily creating a determinable centrifugal force for counterbalancing the static or dynamic unbalance existing in said mcahine element.



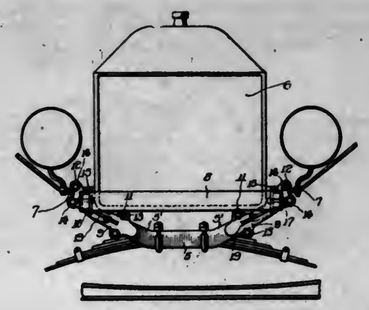
1,481,786. GAME. GEORGE T. BARBER, Brooklyn, N. Y. Filed Mar. 24, 1922. Serial No. 546,268. 8 Claims. (Cl. 46—61.)

1. In a game, the combination with playing balls adapted to be rolled by the player, of a hollow member rotatable about a longitudinal axis, and having longitudinally spaced apertures, trackways leading from the players to the member for the balls and means for continuously rotating said member.



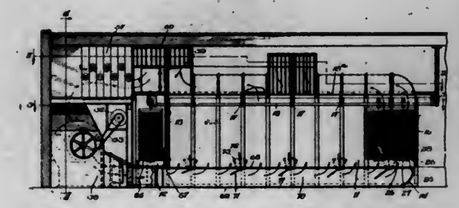
1,481,787. OPERATING MECHANISM FOR DUMP CARS. JAMES D. BENBOW, Aurora, Ill., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Dec. 2, 1918. Serial No. 265,001. 9 Claims. (Cl. 121—41.)

1. In an operating mechanism for dump cars, the combination with means for supplying compressed air, and an operating cylinder, of a valve interposed between said air supplying means and said cylinder, said valve comprising a main valve chamber, an inlet duct leading to one end portion thereof, an auxiliary chamber communicating with the opposite end of said main chamber, a passage communicating intermediately with said main chamber and connected with said cylinder, an exhaust port leading from said main chamber into said auxiliary chamber, an exhaust port opening out of said auxiliary chamber, a slide valve movable in said



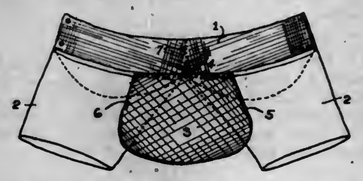
main chamber to connect said passage either with said inlet duct or with said first mentioned exhaust port, and means actuated by the admission of compressed air to said auxiliary chamber for operating said slide valve to connect said passage with said inlet duct.

1,481,788. DUMP CAR. JAMES D. BENBOW, Aurora, Ill., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Aug. 3, 1922. Serial No. 579,376. 12 Claims. (Cl. 105—276.)



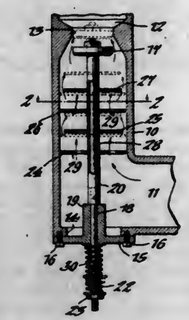
1. A dump car comprising a tilting bed, an under-body on which said bed is mounted, transverse bars mounted on said under-body, rollers carried by said transverse bars adjacent to one of the side margins of said bed, a side gate pivotally connected with the bed adjacent to the floor thereof whereby the upper margin of said gate may swing outward and downward, and arms carried by and depending from said gate and adapted to ride on said rollers when the car bed is tilted.

1,481,789. BUMPER. WALTER A. BOCKIUS, Wilmette, Ill., assignor to The Beckley-Ralston Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1921. Serial No. 507,889. 3 Claims. (Cl. 293—55.)



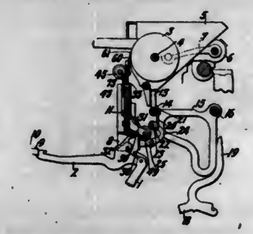
2. A bumper structure for Ford motor vehicles comprising a U-shape bumper bar, supporting brackets, each bracket having a base part and a wall extending forwardly therefrom intermediate its ends, said bumper bar engaging at its ends against said base parts and against the outsides of said walls and being rigidly secured to said walls, the inner ends of said base parts being adapted to engage against the front face of the front cross member of the vehicle chassis frame, wings on said inner ends for receiving U-bolts which engage around the cross member, the outer ends of said base parts being in front of the lamp supporting brackets of the vehicle and being provided with bolt holes for receiving fastening members adapted to engage with said lamp brackets.

1,481,790. DRYING APPARATUS. HENRY B. BUCKHAM, Chicago, Ill., assignor to The Albright-Nell Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1920. Serial No. 388,504. 12 Claims. (Cl. 34—46.)



1. In a drying apparatus, in combination: a drying chamber divided into a plurality of compartments, each adapted to be opened from end to end for the free passage therethrough of containers supporting the material to be dried; a blower; a heating chamber for supplying heated air to the inlet of said blower; a distributing chamber receiving the hot air discharged by said blower and adapted to feed such air to any of said compartments; and means for individually controlling the feed of air from said distributing chamber to any one of said compartments; and means for selectively causing an open and closed circulation of air through said compartments, substantially as specified.

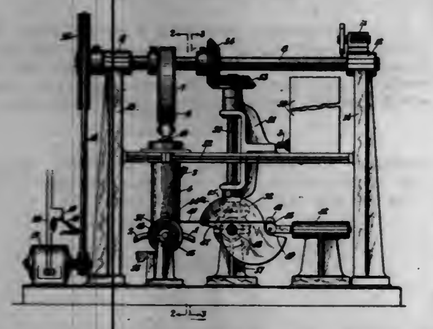
1,481,791. UNDERGARMENT. NAOMI RITCHIE CURTIS, Norwalk, Conn. Filed July 24, 1922. Serial No. 576,947. 3 Claims. (Cl. 2—122.)



1. An undergarment comprising a hip engaging band, drawer legs secured to the lower edge of said band, and a depending flap having a free lower edge and being secured to a rear portion of said lower edge and to a rearwardly disposed portion of the respective drawer legs.

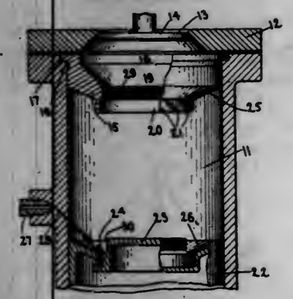
1,481,792. GOVERNOR FOR GAS ENGINES. HAROLD S. DAILEY, Barker, N. Y. Filed Mar. 29, 1922. Serial No. 547,940. 4 Claims. (Cl. 48—180.)

1. A device of the character described, comprising a fuel conduit having an outlet port, a valve stem slidable in said conduit, a throttle valve mounted on said stem and movable toward and from said outlet port, and a plurality of baffle-disks mounted on said stem and arranged in sets, some of said disks having fuel-passages and others having solid portions located opposite the passages of the first-named disks.



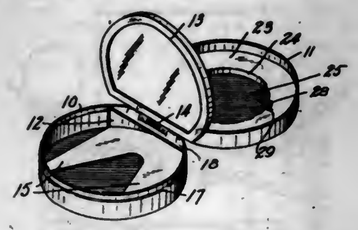
1,481,793. TYPEWRITING MACHINE. JOHN C. DOANE, Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,221. 23 Claims. (Cl. 197—135.)

1. In a front-strike typewriting machine, the combination with a platen and case-shift mechanism for shifting said platen vertically, of a guiding and aligning element to co-operate with said platen and pivoted for movement to and from the latter, means to cause vertical shifting of said element with said platen, a stop to



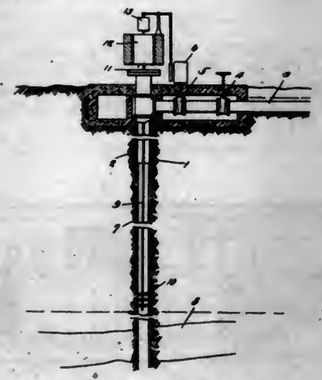
limit the movement of said guiding and aligning element away from said platen, and a manually shiftable member to be interposed between said stop and said element to diminish the extent of movement of the latter away from the platen.

1,481,794. BLOOD-TRANSFUSION APPARATUS. EUGENE A. DUPIN, New York, N. Y., assignor of one-third to Harry J. Dupin, one-third to Oscar Hauser, and one-third to Leontine F. Dupin, all of New York, N. Y. Filed May 22, 1922. Serial No. 562,585. 4 Claims. (Cl. 128—214.)



1. A blood transfusion apparatus comprising a pump, means for supplying auxiliary fluid under pressure, intake and discharge conduits, mechanism for connecting the chamber of said pump and said auxiliary fluid-supplying means selectively to said intake and discharge conduits, and mechanical means timed in accordance with the stroke of the pump for connecting said fluid-supplying means to said discharge conduit and the pump chamber to said intake conduit during the suction stroke of the pump and for shifting said mechanisms to connect the pump chamber to the discharge conduit and the auxiliary fluid-supplying means to the intake conduit during the delivery stroke of the pump.

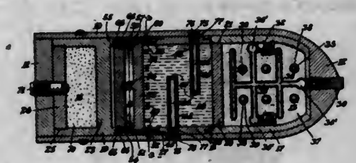
1,481,795. FUEL-MIXING MEANS FOR INTERNAL-COMBUSTION ENGINES. EUGENE A. FORD, Newton, Mass., assignor to R. E. D. Engine Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1921. Serial No. 450,446. 9 Claims. (Cl. 123—33.)



1. In an internal combustion engine, a cylinder, a piston arranged to reciprocate in said cylinder, a partition in the upper part of the cylinder delimiting a combustion chamber from the main interior space of the cylinder, and means for delivering liquid fuel upon the upper end of the piston between the cylinder wall and the entrance to said combustion chamber; the piston end having a depressed portion to receive the fuel, and the partition being complementally formed to enter said depressed portion when the piston approaches the end of its compression stroke, whereby to cause air then entrapped in the intermediate space to carry the fuel with it in its flow to said combustion chamber.

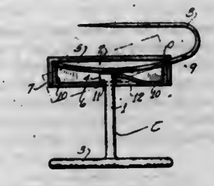
1,481,796. COMBINATION VANITY BOX. GEORGE GUSSOFF, New York, N. Y. Filed June 23, 1923. Serial No. 647,234. 8 Claims. (Cl. 132—83.)

1. In a vanity case construction, a receptacle forming a compartment for cosmetic material, a hinged cover member forming another compartment for material, a mirror-supporting and compact-holding element removably positioned in the receptacle, a mirror having a hinged mounting on the element, and means for automatically raising the mirror to a convenient position for use when the cover member is lifted.



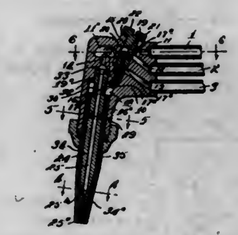
1,481,797. METHOD AND APPARATUS FOR UTILIZING POTENTIAL HYDRAULIC ENERGY. NIAL HADDEN, Buffalo, N. Y., assignor of one-third to Sherman Woodward and one-third to Palmer Osterman, both of New York, N. Y. Filed May 6, 1921, Serial No. 467,444. Renewed Dec. 9, 1922. 6 Claims. (Cl. 61—19.)

4. The method of utilizing potential hydraulic energy, which comprises conducting water from a body of water to a subterranean water-carrying stratum located below the level of said body of water, and utilizing the flow of water thus produced to operate a hydraulic power producer.



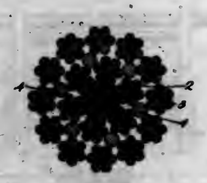
1,481,798. PROJECTILE. JOHN HAYS HAMMOND, Jr., and HENRY L. F. BUSWELL, Gloucester, Mass.; said Buswell assignor to said Hammond. Filed June 27, 1917, Serial No. 177,425. Renewed July 11, 1922. Serial No. 574,284. 12 Claims. (Cl. 102—29.)

1. A projectile including a shell, a plurality of substances contained in said shell and adapted to combine chemically to produce a given substance, means normally maintaining said substances separated but operative as a result of the sudden discharge of said shell from a gun



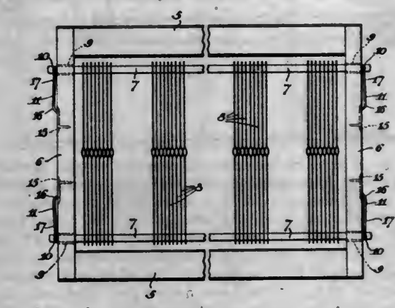
to cause said first mentioned substances to combine to produce said given substance, and means operative to explode said shell a predetermined time after impact.

1,481,799. COLLAR BUTTON. CLARENCE B. HAND Maplewood, Mo. Filed Feb. 28, 1923. Serial No. 621,786. 1 Claim. (Cl. 24—63.)



A collar button comprising a stem and a hollow head detachable therefrom, said head being provided with an opening adapted to receive one end of the stem, and a hook provided with a spring shank secured in the head and adapted to bear against the end of the stem received in opening in the head.

1,481,800. BLOWPIPE. JOHN HARRIS, Lakewood, Ohio, assignor to Carbo-Oxygen Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Aug. 11, 1919. Serial No. 316,556. 9 Claims. (Cl. 158—27.4.)

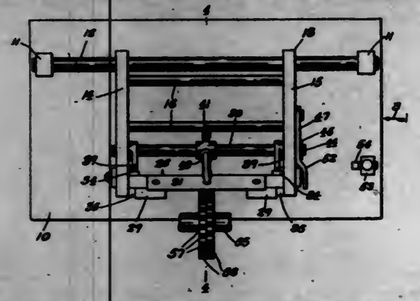


1. In a blow pipe, the combination of a head having a branched chamber for cutting oxygen and a tip having a central bore for such cutting oxygen and passageways for preheating gases surrounding said bore, said head having a bore extending between the branches of said chamber and in approximately the direction of the first mentioned bore and also having passageways for preheating oxygen and combustible gas communicating with such second bore, and a plug in such second bore having a passageway extending therethrough and adapted to receive the preheating oxygen and provided with ports communicating with its passageway and adapted to conduct combustible gas thereto, said head having a chamber with which the lower end of the passageway in said plug communicates and with which the passageways in said tip also communicate.

1,481,801. WIRE ROPE. NOBLE C. HARRISON, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Mar. 23, 1921. Serial No. 454,721. 6 Claims. (Cl. 117—59.)

1. A wire rope comprising an inner series and an outer series of strands of helically wound wire, and a series of bearers arranged between contiguous surfaces of the strands of the outer and inner series, said bearers being laid up in the valleys between the strands of the inner series, whereby flexibility of the rope is increased and the friction due to relative movement of the strands during bending is reduced.

1,481,802. HEDDLE FRAME. JACOB KAUFMANN, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1923. Serial No. 624,170. 4 Claims. (Cl. 139—92.)

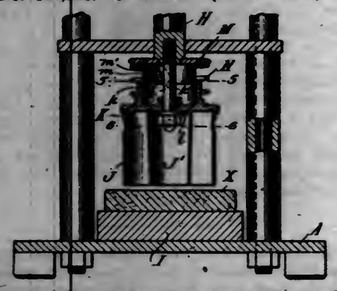


1. A heddle frame comprising top and bottom bars and end members, heddle supporting bars mounted in said frame extending through slots in the end members and having their ends projecting beyond the outer margins of the end members and having apertures provided in said projecting portions, securing devices each adapted to engage one of said projecting end portions of the heddle supporting bar and comprising a member made of spring wire having one end thereof extending into the material of the end member and being retained therein by frictional engagement, said member having a spring-like extension, the free end of said extension being provided with a hook-like portion adapted to engage the aperture in the heddle supporting bar, and means for preventing rotative movement of said securing member about the portion thereof which extends into the end member of the frame.

1,481,803. APPARATUS FOR MAKING SAW BLADES. ADOLF KÖNIG, Hoboken, N. J., assignor to Hans K. Lorentzen, New York, N. Y. Filed Aug. 28, 1918, Serial No. 251,762. Renewed June 23, 1923. 13 Claims. (Cl. 76—25.)

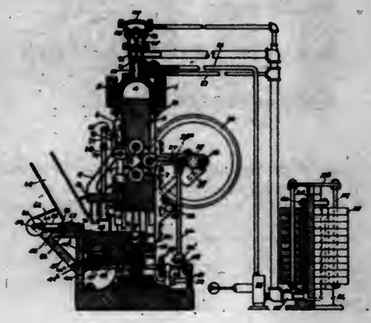
1. In an apparatus of the class described, a base, a shaft mounted longitudinally of and above the rear end portion of said base, a frame mounted on said shaft and

movable longitudinally thereof, rollers for supporting the front end portion of said frame in its movement over



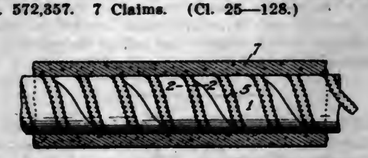
the base, a workpiece supporting member detachably mounted in the front end portion of the frame, and means for locking said member in position.

1,481,804. GARMENT-CUTTING DEVICE. ANIELLO LUONGO, New York, N. Y. Filed Sept. 23, 1921. Serial No. 502,804. 6 Claims. (Cl. 164—31.)



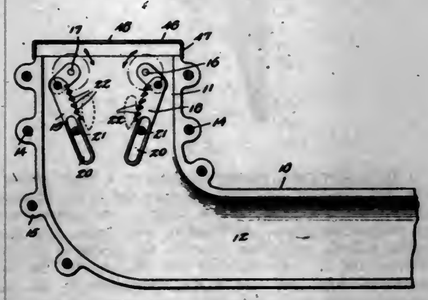
1. In a garment cutting and marking device having a plurality of individual pattern resembling units provided with self-adjusting cutting or marking blades adapted to conform with the contours imparted to said units, a plurality of individual adjusting means in each of said units adapted to control the shaping of various portions of each units, a main connection for all of said adjusting means, all of said units, and means for collectively controlling and simultaneously operating all of said adjusting means through said main connection.

1,481,805. MACHINE FOR CUTTING DOUGH OR SIMILAR MATERIAL. ALBERT F. MAIN and FRANK A. ADAMS, Rochester, N. Y. Filed Feb. 11, 1921. Serial No. 444,246. 3 Claims. (Cl. 107—21.)



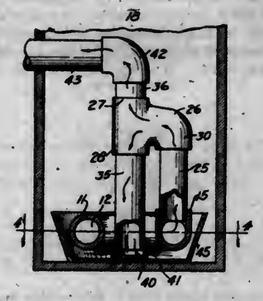
3. In a machine for cutting dough, the combination with a support movable vertically toward the material to be cut, of a knife mounted on the support and yieldable vertically thereon as it engages the dough, and instrumentalities acting to impart a turning motion to the knife as it enters the material to be cut.

1,481,806. APPARATUS FOR COMPRESSING METALLIC PARTICLES. ALONZO B. MONTGOMERY, Lakewood, Ohio. Filed Nov. 18, 1920. Serial No. 424,841. 16 Claims. (Cl. 78—13.)



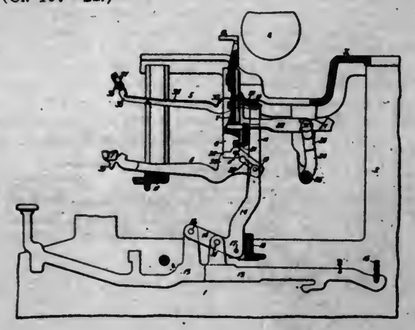
1. In an apparatus for compressing material, an automatic intermittently revolving table, a plurality of molding chambers therein, a plunger head, a plurality of plungers carried by said plunger head for successively compacting material within the respective molding chambers, and a plurality of plungers on said head for successively giving said material a different outward configuration.

1,481,807. PRODUCTION OF CONDUITS. JOHN F. MURRAY, Brooklyn, N. Y. Filed July 3, 1922. Serial No. 572,357. 7 Claims. (Cl. 25—128.)



3. A hollow molding core in combination with a strip wound spirally around said core and attached thereto.

1,481,808. COTTON PICKER. JAMES P. ROACH, New York, N. Y. Filed May 15, 1922. Serial No. 560,910. 4 Claims. (Cl. 56—36.)

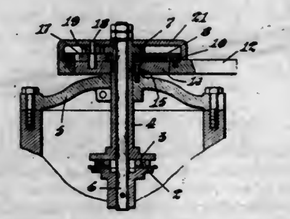


1. In a pneumatic cotton picker, means for stripping cotton from the boll comprising complementary picking elements mounted for movement in the intake of the suction nozzle and means for positively driving the same at a high rate of speed to effect their advancement toward each other during the stripping action and at a reduced rate of speed and away from each other during the releasing action.

1,481,809. GAS GENERATOR. WILLIAM C. SCHEU, Los Angeles, Calif., assignor to Harrison, Paul Scheu Co., Upland, Calif., a Corporation of California. Filed June 18, 1921. Serial No. 478,605. 6 Claims. (Cl. 158—28.)

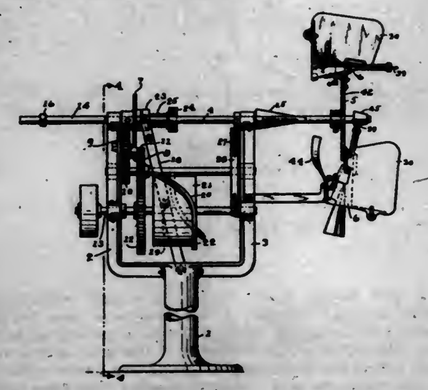
burner inlet pipe extending downwardly to the burner, a generating chamber extending around said inlet pipe and burner and having an outlet extending upwardly and connecting with the downwardly extending inlet pipe for the burner, a gas outlet means connecting with said outlet of the generating chamber, and an outlet pipe communicating with said chamber at the end thereof remote from the outlet of said chamber, means for forcing air to said air inlet pipe, and means for supplying fuel to said air inlet pipe.

1,481,810. TYPEWRITING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Apr. 12, 1923. Serial No. 631,404. 6 Claims. (Cl. 197—22.)



1. In a typewriting machine, a system of segmentally arranged pivoted type bars movable at their heels in converging planes, the point of convergence of such planes being on the median plane of the system and intermediate the pivots of the type bars and the point where the bars converge in the printing position.

1,481,811. SOAP PASTE. FRED W. SHIELDS, Kansas City, Mo., assignor to Little Wonder Laboratory, Atchison, Kans., a Firm consisting of Fred W. Shields, Alma L. Shields, and Guy V. Haley, all of Kansas City, Mo. Filed Aug. 29, 1921. Serial No. 496,607. 1 Claim. (Cl. 87—5.)



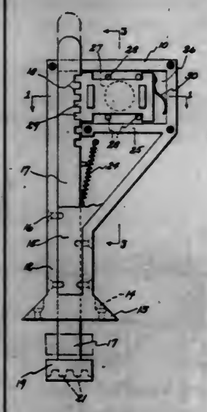
A plastic composition adapted to form a soap paste, consisting of thirty pounds of tallow, five pounds of borax, one pound of alum, five pounds of soda, five pounds of laundry soap, one ounce of oil of wintergreen, one ounce of sweet oil, one quart of liquid glass, five gallons of boiling water, and thirty-five pounds of pine sawdust.

1,481,812. DIAL-HOLDING MECHANISM. WALTER A. SIMOND, Franklin, N. H., assignor to Acme Knitting Machine & Needle Company, Franklin, N. H., a Corporation of New Hampshire. Filed Nov. 17, 1919. Serial No. 338,678. 7 Claims. (Cl. 66—22.)

1. In a knitting machine having a needle dial and a cam for operating the needles mounted in said dial, a mechanism for holding the dial stationary while the cam revolves, comprising, in combination, an annular gear, means supporting said gear in a fixed position, a second gear of smaller pitch circle than said annular gear, said second gear being rigidly connected with said dial and positioned substantially within said annular gear, and planetary gearing connected with said cam to rotate therewith and positively connecting said gears, said planetary gearing being of a ratio to maintain said second gear stationary.

1,481,813. CONE-ROLLING MACHINE. CARL R. TAYLOR, Cleveland, Ohio. Filed Feb. 16, 1921. Serial No. 445,294. 22 Claims. (Cl. 107—58.)

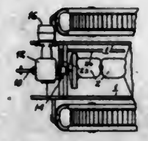
11. In a cone rolling machine, a hollow conical die, a mandrel engageable and disengageable with said die to form a pastry cone therein, means carried by the die operable upon movement of the mandrel out of the die to positively engage the formed cone to prevent displacement thereof from the die, means for moving the die and means engageable with said cone engaging means to move it out of engagement with the formed cone to release the cone from the die.



16. In a cone forming machine, a die carrying disk, a series of conical cone forming dies pivoted to the disk, means for rotating the disk, means cooperating with the dies to form conical pastry cones therein, means carried by the die for engaging a formed cone to retain it in the die, means engageable with the dies successively to swing them about their pivots and simultaneously release said cone engaging means, and means operable upon said swinging movement of the dies to directly engage and positively eject the formed cones from the dies.

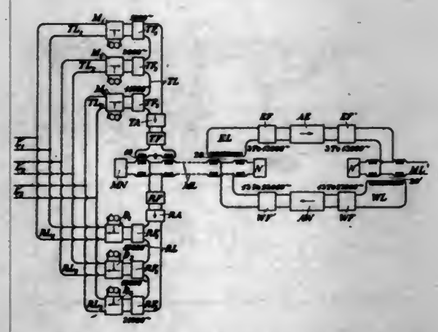
1,481,814. KINESITHERAPEUTIC APPARATUS. JOHN P. THEOFILOS, Chicago, Ill. Filed Nov. 10, 1922. Serial No. 600,058. 6 Claims. (Cl. 128—63.)

1. In a kinesitherapeutic apparatus, the combination of a rotary crank head adapted for fixed attachment to the end of the power shaft of a rotary motor and carrying a pair of crank pins in diametrically opposed relation at the end opposite to that formed for attachment to the power shaft, a flexible band having a loop shape the ends of which are operatively connected to said crank pins, and applicator means associated with said band.



1,481,815. ANTITHEFT DEVICE FOR AUTOMOBILES. ANTONIO TINO, New York, N. Y. Filed June 6, 1922. Serial No. 566,297. 1 Claim. (Cl. 70—132.)

A gear locking device comprising a rigid stationary frame adjacent the gear, a bolt slidable in said frame radial with respect to the gear, teeth on the end of said bolt adapted to engage the teeth of said gear, guides on each side of the bolt teeth engageable with opposite sides of the rim of the gear, manual means for depressing said bolt to cause engagement of the respective teeth of said bolt and gear, a tension spring normally operating to lift said bolt out of engagement with said gear, notches on the side of said bolt, a slide movable transverse to the bolt, the notches of the bolt being numerically greater than the number of teeth on the slide, said notches being adapted to permit locking of the bolt at intermediate positions, teeth on said slide adapted to engage the lateral teeth of the bolt, an S-shaped spring secured to the slide adapted to urge said slide into engagement with the bolt, and key operated means for retracting said slide.



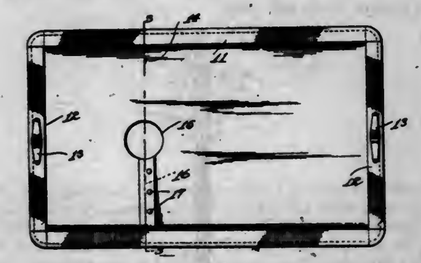
1,481,816. POWER MECHANISM FOR TRACTORS. JAMES J. TRACY, Cleveland, Ohio. Filed July 15, 1918. Serial No. 244,872. 1 Claim. (Cl. 180—53.)

In a tractor, the combination of a frame and traction members therefor; of an engine, mounted in said frame with its shaft disposed longitudinally thereof; means including a clutch and change-speed gear for operatively connecting one end of the engine shaft with said traction members; control levers for said means; a casing supported on a cross member of said frame adjacent the other end of said engine shaft; an extension shaft continuously coupled to said engine shaft and supported in alignment therewith in said casing; a lateral extension on said casing supported on a side member of said frame; a power shaft mounted in said lateral extension at right angles to said extension shaft; beveled gear secured to the inner

end of said power shaft and a belt pulley secured to the outer end thereof; a clutch element rotatably mounted on said extension shaft; a beveled gear mounted on said clutch element and in constant engagement with the beveled gear of said power shaft; a companion clutch element splined on said extension shaft for engagement with said first-named clutch element; a clutch shifting mechanism slidably mounted within said casing and a hand lever for controlling said clutch shifting mechanism located adjacent the control levers of said tractor.

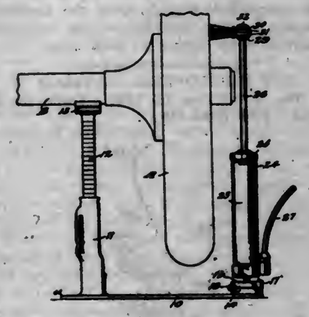
1,481,817. REPEATER FOR MULTIPLEX SYSTEMS. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 26, 1919. Serial No. 326,515. 11 Claims. (Cl. 178—44.)

1. In a signaling system, a transmission line, means for transmitting signals in one direction over said line by means of currents of one frequency, and means for transmitting signals of the same kind in the opposite direction over said line by means of currents of another frequency, a one-way repeater in said line for amplifying currents of the frequency transmitted in said first mentioned direction, and a second one-way repeater for amplifying currents of the frequency transmitted in the opposite direction.



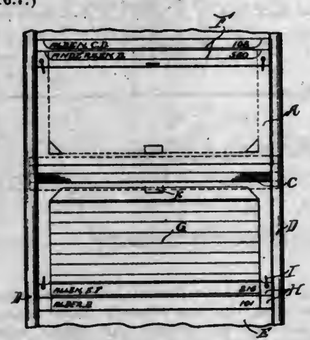
1,481,818. COMBINED SAW JOINTER AND GAUGE. GUSTAF ANDERSON, Atlin, British Columbia, Canada. Filed Feb. 2, 1922. Serial No. 533,635. 18 Calims. (Cl. 76—46.)

1. A saw fitting tool including a frame, a jointer support connected to the frame in parallel relation thereabove having heads at its opposite ends, runner plates having threaded stems shiftable through the said heads, an adjusting nut confined in each of the heads between vertically spaced portions thereof and engaging the said



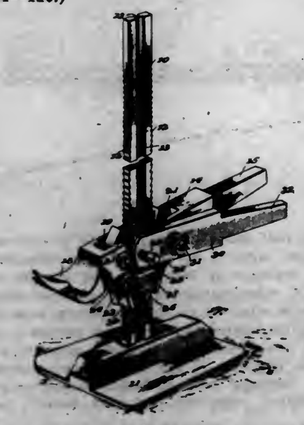
stems of the runner plates, and means to secure the stems in adjusted position, said means being carried by the heads and engaging the said adjusting nuts.

1,481,819. BATH DEVICE. KATE B. BAGGS, Atlanta, Ga. Filed Apr. 3, 1923. Serial No. 629,649. 3 Claims. (Cl. 4—160.)



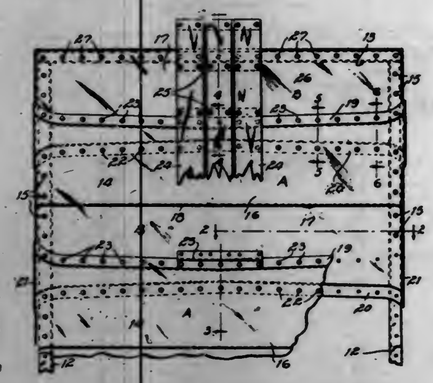
1. A vapor confining cover for a bath-tub comprising a flexible cover, and a frame including movably connected sections, one of the sections being secured to one portion of the flexible cover and the other section of the frame and the other portion of the cover being free for movement independently of each other, said other section cooperating with the rim of a tub to clamp said other portion of the cover therebetween, said cloth having a head receiving opening and a closure extending from the opening through the other portion of the cover.

1,481,820. PUMP. FEDERICO ZORRILLA BARRUNDIA, Oaxaca, Mexico. Filed May 13, 1922. Serial No. 560,784. 3 Claims. (Cl. 230—27.)



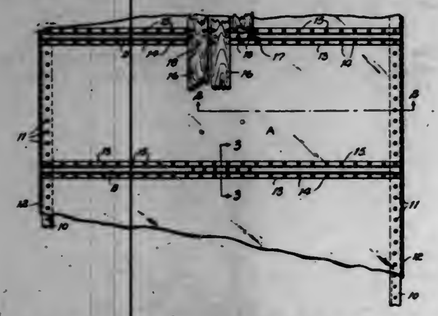
1. A device for inflating the tire of a motor vehicle embodying a base, means for elevating one of the rear driving wheels of the vehicle, a pump barrel connected to the outer end of the base for universal rocking movement, a plunger in the barrel, a plunger rod connected with the plunger and an eccentric crank connected with the free end of the plunger and provided with a base having divergent spoke embracing elements engageable with adjacent spokes, and means extending around the crank and the hub of the wheel for preventing outward radial movement of the crank.

1,481,821. INDEX-DEVICE. JOSEPH ALBERT BAKER, Salt Lake City, Utah, assignor to Rand Company, Inc., North Tonawanda, N. Y., a Corporation of New York. Filed June 9, 1922. Serial No. 567,048. 5 Claims. (Cl. 129—16.7.)



1. A card holder for card index systems having a sheath of transparent material secured thereto at one edge and folded over the body of the holder to form a pocket, and a card removably mounted on said holder with one margin in said pocket, said holder having a portion of the margin covered by said sheath cut away to provide a recess of less width than one wall of the pocket whereby to permit a portion of the margin of the card to be visible from the back of the holder.

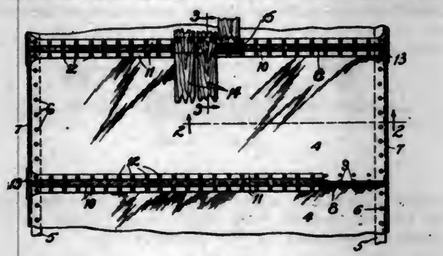
1,481,822. JACK. WILLIAM BENGEL, Newport, Ark. Filed Oct. 7, 1922. Serial No. 592,954. 3 Claims. (Cl. 254—110.)



1. A jack including an upright having a supporting base and opposite ratchet faces; a lever slidably guided on the upright and oscillatable with respect thereto, said lever being directly engageable with the work at one end and having an opposite handle end, spring controlled dogs pivotally supported by the lever and having depending portions engaging the ratchet faces of the upright, and a member carried by and shiftable with the lever and movable between and in engagement with the engaging portions of said dogs to force the latter out of engagement with the ratchet faces of the said upright.

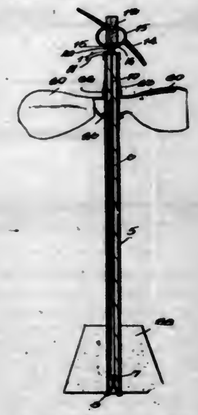
1,481,823. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1922. Serial No. 538,653. 20 Claims. (Cl. 108—54.)

1. A car roof whose longitudinal cross-section comprises alternating ribs and channels whose adjacent side marginal portions are shaped and rigidly secured together throughout their lengths to form hollow box-girders.



1,481,824. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 17, 1922. Serial No. 553,645. 7 Claims. (Cl. 108—5.4.)

1. A car roof comprising a plurality of roof sheets extending from eaves to eaves and rigidly connected along their side margins by lap-joints, and outside stiffening members of substantially inverted channel shaped section arranged adjacent to said lap-joints, said stiffening members being secured along one side margin to said lap-joints and being secured along their opposite side margins to the portions of the sheets located beyond said lap-joints, whereby said stiffening members and roof sheets together constitute exterior hollow box-girder joints.

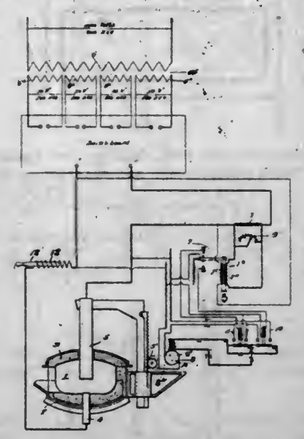


1,481,825. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Original application filed Apr. 17, 1922, Serial No. 553,645. Divided and this application filed Feb. 26, 1923. Serial No. 621,217. 5 Claims. (Cl. 108—54.)

1. A car roof comprising a plurality of roof sheets connected together along their adjacent margins by rigid joints, and cap strips of inverted channel shape covering said joints, said cap strips being positively secured to adjacent sheets on opposite sides of the joints and far

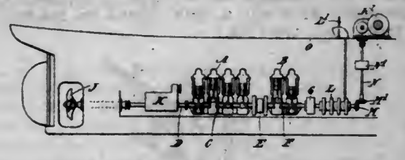
enough therefrom to form with such adjacent sheets hollow box-girders.

1,481,826. TOY HELICOPTER. LAWRENCE W. BROWN, Clinton, Mo. Filed Sept. 19, 1922. Serial No. 589,229. 9 Claims. (Cl. 244—19.)



9. In a device of the character described, a tubular body member, a rubber band within said body member and extending longitudinally thereof, a rotatable member secured to one end of said band, and adapted to rotate exteriorly of the tube, a clip secured to the other end of the band and disposed within the tubular member, and outwardly bent hook-shaped projections carried by the clip adapted to engage upon the associated end of the tubular member and secure the tube and band against rotation with respect to each other.

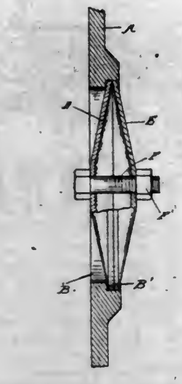
1,481,827. TOY HELICOPTER. LAWRENCE W. BROWN, Clinton, Mo. Filed Feb. 16, 1923. Serial No. 619,457. 12 Claims. (Cl. 170—159.)



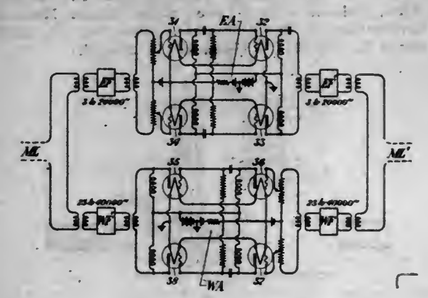
1. A propeller comprising an elongated flexible central portion, a blade extending from each side of the central portion and adjacent opposite ends thereof and the longitudinal axes of said blades being in alignment for the purpose described.

1,481,828. APPARATUS FOR TREATING METALS. REGINALD H. BULLEY, Syracuse, N. Y. Original application filed Apr. 24, 1916, Serial No. 93,070. Divided and this application filed Feb. 8, 1918, Serial No. 216,100. Renewed Mar. 21, 1922. Serial No. 545,570. 11 Claims. (Cl. 204—64.)

1. In apparatus for treating metal by the use of an electric arc, the combination of a pair of electrodes, one of which is movable relatively to the other one, and means for delivering to said electrodes when positioned for a relatively long arc a given kilowatt load, and then substantially the same kilowatt load with reduced voltage and increased amperage when the electrodes are positioned for a shorter arc.



1,481,829. POWER APPARATUS FOR USE ON VESSELS. ALAN ERNEST LEOFRIC CHORLTON, Westminster, London, and JOHN SALMOND DOIG, Grimsby, England, assignors of one-third to Sir William Beardmore, Westminster, London, England. Filed Oct. 19, 1920. Serial No. 418,063. 2 Claims. (Cl. 115—34.)

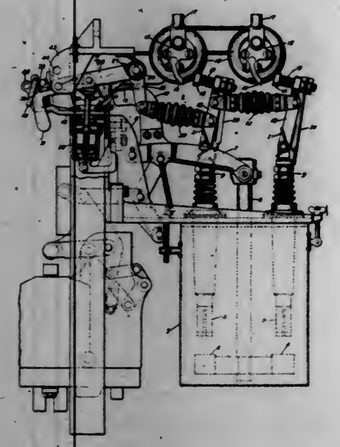


1. In power apparatus for use on vessels, in combination, an internal combustion engine comprising a plurality of cylinders arranged in groups, a crank shaft divided in accordance with the grouping of the cylinders, means for detachabling coupling the sections of the crank shaft together, work performing means at the opposite ends of the crank shaft, and mechanism associated with each of said work performing means whereby the amount of work performed thereby may be varied or rendered negligible so that the power of all the cylinders may be utilized by either work performing means or any fraction thereof utilized by either such means.

1,481,830. EXPANSIBLE CLOSURE. JAMES HARRY CLARK, Detroit, Mich. Filed June 18, 1921. Serial No. 478,772. 2 Claims. (Cl. 301—63.)

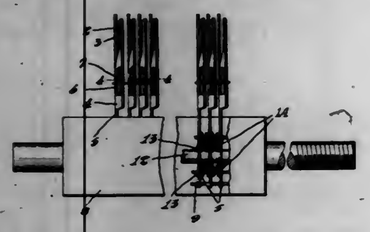
1. In a vehicle wheel, the combination with a plate having a circular opening, of a closure for said opening comprising only a pair of metallic disks of concavo-convex form having aligned apertures, the concave faces of said disks being opposed to each other with the marginal portions thereof abutting, a bolt extending through the aligned apertures in said disks, and a member cooperating with said bolt for moving the central portions of said disks toward each other to force the marginal portions thereof against the walls of the opening in said plate.

1,481,831. REPEATER ARRANGEMENT FOR MULTIPLEX SIGNALING. CHARLES S. DEMAREST, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 13, 1919. Serial No. 323,492. 15 Claims. (Cl. 179—15.)



1. In a signaling system, a transmission line, means for simultaneously transmitting over said line in one direction a plurality of signals by means of currents of different frequencies, means for simultaneously transmitting in the opposite direction over said line a plurality of signals by means of currents of a plurality of other frequencies, a common repeater in said line for amplifying all of the frequencies transmitted in one direction, and a second common repeater for amplifying all of the frequencies transmitted in the opposite direction.

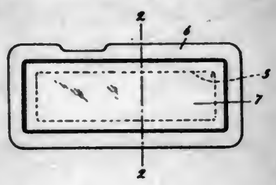
1,481,832. ELECTRIC SWITCH. WILLIAM POOLE DREYER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 3, 1920. Serial No. 378,418. 32 Claims. (Cl. 200—50.)



15. An electric switch comprising a current interrupting switch element and a disconnecting switch element, the latter element being biased to open position and

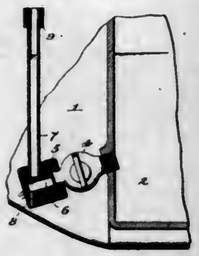
mechanism which will cause the closure of said disconnecting element and the subsequent closure of said current interrupting element and will cause the opening of said current interrupting element and permit the subsequent opening of the disconnecting element.

21. A circuit breaking mechanism of the character described comprising an oil switch mechanism, an air break mechanism associated with said oil switch mechanism and normally automatically controlled thereby, and means for simultaneously locking both of said switch mechanisms in open position.



1,481,833. LEASE COMB. CHARLES F. DUPEE, Lowell, Mass., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 20, 1922. Serial No. 595,791. 5 Claims. (Cl. 28—54.)

1. A sheet metal warp guide for lease combs, comprising a shank, two dents integral with said shank, said dents being laterally offset from each other to provide a space between them, one of said dents being located ahead of the other, and a finger integral with one of said dents but laterally offset therefrom, said finger extending substantialy across said space and being positioned closely adjacent to the opposite dent.



1,481,834. ART OF STENCIL MAKING. STERLING ELLIOTT, Cambridge, Mass.; Harriet Adell Elliott executrix of said Sterling Elliott, deceased. Filed Mar. 1, 1920. Serial No. 362,200. 2 Claims. (Cl. 41—38.5.)

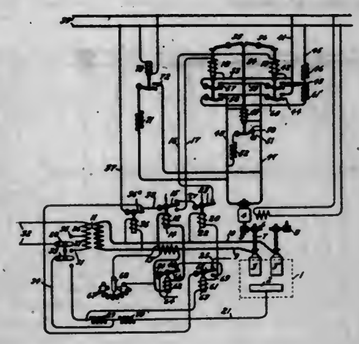
1. That step in the art of making stencils having a frame bounding an aperture therein and a gelatine-coated stencil sheet adhesively secured to the frame over the aperture and within the opposite faces of the frame, which consists in stretching the dry gelatine-coated stencil sheet by moistening it with water, cementing the borders of the moistened sheet to the stencil frame over

the aperture therein, and allowing the cement to set and the stencil sheet to dry and contract on the frame.

1,481,835. OIL GAUGE. STANLEY W. FINCH, Washington, D. C. Filed Mar. 17, 1923. Serial No. 625,887. 7 Claims. (C. 73—54.)

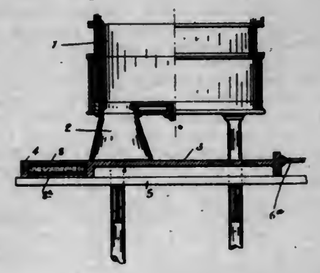
1. In combination with the oil reservoir or sump of an internal combustion engine; a pet-cock in communication with the lower portion thereof; and a gauge communicating with the cock and adapted, when the cock is opened, to indicate the level of the oil in the sump, said gauge being provided with a restricted normally open drain passage.

1,481,836. CURTAIN LIGHT FOR MOTOR VEHICLES. JACOB HAMMEL, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 9, 1919. Serial No. 288,682. 2 Claims. (Cl. 296—145.)



1. In a curtain light, metallic pane and fabric clamping members, a screw connecting said members, having an inwardly projecting shank, a threaded stud on said screw, and a finishing member adapted to cover a face of said clamping members, and having spring socket means to engage said stud.

1,481,837. ELECTRIC-FURNACE CONTROL APPARATUS. HAMMOND CHARLES HASTINGS and NEWTON LAYCOCK, Rugby, England, assignors to General Electric Company, a Corporation of New York. Filed Apr. 19, 1920. Serial No. 374,916. 5 Claims. (Cl. 204—64.)

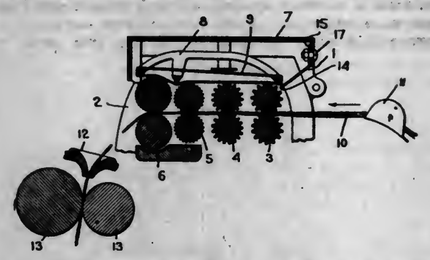


2. A regulator for a plurality of co-operating arcing electrodes, comprising means for regulating the arcing

relation of one of the electrodes in response to the current in the arc circuit and another of the electrodes in

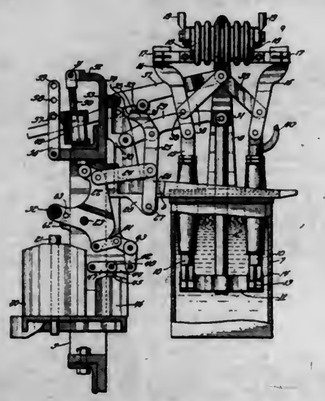
response to the voltage drop across the arc, and means for preventing the current controlled electrode from being lowered when the arc voltage is abnormally high.

1,481,838. APPARATUS FOR EXPRESSING OIL FROM COTTON AND SIMILAR SEED MEATS. NELSON B. HENRY, Atlanta, Ga., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Sept. 9, 1919. Serial No. 322,654. 2 Claims. (Cl. 100—50.)



1. In an apparatus of the character described, an open-ended die, formed in a die table; a second table on which the die table slides in a straight path; a cage, operatively arranged in the path of the die; a cake-forming plunger above the cage and over the path of the die, a yielding resistance plunger moving through the cage and beneath the cake-forming plunger to react against the cake forming plunger in compacting the cake.

1,481,839. MAN'S NECKWEAR. JAMES A. HEWES, Melrose, Mass., assignor to Hewes & Potter, Boston, Mass., a Copartnership composed of James A. Hewes and Frank W. Potter. Filed May 1, 1922. Serial No. 557,719. 2 Claims. (Cl. 2—82.)

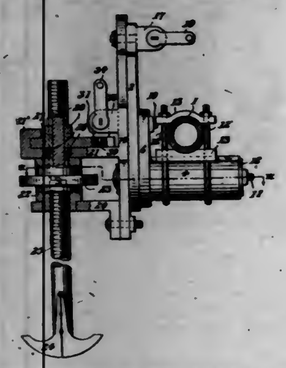


1. A bow necktie including an interior supporting frame consisting of a narrow strip of pliable sheet metal, readily bendable to impart a variety of shapes to the tie at the will of the wearer.

1,481,840. GUARD FOR DRAWING FRAMES. WILLIAM HINCHLIFFE, Huntsville, Ala. Filed June 20, 1923. Serial No. 646,668. 3 Claims. (Cl. 19—189.)

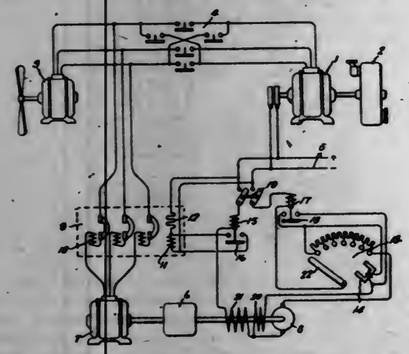
1. A guard for a drawing frame having drawing rolls for operating on a cotton sliver and a cleaner for the rolls, the said guard being joined to the frame and extending toward the rolls with its edge closely adjacent the leading in roll beneath the cleaner to close the opening between the roll and the frame thereby to prevent the sliver from coming in contact with the cleaner.

1,481,841. SWITCH. BERTRAND G. JAMIESON, Hollywood, Ill., assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed June 12, 1920. Serial No. 388,567. 20 Claims. (Cl. 200—50.)



1. A circuit breaking apparatus of the character described comprising an oil switch mechanism, a visible air break switch mechanism automatically opened upon opening of said oil switch mechanism, said switch mechanisms being serially included in the same circuit, means for operating said oil switch mechanism, and means for operating said air break switch mechanism comprising a pair of contact members mounted for movement in opposite directions.

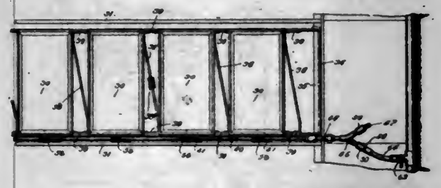
1,481,842. CULTIVATOR. JOE JEMELKA, Moulton, Tex. Filed Dec. 22, 1921. Serial No. 524,074. 3 Claims. (Cl. 97—197.)



1. Adjustable mechanism for a cultivator plow shaft including a bracket plate fixed to a cultivator frame bar, a perpendicular plate pivotally associated with the bracket plate, manually operable means for pivotally moving said plate, said means comprising laterally extending spaced bearing members carried by the upper end of said bracket plate, the said bracket plate having a transverse slot positioned between said bearing members, a screw having an operating handle journaled in said bearing members, and a screw block pivotally carried by

said perpendicular plate and extending through the transverse slot for engaging said screw to pivotally move said perpendicular plate, spaced lateral arms carried by said plate, a cultivator standard extending through said arms, an adjusting nut on said standard positioned between said arms for vertically shifting the same, co-

operating means carried by said standard and plate to prevent rotation of the standard during vertical adjustment, said cooperating means including a disk nut interlocked with said standard, and a block and screw for shifting the disk nut for rotating the standard to change the position of the plow point.

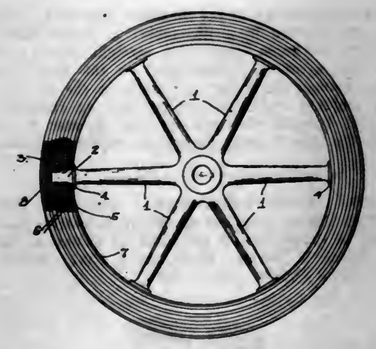


1,481,843. ELECTRIC-POWER SYSTEM. DENNIS E. JEWITT, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed June 1, 1921. Serial No. 474,121. 9 Claims. (Cl. 172—8.)

9. In an electric power system, a machine adapted to run at variable speeds, a plurality of motors each adapted to drive said machine, independent sources of supply for said motors, one of which is variable in character, and means responsive to the load on one of said motors for controlling the operation of another of the motors.

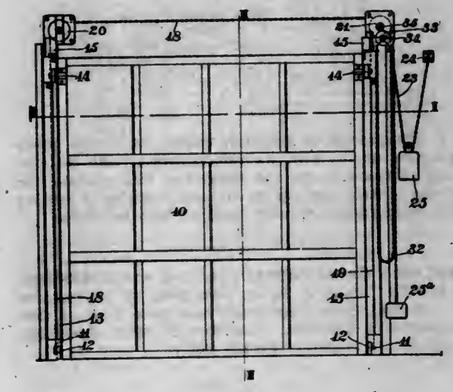
1,481,844. ART OF MANUFACTURING ICE. OTTO LUHR, Chicago, Ill., assignor to Luhr & Friedl, Chicago, Ill., a Partnership Firm composed of said Otto Luhr and Herman Friedl. Filed July 11, 1921. Serial No. 483,938. 18 Claims. (Cl. 62—159.)

8. A can in which ice is to be formed, provided with an air-pipe connected at its upper end with the upper end of the can and at its lower end connected with the lower end of the can and opening into the latter, and straps on the can through which said pipe guidingly extends, said pipe being formed with a relatively flexible section disposed in deflected condition in the contracted condition of the can and moving toward straight condition in the expanding of the can.



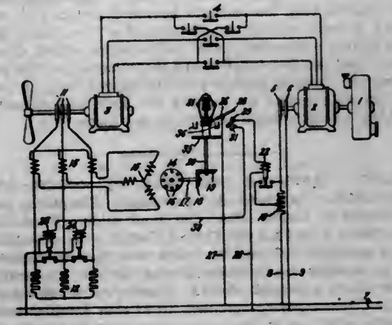
14. In ice-making apparatus, the combination of a refrigerating tank, a series of batteries of cans, the cans of each battery being operatively connected together and removable from, and replaceable in, said tank, as a unit, a system of air-pipes carried by each of said batteries and through which air is supplied to the interiors of the cans thereof, said systems of air-pipes being movable with the respective batteries in the transporting of said batteries, each of said systems of air-pipes being provided with a plurality of attaching portions for communication with other pipes, means releasably connecting one of said attaching portions of each of said systems to a source of air under pressure, and a flexible hose leading from a source of air under pressure and adapted for successive attachment to the others of said portions of said systems of air pipes, in succession.

1,481,845. TREATMENT OF NONSATURATED ORGANIC ACIDS. JACOB LUND and HERMANN HAUSAMANN, Fredrikstad, Norway, assignors to De Nordiske Fabriker, Christiania, Norway. Filed Mar. 19, 1920. Serial No. 367,249. 15 Claims. (Cl. 87—12.)



1. The process herein described which consists in purifying unsaturated fatty acids, converting the purified fatty acids into alkali salts, and heating said salts to a temperature of from about 200° to 215° C.

1,481,846. STEERING WHEEL AND METHOD OF MAKING SAME. WILLIAM B. MCALLISTER, Cleveland, Ohio. Filed Feb. 11, 1920. Serial No. 357,936. 3 Claims. (Cl. 74—33.)

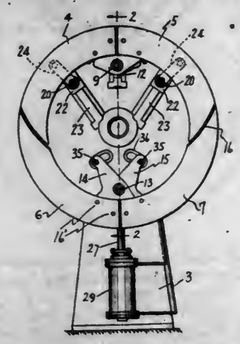


1. A steering wheel comprising a central spider having radial arms, a laterally projecting flange formed on each of said arms and spaced from the ends thereof, and a laminated wooden rim mounted upon said spider, each of the inner laminations of said rim being provided with a series of spaced aligned openings fitting over the ends of said arms outwardly of said flanges.

1,481,847. DOOR AND THE LIKE. EDWARD H. MCCLOUD, Columbus, Ohio, assignor, by mesne assignments, to The Kinnear Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 8, 1918. Serial No. 261,602. 2 Claims. (Cl. 20—19.)

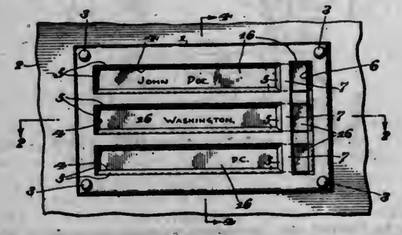
1. In combination with a door, means for raising the same and deflecting it at its upper end when raised, means upon which a portion of the weight of the door is supported when so deflected, counterbalancing means for said door including a main weight, and a supplemental weight of smaller gravity than the main weight, flexible means through which the supplemental weight acts on the door, flexible means connected with the door and a fixed point and provided with a hanging loop supporting therein said main weight and a support for the supplemental weight when the door is in deflected position.

1,481,848. ELECTRIC POWER SYSTEM. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 10, 1923. Serial No. 624,246. 6 Claims. (Cl. 172—8.)



1. An electric power system wherein an alternating current generator is arranged to supply power to a load motor adapted to operate with a plurality of torque characteristics, characterized by the fact that a centrifugally operated device is provided for controlling the torque characteristics of said motor in response to one predetermined value of motor slip frequency and for controlling the excitation of said generator in response to a different value of motor slip frequency.

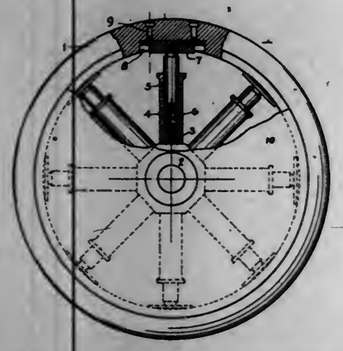
1,481,849. METHOD FOR PRESERVING ALREADY PARTLY POLYMERIZED FORMALDEHYDE. LUDVIG AUGUST MEYER, Copenhagen, Denmark, assignor to the Firm of International Chemical Company, Copenhagen, Denmark. Filed Dec. 31, 1921. Serial No. 526,317. 3 Claims. (Cl. 23—29.)



3. The method of preserving formaldehyde, which consists in adding to it a solution which will render soluble in water any paraformaldehyde already formed and will prevent the further formation thereof; substantially as described.

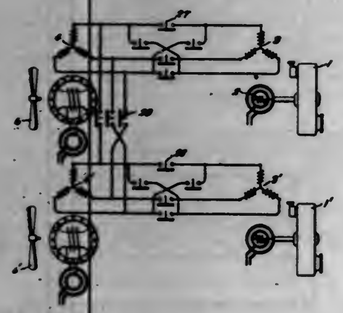
1,481,850. CONTRACTIBLE TIRE-BUILDING FORMER. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Sept. 21, 1922. Serial No. 589,669. 10 Claims. (Cl. 154—9.)

5. A tire building support of the character described comprising in combination a complete tire core of four approximately equal sections, an arm pinned to each section and pivotally mounted on the support, the arms for one pair of sections arranged diametrically opposite the arms of the other pair of sections, the abutting ends of each pair of sections remote from said arms lying in a circumference struck from one of the pivots on the support, and means on the support to swing one pair of sections together from said last named pivot, to swing the other pair when the ends of the first pair have cleared, and to move the first pair of sections towards the center of the core plane to cause the ends of the core sections to overlap to a greater degree.



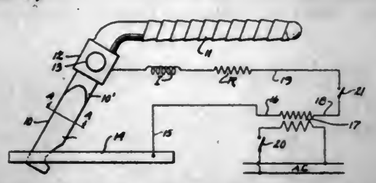
1,481,851. LABEL HOLDER. BENJAMIN LA PISH, Norwood, Pa., assignor to The Belber Trunk & Bag Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 26, 1922. Serial No. 608,888. 3 Claims. (Cl. 40—17.)

1. A label holder consisting of a plate having one or more slots therein adapted for the reception of a label or labels and having means for supporting a label or labels in rear of said slot or slots and having a slot extending substantially at right angles to said first



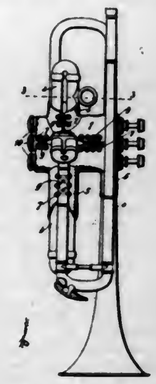
named slot or slots and spaced therefrom, and said plate also having a cut-out portion upon its under side adjacent the upper edge of said second named slot forming an overhanging lip under which an end or ends of said label or labels projects or project, substantially as described.

1,481,852. RESILIENT WHEEL FOR VEHICLES. VICENTE LAZARO and BERNARDINO LAZARO, Buenos Aires, Argentina. Filed Sept. 19, 1922. Serial No. 589,084. 2 Claims. (Cl. 152—48.)



2. A resilient wheel, comprising, in combination, a hub, a rim, a plurality of spokes connecting said hub and rim, each of said spokes comprising a pair of telescoping members, one secured rigidly to the hub, the other having secured at its outer end a plate extending at right angles thereto, and a plurality of plates secured in said rim, one for each of said spokes, said rim plates each having a guideway for the reception of the spoke plates, the formation of said guideway being such as to prevent radial movement of the spokes relatively to the rim, the length of the guideway being such as to permit the spoke plates to move tangentially of said rim.

1,481,853. ELECTRIC SHIP PROPULSION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Feb. 16, 1920, Serial No. 358,973. Divided and this application filed Sept. 12 1921. Serial No. 500,025. 6 Claims. (Cl. 172—8.)

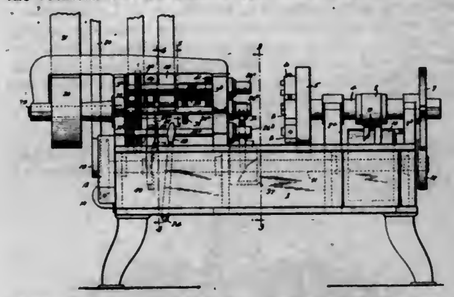


1. An electric ship propulsion system comprising a plurality of propellers and a synchronous motor arranged to drive each propeller, characterized by the fact that connections are provided whereby the motors may be connected together with reversed phase rotation and excited to operate as generators to break the propellers from the water and bring them to standstill.

1,481,854. ELECTRICAL CUTTING OF METALS. PERCY A. E. ARMSTRONG, Loudonville, N. Y. Filed July 5, 1921. Serial No. 482,521. 17 Claims. (Cl. 219—8.)

1. The process of electrical cutting of metals which comprises cutting with low voltage current with the electrode in contact with the metal and slag whereby the cutting is done partially by arc and partially by melting by current passage through localized high resistance.

1,481,855. HAND PROTECTOR FOR WIND INSTRUMENTS. HANS J. BACH, New York, N. Y., assignor to Vincent Bach Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1922. Serial No. 609,403. 4 Claims. (Cl. 84—387.)

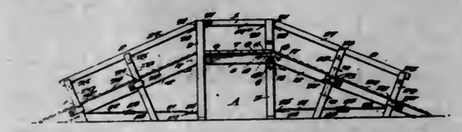


3. A flexible hand grip and cover for cornets or similarly shaped wind instruments having a piston box, comprising a body portion which encircles the piston box, three sleeves connected to said body portion which sleeves encircle the two end tubes of the instrument and the part of the bell portion adjacent to the piston box, in combination with means for holding the body and sleeves in operative relation, substantially as set forth.

1,481,856. MACHINE FOR MAKING COCKS AND FAUCETS. CHARLES M. CAMPBELL, Cleveland, and WILLIAM H. SMITH, East Cleveland, Ohio. Filed Nov. 20, 1920. Serial No. 425,524. 2 Claims. (Cl. 10—132.)

1. A machine for making cocks and faucets comprising, in combination, a plate having thereon a plurality of circularly arranged chucks, a plurality of circularly arranged, tool-carrying spindles, all of said spindles being rotatable and one of the same being also longitudinally slidable, a thread cutting tool carried by said last mentioned spindle, means for rotating said plate in an intermittent manner, means for advancing it longitudinally toward said spindles in the intervals of its rotation so as to bring the articles held in said chucks into engagement with those tools which have rotational movement only, said last means being arranged to provide a period of dwell when said plate has reached its point of maximum advance, means operative during such period of dwell to rotate said slidable spindle and simultaneously

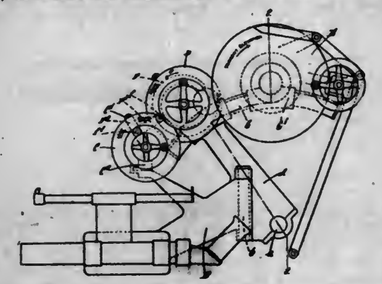
to advance it toward said plate at a rate equal to the pitch of the thread cut by its tool, means for stopping the rotation and advance of said slidable spindle at the



same instant, and means for reversing the rotation of said slidable spindle and screwing said tool out of the article during such period of dwell, and means for thereafter retracting said plate.

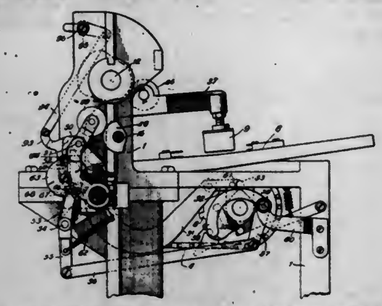
1,481,857. CUE. ARTHUR F. CARLSON, Minneapolis, Minn., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 29, 1920. Serial No. 369,771. 1 Claim. (Cl. 46—9.)

A billiard cue having a socket in its butt end, a hollow bushing tightly forced into said socket and having a plurality of burrs on its exterior surface to engage the wall of said socket for permanently securing the bushing therein, and a resilient bumper having a shank tightly fitted in said bushing and having a head formed integrally with the shank and engaging the end of the cue butt.



1,481,858. GRAVEL LOADER. WILLIAM H. CURL, Fair Play, Mo. Filed Oct. 7, 1922. Serial No. 593,010. 6 Claims. (Cl. 214—1.)

1. In an apparatus of the class described, the combination of a central section provided with end beams, a pair of approach sections assembled with said central section, each approach section including a plurality of floor beams, each floor beam having its upper end cut at an angle and provided with a notch contiguous to the upper end, said notch provided with an upper edge resting snugly upon a beam of the central section, a rod extending across all of said floor beams, a plurality of hooks on said rod and having their outer ends fastened to the central section, and a floor upon the floor beams.

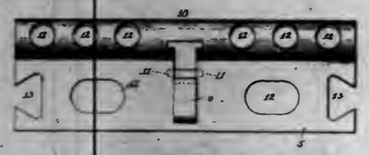


1,481,859. ORDNANCE-SIGHTING APPARATUS. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed May 15, 1922. Serial No. 561,041. 8 Claims. (Cl. 33—48.)

1. In an ordnance sighting apparatus comprising sight, a sight support and sight moving means the improvement which comprises in combination a lateral deflection gear for displacing the sight to compensate for the speed of the target in a direction at right angles to the line of sight, of means for imparting lateral adjustment to the

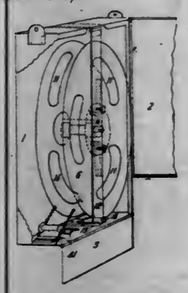
sight through the intermediary of said lateral deflection gear to effect the correct compensation for drift deviation in accordance with the angle of tangent elevation.

1,481,860. PRINTING MACHINE. JOSEPH S. DUNCAN, Chicago, Ill. Filed Aug. 29, 1921. Serial No. 496,197. 51 Claims. (Cl. 101—57.)



1. In a printing machine, a plurality of printing devices, means for feeding said printing devices, a platen, means to select certain printing devices to be printed and others to be skipped, means to prevent a portion of a printing device from printing, and selector means to control said last named means.

1,481,861. ORTHODONTIC APPLIANCE. RALPH W. EATON, Rochester, N. Y. Filed Apr. 5, 1922. Serial No. 549,759. 5 Claims. (Cl. 32—19.)

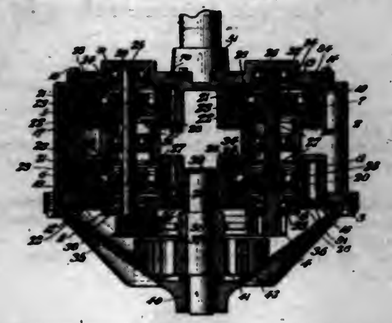


1. The combination with a regulating wire and an anchoring member, of an interlocking connection between the anchoring member and the regulating member embodying a transverse abutment carried by the regulating wire in spaced relation to one end of the latter, an abutment carried by the anchoring member, and engaging with said transverse abutment on the regulating wire, and means providing an opening through which the portion of the regulating wire beyond said abutment may be passed, the portion of the regulating wire on the inner side of the abutment being free of the anchoring member so that wire may be deflected laterally to disengage the two abutments.

1,481,862. BRAKE SHOE. JOHN H. EISENBEISS, Suffern, N. Y., assignor to The American Brake Shoe & Foundry Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 30, 1923. Serial No. 615,804. 5 Claims. (Cl. 188—258.)

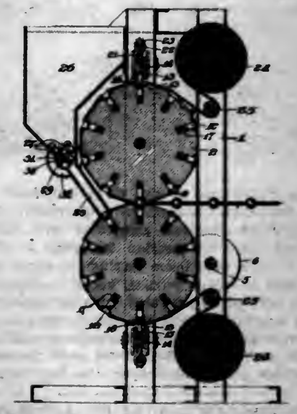
5. A brake shoe comprising a body and a reinforce back connected to the body, said back being formed of a single sheet of metal and having a transverse section cut and bent therefrom to form the attaching lug of the shoe, said section being integrally connected with the back at one end and having lateral projections at its other end engaged with the underside of the back, the body metal being extended up at the sides of the lug to reinforce and strengthen the same.

1,481,863. CINEMATOGRAPH SPOOL AND SPOOL BOX. LANCELOT RUSSELL FREW, East Brisbane, Queensland, Australia. Filed July 27, 1921. Serial No. 487,953. 4 Claims. (Cl. 242—71.)



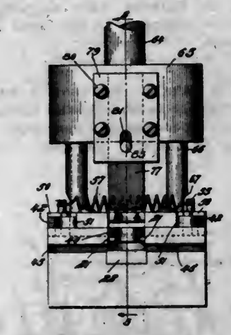
1. Improvements in cinematograph apparatus, comprising, in combination, a spool box provided with hinged flap doors, a vertical metal bar hinged to the top of said spool box, a spool, a revolving sub on which said spool is disposed, and means for supporting said spool at both ends thereof, one end of the spindle for holding the spool being supported by one side of the spool box and the other end by the vertical metal bar hinged to the top of the spool box, permitting the door of same to swing freely.

1,481,864. ADVERTISING MEANS. EDWIN I. GOLDING, New York, N. Y. Filed Jan. 27, 1921. Serial No. 440,469. 2 Claims. (Cl. 206—50.)



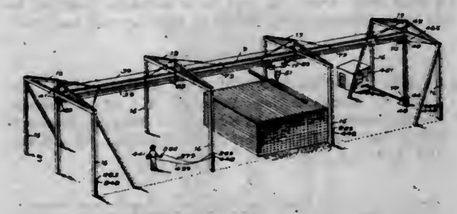
1. In combination with an article of merchandise of a textile character having a selvage and intended to be subdivided into smaller portions for purposes of sale, and having indicia irremovably associated with said selvage and repeated at intervals, said indicia being of a character to indicate the one to whom the goods are to be delivered for purposes of sale, and when so delivered to thereafter indicate to purchasers of all or of parts thereof, the one from whom the merchandise was purchased, of a receptacle or retainer for said merchandise having a window or opening arranged to expose portion of said selvage to view the opening and the indicia being so proportioned and positioned relatively to each other that a complete indicia will at all times be in registry with the opening.

1,481,865. ROTARY ENGINE. CHARLES H. HASSELER, Philadelphia, Pa. Filed June 25, 1919. Serial No. 306,533. 7 Claims. (Cl. 121—34.)



1. A rotary engine adapted to be manually supported, comprising a piston casing having on opposite sides of its vertical axis sets of piston chambers, each set having superimposed piston chambers, a rotary piston in each piston chamber, shafts common to the pistons of a set and disposed in parallelism with said vertical axis, a driven member intergeared with said shafts, and fluid actuated means automatically controlled by said pistons to progressively admit motive fluid into said piston chambers to drive their respective pistons.

1,481,866. METHOD OF AND APPARATUS FOR COVERING CORES. STUART H. HEIST, Penllyn, Pa., assignor to Penn Rubber Products Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 10, 1921. Serial No. 514,240. 10 Claims. (Cl. 18—19.)

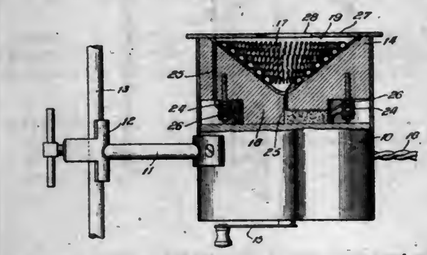


1. The method of covering cores, which consists in seating plastic stock in complementary mold cavities, of rotatable molds to form cover sections by means of a preponderance of pressure mechanically applied to the stock, placing a core in the cover section of one mold cavity and rotating the molds to cause the cover section to be secured around the core.

1,481,867. STAPLING MACHINE. HARRY R. HOLBROOK, Attleboro, Mass. Filed Feb. 8, 1922. Serial No. 534,867. 10 Claims. (Cl. 1—2.)

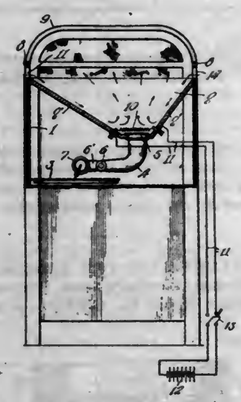
1. In a machine of the character described, a plunger, a punch on the plunger, a depending bending die carried by the plunger, a receiving die, a cutter plate in the receiving die engageable with the punch, and a formed plate slidably mounted in the receiving die in the path of the punch.

1,481,868. CONVEYER APPARATUS. FRANK P. HUCKINS, Newton, Mass. Filed Apr. 30, 1923. Serial No. 635,569. 34 Claims. (Cl. 212—98.)



1. Conveying apparatus, comprising, in combination, an overhead support, a carrier movable along the support, a stationary electric motor mounted on the ground, a drum driven by the motor, a cable for transmitting movement from the drum to the carrier, guides for the cable, an electric circuit for said motor, and a flexible cord including a portion of said circuit and having a portable handle provided with switch means adapted to be carried and actuated by the operator on the ground, said switch means having provision for controlling the starting, stopping and direction of rotation of the motor.

15. Apparatus of the character described, comprising, in combination, a support, a hoisting device on the support, an electric motor, a drum driven by the motor, a cable extending from the drum to the hoisting device, an electric circuit for the motor, limiting switches in said circuit, and means for automatically opening one or the other of said switches when the hoisting device has been moved a predetermined distance, thereby to interrupt the circuit and arrest the motor.

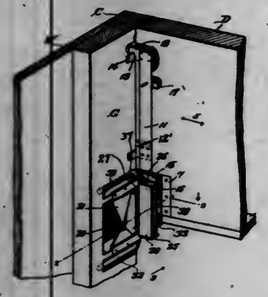


19. Apparatus of the character described, comprising, in combination, a support, a carrier movable along the support, means including a stationary electric motor, a drum and a cable for causing the carrier to travel along the support, a brake for the motor and drum, spring means for applying the brake, and means for releasing the brake including a solenoid having a coil connected into the motor circuit, that the solenoid may be energized and release the brake when the circuit is completed for starting the motor.

1,481,869. ELECTRIC HEATER. PAUL E. KLOPSTEG, Homewood, and CARL S. HORNBERGER and WILLARD H. FARR, Chicago, Ill., assignors to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 19, 1921. Serial No. 516,300. 18 Claims. (Cl. 219—19.)

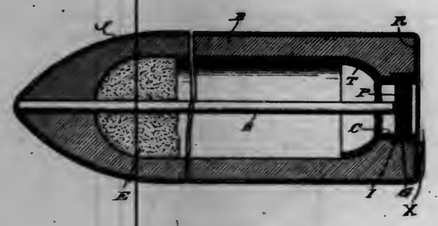
1. In an electric heater, a heating unit comprising a base of insulating material having an upwardly diverging chamber therein, a heating coil in said chamber, and cement securing the coil to the wall of said chamber and covering a small portion only of the coil.

1,481,870. PHONOGRAPH. WALTER F. LUHNOW, Oak Park, Ill. Filed Jan. 5, 1920. Serial No. 349,443. 1 Claim. (Cl. 274—1.)



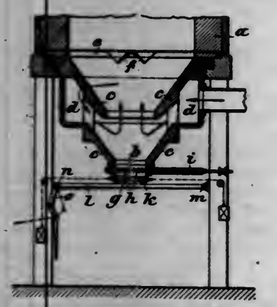
In combination, a sound amplifying chamber having upwardly flaring walls and provided with two adjacently disposed inlet apertures at substantially its lowermost part, sound producing means communicating with one of said apertures and a heat generator disposed across the face of the other in non-obstructive relation adapted to produce an upward current of air from the latter aperture, the upper part of said chamber being adapted to permit discharge of the ascending air.

1,481,871. ELEVATOR SAFETY DEVICE. CHARLES H. MILLER, Lineville, Iowa. Filed Apr. 8, 1922. Serial No. 550,601. 11 Claims. (Cl. 187—61.)



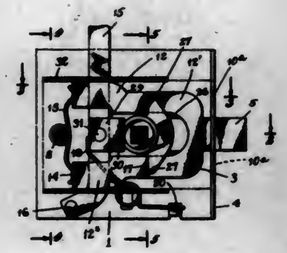
9. In an elevator safety device, the combination with a door at each landing, a latch thereon for engaging a keeper, an upright latch bar having a hook, and a wear plate on the door; of a cam plate hinged in the well

wall at each landing and having a hook for engaging that on the latch bar, a U-shaped car lock also hinged



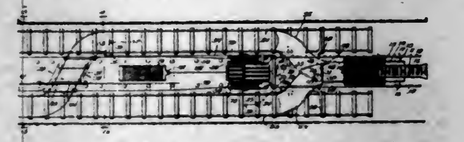
in the well wall at each landing and having a lever for engagement by said wear plate, and means for swinging said cam and car lock normally into the path of the car.

1,481,872. PROJECTILE. CHARLES H. MILLER, Lineville, Iowa. Filed May 24, 1923. Serial No. 641,078. 11 Claims. (Cl. 102—12.)



1. A projectile comprising a cupped bullet, an anvil fixed along its axis, an explosive charge surrounding the anvil, a wad closing the open rear end of the bullet, and a primer carried by the wad in juxtaposition to the anvil.

1,481,873. CHAMBER FOR DRY COOLING OF COKE. ARNOLD MOSTINI, Oberwinterthur, Switzerland. Filed Dec. 28, 1921. Serial No. 525,519. 3 Claims. (Cl. 202—11.)

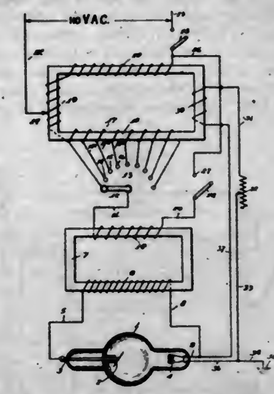


3. In a chamber for dry cooling of coke by means of a current of inert gases passing in a cycle over a heat exchanging device the combination of a bottom part consisting of two hoppers arranged in the same axis, the lower hopper being provided with a discharging device, with a space provided between the hoppers, from which the cooling gas is forced through the coke, a checking member in said chamber preventing the central portion of the coke from dropping faster than the remaining part of the coke in the chamber when partially discharged, whereby premature discharge of the upper layers of hot coke is prevented.

1,481,874. DOOR LATCH. RAYMOND G. MOORE, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 7, 1922. Serial No. 550,276. 4 Claims. (Cl. 292—169.)

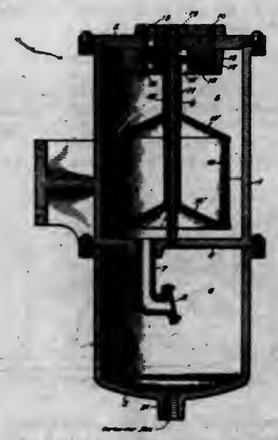
1. In a door latch, the combination of a plate, a spring-actuated bolt slidably mounted thereon, a pivoted lever adapted to retract the bolt, a handle stem adapted independentendently to retract the bolt, and means operatively engaged by said stem and operated thereby to retract the bolt, said means engaging said bolt and engaging said lever when the bolt is in actuated position, to hold said stem and lever firmly in their normal positions.

1,481,875. MINING SYSTEM AND APPARATUS. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Dec. 23, 1919. Serial No. 346,902. 52 Claims. (Cl. 262—1.)



1. In a system of mining, the combination with a mine track, of roof-propping mechanism comprising a series of individual roof props arranged in lateral alinement transversely of the rear end of said track, and mining and loading mechanism for mining material from a pillar between said mine track and a worked-out space in the mine and delivering the mined material to mine cars on such track.

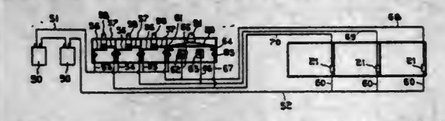
1,481,876. AUTOTRANSFORMER WITH HEATING COILS. ARTHUR MUTSCHELLER and CHARLES FAYER, New York, N. Y., assignors to Wappler Electric Company, Inc., a Corporation of New York. Filed Oct. 15, 1920. Serial No. 417,233. 4 Claims. (Cl. 250—39.)



1. The combination of a vacuum tube provided with a glower cathode to be energized by electric currents, a high tension transformer connected with said vacuum tube for the purpose of sending the main discharge therethrough, a second transformer connected with said high tension transformer for controlling said high tension transformer and for energizing the same, said second

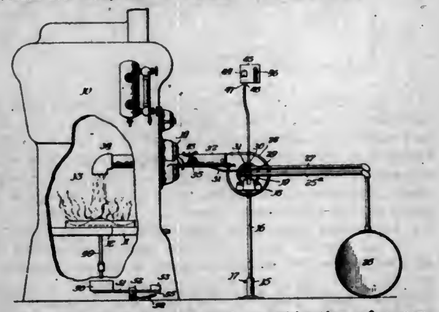
transformer being so proportioned that the core thereof is magnetized to saturation whenever said second trans-

former is magnetized to any degree, a heating coil carried by said second transformer and energized thereby, and connections from said heating coil to said glower cathode.



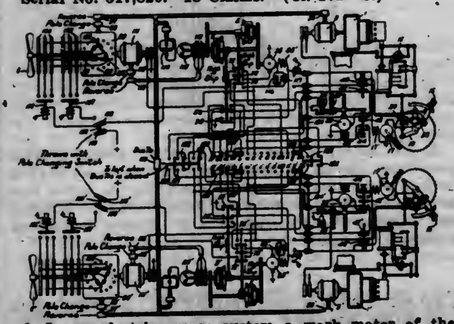
1,481,877. VACUUM FEED SYSTEM. GUSTAVE C. NELSON, Moline, Ill., assignor to The Borg & Beck Company, Moline, Ill., a Corporation of Illinois. Filed July 19, 1920. Serial No. 397,394. 12 Claims. (Cl. 158—36.)

6. In a vacuum feed system, a tank having a liquid fuel receiving chamber and a feed chamber, a valved communication between said chambers, a vacuum producing connection to said receiving chamber, a float operated cut-off disk adapted to close said connection, and vacuum means operating upon said disk to temporarily restrain the movement thereof against the buoyant action of the liquid in the receiving chamber whereby a quick "kick-over" of the disk is provided when said means is released.



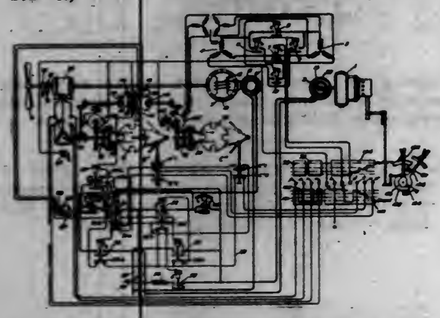
1,481,878. LOCKER AND MEANS FOR LOCKING AND RELEASING THE SAME. EDWARD B. PALMER, Montreal, Quebec, Canada. Filed May 13, 1922. Serial No. 560,685. 3 Claims. (Cl. 70—50.)

1. The combination with a plurality of groups of metal receptacles of the class described each receptacle having a door opening and a door for closing said opening; of independent mechanisms for locking the doors of the groups in closed position and an electrical means for



releasing the locking mechanism of one group independently of the other groups; means for simultaneously releasing the locking mechanisms of all the groups.

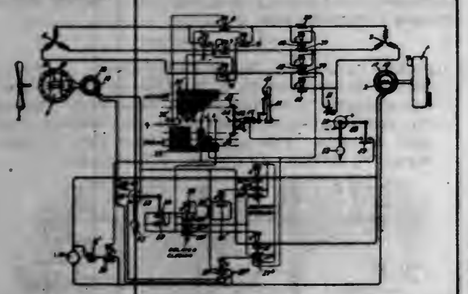
1,481,879. OIL-BURNING APPARATUS. JOHN E. PFEIFER, Chicago, Ill., assignor, by mesne assignments, to M. W. Woolsey, Chicago, Ill. Filed Aug. 26, 1921. Serial No. 495,672. 7 Claims. (Cl. 158—28.)



1. In a liquid fuel burner, the combination of a centrally arranged rotary motor having a driving shaft extending from each side thereof, an air pump directly connected to one end of said shaft, a rotary fuel pump directly connected to the other end of said shaft, a combustion pipe connected to said air pump and extending into the combustion chamber of the furnace, a fuel supply pipe leading to said combustion pipe and discharging its contents into said pipe, a fuel discharge nozzle in said combustion pipe intermediate the ends thereof whereby fuel is discharged into air forced through the said combustion pipe by the blower, and a fuel ignition means in said combustion pipe.

1,481,880. ELECTRIC SHIP PROPULSION. DAVID C. PRINCE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Refiled for abandoned application Serial No. 499,507, filed Sept. 9, 1921. This application filed Feb. 8, 1923. Serial No. 617,820. 13 Claims. (Cl. 172—8.)

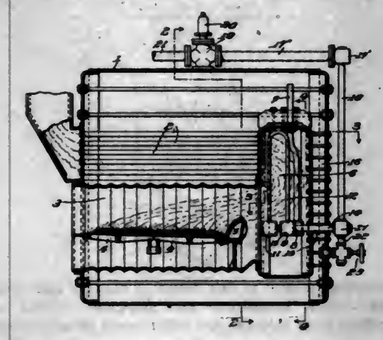
1. In an electric power system a work motor of the induction type, an alternating current generator adapted to supply current to said motor and differential mechanism arranged to control the slip of said motor comprising means connected to run at a speed proportional to slip and means arranged to run at a fixed speed.



1,481,881. ELECTRIC SHIP PROPULSION. DAVID C. PRINCE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1920. Serial No. 365,762. 15 Claims. (Cl. 172—8.)

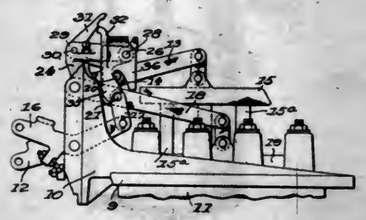
1. An electric ship propulsion system comprising an alternating current motor arranged to drive a propeller and adapted to operate with a plurality of torque characteristics, a generator arranged to supply current to operate said motor, a device adapted to operate at a constant speed and means dependent upon the interrelation of motor speed, synchronous speed and said constant speed for controlling the torque characteristic of the motor.

12. An electric ship propulsion system comprising an alternating current motor arranged to drive a propeller, a generator for supplying current to operate said motor, adjustable speed means for driving said generator and differentially operating mechanism arranged to produce a regulating effect varying with changes in motor load cooperating in the system to maintain the motor within a stable range of operation.



1,481,882. ELECTRIC SHIP PROPULSION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 16, 1920. Serial No. 358,973. 14 Claims. (Cl. 172—8.)

1. The method of operating an electric system for ship propulsion wherein a propeller is driven by an alternating current motor which comprises operating the motor as a generator to supply current to the generator for breaking the propeller from the water and bringing it approximately to standstill.

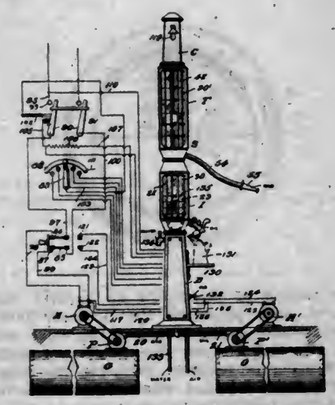


1,481,883. STEAM-SUPERHEATING SYSTEM FOR MARINE BOILERS. JOHN P. BADENHAUSEN, Philadelphia, Pa. Filed Mar. 25, 1919. Serial No. 285,028. 3 Claims. (Cl. 122—469.)

1. In a steam generating system comprising a boiler having fire tubes, a fire box, a bridge, a combustion chamber, a water leg, and a crown sheet at the upper end of said combustion chamber, the combination of a header located in said combustion chamber parallel and close to, and just below the top of said bridge, a second header provided with two chambers and arranged close and parallel to said first header, a conduit leading from the steam space in said boiler directly through said crown sheet to one of said compartments of said second header, a series of tubes extending from said compartment upwardly in said combustion chamber to a point close to

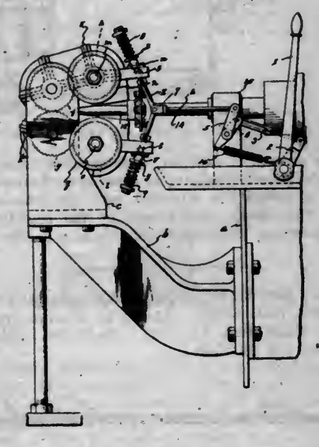
said crown sheet and thence downwardly past the open ends of said fire tubes to said first header, a second series of tubes leading from said first header upwardly past the open ends of said fire tubes to a point near said crown sheet and thence downwardly to the second compartment of said second header and a conduit leading from said second compartment rearwardly through the said water leg to the rear of the boiler and thence to the point of consumption.

1,481,884. CIRCUIT-INTERRUPTER INTERLOCK. ANDREW H. BAKKEN, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 11, 1921. Serial No. 468,556. 12 Claims. (Cl. 78—83.)



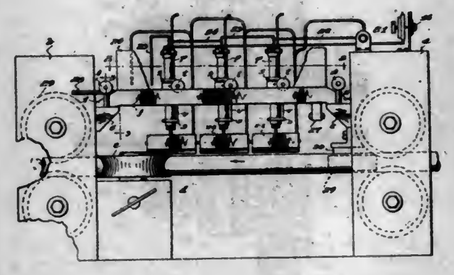
10. The combination with two reciprocably movable switch members, of means for preventing the advancement of one member except at substantially the instant that the other member has reached a retracting position.

1,481,885. LIQUID-DISPENSING APPARATUS. MERRILL A. BEACH, Penn Yan, N. Y. Filed July 7, 1920. Serial No. 394,408. 15 Claims. (Cl. 221—100.)



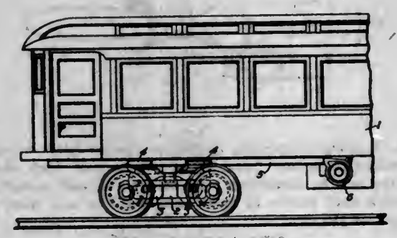
1. A liquid dispensing apparatus comprising a measuring receptacle, a reservoir, a pump for filling said measuring receptacle from said reservoir, means mounted within said measuring receptacle and co-operating with said pump for automatically rendering said pump inactive when a predetermined amount of liquid has entered said measuring receptacle, a variable control switch remotely located with respect to said measuring receptacle and co-acting with said means for regulating the amount of liquid entering said measuring receptacle, and means for automatically draining said measuring receptacle.

2. A liquid dispensing apparatus comprising a measuring receptacle, a reservoir, a pump, an electrical mechanism for rendering said pump active, a variable switch cooperating with said electrical mechanism and con-



trolling the delivery of liquid by the pump, and means associated with said measuring receptacle and also associated with said electrical mechanism and variable switch for rendering said pump inactive when a predetermined amount of liquid enters said measurin greceptacle.

1,481,886. MACHINE FOR FEEDING TUBING. RICHARD O. BERG, Detroit, Mich., assignor to Michigan Steel Tube Products Company, Detroit, Mich., a Corporation of Michigan. Filed July 19, 1922. Serial No. 576,031. 4 Claims. (Cl. 164—61.)

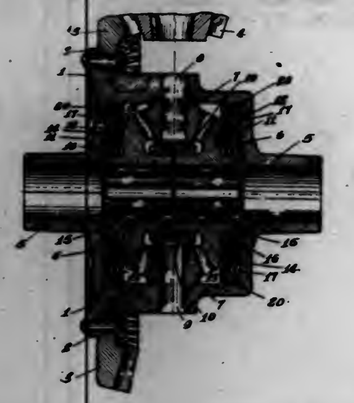


1. In a machine for feeding tubing, the combination of a support, a pair of driving gears, a pair of members supported on the support and one of which is a cradle, supported to rock on the axis of one of the driving gears, a pair of driven gears meshing with the driving gears and rotatably supported on the ends of the said members, feeding rolls coaxially supported with said driven gears on said members, and means for forcing the members toward each other to grip the tube.

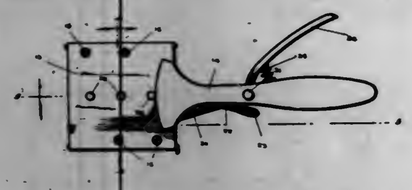
1,481,887. METHOD OF WELDING TUBES. RICHARD O. BERG and SIMON BERG, Detroit, Mich., assignors to Michigan Steel Tube Products Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 13, 1922. Serial No. No. 587,863. 13 Claims. (Cl. 113—112.)

1. A method for welding tube comprising the moving of the tube longitudinally and directing against the seam of the tube a relatively large number of oxy-acetylene flame jets divided into groups each with a purality of flame jets, and separately controlling each group.

1,481,888. AIR CONDUCTOR FOR RAILWAY MOTORS. ANDREW H. CANDEE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 7, 1920. Serial No. 372,022. 7 Claims. (Cl. 105—59.)



1. The combination with a dynamo-electric machine mounted on a car, and a source of air for supplying said dynamo-electric machine, of a flexible conductor made of pliable material connected to said dynamo-electric machine and to said source and provided with means for maintaining the shape of said conductor substantially uniform when inflated.

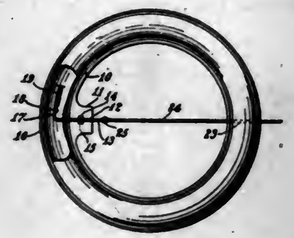


1,481,889. DIFFERENTIAL GEARING. GEORGE C. CARNART, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Mar. 23, 1918. Serial No. 224,183. 2 Claims. (Cl. 74—100.)

1. A differential gearing including a casing, and intermeshing gears in the casing, one of said gears being shiftable axially during relative rotation of the gears, the axially movable gear being provided with external spur gear teeth, a ring fitted in the casing and having internal spur gear teeth opposed to said external spur gear teeth, and interleaved disks between the axially shiftable gear and the opposing face of the casing, one set of disks hav-

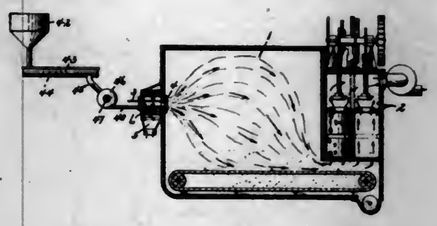
ing internal gear teeth interlocked with the spur gear teeth of the axially movable gear and the other set of disks having external spur gear teeth interlocked with the internal spur gar teeth of said ring, substantially as and for the purpose described.

1,481,890. DIPPER OR SCOOP. GUY M. CAUSEY, Salem, Oreg. Filed June 4, 1923. Serial No. 643,309. 4 Claims. (Cl. 107—48.)



3. A scoop comprising a rim, an ejector plate movable in said rim to and from the mouth thereof, rock shafts having cranks connected with said plate, and means for rocking said shafts to move said plate to and from the mouth of the rim.

1,481,891. ROTARY TOOTHBRUSH. JAMES R. CRUIKSHANK, Vancouver, British Columbia, Canada. Filed Apr. 15, 1922. Serial No. 553,067. 1 Claim. (Cl. 15—26.)



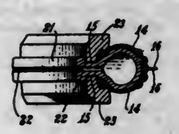
A rotary tooth brush comprising, in combination, a stationary sleeve, a socketed member rotatably mounted in said sleeve, a spirally grooved rod to the outer end of which said socketed member is secured, a cylindrical handle within which the inner end of the rod extends, a nut rotatably mounted on said rod within the handle grooved correspondingly to the rod groove, means for detachably connecting the nut to the handle whereby lateral movement of the handle causes rotation of the rod, and a stem removably mounted in the socket of the socketed member provided at its free end with a rotary brush.

1,481,892. METHOD AND APPARATUS FOR VULCANIZING ANNULAR TUBES. ABRAM E. FALOR, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 13, 1922. Serial No. 536,172. 7 Claims. (Cl. 18—56.)

3. The method of vulcanizing an annular inflatable article such as a pneumatic tire or inner tube, said method comprising enclosing the inflating-valve casing in the tube, attaching a supply-pipe thereto and positioning the valve-casing tangentially, enclosing the tube in a vulcanizing mold, injecting steam tangentially through said valve casing until the tube is vulcanized, and finally fixing the valve casing radially in the tube wall.

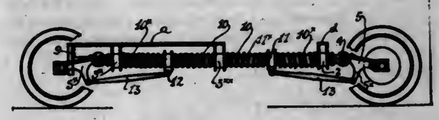
1,481,893. DESICCATING PROCESS. RAPHAEL S. FLEMING, Syracuse, N. Y., assignor to Merrell-Soule Company, Syracuse, N. Y., a Corporation of New York. Filed Feb. 24, 1922. Serial No. 538,922. 6 Claims. (Cl. 99—5.)

1. The process of desiccation comprising introducing a liquid in atomized form into an atmosphere laden with the dust of a compatible material, and simultaneously vaporizing the liquid constituents of the combining substance to reduce the combined solids to a powder.



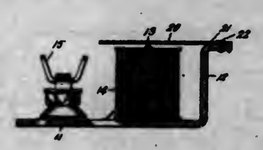
1,481,894. ARTICLE OF JEWELRY AND METHOD OF MAKING THE SAME. LESLIE H. FISHEL, New York, N. Y. Filed June 11, 1921. Serial No. 476,799. 6 Claims. (Cl. 29—148.)

1. An article of jewelry comprising a plurality of sections and a metallic tape passed through said sections, the tape being distorted at intervals whereby the sections are locked in an end to end relation.



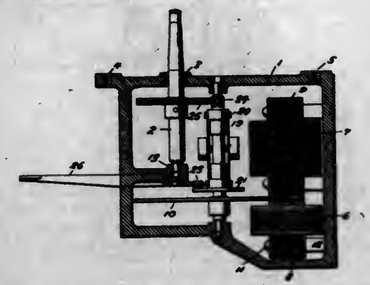
5. The method of producing articles of jewelry which consists in forming blanks, forming tape-receiving openings in the blanks, threading a metallic tape through said tape-receiving openings, and upsetting the tape at intervals whereby the said blanks are locked together.

1,481,895. METHOD AND APPARATUS FOR MAKING RUBBER ARTICLES. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 19, 1921. Serial No. 516,305. 20 Claims. (Cl. 18—34.)



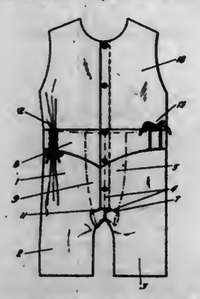
4. The method of making an article of fibrous material and rubber which comprises applying a thin metal wrapper to the article, heating the outer regions of said article through said wrapper, molding said article and said wrapper as a unit, and applying a heating fluid to said wrapper to vulcanize said article, said fluid being under such pressure as to prevent the swelling of said article from substantially deforming said wrapper.

1,481,896. SPRING SUSPENSION FOR MOTOR VEHICLES. HENRIK N. GARSON and THORVALD N. GARSON, New York, N. Y. Filed Apr. 26, 1922. Serial No. 556,794. 4 Claims. (Cl. 280—106.5.)



1. In a motor driven carriage a frame comprising longitudinal members and transverse connecting members, load-carrying springs horizontally guided upon said longitudinal members, front and rear axles, sleeves adapted to engage said springs, a series of rockers each having a ball and socket connection at one end with the frame and secured at the opposite end to an axle, and a link connecting each rocker with a sleeve.

1,481,897. BUZZER. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed July 6, 1921. Serial No. 482,817. 2 Claims. (Cl. 177—7.)



1. An electric signalling device of the alternating current buzzer type comprising a sheet metal stamping forming the base, terminal support and stationary magnetic circuit of the device, the stationary magnetic circuit of said device being in the form of a U made by bending spaced portions of said sheet metal stamping at right angles to the base, an energizing coil wound on one limb of said U and connected to terminals on said base, and a member of resilient magnetic material secured at one end to the upper end of one of said U limbs and extending adjacent the upper end of the other limb, thereby substantially completing the magnetic circuit, whereby the free portions of said resilient member is caused to vibrate against said other limb when the coil is energized.

1,481,898. ELECTRIC DRIVE FOR SOUND-REPRODUCING MACHINES. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Dec. 23, 1921. Serial No. 524,369. 2 Claims. (Cl. 172—36.)

1. An electric drive for phonographs comprising a dust-proof casing, a vertical record spindle rotatably supported in said casing extending through a bearing in the top thereof, a drive shaft rotatably mounted in said casing parallel to said vertical spindle, reduction gearing between said shaft and spindle located near the top of said casing, an induction disc rotor on said shaft located near the bottom of said casing and extending beyond the lower end of said spindle and a field member for driving said disc supported in said casing on the opposite side of said shaft from said spindle.

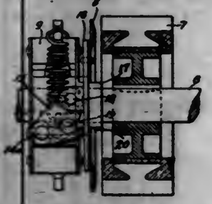
1,481,899. BIFURCATED GARMENT. FRED B. HAMBLIN, Columbus, Ohio. Filed Oct. 17, 1921. Serial No. 508,077. 3 Claims. (Cl. 2—144.)

1. A union undergarment having a permanently closed crotch and comprising a blouse portion, a pants portion, separated from the blouse portion across the back at the waist, a band at the waist extending across the back where it is separated from the blouse portion and connected to the pants portion, the band being secured substantially at the sides, said pants portion being substantially centrally divided at the seat from the crotch to said band to form an opening, an extension secured to one side of said opening, to the band at the waist and at its lower end to the front of the garment adjacent the crotch, a second overlapping extension similarly secured to the other edge of the opening, to the band at the waist and at its lower end to the front of the garment adjacent the crotch, and means at the waist line for circumferentially adjusting the band across the back to the waist.

1,481,900. CENTRIFUGALLY-ACTUATED SHORT-CIRCUITING DEVICE. NIELS HANSEN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 25, 1919. Serial No. 306,624. 5 Claims. (Cl. 172—279.)

1. In a dynamo-electric machine, the combination with an armature and a commutator cylinder mounted upon

a rotatable shaft, of a short-circuiting device for said commutator-cylinder comprising a movable contact plate, a support mounted on said shaft, means for moving said



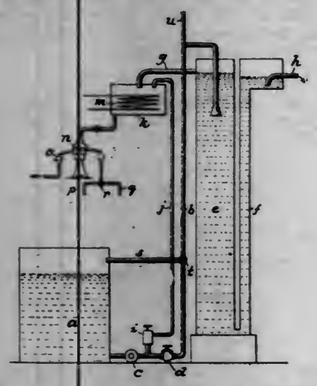


plate into contact with said cylinder, said means comprising a single member pivotally mounted on said support and pivotally connected to said plate, and speed-responsive means for actuating said member.

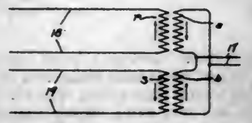
1,481,901. PROCESS AND APPARATUS FOR DISCHARGING UNCONTAMINATED WATER FROM THE BILGE OR BALLAST TANK. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 12, 1923. Serial No. 662,364. 16 Claims. (Cl. 210—52.)

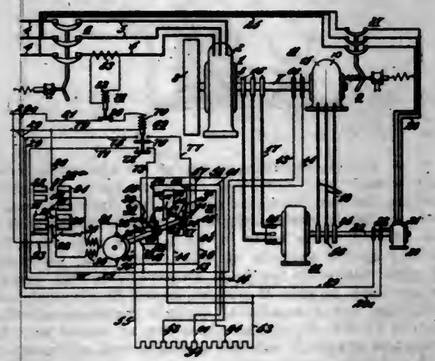
1. The process of emptying reservoirs containing oil-contaminated water and discharging oil-free water, which comprises pumping out the liquid against a constant head, utilizing the pump pressure to arrest the outflow of liquid toward the discharge, opposing the pump pressure by a force adapted to overcome said pressure and maintain open the flow to the discharge during the outflow of water, and adjusting said force so that, upon increase of pump pressure due to outflow of oil and consequent increase in viscosity of the liquid, said force will be overcome by the pump pressure and the outflow toward the discharge arrested.

1,481,902. VULCANIZATION OF TUBES. HARRY H. HARDERS, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Feb. 14, 1921. Serial No. 444,778. 10 Claims. (Cl. 18—56.)



1. The method of preparing for vulcanization a tube which has been positioned upon a mandrel and wrapped with a strait-jacket under tension, which comprises the application of pressure coincidently to a relatively small part of the surface of the tube progressively along the tube.

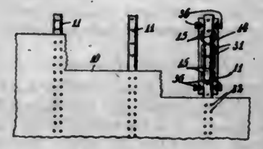
1,481,903. SHOE-LACING DEVICE. WILLIAM J. HART, St. Joseph, Mich., assignor of one-fourth to Alonzo W. Pangborn and one-fourth to Frances D. Pangborn, both of St. Joseph, Mich. Filed Apr. 9, 1923. Serial No. 630,027. 6 Claims. (Cl. 24—117.)



1. A device for lacing shoes and the like comprising guides for the lace along the edges to be drawn together, and means for firmly holding the ends of the lace after tightening; said means including a casing having a chamber and passages for the lace running through said chamber, a sliding member in said casing, a pair of dogs pivoted on said sliding member and tending to grip the lace, and a locking element for said sliding member.

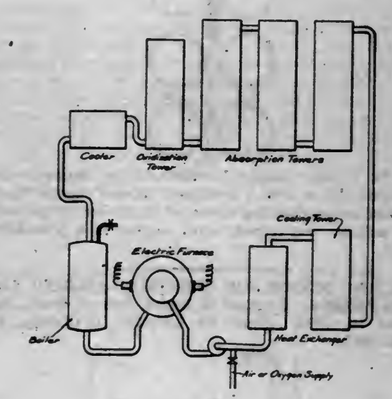
1,481,904. STATIONARY INDUCTION APPARATUS. ALLAN B. HENDRICKS, Jr., Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 2, 1921. Serial No. 489,339. 4 Claims. (Cl. 175—356.)

1. In stationary induction apparatus, the combination with a core, of primary and secondary windings disposed respectively on separate portions thereof, and a tertiary coupling winding coupled closely magnetically with both said primary and said secondary.



1,481,905. MOTOR-CONTROL SYSTEM. GEORGE W. HUEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 6, 1920. Serial No. 414,994. 12 Claims. (Cl. 171—119.)

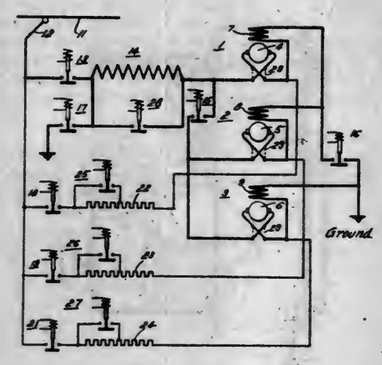
1. The combination with a motor having a field-magnet winding and a resistor, of means for electrically connecting said winding to said resistor, said means being



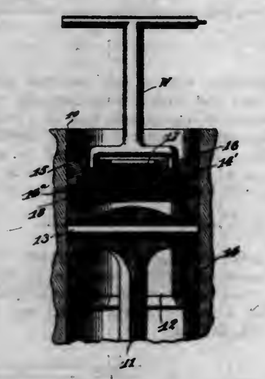
operable to reverse the voltage across said winding by connecting said winding to certain portions of said resistor, and means for shunting an additional portion of said resistor.

1,481,906. MAGNETIC SHIPBUILDING DEVICE. ARCHIBALD JOHN JACKSON, Fort Ogden, Fla. Filed Apr. 14, 1923. Serial No. 632,168. 4 Claims. (Cl. 114—79.)

1. A plate holding means for the hulls of ships comprising magnets, a base on which said magnets are mounted, and gripper jaws on said base adapted to grip the ribs of the ship to hold the device in position thereon.



1,481,907. PROCESS FOR THE OXIDATION OF NITROGEN IN ELECTRIC FURNACES. OLAF JENSEN Notodden, Norway, assignor to Norsk Hydro-Elektrisk Kvaelslofaktieselskab, Christiania, Norway. Filed Jan. 10, 1922. Serial No. 528,238. 3 Claims. (Cl. 204—31.)

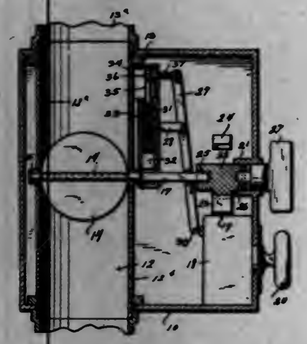


1. Process for the oxidation of nitrogen in electric furnaces and obtaining nitrogen products which comprises circulating the gas through a system including an absorption tower, bringing the gases from the absorption tower into direct contact with a cooling liquid and then heating said gases to so high a temperature that no condensation will take place in the pipes or machinery.

1,481,908. SYSTEM OF CONTROL. HOWARD H. JOHNSTON, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1921. Serial No. 460,790. 12 Claims. (Cl. 172—179.)

2. In a motor-control system, the combination with a plurality of motors, each of said motors having an armature and a field-magnet winding, of an external source of electrical energy, means for simultaneously connecting said windings to said source and in series relation with the armature of one of said motors during dynamic braking and means for independently varying the energization of each said windings from said external source during dynamic braking.

1,481,909. PISTON. ELLIS F. JONES, Burlington, Iowa. Filed Apr. 13, 1922. Serial No. 552,118. 2 Claims. (Cl. 74—109.)

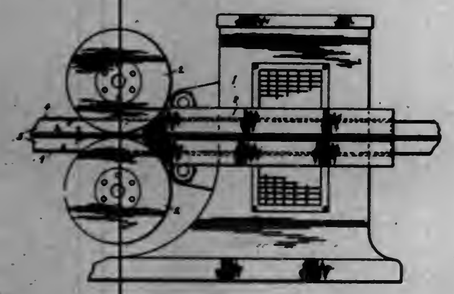


1. The combination with a piston, a plurality of annular steps formed at the outer end of said piston, an expandible ring mounted on said piston and seated on said annular steps, a threaded pillar formed on said piston extending axially thereof, a nut threaded on said pillar and having a bevelled periphery, said ring having an interior bevelled periphery complementary to the bevel of the nut.

1,481,910. MANIFOLD CLOSURE LOCK. ORA E. JONES, Medicine Lake, Mont. Filed Mar. 12, 1923. Serial No. 624,580. 4 Claims. (Cl. 251—6.)

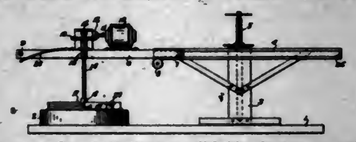
1. In combination with an intake manifold having the intake pipe thereof formed in two separable sections, a casing insertible between the sections and having a conduit extending therethrough whereby the sections may be connected, a valve in said conduit and having a stem, an operating handle extended through the wall of the

casing and engaged with the stem to rotate the same, a lock within the casing having a withdrawable locking part preventing rotation of the operating handle in a di-



rection to open a valve, and means within the casing and engaging the stem of the valve to prevent rotation thereof upon destruction of the casing of said lock.

1,481,911. BELT BUCKLE. MORRIS KALK, Tulsa, Okla. Filed May 4, 1923. Serial No. 636,700. 1 Claim. (Cl. 24—227.)

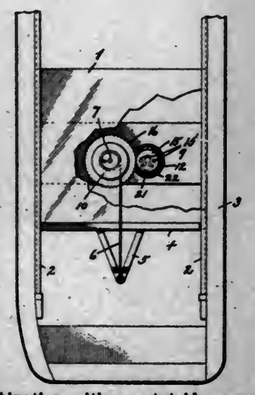


The combination with a belt provided with a metal loop at one end and with a longitudinally extending series of apertures at the opposite end, of a buckle adapted to receive the apertured end of the belt therethrough and provided with a hook member adapted to pass through a selected one of the said apertures and to be engaged through the said loop to secure the ends of the belt together.

1,481,912. JOIST-WELDING MACHINE. THOMAS H. KANE, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Aug. 15, 1923. Serial No. 657,479. 2 Claims. (Cl. 219—4.)

1. A joist welding machine embodying two pairs of disk-electrodes rotating intermittently between welds, and a pair of guides each having T-shaped guiding grooves, the central portions of said grooves being in the same plane and tangent to the electrode disks.

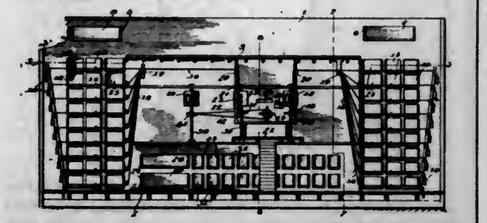
1,481,913. SPREADER. FRANK M. KINNARD and ROBERT M. KINNARD, Sebring, Ohio, assignors of one-half to Charles L. Sebring, Sebring, Ohio. Filed July 5, 1923. Serial No. 649,481. 8 Claims. (Cl. 25—26.)



1. A spreader including a slidable frame, a rotatable spreader tool carried thereby and means for rocking said frame.

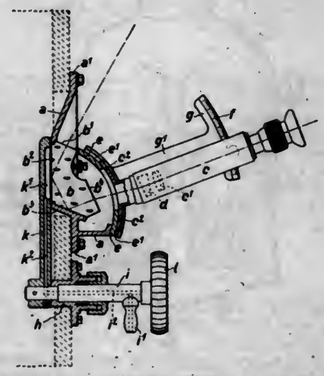
1,481,914. TUBE CLEANER. JOSEPH LEBENSTEIN, Redwood City, Calif., assignor to Associated Engineering & Supply Company, San Francisco, Calif., a Corporation of California. Filed Dec. 27, 1920. Serial No. 433,539. 9 Claims. (Cl. 15—104.05.)

1. In a tube cleaner for horizontally disposed tubes, the combination with a cruciform cutting member having opposed arcuate cutting edges, of means for reciprocating said member transversely with respect to a plurality of tubes.



1,481,915. DEVICE FOR OPERATING SLIDING SASH OR PANELS. CHARLES E. LEWIS, Detroit, Mich. Filed May 19, 1922. Serial No. 562,121. 9 Claims. (Cl. 74—89.)

1. The combination with a rotatable operating shaft, of a fixed locking member, a movable locking member adapted for diametrical displacement upon said shaft, a

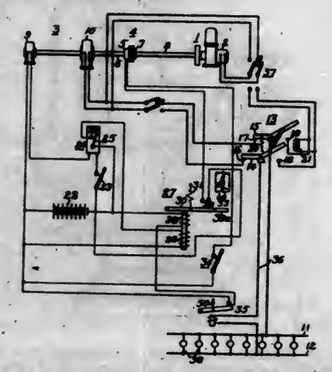


member rotatably mounted on the shaft, and a gear wheel secured to and rotatable with the rotatable member, the latter being adapted to be rotated by the movable locking member when the latter has been disengaged from the fixed locking member.

1,481,916. SCOREBOARD. LEONARD D. LONG, Charleston, S. C. Filed Sept. 29, 1922. Serial No. 591,383. 7 Claims. (Cl. 116—120.)

6. An indicator for imparting information relative to a base-ball game, comprising an indicator plate provided with a plurality of horizontal rows of openings with the horizontal rows arranged in vertical columns, one of the openings in each horizontal row forming a vertical row and provided with a track along a portion of its periphery, a slide movably mounted in the track and provided with indicia indicating the position of a player, the other openings of each horizontal row being provided with a track mounted adjacent a portion of its periphery, a slide movable on the track and adapted to alternately close one of the openings in each horizontal row, eyes secured to the rear face of each slide, a plurality of pulleys secured to the rear face of the indicator plate, a plurality of cables entrained over certain of the pulleys with the inner end of the cable provided with an enlargement, a restraining hook secured in a fixed position adjacent the center of the indicator plate adapted to receive the inner end of a cable and be engaged by the enlargement on the end of the cable, a hook on the cable for engaging an eye on the slide, weights connected to the outer end of each cable and adapted to move a slide from one opening to a second opening in the horizontal row when the enlargement on the end of the cable is released from its restraining hook engaging the enlargement.

1,481,917. REFRACTOMETER. FRITZ LÖWE, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Dec. 7, 1921. Serial No. 520,686. 4 Claims. (Cl. 88—14.)

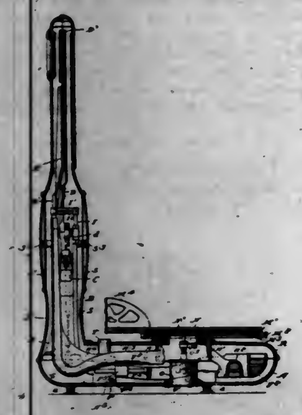


1. In a refractometer destined for examining liquids a prism system, containing a surface adapted to totally reflect rays having entered the prism and further containing a reflecting surface behind the first named surface, adapted to deflect by about 90° the rays reflected at the first named surface, a telescope so disposed behind the prism system as to be capable of receiving luminous rays having passed through the said prism system, a scale connected with the telescope and admitting of reading off the position of the extreme rays, yet totally reflected at the first named surface, and fastening means adapted to fix the said refractometer outside in front of an opening of a vessel in such a manner that the said opening is shut off and the first named surface faces the opening.

1,481,918. PITMAN OILER. JAMES F. LOWE, Milwaukee, Wis. Filed Jan. 10, 1921. Serial No. 436,288. 1 Claim. (Cl. 64—24.)

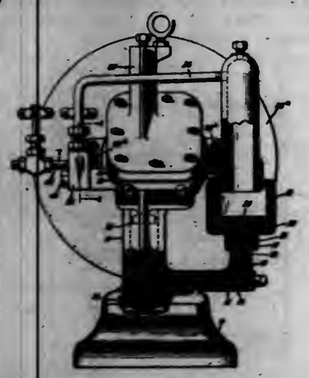
The combination with a crank pin, an operating sleeve mounted for rotation on said crank pin, said operating sleeve having a plurality of openings therethrough, and an oil-tight casing arranged to contain a lubricant mounted concentric with said sleeve and arranged to leave a space between said casing and said sleeve on all sides thereof, that space adjacent the inner side of the sleeve being larger than the remaining space, whereby the lubricant in said casing may accumulate in large quantities in said enlarged space.

1,481,919. ELECTRIC POWER SYSTEM. THOMAS J. MCGILL, Chicago, Ill., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 17, 1920. Serial No. 382,168. 12 Claims. (Cl. 290—30.)



1. In an electrical system, the combination with a line circuit, a dynamo-electric machine normally connected to said circuit, and an engine having a main generator connected thereto, of means for disconnecting said machine from, and for connecting the main generator to, the line circuit in accordance with the load on such circuit.

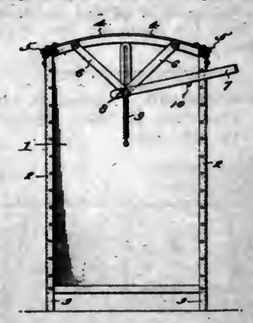
1,481,920. PRICE SCALE. JAMES D. MCGREGOR, Brantford, Ontario, Canada, assignor to Brantford Computing Scales, Ltd., Brantford, Canada, a Corporation of Canada. Filed Aug. 14, 1922. Serial No. 581,801. 19 Claims. (Cl. 265—36.)



1. In a price scale of the fan chart type, a dish-like base casting having supporting projections on the under side and inside upwardly projecting lever bearings, and

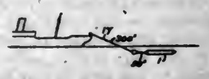
tree support integral therewith, in combination with an upwardly projecting tree mounted rigidly on the tree support and carrying at its upper end the chart and

bearings for the pendulum and check and an enclosing housing mounted on the base casting and enclosing but independent of the said upwardly extending supports for the operating parts of the scale.



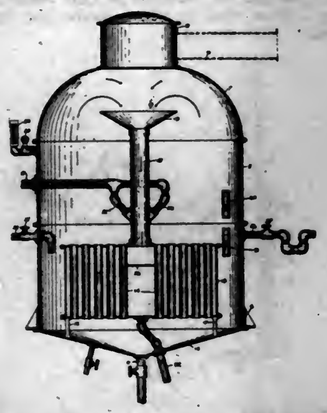
1,481,921. FLOW METER AND THE LIKE. HAROLD H. MAPELSDEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1922. Serial No. 596,893. 3 Claims. (Cl. 73—31.)

1. In a pressure-responsive instrument for use with flow-meters and the like, the combination of a base, a tube mounted vertically thereon, an enlarged casing integral with the tube at its upper end forming a housing, flow meter mechanism in said housing, an arm extending from a point on the tube adjacent its lower end, said arm being hollow and upurned at its outer end to provide a seat, and a second tube detachably connected to said seat and communicating with said first-named tube through the hollow arm, said tubes and hollow connecting arm forming a U-tube.



1,481,922. CAN. WILLIAM J. MILLER, New Iberia, La. Filed Aug. 18, 1922. Serial No. 582,756. 1 Claim. (Cl. 220—24.)

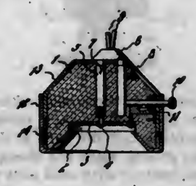
A can of the class described comprising a pair of hinged covers, links pivoted to the covers, a handle of U-shape, means for pivoting the links to the ends of the handles, springs connected with the pivot pins and with



the can for normally holding the parts in closed position and a fulcrum pin on the can for limiting the downward movement of the handle.

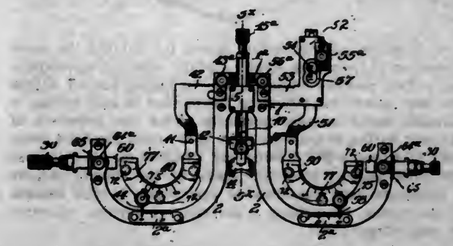
1,481,923. METHOD AND APPARATUS FOR LOCATING THE DIRECTION OF A SOURCE OF VIBRATION. GEORGE H. NASH, Highbury, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1918. Serial No. 261,435. 7 Claims. (Cl. 177—386.)

8. Apparatus for determining the direction of a source of vibration comprising a container, a pair of vibration responsive elements mounted in said container with their responsive surfaces substantially at right angles, means for synchronously varying the position of said elements within said container, means for indicating at a distant point the position of said elements, and means for translating the response of said elements into observable effects.



1,481,924. EVAPORATOR. OSCAR M. NELSON, New Haven, Conn., assignor to The United States Sugar Co., New Haven, Conn., a Corporation. Filed Oct. 23, 1919. Serial No. 332,786. 1 Claim. (Cl. 159—24.)

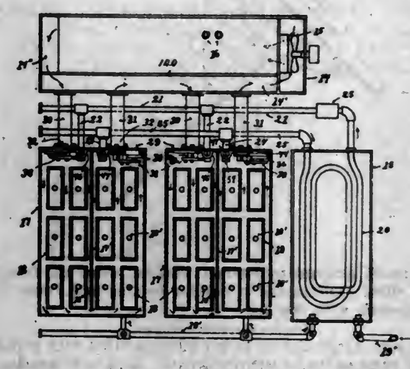
A concentrator comprising a closed evaporating chamber and a heating drum, the heating drum comprising a steam space, a vertical tube wholly within the closed chamber opening at its upper end into the upper part of



the chamber and at its lower end into the steam space and means to discharge steam downwardly through said tube, whereby vapors from the upper part of the chamber are aspirated into the steam space.

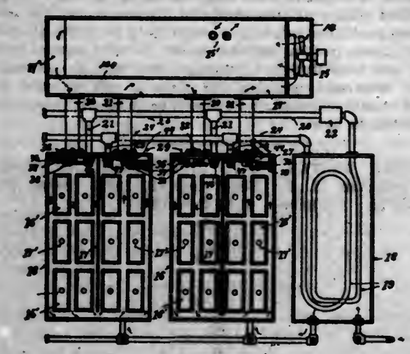
1,481,925. LIGHTER. ALBERT NUHN, Vermilion, Ohio. Filed Mar. 7, 1923. Serial No. 623,485. 1 Claim. (Cl. 219—32.)

A lighter of the class described comprising a porcelain body having a recess in its front, the outer part of which is of frusto conical shape, a heating coil in the bottom of the recess, a two-part cover for the body, one part having a portion overlapping a portion of the other and the front part having an opening with sloping walls which engage the frusto-conical part of the recess in the body, a strip passing through the body and connected with the coil, a second strip passing through the body but spaced from the coil, a switch block electrically connected with the coil, a plunger switch member adapted to be moved into and out of engagement with the short strip, a plug connected with the strips, means for connecting the plug to a source of supply and a clamp connected with the device.



1,481,926. OPHTHALMIC-TEST-LENS FRAME. MAX POSNER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Original application filed Mar. 15, 1916, Serial No. 84,358. Divided and this application filed Jan. 18, 1919. Serial No. 270,794. 7 Claims. (Cl. 88—20.)

5. In an optical apparatus for testing eyes, the combination of a rigid head, a pair of downwardly and outwardly extending arms secured thereto, a pair of flexible temples secured to said arms, a pair of trial lens carriers adjustably supported on said head, a nosepiece cooperating with said temples to support the apparatus on a patient's head, a horizontally adjustable bar on which the nosepiece is mounted, and a bar slidably mounted in said head and vertically adjustable therein and by which said first mentioned bar is carried.

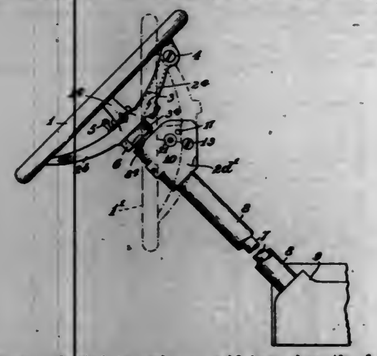


1,481,927. ARTIFICIAL-ICE-MAKING APPARATUS. HENRY D. POWNALL, Canton, Ohio. Filed May 4, 1921. Serial No. 466,759. 7 Claims. (Cl. 62—167.)

1. In combination with the freezing tank of an artificial ice making apparatus, a heat exchange member through separate compartments of which the raw water and brine are circulated so that the raw water leaves the exchange member cooler than when it entered and the brine leaves the exchange member warmer than when it entered, a brine supply conduit leading from said exchange member to said freezing tank and a brine return conduit leading from the freezing tank to the exchange member, means to circulate brine to and from said freezing tank, a valve casing attached to the inside of the freezing tank wall and to which the warm brine inlet conduit is attached,

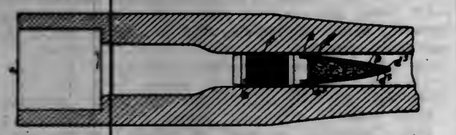
said valve casing being provided with a brine inlet port and a warm brine deflector to deflect the incoming warm brine inside the tank and mix the warm brine with the brine in the freezing tank, a valve removably seated in said valve casing and provided with a valve stem projecting upwardly within the freezing tank to near the top of the said freezing tank.

1,481,928. ARTIFICIAL REFRIGERATING APPARATUS. HENRY D. POWNALL, Canton, Ohio. Filed May 7, 1921. Serial No. 467,666. 16 Claims. (Cl. 62—167.)



16. An artificial ice making apparatus comprising a freezing tank having a series of ice cans mounted therein, a cold brine conduit leading to and a cold brine conduit leading from said freezing tank, a brine conduit leading from said freezing tank to a brine warming member and a brine conduit to return warm brine from said brine warming member to said freezing tank, and a series of valves to control the flow of brine to and from said freezing tank attached to the terminals of said respective brine conduits and located inside the walls of said freezing tank, and means to actuate said valves from outside of said freezing tank.

1,481,929. AUTOMOBILE LOCK. NORMAN A. PRESTON, New York, N. Y. Filed Aug. 18, 1920. Serial No. 404,360. 14 Claims. (Cl. 74—33.)



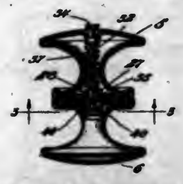
1. Locking means for an automobile, means comprising a tilting steering wheel, a solid rim and a frame therefor,

a fixed steering housing, a non-revolvable multipart lug clamped around said housing, a bifurcated portion in

said frame adapted to embrace said lug when the frame is in tilted position and a lock for holding said frame in engagement with the lug.

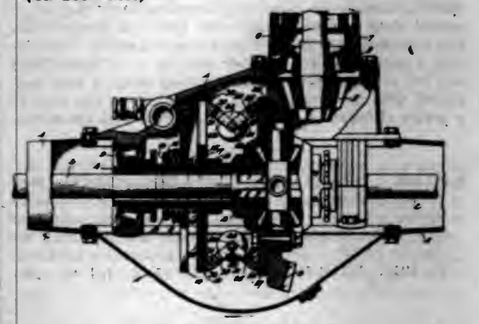
1,481,930. APPARATUS FOR LUBRICATING THE BORE OF FIREARMS DURING FIRING. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company. Filed Sept. 19, 1923. Serial No. 663,661. 10 Claims. (Cl. 102—31.)

10. In a projectile, the combination of an ogival body provided with a driving band and discharge openings terminating at the periphery of said body in front of said band, a nose portion secured on the forward part of said body and constituting a lubricant reservoir in communication with said openings, and plugs of soft material secured in said openings and adapted to be ejected when the projectile is fired.



1,481,931. FILTER LEAF. PETER SHERR SCHUHMANN, Woodhaven, N. Y. Filed Apr. 19, 1923. Serial No. 633,078. 4 Claims. (Cl. 210—195.)

1. In a filter, a leaf comprising a frame, a filter medium supported thereon and means automatically operating to prevent entrance of liquid to the leaf except through the filter medium and to permit the escape of liquid therefrom when the filter is drained.



1,481,932. SEPARABLE BUTTON. CARL E. SKOOG, Cranston, R. I., assignor to Gartner & Skoog, a Firm consisting of himself and George C. Gartner, Providence, R. I. Filed Oct. 18, 1923. Serial No. 669,199. 3 Claims. (Cl. 24—102.)

1. A separable button formed in two parts, each having a shank, a head, and a base, one base being provided with a central hole, a projecting block fixed on the other base slidable through the hole and provided with a longitudinal bore and a transverse bore, a plunger slidable in the longitudinally bore and provided with a groove normally re-

mote from the transverse bore, and locking members slidably mounted in the second bore normally projecting laterally from the block into the path of the first base, and registerable in the groove when the plunger is moved and when the members contact with said first base.

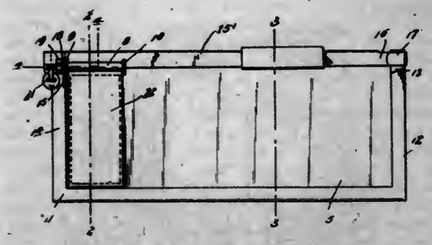
1,481,933. SPEED-CONTROLLING BRAKE FOR VEHICLES. GEORGE STOWE, New York, N. Y., and GEORGE E. MOLYNEUX, Bayonne, N. J., assignors of one-third to John F. Alvord, New York, N. Y. Filed Jan. 29, 1919, Serial No. 273,716. Renewed Feb. 2, 1923. 31 Claims. (Cl. 188—181.)

8. A motor vehicle having means for driving the same at any or at indefinite speed; a brake mechanism comprising a fixed member having a hub; a spring housed within the hub; means for adjusting the tension of said spring; a movable brake member normally under the influence of the said spring to hold the same apart from the fixed member; and means for driving the movable member against the fixed member when the speed of the vehicle exceeds a predetermined maximum in opposition to the tension of the spring, comprising a plurality of devices operable by centrifugal force.

1,481,934. WIRE ROPE. CHARLES C. SUNDERLAND, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Mar. 24, 1921. Serial No. 455,299. 4 Claims. (Cl. 117—58.)

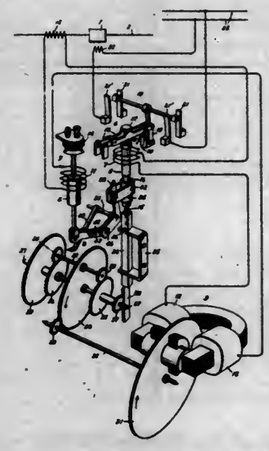
1. A strand for wire ropes comprising a plurality of layers of helically wound strand wires and bearers of hard wire between said helically wound strand wires of two successive layers, the hardness of said bearers being at least substantially that of the strand wires.

1,481,935. TOOTHBRUSH CONTAINER. DANIEL S. TERRELL, Elkton, Md. Filed May 31, 1922. Serial No. 564,987. 1 Claim. (Cl. 248—63.)



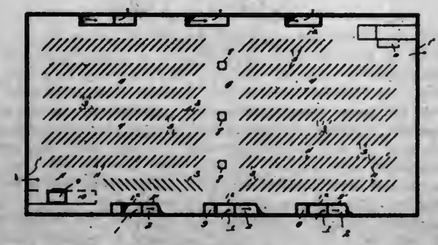
A receptacle for brush heads comprising a hollow casing formed of resilient material having one end wall thereof provided with an enlarged opening for permitting the insertion of the brush head therethrough, the opening being disposed in axial relation to the casing, the opposite end wall having an eccentrically disposed opening therein for the reception of the handle of the brush, the opening being of a less size than the handle, whereby the walls of the opening will frictionally engage the handle to hold the brush head in said casing in spaced relation to the side and end walls thereof, the side wall having a support receiving slot formed therein.

1,481,936. PROCESS OF APPLYING GRAPHITE TO ENGINE PISTONS AND CYLINDERS. JOHN THOMSON, Brooklyn, N. Y. Filed Mar. 17, 1923. Serial No. 625,881. 1 Claim. (Cl. 91—68.)



The process of applying adherent coatings of comminuted graphite upon the co-ordinating metallic surfaces of engine cylinders and pistons, which consists in cleansing the said surfaces; coating them with a dope formed of graphitic dust and water; evaporating the water-content from the dust and then setting and solidifying the residual graphitic film, as by buffing it, or by buffing and planishing it, in place.

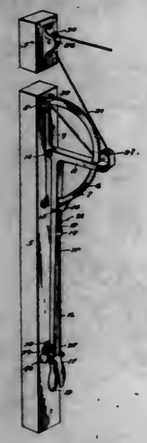
1,481,937. LICENSE-PLATE HOLDER. LAWRENCE T. THOAN, Harrisburg, Ark. Filed Mar. 27, 1923. Serial No. 628,111. 3 Claims. (Cl. 40—125.6.)



1. In a holder for license tags, wherein the tag includes a removable plate having its upper end bent over the tag and provided with a horizontal tube, a relatively U-shaped channel frame, a securing strip upon the upper end of the channel frame adapted for maintaining the tag within the frame, means for retaining the securing strip upon one end of the frame, and an upwardly bent ear adjacent the opposite end of the frame having an opening therein in alinement with the said horizontal tube of the removable retaining bolt.

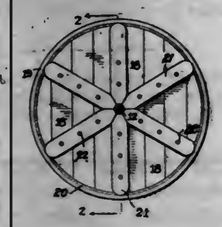
1,481,938. ELECTRORESPONSIVE DEVICE. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 12, 1923. Serial No. 631,735. 10 Claims. (Cl. 175—294.)

9. A relay comprising a winding, an armature adapted to be moved by said winding, a movable member for limiting the movement of said armature in one direction when said winding is deenergized arranged to permit movement of the armature in the oposite direction independently of the member and to move the armature in said opposite direction to vary the position thereof with respect to the winding so that the armature will be attracted at different current values corresponding to different positions of the member, electroresponsive means for moving said member comprising a driving gear and planetary gears movable thereby, sun gears engaged by said planetary gears, the gear ratios between said planetary and sun gears being different, a driving connection whereby one of said sun gears may move said movable member, and relay means operative in response to a predetermined current to restrain another of said sun gears from rotating.



1,481,939. GARAGE. JUNIUS E. TUCKER, Bridgeport, Conn. Filed Dec. 31, 1921, Serial No. 526,322. Renewed June 23, 1923. 3 Claims. (Cl. 20—1.13.)

1. A garage having rows of diagonally arranged stalls therein, aisles between the rows and between the outer rows and the walls of the garage, an entrance aisle com-

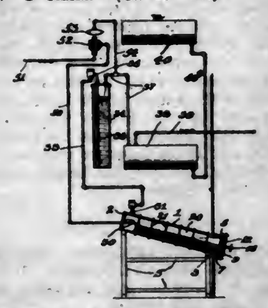


municating with the entrance ends of the first named aisles and an exit aisle communicating with their exit ends, said stalls having both ends open.

1,481,940. CLOTHESLINE SUPPORTING AND TIGHTENING DEVICE. CLARENCE C. TURNEPSEED, Springfield, Ohio. Filed Dec. 29, 1920, Serial No. 433,855. Renewed Dec. 20, 1923. 2 Claims. (Cl. 68—3.)

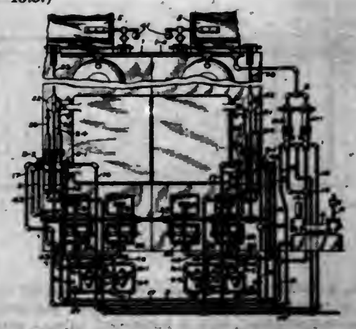
1. A device of the character described comprising a toothed member an L shaped lever comprising a short arm and a long arm pivoted at its heel to said toothed member, a pawl upon said lever engaging the teeth of said member, an antifriction element at the free end of the short arm of the lever, a flexible element pasing thereover and having one end fixedly secured, and an antifriction element disposed above said toothed member over which said flexible element passes.

1,481,941. BEAM CONSTRUCTION. WALTER I. TUTTLE, Providence, R. I., assignor to Frank Mossberg Company, Attleboro, Mass., a Corporation of Rhode Island. Filed Mar. 6, 1922. Serial No. 541,277. 8 Claims. (Cl. 242—124.)



1. In beam construction, in combination, a barrel member, a circular metal head member resting against the end of said barrel member, a metal head member positioned substantially oposite that face of said first-mentioned head member which is remote from said barrel member comprising a plurality of radial reinforcing arms extending to points substantially opposite the periphery of said first-mentioned head member, a wooden head member built up of a plurality of sections interposed between said two metal head members, and means for securing together said two metal head members and said wooden head member interposed therebetween.

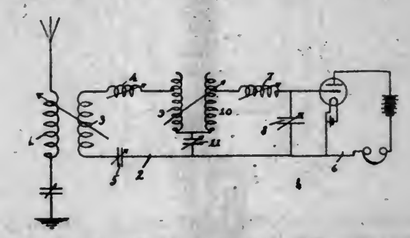
1,481,942. FUEL BRIQUETTE AND THE PROCESS OF MAKING SAME. FELIX A. VOGEL, New York, N. Y., assignor to The General Fuel Briquette Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 13, 1919. Serial No. 330,382. 4 Claims. (Cl. 44—10.)



1. In the art of producing briquettes that improvement which consists in mixing finely comminuted particles of a substance to be briquetted with a relatively small proportion of a dissolved water soluble binding substance, sufficient in quantity but limited to supply only a coating of the particles upon the subsequent masticating treatment, coating each of the particles to be briquetted with a minute film of the binding solution by subjecting the mixture to a masticating action until no accumulation of the binder as such exists in the mixture but the whole of said binder has been converted into a thin film extending throughout the mass of the material, then forming the material into briquettes, removing the moisture therefrom and carbonizing the binder.

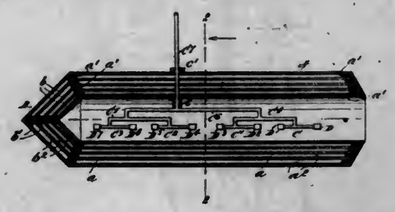
1,481,943. ACETYLENE GENERATOR. PERCY WADE, Washington, D. C. Filed Sept. 23, 1920. Serial No. 412,198. 1 Claim. (Cl. 48—24.)

In a gas generating apparatus of the class described comprising an elongated inclined gas-tight casing, a plural compartment carbide holder of lesser size than and adapted to be positioned within the said casing, means for admitting water at the upper end of said casing between the casing and container so that the water may run down between said casing and container to cool said container and to fill the lowermost compartment and then overflow into the several compartments of the container one after the other as the height of the water increases.



1,481,944. LIQUID-FUEL-BURNING APPARATUS. SHIRLEY S. WEEKS, Providence, R. I., assignor to Associated Engineering & Supply Company, San Francisco, Calif., a Corporation of California. Filed July 22, 1920. Serial No. 398,226. 8 Claims. (Cl. 158—45.5.)

1. In a liquid fuel burning apparatus, the combination with a liquid fuel burner, of a liquid fuel supply main,

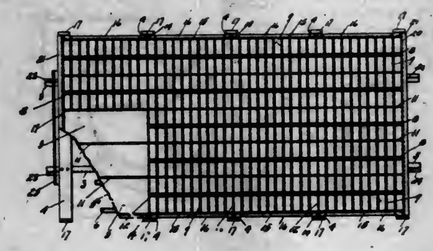


a pump for supplying liquid fuel under pressure to said main, and a plurality of valve mechanisms operative to supply liquid fuel from said main to the burner at a plurality of different presures, each less than the pressure of liquid fuel in the supply main.

1,481,945. RADIO RECEIVING SYSTEM. JULIUS WEINBERGER, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 3, 1921. Serial No. 449,469. 5 Claims. (Cl. 250—20.)

1. In radio telegraphy, means for eliminating interference, comprising primary and secondary circuits, a pair of connections across the primary and secondary circuits, each connection comprising two portions consisting of capacity and inductance in series, one of said portions being common to both connections and the other portions arranged to couple the primary and secondary circuits, said portions being relatively adjustable to substantially eliminate interference.

1,481,946. DIRECTIONAL SIGNAL RECEIVING. ROBERT L. WILLIAMS, Newton, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed July 18, 1918. Serial No. 245,567. 8 Claims. (Cl. 181—26.)



8. A subaqueous sound directional receiving device comprising a tubular sound screen closed at one end by said sound screen and exposed at the other end to the sound conducting medium, the inner walls of said sound screen abutting against the subaqueous sound medium, a plurality of receiving tubes positioned in a line parallel with the axis of said sound screen within said tubular sound screen, said receiving tubes containing a compressible fluid other than the subaqueous sound medium, each of said receiving tubes having a vibratory closure at the outer end thereof, a plurality of conducting tubes, a main tube, said conducting tubes connecting the said receiving tubes to said main tube, said conducting tubes and said main tube forming a rigid structure, said main tube extending through the wall of the sound screen and supporting said sound screen, said conducting tubes and main tube being in a fixed position with reference to the sound screen, said receiving tubes being positioned whereby the sound wave front traveling perpendicular to the axis of the tube is transmitted by the said receiving tubes to the main tube in phase and whereby the maximum sound energy is transmitted to the receiving tubes when the sound screen has its axis perpendicular to and facing the approaching sound wave.

1,481,947. STORAGE BATTERY. WILLIAM H. WOOD, South Euclid, Ohio. Filed Nov. 22, 1920. Serial No. 425,828. 3 Claims. (Cl. 204—29.)

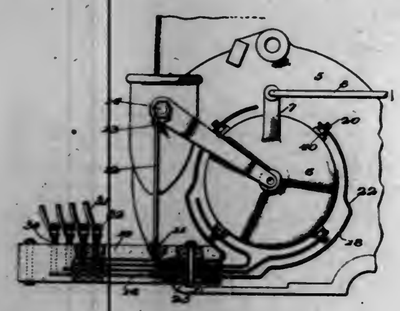
1. A composition of matter for the plates of storage batteries consisting essentially of oxide of lead mixed with carroted hair.

1,481,948. MULTIPLE BRICK MOLD. FRANK ZAGELMEYER, Bay City, Mich. Filed Feb. 8, 1923. Serial No. 617,703. 9 Claims. (Cl. 25—121.)

1. A multiple mold comprising a plate having a series of U-shaped molds secured thereto and forming a unit, the end molds of each unit having but one side wall.

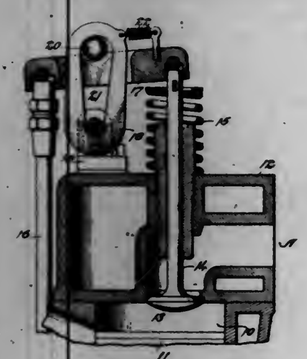
6. A multiple mold comprising a face plate having a plurality of molds mounted thereon and forming a unit, transversely disposed division plates having openings therein and adapted to receive the ends of the said units, and longitudinal division plates adapted to be positioned between the face plates to form the outer edge of the mold.

1,481,949. CUE HOLDER. ADAM ANDRECK and FRANK RUBCZYNSKI, Toronto, Ontario, Canada. Filed Jan. 10, 1922. Serial No. 528,340. 3 Claims. (Cl. 46—6.)



3. A cue holder of the character described comprising, in combination, a slotted plate formed with a cue-top rest and provided with pivotally mounted gripping members link-connected to a pin member adapted to slidably support the holder, and cam means on the holder designed to engage with said pin to securely retain the holder in an open or closed position.

1,481,950. TIMER. WALTER ALEXANDER ASHLEY, Liverpool, N. Y. Filed Apr. 29, 1922. Serial No. 557,495. 2 Claims. (Cl. 123—146.5.)



1. An attachment for timers comprising an insulating block, a plurality of lengths of spring metal having attaching portions embedded in said block and having

exposed arcuate portions adapted to surround the shell of a commutator, the exposed arcuate portions of said length of spring metal being formed with arcuate slots to freely receive the binding posts of the shell, certain of the arcuate portions being offset whereby the slotted portions of the contacts are all in the arc of the same circle, a

connecting bolt extending through said block and contacts, and binding screws threaded into the top of the block and directly engaging the terminal portions of said length of spring metal to hold the same in position, said binding screws being provided with means whereby conductor wires may be connected thereto.

1,481,951. VALVE-OPERATING MECHANISM. DORSEY F. ASBURY, Washington, D. C. Filed Apr. 19, 1920. Serial No. 374,997. 11 Claims. (Cl. 123—90.)

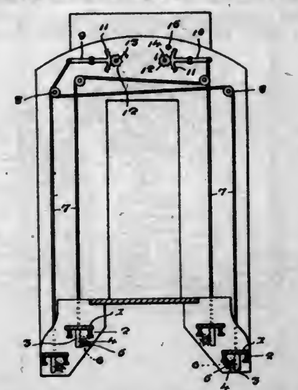
1. In a valve operating mechanism, a valve, an actuator therefor, a lever arm between said valve and actuator, and a movable fulcrum for said lever arm including rollable wedging means to maintain said lever in contact with said valve and actuator.

1,481,952. MAGNIFYING MANOMETER. HERMAN BACHARACH, Pittsburgh, Pa., assignor to Bacharach Industrial Instrument Company, a Corporation of Pennsylvania. Filed Mar. 6, 1922. Serial No. 541,364. 5 Claims. (Cl. 73—31.)

1. In combination in a gage, a pair of vertical pressure legs, a gage glass leading upward from the end of one of such legs and having an outlet at its upper end, a screw plug constituting the bottom closure of the leg having the gage glass, an indicating liquid in the legs, means for adjusting the level of the liquid in the legs carried by said plug, a second screw plug constituting the bottom closure of the other leg, and an inlet tube carried by said

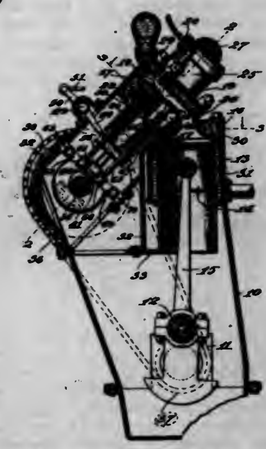
second screw plug and extending upward through the pressure leg to a point above the level of the indicating fluid therein.

1,481,953. MEANS FOR ATTACHING THE MEMBERS OF SEPARABLE FASTENERS TO GARMENTS. CLARA E. BEGEMAN, Milledgeville, Ill. Filed Mar. 17, 1923. Serial No. 625,686. 2 Claims. (Cl. 24—88.)



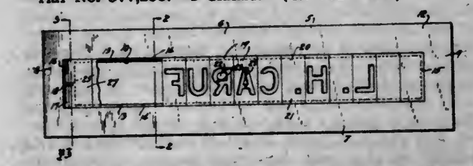
1. In a separabe fastener member, a pair of inwardly bent lip or keeper portions formed integrally upon opposite sides of the member body, a relatively U-shaped pin loosely disposed within one of the lip or keeper portions, and a pin retaining member rigidly secured within the opposite lip or keeper portions, said pin retaining portions comprising a single length of wire having its ends bent to form eye members for the reception of the ends of said U-shaped pin.

1,481,954. CAR-REGISTERING DEVICE. WILL DEAN BURNON, Spencer, N. C., assignor of one-half to Richard P. Carter, Spencer, N. C. Filed Aug. 23, 1921. Serial No. 494,686. 3 Claims. (Cl. 234—15.)



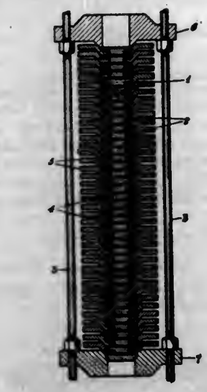
1. In combination with a vehicle having vertcially movable steps, a casing carried by the vehicle, tape supporting means in said casing, tape feeding means, a type carrying block, a slide in which the block is movably mounted, connections for causing the movement of the first step to move the slide and actuate the feeding means, a crank shaft for forcing the block upon the tape, connections from the second stop for rocking said shaft

when the step is moved, a pair of registers, actuating means for the same including a pair of hooked links, the



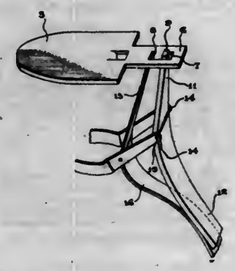
hooked ends of which are adapted to be engaged by the crank shaft and means connected with the slide for placing the hook of one or the other link under the crank.

1,481,955. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor of one-half to Homer A. Brunnell, Los Angeles, Calif. Filed June 27, 1922. Serial No. 571,240. 13 Claims. (Cl. 123—75.)



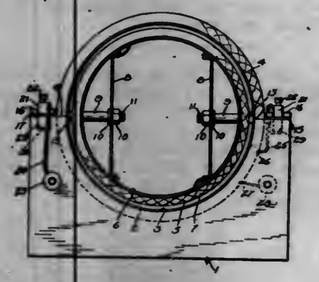
1. An internal combustion engine having a pocket that is directly connected to the piston chamber, said pocket being provided with a valved inlet port, and means for successively admitting air and gaseous fuel into said pocket through said valved inlet port.

1,481,956. SAND-BLASTING SCREEN. LOUIS H. CARUFEL, Bismarck, N. Dak. Filed July 24, 1922. Serial No. 577,253. 4 Claims. (Cl. 101—127.)



1. A sand blasting screen comprising a frame having an elongated opening therein, the edges of the opening being rabbeted, a plurality of stencils located within the opening and engaging upon said rabbets, a clamping plate movably mounted within the opening and seating upon the rabbets, and a screw threaded into said plate, the frame being provided with an elongated slot for the reception of said screw whereby said plate may be moved into clamping engagement with the stencils for holding the latter in engagement with one another and with the opposite end of the frame.

1,481,957. APPARATUS FOR CARRYING OUT HIGHLY-EXOTHERMIC CATALYTIC REACTIONS BETWEEN GASES, PARTICULARLY CATALYTIC OXIDATION OF AMMONIA WITH OXYGEN. IVAR WALFRID CEDERBERG, Berlin-Steglitz, Germany, assignor of seven-tenths to Helge Mattias Bäckström, Djursholm, Sweden. Filed July 7, 1923. Serial No. 649,979. 8 Claims. (Cl. 23—1.)

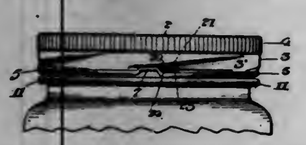


1. An apparatus for carrying out highly exothermic catalytic reactions between gases, particularly catalytic oxidation of ammonia with oxygen, in which the catalyst chamber consists of a series of metal rings which when pressed together fit gas-tight to one another.

1,481,958. POWDER JACK. PAT FANNON, Harlan, Ky. Filed Feb. 28, 1923. Serial No. 621,924. 1 Claim. (Cl. 221—62.)

A powder jack for miners' use having an outlet spout and a slidable valve for closing the passage therethrough, said valve having its outer portion provided with spaced slots, an angle lever pivotally supported on the jack having the end of one of its arms received in one of said slots, a two-armed spring fixed to the jack having one of its arms received through the second slot in the valve and its second arm in contacting engagement with the under face of the lever, both of said arms exerting tension upon the elements engaged thereby to force the valve to closed position and to swing the lever to cause the latter to further influence the valve in such closed position.

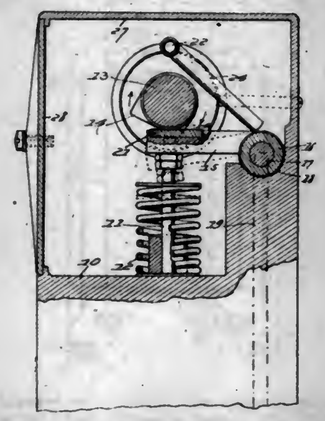
1,481,959. RADIO APPARATUS. RENSSELAER W. FRENCH, Chicago, Ill., assignor, by mesne assignments, to Diamond Radio Products, Chicago, Ill., a Common Law Trust. Filed Mar. 27, 1922. Serial No. 547,304. 2 Claims. (C. 171—242.)



1. In a device of the character described, an annular lattice wound stator coil of insulated wire, an annular lattice wound rotor coil of insulated wire rotatably mounted within said stator coil and arranged to be moved concentric therewith, each turn of said rotor coil being arranged to exactly underlie its corresponding turn on said stator coil when said coils are concentric with one another.

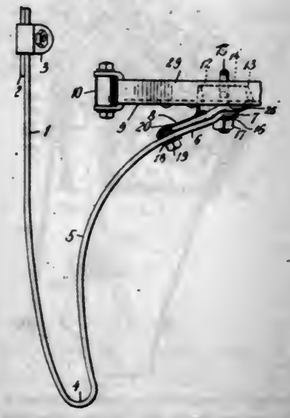
1,481,960. CAP. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed Nov. 29, 1922. Serial No. 603,990. 19 Claims. (Cl. 215—44.)

1. A sheet metal closure for containers and comprising a top and a flange, the flange being provided with an inwardly extending projection narrow and deep at one end and wide and shallow toward the other end.



1,481,961. DUPLEX LOCKING MEANS FOR BOTTLE CAPS. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed Dec. 23, 1922. Serial No. 608,597. 22 Claims. (Cl. 215—44.)

1. A metal cap having a depending skirt having a set of locking projections, one having inclination and the other lying substantially parallel to the top of the cap.



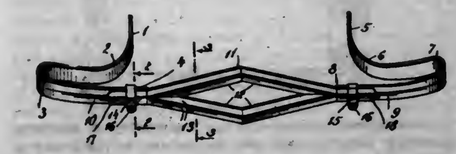
1,481,962. VALVE-IN-HEAD MOTOR. JOHN W. IRVIN, Franklin, Nebr., assignor of two-fifths to P. J. Way, Hastings, Nebr. Filed Jan. 11, 1923. Serial No. 612,053. 4 Claims. (Cl. 123—90.)

1. A valve-in-head motor having an overhead valve actuating cam shaft, rockers provided with fingers interposed between the valve stems and the cams on the cam shaft, means for operating said cam shaft, and cushioned

contact elements consisting of pads having a durable wearing quality inset in the rockers and affording noise eliminating contact for the cams.

1,481,963. BUFFER-ATTACHING DEVICE. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Mar. 31, 1921, Serial No. 457,258. Renewed Apr. 30, 1923. 9 Claims (Cl. 293—55.)

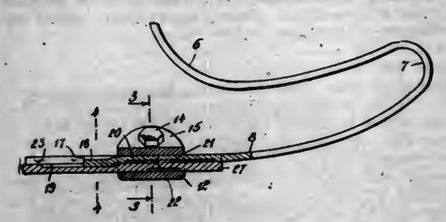
1. In attaching devices adapted for use in attaching an automobile buffer to automobile frame members having projecting flanges, a buffer attaching member of spring steel strip having an inwardly bent portion and an offset end to form a substantially flat bearing portion provided with a plurality of intersecting adjusting holes forming a figure 8 type adjusting aperture, said attaching member being formed with a connecting hole ahead of said aperture, a forged attacher bracket having a bearing face adapted to engage the web of the automobile frame member and having laterally extending supporting flanges projecting from said bearing face at longitudinally separated points and adapted to engage the frame flange there being a hook bolt hole formed in said bearing face and an aligning hook bolt socket formed in said bracket between said supporting flanges, an outwardly diverging bracket arm formed on said bracket to substantially engage and support the adjacent attaching member and formed with a threaded connecting hole,



a connecting member extending through said connecting holes to permanently and adjustably connect said bracket arm and attaching member and a hook bolt adapted to adjustably and securely connect said bracket and attaching member to the cooperating automobile frame member.

1,481,964. AUTOMOBILE BUFFER DEVICE. GEORGE ALBERT LYON, Philadelphia, Pa. Filed June 14, 1921, Serial No. 477,586. Renewed Sept. 1, 1922. Serial No. 585,831. 15 Claims. (Cl. 293—55.)

2. The automobile buffer formed of spring steel strip and comprising end loops and connected front strips having inwardly extending connector portions, and a resilient sheet metal contact and clamping device formed with vertically separately central contact portions and with channeled end connector portions extending adjacent said end loops and integral clamping members to adjustably and securely clamp each of said front strips at separated points and securely connect the buffer elements.

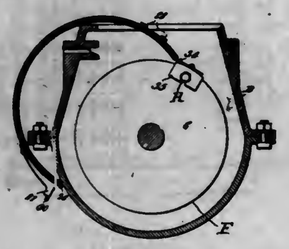


1,481,965. BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Oct. 25, 1921, Serial No. 510,292. Renewed Oct. 20, 1923. 16 Claims. (Cl. 293—55.)

1. The automobile buffer comprising two spring steel strip members each having a rearwardly extending attaching member, an end loop and an inwardly extending connector portion having a forwardly bent V-sectioned stiffening aligning cross section, a co-operating contact connecting member of spring steel plate having outwardly extending connector portions formed with similarly bent V-sectioned aligning cross section co-operating with the connector portions of said spring strip members, said contact connecting member having vertically separated upper and lower contact portions of similarly stiffened angularly bent cross section to form a generally diamond shaped contact member at least three times as high as said strip members adjacent the central part of the buffer, and clamping devices to rigidly hold together the co-operating connector portions.

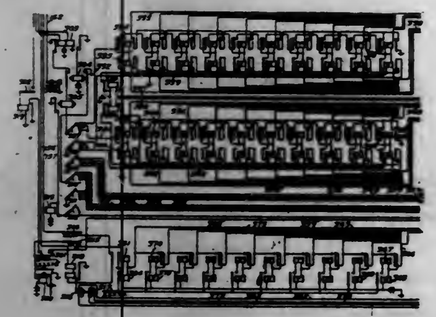
1,481,966. AUTOMOBILE BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Nov. 23, 1921, Serial No. 517,268. Renewed Nov. 3, 1923. 26 Claims. (Cl. 293—55.)

11. The one piece resilient buffer contact and connecting device adapted for use with co-operating spring strip end loop buffer members and comprising vertically separated contact faces adjacent its middle portion and comprising edge stiffening flanges forming diverging flanges adjacent the ends of the connecting device, there being vertically aligning depressions formed in the inter-



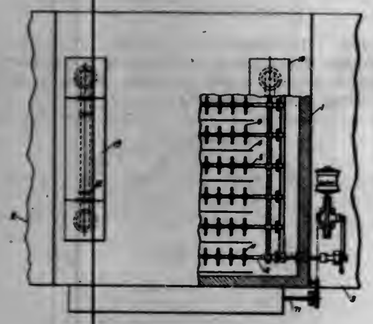
mediate portions of the rear face of said connecting device at a considerable distance inward from its ends to promote the alignment of the co-operating buffer members.

1,481,967. AUTOMOBILE BUFFER DEVICE. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Mar. 27, 1922. Serial No. 547,328. 16 Claims. (Cl. 293—55.)



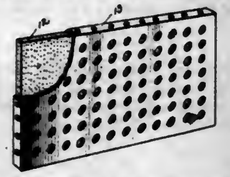
6. The automobile buffer comprising end loop attaching members of steel strip adapted to be secured to the automobile frame members and having inturned connector portions, a cooperating front plate having end connector portions, a clamping bolt extending through each of said connector portions of the front plate and adapted to clamp the connector portion of the attaching member to said front plate and enclosing clamping devices adapted to be secured around the cooperating connector portions of said front plate and attaching members.

1,481,968. TRANSMISSION BAND, PULLER, AND HOLDER THEREFOR. GARRETT A. MCDERMOTT, San Diego, Calif. Filed July 11, 1922. Serial No. 574,165. 6 Claims. (Cl. 188—249.)



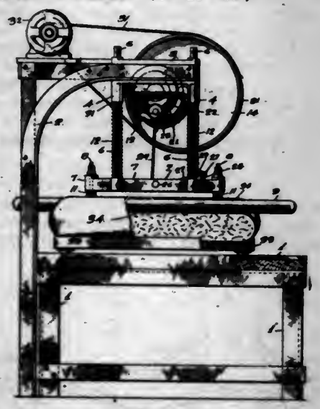
4. In a planetary transmission for automobiles including a series of drums and a driving plate bolted to one endmost drum, a transmission band provided at one end with a rigid ear and having at its other end a detachable ear, hook plates secured upon the band and extending beyond the ends thereof, in combination with a puller formed as a member adapted to be secured upon the driving plate by one of the bolts holding the latter, an arm on said member overlying the adjacent drum, and loop members carried by the arm and engageable with either of said hooks whereby upon rotation of the drums and driving plate the band will be moved into or out of encircling relation to said endmost drum.

1,481,969. TELEPHONE-EXCHANGE SYSTEM. FRANK N. REEVES, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,441. 17 Claims. (Cl. 179—18.)



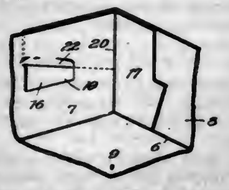
1. The combination in a telephone system of selective switches for extending telephone connections, registers for controlling the selective operation of said switches, a plurality of successively operable electro-mechanisms, means responsive to current impulses for variably operating said electro-mechanisms, and means dependent on the number of said electro-mechanisms operated for positioning said registers.

1,481,970. APPARATUS FOR ELECTRICAL PRECIPITATION OF SUSPENDED PARTICLES FROM GASES. HARRY V. WELCH, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 26, 1921. Serial No. 448,070. 10 Claims. (Cl. 183—7.)



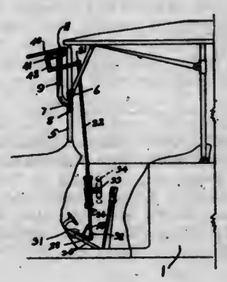
1. An electrical precipitator comprising a flue adapted for passage of the gases horizontally therethrough, a plurality of relatively long collecting electrodes extending vertically in said flue parallel to the direction of gas flow therein and extending nearly to the top and bottom of the flue, a plurality of relatively short collecting electrodes extending in said flue in alternate arrangement with said relatively long electrodes, so as to leave free space above and below said relatively short electrodes, insulated electrode supporting means extending in said flue spaces and high tension discharge electrodes mounted on said supporting means and extending vertically between opposing long and short collecting electrodes.

1,481,971. METHOD OF AND MEANS FOR CONTROLLING THE HUMIDITY WITHIN CONTAINERS. JASPER WHITING, Boston, Mass. Filed May 17, 1921. Serial No. 470,305. 3 Claims. (Cl. 131—30.)



1. The method of maintaining a substantially constant relative humidity in a gas, which consists in bringing in contact with the gas a saturated solution of a salt containing an excess of the salt.

1,481,972. MATTRESS-BEATING MACHINE. GUSTAV A. AICHER, San Francisco, Calif., assignor of one-half to Droll Patent Corporation, San Francisco, Calif., a Corporation of California. Filed Dec. 8, 1920. Serial No. 429,283. 4 Claims. (Cl. 15—89.)

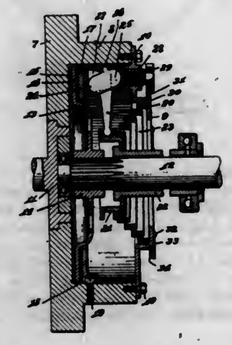


1. A mattress beating machine comprising a mattress supporting element arranged to receive a mattress; a beating element slidably mounted above said mattress; springs mounted in connection with said beating element to normally exert a downward pressure thereon; a power driven shaft mounted above the beating element; a disc rotatably mounted upon the shaft and connected to the beating element; and means mounted upon the shaft arranged to alternately engage the disc to rotate the same and thereby lift the beating element upwardly against the pressure of the springs and to disengage said disc to permit free downward movement of the beating element due to pressure by the springs to strike a blow upon the mattress.

1,481,973. BOX. SIEGMUND BACHMANN, Chicago, Ill. Filed June 2, 1922. Serial No. 565,380. 1 Claim. (Cl. 229—35.)

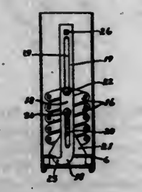
A box made from a blank comprising a bottom portion, walls rising therefrom and extending at an angle to each other, tongues on walls of the box adapted to overlap adjacent walls, said tongues and the walls overlapped thereby having portions adapted to be interlocked with each other, said interlocking portions when in set up condition consisting of a slot below the upper edge of the box and angularly disposed relative to the upright corner thereof, and a downwardly extending portion the inner engaging edge of which is substantially parallel with the box corner, said tongues at their juncture with the walls carrying them reaching short of the bottom portion of the box.

1,481,974. ADJUSTABLE GLARE SHIELD FOR AUTOMOBILES. JOHN C. BARTLEY, Denver, Colo., assignor of one-half to Harley I. Jones, Denver, Colo. Filed Sept. 5, 1922. Serial No. 586,191. 1 Claim. (Cl. 296—97.)



In combination, a body member; a windshield frame attached thereto; a pair of supporting brackets attached to the frame; a bracket pivotally attached to the upper end of each supporting bracket; a translucent shield member carried by said last named bracket; an arm secured to one of said brackets and having its outer end projecting to the other side of said windshield; a casing pivotally secured to the body member; a spring in said casing; a rod passing through said spring and said casing and connected to the end of said arm; an abutment member secured to the rod and engaging the lower end of said spring; means for moving the rod upwardly whereby the spring is compressed and the shield tilted downwardly, said means comprising a pivotally mounted pedal; and locking means for holding the rod in its upward position.

1,481,975. CAP. BENEDICT H. BENDER, Milwaukee, Wis., assignor to Bender-Zimmer Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 5, 1921. Serial No. 467,148. 1 Claim. (Cl. 2—107.)



The method of manufacturing a cap from a series of blanks constituting a body portion, a cuff, and an ear and neck flap wherein an elongated knitted blank is employed as the body portion and comprises connected sections with the direction of the wales oblique to the longitudinal axis of the blank and with the direction of the wales substantially at right angles with respect to the adjacent ones of said sections, the lower longitudinal edge of the blank being straight and the upper edges of the sections being parallel to the wales of the latter whereby intermediate pairs of sections are formed with inverted V-shaped projecting portions, said projecting portions being brought inwardly and having their meeting edges stitched together so as to form a closed end, a second elongated knitted blank forming the cuff and having the direction of the wales longitudinally of the blank with one longitudinal edge secured to the lower edge of the first blank, and a third elongated knitted blank forming the ear and neck flap with the direction of the wales longitudinal of the blank, said blank having curved end edges providing longitudinal edges of differing length with the shorter longitudinal edge and curved end edges secured by stitching to the lower edge of the first blank, and with the portions of the longer longitudinal edge which then forms the end edges of the third blank terminating in spaced relation.

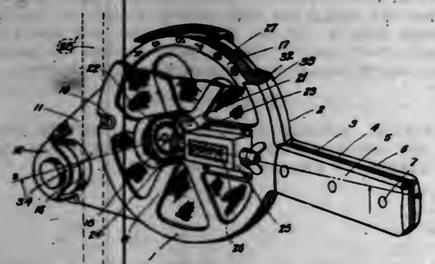
1,481,976. CLUTCH. VINCENT BENDIX, Chicago, Ill. Filed Dec. 3, 1919. Serial No. 342,171. 2 Claims. (Cl. 192—68.)

1. A clutch comprising a casing, cooperating clutch members, means including a plurality of cam-levers for bringing said members into clutched relation, said levers having freely shiftable terminal fulcrum points bearing upon the casing, and cam portions bearing at opposite points upon one of said clutch members and upon normally fixed elements screw-threaded through the casing, and means for simultaneously adjusting said elements.

1,481,977. POCKET MATCH BOX. ARTHUR M. BENNER, Olympia, Wash. Filed Jan. 9, 1923. Serial No. 611,654. 5 Claims. (Cl. 206—33.)

1. In a pocket match box, a foot attachment having a longitudinal slot therein, and whose toe portion is sharp-shod on its upper surface.

1,481,978. CLOTHESPIN. WILLIAM O. BICE, Logan, Iowa. Filed Feb. 3, 1923. Serial No. 616,745. 2 Claims. (Cl. 24—137.)

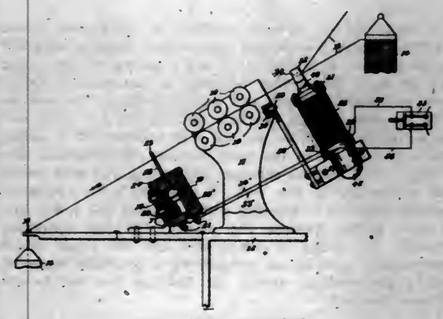


1. A clothes line pin comprising a pair of discs, a shaft extending through said discs, said discs being slidably keyed on the shaft, coiled springs surrounding the shaft, said coiled springs being interposed between headed members carried by the ends of the shaft and the outer faces of the discs, the inner faces of said discs being provided with registering rectangular shaped grooves having their corners extending through the outer edges of the disc.

1,481,979. CIGARETTE-MAKING DEVICE. WILHELM GOERT BOONZAIER, New Wandsworth, London, England. Filed Nov. 22, 1920. Serial No. 425,688. 6 Claims. (Cl. 131—5.)

3. A device for making cigarettes consisting of two similar semi-cylindrical members, each having a closing guide part at one of its ends, the open end of one semi-cylindrical member being adapted to pass through the closing member of the other semi-cylindrical member, so that the two assembled semi-cylindrical members forming a complete tube can be reciprocated one upon the other for assembling or disassembling or compressing the filler.

1,481,980. CABLE-MEASURING DEVICE. RALPH R. BOSTIC, Kansas City, Mo. Filed June 26, 1922. Serial No. 570,915. 3 Claims. (Cl. 33—184.)

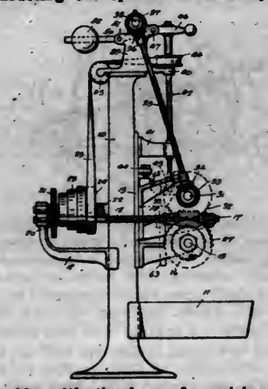


1. A cable measuring device for wells comprising a casing consisting of two complementary side members, each having an outwardly projecting handle portion, one of the side members having a forward extension, means connecting the handle portions together, a friction wheel mounted between the two side members, an idler mounted upon the forward extension in spaced relation with the friction wheel, and registering mechanism operated by the friction wheel.

1,481,981. CURTAIN ROD. JAMES H. BOYD, Chicago, Ill. Filed Oct. 27, 1922. Serial No. 597,274. 5 Claims. (Cl. 156—19.)

4. In a curtain rod, the combination with a pair of hollow endwise abutting rod sections, of an internal splicing member snugly fitting the meeting ends of said sections, said rod sections and splicing member having co-operating devices for locating the joint between said rod sections at the longitudinal center of said splicing member, and other co-operating devices for yieldably locking said splicing member in said rod sections.

1,481,982. AUTOMATIC ELECTROMAGNET ROVER STOP OR BREAKER FOR SPINNING MACHINES. DELBERT B. BRACE and WILLIAM B. THOMAS, Elmira, N. Y., assignors to Eclipse Textile Devices, Inc., Elmira Heights, N. Y., a Corporation of New York. Filed Apr. 21, 1921. Serial No. 463,122. 6 Claims. (Cl. 117—82.)

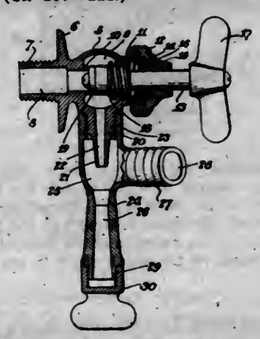


1. A device of the class described comprising a weight-operated electric switch controlled by the thread, such switch including a casing having a closed chamber, electrical contacts located in such chamber and arranged in an electrical circuit, a weight movable within such chamber, a stem secured to the weight and extending through the casing and provided with an eye through which the thread passes, and an electrically operated gripping means arranged in said circuit and adapted to grip the thread, said circuit being normally open but adapted to be closed by said weight upon the dropping of the latter when the thread breaks.

1,481,983. MACHINE FOR COUNTERBORING NUTS. HARRISON M. BRIGHTMAN, Columbus, Ohio, assignor of one-fourth to G. F. Brightman, one-fourth to H. L. Brightman, and one-fourth to J. H. Brightman, all of Columbus, Ohio. Filed Oct. 28, 1921. Serial No. 510,990. 4 Claims. (Cl. 77—22.)

1. In combination with a rotatable nut supporting feed table, a rotatable and vertically shiftable spindle having a counterboring tool and beneath which the nut holding means of the feed table are successively shiftable, means in rotatable connection with the spindle

for shifting the same vertically, including a shifting lever, adjustable weight controlled means engaging the lever for thrusting the spindle downwardly, a tripping

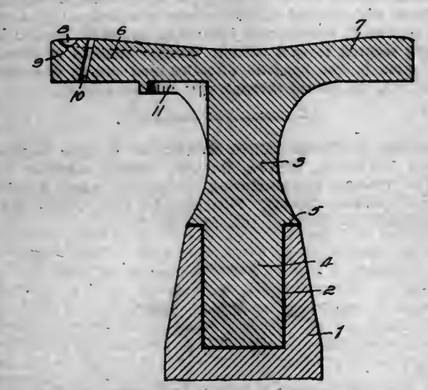


cam engageable with the lever for raising the spindle, and gearing connections between the tripping cam and the feed table rotating means as described.

1,481,984. PENCIL CLIP OR HOLDER. WILLIAM W. CARNETT, Mountain View, Ark. Filed May 11, 1923. Serial No. 638,310. 3 Claims. (Cl. 24—11.)

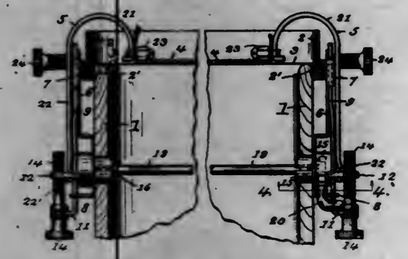
2. A device of the class described, comprising a pencil-holding socket provided with an offset grip extended transversely of the axis of the socket, the socket having free ends, one of which is provided with an inwardly extended flange spaced from the free end of the grip.

1,481,985. FAUCET. DAVID D. CHRISMAN, Elkins Park, Pa. Filed July 30, 1921. Serial No. 488,506. 3 Claims. (Cl. 137—111.)



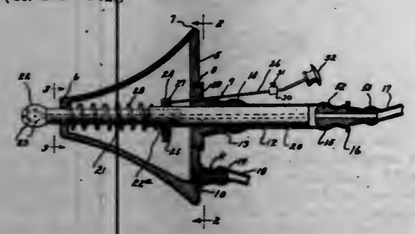
3. A faucet comprising a valve housing, a manually operable valve member mounted therein for controlling the passage of liquid to the interior thereof, an integral nipple extending therefrom and terminating in a nozzle at its end, a housing threaded on said nipple having a chamber within which the nozzle of the nipple extends, said housing having a passageway extending from said chamber in alinement with the nozzle, means for closing the end of said passageway, and a nipple integral with said housing adapted to receive the end of a hose, said nipple having a passageway extending to the central chamber.

1,481,986. METHOD AND APPARATUS FOR MEASURING ALTITUDES. JOSEPH G. COFFIN, Garden City, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane and Motor Company, Inc., Garden City, N. Y., a Corporation of New York. Filed Nov. 16, 1918. Serial No. 262,908. 11 Claims. (Cl. 73—2.)



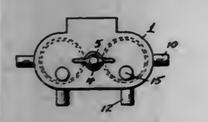
1. The method of determining the true barometric pressure around a body moving through the air which consists in measuring both the leading and the trailing air pressures and striking an average of the values of these pressures.

1,481,987. LAST. ABRAHAM COHEN, St. Louis, Mo. Filed Aug. 26, 1920. Serial No. 406,138. 4 Claims. (Cl. 12—128.)



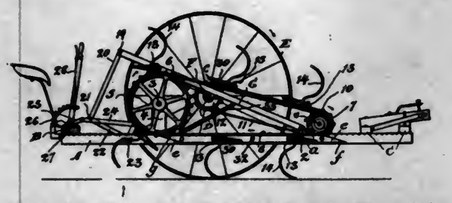
1. A last for applying either aluminum or wooden heels to ladies' shoes, comprising a supporting shank, a pair of opposed heads for supporting a shoe, one of said heads having a U-shaped marginal groove in its upper face for receiving and partially clinching the nails of aluminum heels when applying the heel to a shoe and the other head having a smooth curved upper face for finishing the clinching over of the nails when the shoe is transferred from the first mentioned head of the last to the latter.

1,481,988. SNARE DRUM. ROBERT C. DANLY, Chicago, Ill., assignor to Ludwig & Ludwig, Inc., Chicago, Ill., a Corporation of Illinois. Filed July 8, 1921, Serial No. 483,154. Renewed June 25, 1923. 14 Claims. (Cl. 84—415.)



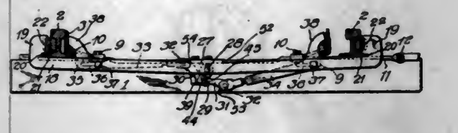
1. A drum having a snare extending across the head of the same, a pair of snare supporting members mounted at opposite sides of the drum, and means for imparting simultaneous movement to said embers in a path at substantially right angles to the face of the drum head.

1,481,989. SYRINGE. JOSEPH W. DEBEN, Detroit, Mich. Filed Nov. 15, 1922. Serial No. 601,155. 5 Claims. (Cl. 128—241.)



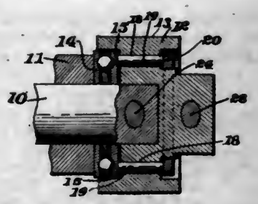
2. A device of the class described, comprising a tapered member having a tubular member passing through both ends thereof, a rod attached to a removable collar on said tubular member within said tapered member and extending without said tapered member whereby movement of said rod may move said tubular member in one direction and a spring secured to said tubular member adapted to move the same in the opposite direction and means whereby liquid may be passed through said tubular member.

1,481,990. HAND MILKING MACHINE. WALTER HAMILTON DELAHAYE, Ottawa, Ontario, Canada, assignor to The National Manufacturing Company Limited, Brockville, Ontario, Canada. Filed Apr. 11, 1923. Serial No. 631,468. 6 Claims. (Cl. 31—98.)



1. In a milk receiver, a tubular body, means to close the ends of said body, said body being vertically disposed, the closure means provided with a valve controlling the discharge therefrom, an admission port, and a suction port controlled by a float in the said body, the closures being provided with recesses for the ends of the tubular body, said recesses providing gasket seats and means to detachably clamp the closures on the body, the whole being provided with means to support the device on a portable frame.

1,481,991. CULTIVATOR. ANDREW LEE DONOGH, Griswold, Manitoba, Canada. Filed Dec. 14, 1921. Serial No. 522,421. 8 Claims. (Cl. 97—46.)

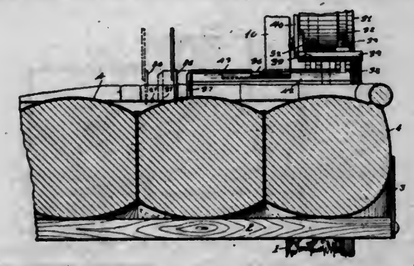


1. In a cultivator, in combination a frame; a drive shaft positioned above the same; traction wheels mounted on said shaft; means functionally intermediate said shaft and said frame whereby said frame is adjustably supported by said shaft; two shafts supported by said frame thereabove; two wheels mounted on each of the said shafts; drive belts co-operating with said wheels mounted on said second-mentioned shafts and passing around said drive shaft; a plurality of teeth carried by each of the said drive belts, and means circulating with said drive belts and associated with said teeth and adapted to co-act with said frame to maintain said teeth in operative position.

1,481,992. RAILWAY-SWITCH LOCK. JOSEPH R. DOOLEY, Mobile, Ala., assignor of one-half to Cornelius W. Vink, Mobile, Ala. Filed Oct. 11, 1923. Serial No. 667,882. 16 Claims. (Cl. 246—158.)

5. In a railway switch lock, means engaging the outer faces of the rails to prevent spreading, a pivotally mounted rocker member, and oppositely disposed locking bars pivotally mounted on said rocker member, and having limited loose connections with said means.

1,481,993. SHAFT-ADJUSTMENT DEVICE. CHARLES DRAKE, Endora, Kans. Filed Feb. 10, 1922. Serial No. 535,581. 5 Claims. (Cl. 64—49.)

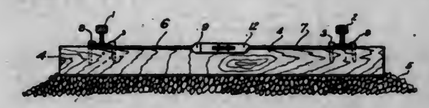


1. An attachment for a crank shaft comprising a rotatable pulley member securing means for holding the pulley member on the crank shaft, a thrust bearing, means coacting between the thrust bearing and the pulley member and movable in the direction of the shaft axis for limiting the movement of the crank shaft in an endwise direction.

1,481,994. FEEDING AND TAKE-UP DEVICE. JOSEPH W. DROLL, Oakland, Calif. Filed May 27, 1920. Serial No. 384,735. 22 Claims. (Cl. 112—3.)

1. The combination with a table adapted to support a mattress thereon and a mattress roll forming machine ar-

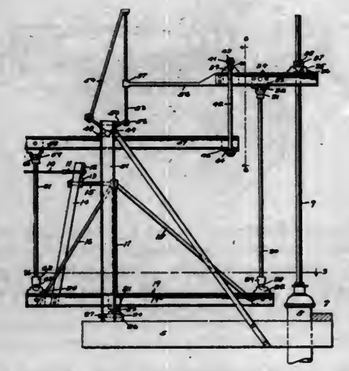
ranged to move intermittently around said table to form a roll on the edge of said mattress, of means mounted upon



the machine for engaging the mattress to prevent movement of the same while said machine is in motion.

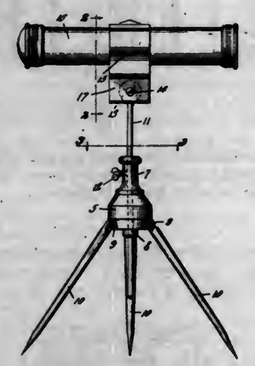
1,481,995. BUCKLE FOR WRIST-WATCH STRAPS AND THE LIKE. HERBERT HARRY DUKE, Nottingham, England. Filed Feb. 9, 1923. Serial No. 617,975. 8 Claims. (Cl. 24—175.)

1. In buckles for straps and the like, the combination of a buckle frame and a cover member hingedly mounted thereon, said cover member having a downwardly depending flange located at the end remote from the hinge, said flange and one end member of the frame each having co-operating fastening means for retaining the cover in closed position.



1,481,996. TRACK GAUGE AND BRIDLE BAR. OTIS DUNCAN, Birmingham, Ala., assignor of one-third to Dave Goldstein, Birmingham, Ala. Filed Apr. 13, 1923. Serial No. 631,947. 2 Claims. (Cl. 238—51.)

1. A bridle bar and gauge formed by two bars, each having at one end a rail engaging hook and at the other end a slotted portion, one of said slotted portions being bifurcated and adapted to receive the other, and a wedge inserted through the registering slots in said bar ends to hold the assembled bar in place with the desired gauge adjustment, said wedge having one straight side disposed to operatively engage the bifurcated end portion of one bar and having a shoulder disposed to interlock with the bridle bar when it has been adjusted to the maximum permissible track gauge.

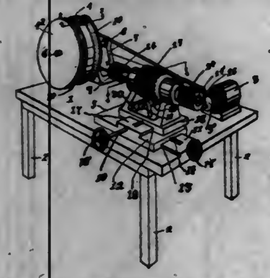


1,481,997. PUMPING JACK. JAMES A. EARLEY, Tyro, Kans. Filed Oct. 30, 1922. Serial No. 597,813. 3 Claims. (Cl. 74—14.)

1. In combination a vertically disposed pump rod, a main beam, an intermediate beam, and an upper beam, a connection between one end of the upper beam and the pump rod, a connection between the rear end of the upper beam and the intermediate beam, a connection between the rear end of the intermediate beam and the rear end of the

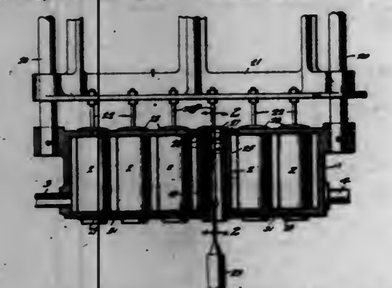
main beam and a connection between the front end of the main beam and the intermediate part of the upper beam.

1,481,998. FLASH-LIGHT STAND. HARRY H. ELDREDGE, East St. Louis, Ill. Filed July 14, 1921. Serial No. 484,797. 1 Claim. (Cl. 248—43.)



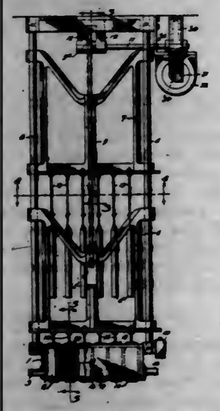
In a device of the character described, a body portion having an opening formed centrally thereof, leg members pivotally connected to the body portion, an extension having a tubular shank positioned in the central opening of the body portion, said shank having a threaded extremity, a nut operating on the threaded extremity to hold the extension in various positions of adjustment, a supporting rod having jaws at its upper end, extending through the extension and tubular shank thereof, and means passing laterally through the extension for securing the rod thereto.

1,481,999. BILLIARD-CUE MACHINE. ORA E. ELZEY, Akron, Ohio, assignor of one-half to H. Earl Williard, Akron, Ohio. Filed Dec. 20, 1920. Serial No. 431,864. 5 Claims. (Cl. 51—95.)



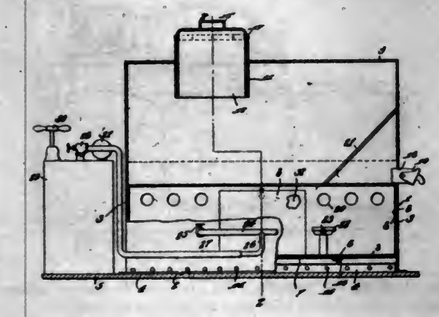
1. A cue tip and stick finishing machine comprising a supporting member, an abrasive wheel rotatably mounted on said member, a motor having belt connection with said wheel, a stick clamp independently adjustable longi-

radially and transversely of the supporting member and operatively connected to said belt, said operative con-



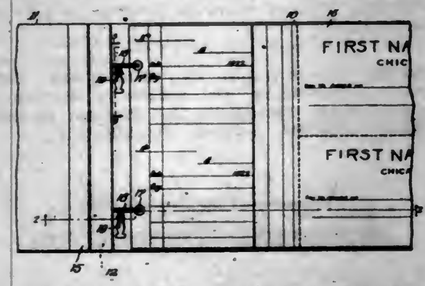
nections including a pinion fixed to said clamp, a worm shaft journaled in the clamp support and a pulley splined on said worm and driven by said belt.

1,482,000. CANDLE-FINISHING DIE. EVALD J. ENGMAN, St. Bernard, Ohio. Filed June 28, 1923. Serial No. 648,191. 11 Claims. (Cl. 18—12.)



1. A candle finishing die, comprising a tubular member having a tapered bore, said bore having a circumferential groove therein between the ends thereof.

1,482,001. CANDLE-FINISHING MACHINE. EVALD J. ENGMAN, St. Bernard, Ohio. Filed June 28, 1923. Serial No. 648,192. 8 Claims. (Cl. 18—12.)

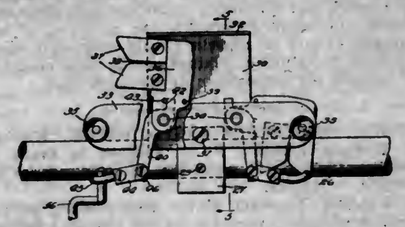


1. In a machine for finishing candles, finishing dies, means for drawing candles through said dies comprising mutually counterbalanced reciprocable members, and means for actuating said members.

1,482,002. TAR HEATER. HAROLD J. FRIEDMAN, Savannah, Ga. Filed July 12, 1922. Serial No. 574,401. 1 Claim. (Cl. 126—343.5.)

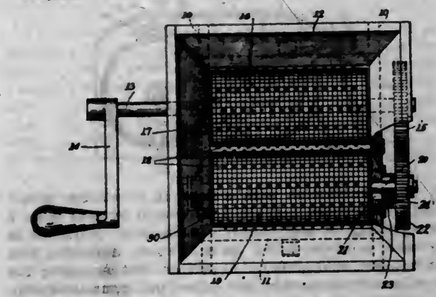
In a device of the class described, a box-like base and a cylindrical tank on the base, the tank being provided at one end with an outlet disposed close to the bottom of the tank, a sleeve in the top of the tank, a closure inserted into the sleeve and a screen extended between said end of the tank and the bottom thereof, the screen serving as a guard for the outlet and being so inclined as to tend to direct floating lumps toward the sleeve, whereby when lumps of material are introduced by way of the sleeve, such lumps will tend to fall upon floating lumps, thereby reducing the spattering of melted material through the sleeve, the sleeve extending an appreciable distance above and below the top of the tank for the double purpose of preventing spattering thruogh the sleeve and affording a large area for frictional contact with the closure.

1,482,003. LOOSE-LEAF CHECK BOOK. GRANT FRINK, Chicago, Ill. Filed June 5, 1922. Serial No. 566,016. 1 Claim. (Cl. 129—23.)



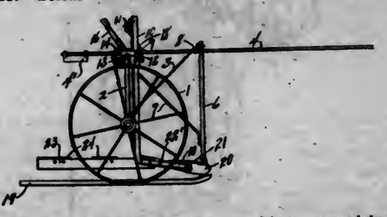
In a loose-leaf book comprising covers, a transverse strip interposed between the rear edges of the same, and having an inside and an outside strip of fabric connecting the same, and a series of leaves of paper having a plurality of correspondingly located apertures near the rear edge thereof, a plurality of longitudinally disposed ring shaped hooks one and each of which is flattened and straightened, and extends longitudinally therefrom and is provided with two integral sharpened spears on each longitudinal edge which are made by slitting said edges, and which puncture and attach the same to the cover.

1,482,004. SPINNING FRAME AND THE LIKE. JOHN P. GARRY, Elmira Heights, N. Y. Filed Apr. 28, 1921. Serial No. 465,236. 12 Claims. (Cl. 117—33.)



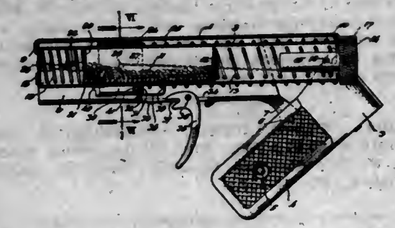
1. In combination with the drawing rolls of a spinning frame or the like, and with the bobbin, a movable thread guide located between the rolls and the bobbin, a stop device for the roving comprising a plate having a guide

opening for the roving, a clamping member pivoted at one end adjacent such opening and movable thereacross to catch and bind the broken roving thereat, and means con-



nected with such thread guide and dependent upon the normal working position thereof for controlling the action of such clamping member.

1,482,005. FRUIT GRINDER. FRANCESCO GIORDANO, Brooklyn, N. Y. Filed Nov. 18, 1922. Serial No 600,705. 2 Claims. (Cl. 100—47.)



1. A device of the class described comprising a portable casing having converging upper walls and an open rectangular body, a pair of shafts rotatably mounted in the walls of the body, said shafts being geared to operate in unison, means for manually actuating said shafts, cylindrical wooden rolls fixed on said shafts, bands at the ends of said rolls, a coarse meshed netting circumjacent said rolls, said rolls being recessed to agree with the openings in the netting, and spring impelled plungers disposed in the mentioned recesses to normally extend outward.

1,482,006. INSECT-EXTERMINATING MACHINE. WILLIAM J. GOUALEY, Weatherford, Tex. Filed July 18 1923. Serial No. 651,265. 3 Claims. (Cl. 43—133.)

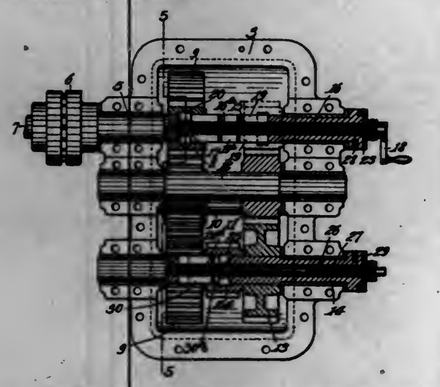
1. An insect exterminating machine comprising a wheeled truck, a gathering pan dragged by said truck, a frame member for said truck, hangers supported on said frame and vertically and laterally adjustable thereon, said hangers having horizontal forward extensions at their lower ends, gatherers attached to said extension and flared outwardly at their forward ends and projecting over said pan at their rear ends, bumper bars attached to said extensions, and a plurality of bumpers attached to each bumper bar and projecting over said pan.

1,482,007. TOY PISTOL. WALTER GRUPKA, Detroit, Mich. Filed Dec. 6, 1923. Serial No. 679,084. 10 Claims. (Cl. 124—13.)

1. In a toy pistol, a barrel, a magazine in said barrel adapted for holding projectiles, a spring actuated projector on said magazine adapted to receive projectiles one at a time from said magazine, a pivoted cocking handle carried by said barrel and adapted for retracting said projector, and a trigger mechanism adapted for holding said projector retracted until manually released.

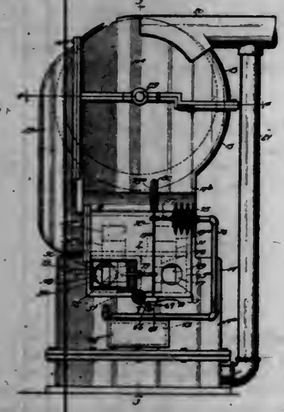
1,482,008. AUTOMOBILE LOCK. CHARLES A. HAISLEY, Richmond, Ind. Filed May 15, 1922. Serial No. 560,911. 1 Claim. (Cl. 251—6.)

An automobile locking means comprising in combination with an exhaust manifold, a body adapted to be secured to the discharge end of the exhaust manifold with a passageway therethrough forming a continuation of the passageway through the manifold, a stem rotatably mounted in said body and extending out therefrom at right angles thereto, a valve shutter carried by said stem and adapted to be turned in said passageway in the body to open and close said passageway, a disc integral with said body and concentric of the stem, a second disc rigidly connected with said stem and contacting flat with the first disc, there being apertures formed through both of said discs with the apertures of one disc adapted to register with the apertures of the other disc, a padlock whose shackle is adapted to be inserted in two of said apertures when they register with each other, means whereby said stem may be turned manually, and means for limiting the rotation of the stem in either direction, all substantially as shown and described.



1,482,009. BELT BUCKLE. JOHN HEBERLING, Rochester, N. Y., assignor to Hickok Mfg. Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 4, 1922. Serial No. 579,617. 2 Claims. (Cl. 24—191.)

2. In a belt buckle, the combination with a buckle frame having a clamping surface thereon and a pivot pin supported on said frame, of a carrier formed from one piece of sheet metal and having a flange extending laterally from one side to provide a clamping device to cooperate with the clamping surface on the buckle frame, said carrier also having two arms formed at the opposite side and bent over the pivot pin to provide bearings and

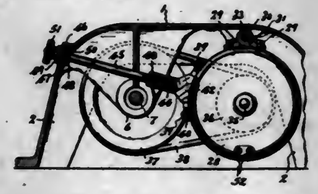


to secure the carrier to the pivot pin, a clamping member pivotally mounted in the bearings of the carrier to cooperate with the clamping surface of the buckle frame on the side of the pivot pin opposite the side on which the first mentioned clamping device is arranged, and means connected with said last mentioned member for effecting its movement toward and from the clamping surfaces on the buckle frame.

1,482,010. CHANGE-SPEED TRANSMISSION FOR LATHE FACEPLATES. JOHN A. HELLSTROM, Wheeling, W. Va. Filed Aug. 10, 1923. Serial No. 656,635. 5 Claims. (Cl. 74—57.)

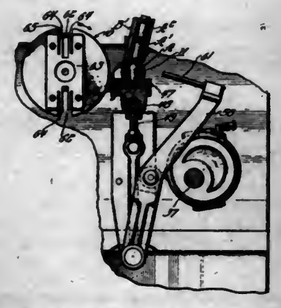
1. A change speed transmission for lathe face plates, comprising a main transmission gear, a main drive shaft, a drive gear shiftable on said shaft, a countershaft, an idler gear fixed on said countershaft, said drive gear being shiftable into driving relation either to said main gear or to said idler gear, a low speed shaft, a gear fixed on said low speed shaft disposed permanently in mesh with said idler gear, a gear shiftable on said low speed shaft into and out of mesh with said main gear, and means carried by each the drive shaft and the low speed shaft whereby the shiftable gears are shifted.

1,482,011. APPARATUS FOR MIXING AIR AND GAS. THERON L. HIGGS, Niles, Mich. Filed May 31, 1919, Serial No. 301,112. Renewed May 31, 1923. 31 Claims. (Cl. 48—180.)



1. An apparatus of the character described comprising, in combination, a compressor of the positive blower type having an inlet and an outlet, a mixing chamber communicating with said inlet, air and gas inlet chambers communicating with said mixing chamber, a closed chamber having a diaphragm, means establishing communication between said compressor outlet and said diaphragm chamber, and means actuated in the movement of said diaphragm to vary the capacity of said compressor whereby to limit the volume of mixture passing therethrough to that required for consumption at any given time.

1,482,012. PROCESS FOR MAKING PAPER. WILLIAM R. HOWARD, Ballston, N. Y., assignor to Frank L. Belknap, Chicago, Ill. Filed Nov. 10, 1920. Serial No. 423,015. 4 Claims. (Cl. 92—49.)



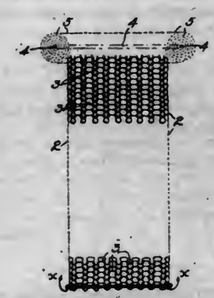
1. A process of treating the felt blanket of a paper machine consisting in passing the blanket through a mixture of clay and water whereby the surface of the blanket is insulated against adhesive substance.

1,482,013. BAND-SAW MACHINE. BENJAMIN E. JARVIS, East Orange, and LEONARD C. LOTZ, Newark, N. J. Filed June 30, 1921. Serial No. 481,531. 3 Claims. (Cl. 64—52.)

1. The combination with a base of an electric motor pivotally suspended beneath and covered by said base, a driving pulley on said motor, a main shaft journaled in said base, a driven pulley on said shaft, a driving belt running over said pulleys, a presser foot engaging the side of said motor toward said driven pulley, an internally threaded shank on said presser foot, an adjusting screw threaded into said shank, means for rotatably journaling said adjusting screw on said base, and said adjusting screw having an external end provided with a finger piece for manipulating the same.

1,482,014. WRAPPING MACHINE. CHARLES W. JOHNSON, Chicago, Ill., assignor to Wm. Wrigley Jr. Company, Chicago, Ill., a Corporation of West Virginia. Filed July 26, 1920. Serial No. 399,051. 7 Claims. (Cl. 107—45.)

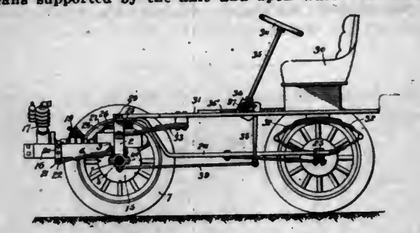
1. In a wrapping machine, the combination of an article conveyor comprising elements acting successively to arrange the articles into successive rows of package form, a valve at the discharge end of said conveyor adapted to receive successive rows of articles, and means co-acting with said valve for discharging the rows successively from said valve.



7. In a wrapping machine, the combination of a feed hopper adapted to receive a quantity of lozenge shaped articles, a conveyor communicating with said hopper and adapted to arrange the articles uniformly in transverse rows of package form, a cylindric valve member mounted at the discharge end of said conveyor, and provided with an article receiving slot adapted in one position of the valve to receive a row of the articles, and in another position to close the end of said conveyor, and a rocker arm provided with a series of push rods adapted to engage each of the articles in said last mentioned position of the valve, and to impel the same from said valve.

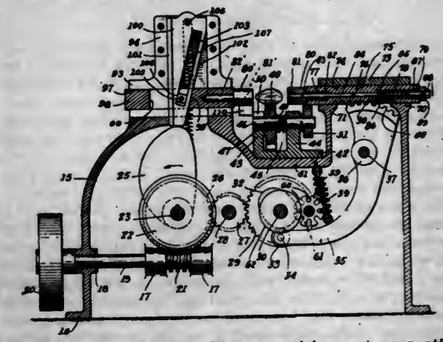
1,482,015. SHEET-METAL RECEPTACLE. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Whitaker-Glessner Company, a Corporation of West Virginia. Filed Dec. 17, 1921. Serial No. 522,989. 2 Claims. (Cl. 220—72.)

1. A sheet-metal can of the character described comprising a downwardly tapered body having vertical corrugations which increase in depth and decrease in width toward its lower end whereby reduction in diameter of said body is effected, said corrugations being terminated above the lower edge of said body, the uncorrugated lower edge portion having the surplus metal thereof laid over in flattened plait-like folds and being flexed at a suitable point in internal bead form to provide an internal downwardly facing shoulder and an external upwardly facing shoulder, a bottom fitted in underlying seated relation to the internal shoulder, and a reinforcing chime ring disposed in supporting relation to said bottom, said ring embracing said edge portion below said bead and having its outer edge turned inward into overlying relation to the external shoulder.



1,482,016. SCOURING IMPLEMENT. RUSSELL B. KINGMAN, Orange, N. J. Filed May 31, 1923. Serial No. 642,530. 2 Claims. (Cl. 15—208.)

1. A scouring implement comprising a tubular metallic fabric member spirally rolled upon itself in directions from both end-portions toward the central portion of the said member so as to provide adjacent annular bodies, each body forming an elastic spongiform mass, a non-stretchable restraining means within said rolled masses, and means for securing said rolled masses together.

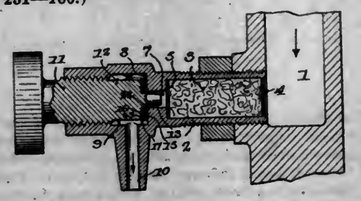


1,482,017. AUTOMOBILE PROPELLING MECHANISM. JOSEPH P. LEGGETT, deceased, late of Carthage, Mo., by Ida M. Leggett, administratrix, Carthage, Mo. Filed Nov. 12, 1921, Serial No. 514,462. Renewed Dec. 5, 1923. 19 Claims. (Cl. 180—89.)

1. In an automobile propelling mechanism, the combination with a front axle and carrying wheels supporting the axle, of a motor frame pivoted on a horizontal transverse axis on said axle, vertically resilient means supported by the axle and upon which the frame

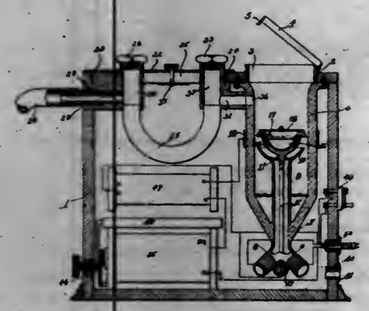
is supported at a point forward of the axle, a motor carried by the frame forward of the axle, and means actuated by the motor for driving said carrying wheels, substantially as set forth.

1,482,018. NUT-CRACKING MACHINE. CHESTER S. LEONARD, Lansdowne, Pa. Filed Nov. 13, 1922. Serial No. 600,700. 10 Claims. (Cl. 146—12.)



1. A nut cracking machine comprising nut supporting means, an anvil and a ram plunger operable in the plane of the supported nut at opposite ends thereof, means for reciprocating said ram, a slide having an angular edge movable transversely in said anvil, resilient means for actuating said slide in one direction, a cam directly retracting said slide, said slide having an oblique slot parallel with its angular edge, and a block carried by said anvil engaging the slot in said anvil to retract the same.

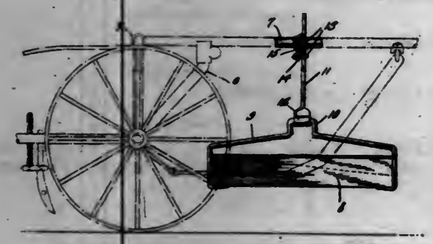
1,482,019. [WITHDRAWN.]



1,482,020. [WITHDRAWN.]

1,482,021. VALVE. ORTON C. LITTLE, Menasha, Wis. Filed July 16, 1919. Serial No. 311,143. 10 Claims. (Cl. 251—160.)

6. A valve head comprising a set of apertured disks, and means for bypassing a limited amount of fluid thru an intermediate disk whereby the valve head can never entirely shut off the fluid supply.

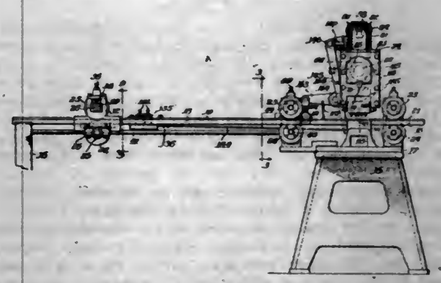


1,482,022. AIR-PURIFICATION APPARATUS. HERMAN A. LOOSE, Cleveland, Ohio, assignor to William E. Trego, Cleveland, Ohio. Filed Sept. 19, 1919. Serial No. 324,910. 6 Claims. (Cl. 167—3.)

2. An apparatus of the class described comprising an internal and an external electrode adapted to receive an electrical discharge therebetween, said internal electrode being provided with a cup-shaped member, said cup-shaped member being provided with a series of openings about its periphery, a tubular member surrounding said internal electrode for conducting heated air thereto and an insulating member interposed between said electrodes and formed integral with said tubular member.

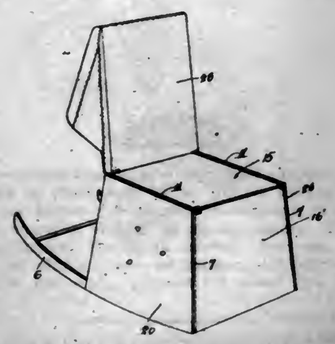
3. An apparatus of the class described comprising a case, an insulating member supported in said case and provided for the plurality of electrodes adapted to receive an electrical discharge therebetween, means for supporting a liquid adjacent said electrodes a relatively large opening in said case for emitting the products of said discharge and the vapors of said liquid to the room, means for closing said opening, and means for delivering the products of said discharge through a smaller opening for individual use.

1,482,023. BOLL-WEEVIL MACHINE. WILLIAM B. MANN, Sr., Marianna, Ark. Filed July 31, 1923. Serial No. 654,879. 1 Claim. (Cl. 43—133.)



In a device of the character described, a cultivator frame, pans supported by the cultivator frame, each of said pans including a bail, said bail having offset portions, curved arms having loops formed at the lower ends thereof and adapted to accommodate the offset portions of the bails, a bar disposed above the pans, means for connecting the arms to the bar to permit of lateral and vertical adjustment of the arms and pans supported thereby.

1,482,024. GOLF-TEE MOLD. WILLIAM G. MUNN, Louisville, Ky. Filed Sept. 20, 1922. Serial No. 589,491. 3 Claims. (Cl. 46—4.)



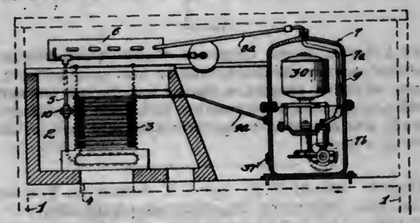
1. A golf tee mold formed with spring split side walls of conical shape, open at each end, the larger end arranged to receive the material for the tee and the other the thumb of the operator, and a stop at the smaller end, for the purpose specified.

1,482,025. CUTTING AND PUNCHING MACHINE. ALEXANDER J. NEUHENGEN, Chicago, Ill. Filed June 8, 1921. Serial No. 474,657. 17 Claims. (Cl. 164—15.)

1. In a cutting and punching machine, the combination of cutting and punching mechanism, continuously operating stock feeding means, a finger normally disposed in the path of the advancing stock, driving means for said cutting and punching mechanism controlled by said finger, and means actuated by said driving means for moving said finger into inoperative position.

1,482,026. FIRE ESCAPE. RICHARD D. NILSON, Denver, Colo. Filed June 24, 1921. Serial No. 480,061. 1 Claim. (Cl. 227—9.)

A device of the class described comprising an elongated frame structure adapted to form a chair, said frame including a series of pivotally connected frame bars, loosely connected panels mounted upon the frame structure, hook members mounted on the frame structure to support the same from a window sill, said structure including side

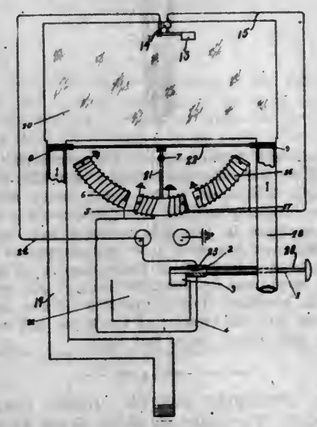


panels, cross arms extending transversely between the panels and connected thereto to form a reel, and a flexible ladder attached to the ends of two of the frame bars and normally wound upon the said reel and adapted to unwind therefrom when said structure is open.

1,482,027. TOOTHBRUSH. WILLIAM OCHSE, San Antonio, Tex. Filed May 14, 1923. Serial No. 638,805. 2 Claims. (Cl. 15—167.)

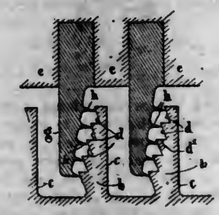
1. A tooth-brush including a back provided upon one face with outer rows and an intermediate row of bristle tufts, said rows of tufts extending in contiguous approximately parallel relation longitudinally of the back, the free ends of the bristle tufts of the outer rows being trimmed flat to normally reside on the same plane and the tufts of the intermediate row being trimmed to taper outwardly of the back beyond the flat face of the outer rows.

1,482,028. ARTIFICIAL-REFRIGERATING APPARATUS. EARL P. OSWALD and CLARENCE M. HOLLEY, Detroit, Mich., assignors to Utility Compressor Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 9, 1919. Serial No. 329,469. 6 Claims. (Cl. 62—115.)



1. In artificial refrigerating apparatus, the combination with the compression and expansion coils for the refrigerant, of a chamber sealed to atmosphere into which the expansion coils discharge, a pump and a motor entirely housed within the chamber and subject to the cooling influence of an expanded refrigerant, said pump taking its supply of refrigerant from the chamber and discharging the same to the compression coils exteriorly of the chamber, the said chamber providing an oil receptacle, a driving connection betwneen the pump and motor immersed in the said oil, a conduit connecting the compression and expansion coils, and an expansion valve in the last named conduit.

1,482,029. WARDROBE-TRUNK-DRAWER RETAINER. RICHARD W. OWEN, Jr., Chicago, Ill., assignor, by mesne assignments, to The Indestructo Trunk Corporation, Mishawaka, Ind., a Corporation of Indiana. Filed Nov. 8, 1920. Serial No. 422,733. 2 Claims. (Cl. 45—94.)

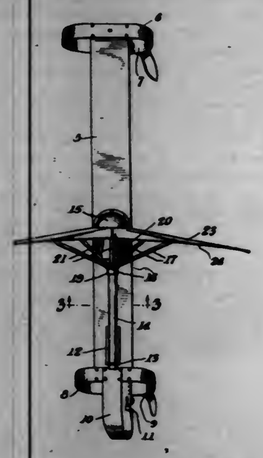


1. In drawer retaining and locking devices, a series of drawers, a removable rigid member adapted to pass in front of the drawers to be held, means for holding the lower end of said member against sidewise movement, and means comprising a hook on the upper end of said member to pass over and down inside one of the drawers, said drawer being locked to retain said member in locking position by its interposition between the drawer and its support.

1,482,030. OIL PUMP. JOE C. PALMER, Fort Worth, Tex. Filed May 8, 1923. Serial No. 637,472. 2 Claims. (Cl. 221—100.)

1. A liquid feeding device comprising a tank provided with inlet and discharge valves, two stationary magnets and a swinging magnet positioned between and spaced from said stationary magnets, a lever carrying said swinging magnet, a sliding bar provided with lugs projecting in the path of the short end of said lever, means for energizing one of said magnets and said swinging magnet for actuating said lever to open the inlet valve and to close the discharge valve, and means to be actuated by liquid accumulating in said tank for energizing the other stationary magnet and said swinging magnet for actuating said lever and bar to close said inlet valve and to open said discharge valve.

1,482,031. PACKING FOR ROTATING BODIES. CHARLES ALGERNON PARSONS and ALFRED QUINTIN CARNEGIE, Newcastle-on-Tyne, England; said Carnegie assignor to said Parsons. Filed Jan. 18, 1923. Serial No. 613,516. 4 Claims. (Cl. 286—10.)



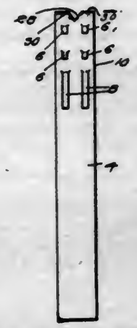
1. In combination a pair of relatively rotatable coaxial bodies, barrier means associated with one of said bodies, said barriers consisting of steps having rises and treads, a plurality of knife edges all disposed parallel to the axis of rotation of said bodies, carried by the other body and engaging the rises of said steps, the points of contact between adjacent knife edges and rises lying in a line at an angle other than a right angle to the axis of rotation of the bodies.

1,482,032. THERMOSTATIC CIRCUIT CLOSER. FRANS PAWLIK, Rorschach, and KARL ALTHERR, Horn, Switzerland, assignors to Jacob Schmidheiny, Hierbrugg, St. Gallen, Switzerland. Filed Mar. 15, 1921. Serial No. 452,624. 2 Claims. (Cl. 200—142.)

1. An electric contact device for automatic temperature alarm devices, in combination, a cartridge consisting of a metallic tube closed at one end, a fusible mass being an electric insulator melting at a predetermined temperature and enclosed in said tube, a metal body and metal balls arranged inside said tube and supported by said fusible mass and deprived of their support on the mass becoming fused, and an insulated contact pin projecting through an air-tight closure provided at the other end of said tube into the interior of the latter and co-operating with said metal balls and body.

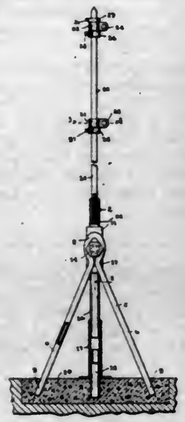
1,482,033. SWIMMING DEVICE. JOSEPH PUKEL, New York, N. Y. Filed June 11, 1923. Serial No. 644,609. 2 Claims. (Cl. 9—21.)

1. A swimming device comprising a strip of material and means associated therewith to secure the same to a person's lower limb above the foot, a bar fixed on said strip to extend at a spaced distance parallel therewith, a shield fixed to said strip above said bar, ribs pivoted within said shield, a runner on said bar, stretched rods engaging said ribs with the runner, a covering over said ribs, and means for limiting the folding of said ribs against said bar.



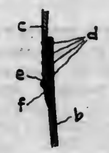
1,482,034. SANITARY CHICKEN PERCH. DANIEL J. REEN, Clyman, Wis. Filed Sept. 11, 1922. Serial No. 587,500. 3 Claims. (Cl. 119—25.)

1. A sanitary perch for fowls comprising a tubular member for holding an insecticide, said member being provided with perforations; an absorbent strip secured to said tubular member over said perforations, adapted to receive said insecticide therefrom and distribute it over



the surface of said tubular member; and a foot-rest member of a width greater than said absorbent strip also secured to said tubular member.

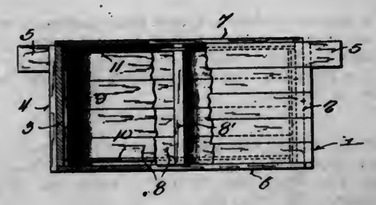
1,482,035. CLIP AND HANDLE FOR CIGAR BOXES. CHARLES C. ROBERTS, Ansonia, Conn. Filed Oct. 21, 1922. Serial No. 596,033. 3 Claims. (Cl. 217—61.)



1. A device of the character described, comprising a resilient sheet metal clip having an arm provided with a series of biting tongues, a spring eye formed therewith having an open loop terminating in a knife edge directed toward said arm, and means formed on said arm for supporting a card.

1,482,036. FLAGPOLE. LOUIS H. SCHABLOW, New Berlin, Wis. Filed Aug. 28, 1922. Serial No. 584,782. 3 Claims. (Cl. 116—173.)

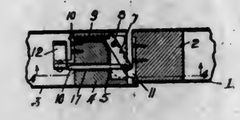
2. In a device of the class described, a rigid support; a socket member pivotally carried by said support; an upwardly extending pole carried by said socket member; a downwardly extending rod member also carried by said socket; a rigid post beneath said support; and means slidably carried by said downwardly extending member adapted to engage said post for locking the parts in a substantially vertical position.



1,482,037. FOOTWEAR. PEARL Y. SMILEY and FREDERICK W. KNIBBS, Kitchener, Ontario, Canada. Filed May 13, 1922. Serial No. 560,619. 2 Claims. (Cl. 36—57.)

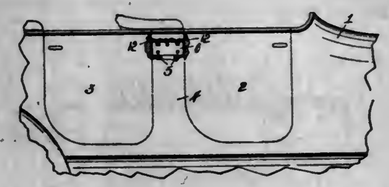
1. In a boot of the type described consisting of a rubber lower portion the exterior of which constitutes the exterior of the boot at that part, a leather upper having its lower edge overlapping the exterior surface of the rubber portion adjacent the upper edge thereof, and a rubber bead surrounding the boot and having its top edge abutting the edge of the overlapping portion of the leather upper, said bead forming an integral part of the rubber lower portion.

2. In a boot of the type described consisting of a rubber lower portion the exterior of which constitutes the exterior of the boot at that part, a leather upper having its lower edge overlapping the exterior surface of the rubber portion adjacent the upper edge thereof, and a rubber bead surrounding the boot and having its top edge abutting the edge of the overlapping portion of the leather upper, said bead being of increased thickness at its top edge and tapered towards its bottom edge and forming an integral part of the rubber lower portion.



1,482,038. SHIPPING CRATE. LESTER SMITH, Port Washington, Wis., assignor of one-fourth to Delos H. Smith, one-fourth to Delia B. Smith, and one-fourth to Oliver H. Smith, all of Port Washington, Wis. Filed Oct. 12, 1922. Serial No. 594,064. 1 Claim. (Cl. 217—5.)

The combination of an outer shipping container having side, bottom and end walls and a top, and an inner container having a bottom provided with transverse cleats to space it from the outer container bottom, and having side walls extending the full length of the interior of said outer container and contacting with the ends thereof, transverse cleats secured externally of the side walls of said inner container, said inner container having end walls spaced from the end walls of said outer container and located between the side walls of said inner container, and a removable top for said inner container snugly fitting within said outer container and contacting with the end and side walls thereof and provided with cleats upon its upper side, whereby the top of said inner container is held in position when the first mentioned top is in position.

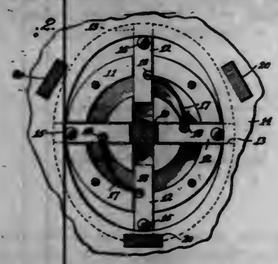


1,482,039. DOOR LOCK. HARRY N. SORENSON, Toledo, Ohio. Filed Nov. 12, 1921. Serial No. 514,450. 2 Claims. (Cl. 292—223.)

1. The combination with a door and jamb, of a channel plate set into the free edge of the door with its channel extending transversely thereof, a catch lever of bar form pivoted in the channel plate for swinging movements toward and away from the jamb and adapted to stand at an incline to the door edge with one edge projecting beyond such edge, a spring acting on one end of the lever to normally retain it in said projecting

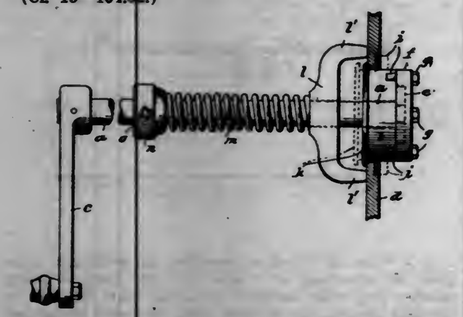
position, operating means connected to the other end of the lever, and a catch lug fixed to the jamb and having a catch surface for engagement with the outer end of the catch lever, such surface being inclined and disposed at substantially a right angle to the longitudinal axis of the catch lever when in normal projected position.

1,482,040. DOOR HINGE. HARRY N. SORENSON, Toledo, Ohio. Filed Oct. 24, 1921. Serial No. 509,886. 6 Claims. (Cl. 16—135.)



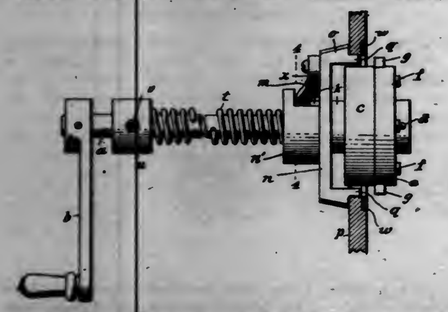
1. A hinge of the class described comprising a jamb-plate for attaching to a side of a door jamb, a socket member projecting inwardly from the plate adjacent to the door opening end thereof, with its socket facing and open to the door opening, the socket member having an opening at the top of its plate end and having a pivot receiving hole in its bottom portion below such top opening, and an L-shaped projecting hinge member for attaching to a door edge and having its outer angled end lying in the socket member longitudinally thereof when the projecting member is in closed position, said projecting member having a pivot projecting downward from its free end portion into the hole of the socket member, the projecting member being removable upward from engagement with the socket member through its top opening when swung to a predetermined open position relative to the socket member.

1,482,041. DOOR BUFFER. HARRY N. SORENSON, Toledo, Ohio. Filed Dec. 12, 1921. Serial No. 521,597. 5 Claims. (Cl. 16—86.)



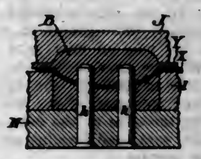
1. In a buffer of the class described, a socket member formed of sheet metal having successive U-shaped loops to provide a center loop for receiving the projecting member of the buffer and side loops for receiving buffer members.

1,482,042. TOOL FOR CLEANING HANDHOLES. HARRISON L. STALEY, Richmond, Va. Filed June 30, 1921. Serial No. 481,646. 9 Claims. (Cl. 15—104.02.)



2. In a tool for the purpose set forth, a shaft carrying a tool-head, a plurality of tools carried by said head, and means for connecting the adjacent tools to cause one to move outwardly when the other is forced inwardly.

1,482,043. GASKET-SEAT-CLEANING TOOL. HARRISON L. STALEY and FRANK J. ROCK, Richmond, Va. Filed Apr. 6, 1920. Serial No. 371,649. 15 Claims. (Cl. 15—104.02.)

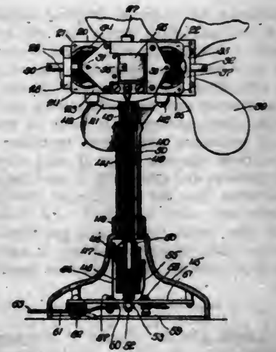


15. In a tool for the purpose set forth, a rotatable shaft, a cutter-head freely mounted on said shaft and having grooves therein, cutters slidingly movable in said grooves, means connected to said shaft and engaging said cutters so as to slidingly move the same on the rotation of said shaft, and means for holding said cutter-head stationary temporarily when said shaft is rotated.

1,482,044. GASKET-SEAT-CLEANING TOOL. HARRISON L. STALEY, Richmond, Va. Filed Apr. 6, 1920. Serial No. 371,650. 10 Claims. (Cl. 15—104.02.)

1. In a tool of the class described, a circular rotary cutter-head, a shaft carrying the cutter-head, means whereby the cutter-head is held to its work, and means within the head whereby the cutting-edges of the cutter are caused to describe a non-circular path during cutting action, said means embodying a cam-member having partial rotatability independently of the head to permit insertion of the head into the hand-hole, substantially as set forth.

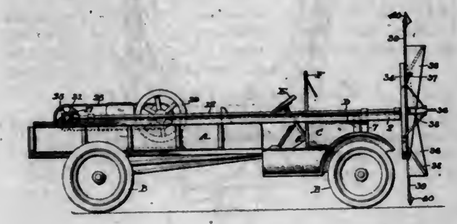
1,482,045. METHOD OF MAKING BUTTON COLLETS. EMORY WARD STEARNS, Roslyn, N. Y., assignor to Parker, Stearns & Company, Brooklyn, N. Y., a Corporation of New York. Original application filed June 30, 1922, Serial No. 572,045. Divided and this application filed Apr. 19, 1923. Serial No. 633,127. 1 Claim. (Cl. 18—59.)



The herein described method of forming rubber button members which consists in placing between suitable mold members a sheet of cloth and a sheet of rubber, pressing the mold section together to give form to the button members while connected by a thin sheet, then vulcanizing and subsequently cutting the button members from the sheet and finishing them in the usual way.

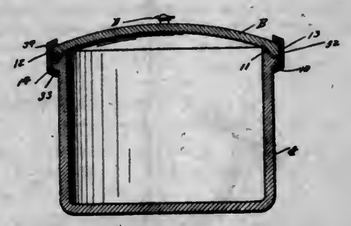
1,482,046. BUTTON COLLET. EMORY WARD STEARNS, Roslyn, N. Y., assignor to Parker, Stearns & Company, Brooklyn, N. Y., a Corporation of New York. Filed June 30, 1922. Serial No. 572,045. 5 Claims. (Cl. 24—245.)

4. A button comprising a base plate carrying a headed post and a flanged rubber button member having stiffening material therein held on the base plate by the post with the stiffening material extending under the headed portion of the post.



1,482,047. ELECTRIC FAN. ARTHUR STEINBACH, Chicago, Ill., assignor of one-half to Joseph Weber, Chicago, Ill. Filed Nov. 3, 1921. Serial No. 512,427. 1 Claim. (Cl. 172—36.)

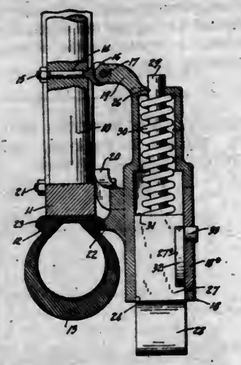
An electric motor comprising two parallel flat plates having confronting concave ends at each end and joined together near their mid-portions by a magnet core; a coil surrounding the core; an armature between the



plates at each end thereof; an electric circuit including both armatures and the coil in series and a support, upon which the motor is rotatably pivoted, in axial alignment with the core.

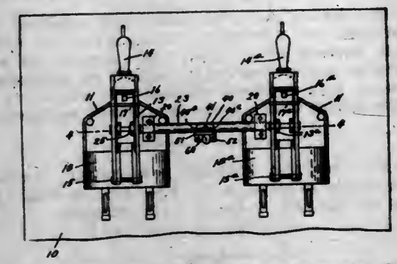
1,482,048. SNOW REMOVER. FRED D. STEPHENSON, Osceola, Iowa. Filed May 28, 1923. Serial No. 642,135. 6 Claims. (Cl. 37—43.)

1. A snow remover comprising a frame adapted to be supported by a truck, shafts extending longitudinally thereof, means for rotating said shafts in opposite directions, a circular frame carried by each of said shafts in front of the truck, each circular frame having two fan blades carried thereby side by side and extending beyond the circumference of the frame, each blade tapering from its outer wide portion to the opposite side of the frame, the two blades of each frame tapering in opposite directions, and cutting elements carried by the frame and extending outwardly farther than the fan blades.



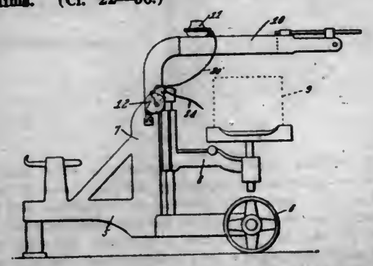
1,482,049. CLOSURE CONSTRUCTION FOR PRESSURE COOKERS. NELS E. SWANSON, Denver, Colo., assignor to Abram G. Cox, Denver, Colo. Filed June 3, 1922. Serial No. 565,598. 3 Claims. (Cl. 220—61.)

1. In a receptacle in which a pressure occurs, a closure seated on said receptacle along a surface inclined downwardly and outwardly, the lower edge of the closure being out of contact with the receptacle, the closure having a cam surface on one side of the seat, the receptacle having a cam surface on the other side of the seat, a fastening element of channel formation surrounding and intimately engaging the outer surfaces of the receptacle and closure and having cam surfaces in engagement with said cam surfaces, and the fastening element being adjustable according to the pressure within the vessel and the degree of contact of the receptacle and closure at their seat.



1,482,050. MUD LUG FOR WHEELS. LEONARD W. Timberlake, Oskaloosa, Iowa. Filed Oct. 21, 1922. Serial No. 596,010. 5 Claims. (Cl. 301—51.)

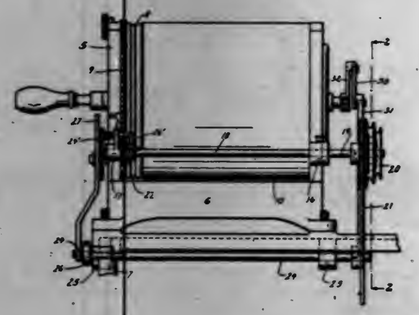
4. In combination with a wheel having a demountable rim, members pivoted to the wheel and embodying portions engaging the rim in one position to prevent removal of the rim, means for securing the members in



such position, and plungers carried by the members and extensible therefrom to engage with the ground.

1,482,051. SWITCH INTERLOCK. HERBERT F. TURNER, Cambridge, Mass., assignor to Sears B. Condit, jr., Boston, Mass. Filed Jan. 2, 1920. Serial No. 348,866. 13 Claims. (Cl. 200—42.)

1. An electric switch having a movable member formed with a locking aperture, a stationary member, a locking-bolt movably carried thereby arranged to be moved manually into and also out of the aperture in said movable member to lock said movable member against or unlock it for operation and means to lock said locking bolt against movement to said stationary member in both positions of said locking bolt.

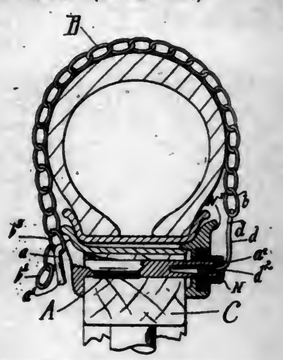


1,482,052. SWITCH. ROY E. VAN HOOSEAR, Hillsdale, Mich. Filed Nov. 4, 1920. Serial No. 421,740. 2 Claims. (Cl. 22—56.)

1. In a moulding machine, a frame, a mould support forming a part of the frame, a movable arm mounted above the mould support, said movable arm adapted to support a pattern, a switch member including stationary

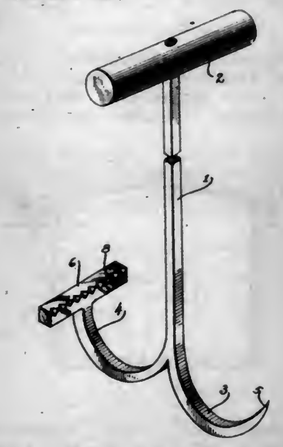
contact members, and a pair of movable contact members, means for connecting the movable contact members and the pattern supporting arm, a vibrator carried by the pattern supporting arm, and said movable contact members adapted to engage the stationary contact members to complete a circuit to the vibrator to move the pattern supporting arm.

1,482,053. MEANS FOR DRIVING MULTIGRAPH APPARATUS. WALTER E. VERKLER, Chicago, Ill. Filed Oct. 10, 1921. Serial No. 506,841. 6 Claims. (Cl. 101—243.)



1. In a driving means for a multigraph apparatus, the combination with a revoluble printing drum, of a transversely disposed power driven shaft mounted on said apparatus; and driving means mounted for longitudinal movement with respect to the shaft and adapted to be directly applied to said drum, substantially as described.

1,482,054. DUPLEX WRITING IMPLEMENT. ANICETO VISITACION, Brooklyn, N. Y. Filed Apr. 18, 1922. Serial No. 555,103. 3 Claims. (Cl. 120—42.)

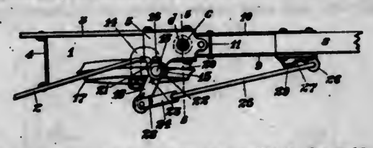


1. A writing implement comprising a body having a pair of longitudinally extending parallel bores of unlike sectional area said body having an elongated slot near its operative end therein, a stationary marking point contained in one of the bores, a movable marking point in the other bore, means for projecting said movable marking point into position to obstruct the point of the stationary element, and a bowed spring fixed in the mentioned slot for holding said movable point in either of its adjusted positions.

1,482,055. ANTISKID CHAIN. OLIVER BRUCE WALKER, Cincinnati, Ohio. Filed Jan. 7, 1921. Serial No. 435,582. 7 Claims. (Cl. 152—14.)

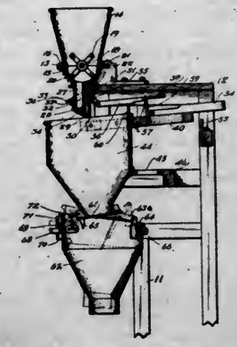
1. The combination of an automobile wheel-structure having a bore in one side, a hook having an open throat mounted on the opposite side of the wheel, an anti-skid chain having links, any one of which adjacent to one end is adapted to be mounted on the hook, and a spring clip mounted on the other end of the chain and adapted to engage in the bore in the wheel-structure.

1,482,056. HOOK. CHARLES R. WATKINS, Memphis, Tenn. Filed May 10, 1923. Serial No. 638,037. 1 Claim. (Cl. 294—26.)



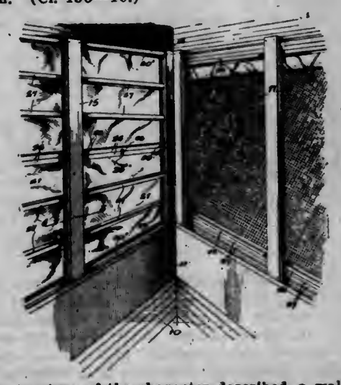
A tool of the class described comprising a handle, a shank bifurcated at its outer free end and forming a pair of arms, said arms being bent in opposite directions, one of said arms provided with a T-head and having serrations on its upper edge.

1,482,057. TONGUE TRUCK. FREDERICK D. WILSON and OSCAR F. CARLSON, Moline, Ill., assignors to Deere and Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 15, 1916, Serial No. 115,032. Renewed Nov. 6, 1920. Serial No. 422,384. 14 Claims. (Cl. 280—82.)



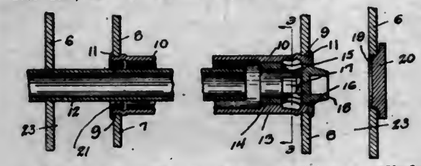
1. The combination of a draft device arranged to normally exert draft on a central draft line and laterally movable to exert draft on lines inclined to the line aforesaid, a support connected to the draft device, a ground engaging steering wheel oscillatable relatively to the support from

a normal central line to a predetermined limit, and a power transmitter with two inter-engageable elements, one carried by the frame and the other carried by the draft



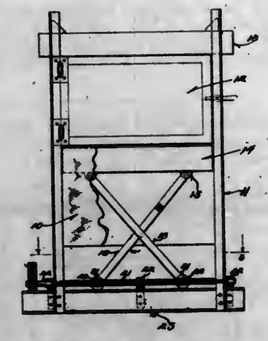
device and arranged to positively oscillate the said wheel relatively to the support through part of the path to said limit, the wheel being freely oscillatable through the remainder of the path to said limit.

1,482,058. WEIGHING DEVICE. RICHARD J. ZANONE, Louisville, Ky., assignor to Vogt-Zanone Scales Company, Louisville, Ky., a Corporation of Kentucky. Filed Mar. 20, 1922. Serial No. 545,168. 8 Claims. (Cl. 249—48.)



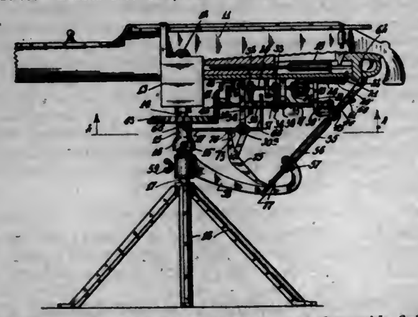
1. In a weighing machine, a storage hopper having a pair of outlet passages, a weighing hopper mounted to move downwardly under the influence of weight therein and positioned below said passages, a pair of gates each controlling a respective passage, a toothed ratchet operatively connected to said gates to hold them open, and a pawl member on the weighing hopper positioned to release one and engage the next tooth of said ratchet as the weighing hopper moves downward.

1,482,059. CURTAIN. SAMUEL B. ZIMMER, El Centro, Calif. Filed Sept. 15, 1921. Serial No. 500,750. 1 Claim. (Cl. 156—10.)



In a structure of the character described, a wall having an elongated opening, a plurality of studs arranged in parallel relation across the opening and in vertical relation to said wall, a board secured upon the inner edge of each stud and projecting from each side thereof, and a strip secured upon each side of each of said studs and adapted to cooperate with the associated extended board portions to provide guideways for the purpose described.

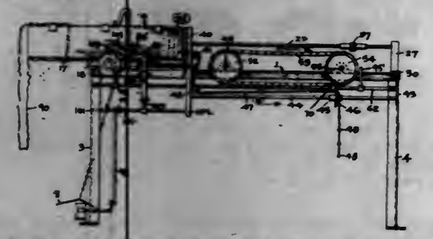
1,482,060. BOILER-PIPE CONNECTION. VITTORIO ANDRIOLI, Schenectady, N. Y. Filed Sept. 18, 1920. Serial No. 411,042. 5 Claims. (Cl. 137—76.)



1. A closure cap for a pipe, comprising a cylindrical member having means at its inner end for engaging the interior of the pipe, and being tapered at its outer end to form a wedge fit with the end of the pipe.

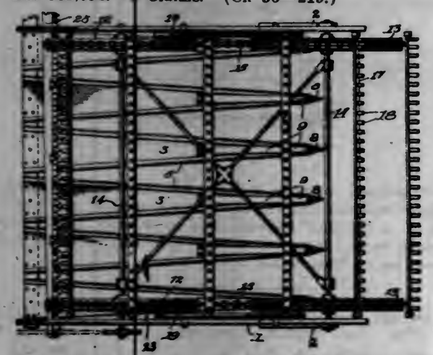
1,482,061. THRUST-BAR PRESS. OTTO ALBERT, Milwaukee, Wis., assignor to Galland-Henning Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 1, 1921. Serial No. 512,086. 1 Claim. (Cl. 100—11.)

In a press, a platen, a thrust bar therefor, having legs, spacer rods for supporting the lower ends of said legs, a screw, a traveler thereon rigid with said spacer rods, rollers on said spacer rods, guide rods and sleeves on said guide rods affixed to said spacer rods.



1,482,062. AUTOMATICALLY-SWINGING MACHINE GUN. CARL BABITS, Catasauqua, Pa. Filed May 7, 1923. Serial No. 637,096. 3 Claims. (Cl. 89—2.)

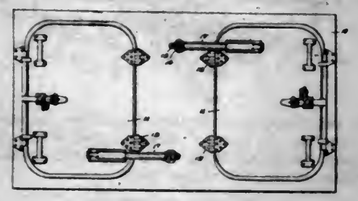
1. In a machine gun, a gun proper, a reciprocable firing pin therein, a support therefor, and means controlled by the said firing pin for oscillating said gun on said sup-



port, said means being adjustable to cause vertical or horizontal oscillation of the gun as may be desired, and including a shaft adapted by longitudinal shifting movement to cause selective operation of the respective oscillating means.

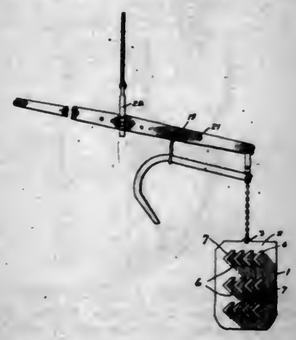
1,482,063. MACHINE FOR STUFFING CUSHIONS AND THE LIKE. CHARLES H. BAER, San Francisco, Calif., assignor of thirty-three and one-third per cent to Arthur L. Holmes, San Francisco, Calif. Filed June 1, 1920. Serial No. 385,587. 2 Claims. (Cl. 226—46.)

2. A device such as described comprising an open-ended container; a plunger within said container; an endless belt adjacent said plunger and means on said plunger for engaging said endless belt and to move said plunger forwardly and rearwardly and to disengage therefrom at a predetermined point on the rearward stroke, the part of said means causing rearward movement being adjustable for regulating the length of the forward stroke of said plunger.



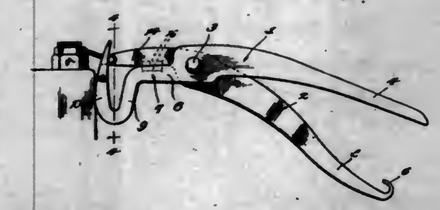
1,482,064. WEED-CUTTING DEVICE. HUGH STEPHEN BEATON, Olympia, Wash. Filed Aug. 18, 1922. Serial No. 582,794. 4 Claims. (Cl. 56—219.)

1. An attachment of the character described comprising a series of relatively spaced longitudinal outwardly tapering gathering finegrs, cutting blades secured to the sides of said fingers and extending laterally from their marginal portions, teeth secured to the forward ends of each of said gathering fingers having cutting edges formed on their opposite sides corresponding to the arrangement of the cutting blades and aligning therewith and means supported above said fingers and movable rearwardly over the same for directing matter into engagement with said blades.



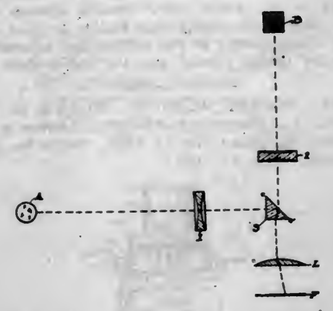
1,482,065. LID PROP. LOUIS B. CRAIG, Davenport, Iowa. Filed Nov. 3, 1920. Serial No. 421,605. 7 Claims. (Cl. 292—262.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A lid prop, including a bracket; consisting of a plate bent to form a loop, a block positioned in the loop and formed with a grooved upper end, and a key for fastening the block in the loop; a prop pivoted in the eye having resilient legs formed with angularly disposed ends, a guide plate having longitudinal grooves at the edges thereof for the reception of the angularly disposed ends of the legs with a free sliding fit, portions formed



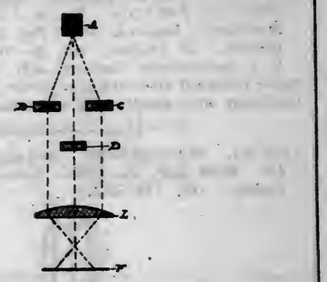
on the plate to provide notches into which the legs may spring and an abutment at one end of the plate to prevent passage of the angled ends of the legs from the grooves.

1,482,066. GALVANIZING RACK. LEONARD T. CURTIS, Burlingame, Calif. Filed Mar. 7, 1921. Serial No. 450,442. 9 Claims. (Cl. 91—12.6)



1. In means for simultaneously handling a plurality of metal bars for hot galvanizing, a plurality of metal plates with correspondingly spaced similar perforations in each adapted to receive therethrough said metal bars, means for suspending said plates vertically on edge and spaced horizontally from one another for supporting the bars horizontally arranged and projecting therethrough.

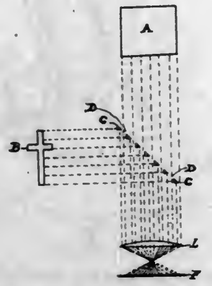
1,482,067. TOOL FOR EXTRACTING COTTER PINS AND THE LIKE. ALFRED DANIELSON, Black River Falls, Wis. Filed June 13, 1922. Serial No. 568,075. 3 Claims. (Cl. 29—86.2.)



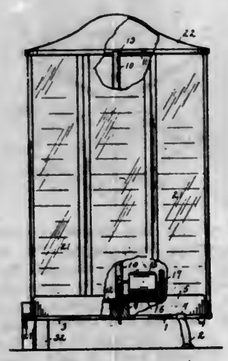
1. In a tool for extracting fastening elements, pivoted members having coacting jaws, one of said jaws having a notch in its end and having a face substantially concentric to the pivot and the other jaw being provided with an element for engagement with the fastening element to be extracted and extending in a direction transverse with relation to the said face of the first-mentioned jaw and the notch therein and movable in an arc substantially concentric to the said pivot.

1,482,068. METHOD AND APPARATUS FOR PRODUCING MULTIPLE AND MINIATURE IMAGE EFFECTS IN PHOTOGRAPHY. LEON F. DOUGLASS, Menlo Park, Calif. Filed Aug. 14, 1922. Serial No 581,785. 8 Claims. (Cl. 95—18.)

1. The method of producing a plurality of miniature images of a plurality of objects on a photographic film which comprises, interposing a double concave lens in the path of the light rays from one of said objects and refracting said light rays to a light-reflecting prism positioned to reflect an image of said object through a camera lens onto said film, and simultaneously, interposing another double concave lens of less curvature than the first mentioned concave lens, in the path of the light rays from another of said objects, and refracting the said light rays through the said camera lens onto the photographic film.



1,482,069. METHOD AND APPARATUS FOR PRODUCING MULTIPLE AND MINIATURE IMAGE EFFECTS IN PHOTOGRAPHY. LEON F. DOUGLASS, Menlo Park, Calif. Filed Aug. 14, 1922. Serial No. 581,786. 9 Claims. (Cl. 88—1.)

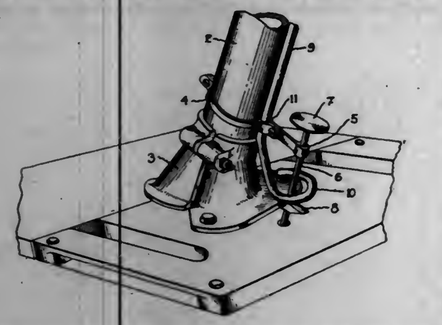


1. The method of producing on a single photographic film a plurality of miniature images of a single object which comprises refracting a plurality of miniature images of said object through a lens onto said film by interposing a plurality of concave lenses in the path of the light rays from said object.

1,482,070. METHOD AND APPARATUS FOR PRODUCING A PLURALITY OF IMAGES OF SEPARATE OBJECTS ON A PHOTOGRAPHIC FILM. LEON F. DOUGLASS, Menlo Park, Calif. Filed Aug. 23, 1922. Serial No. 583,925. 8 Claims. (Cl. 95—18.)

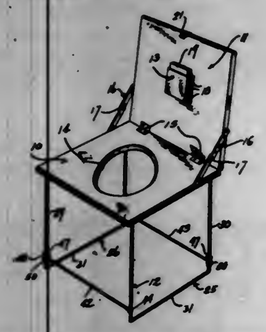
1. The method of producing a plurality of separate images of a plurality of separate objects on a sensitized photographic film which comprises, reflecting an image of one of said objects through a lens onto said film by means of a plurality of light-reflecting elements interposed in the path of a plurality of pencils of light rays from said object, and simultaneously allowing a plurality of pencils of light rays from another of said objects to proceed between said light reflecting elements, through said lens and onto said film.

1,482,071. DISPENSING STAND. LEE F. DUFF and GEORGE LANGHANS, Los Angeles, Calif. Filed Mar. 6, 1922. Serial No. 541,342. 3 Claims. (Cl. 211—8.)



2. A dispensing stand comprising a plurality of circumferentially arranged container grooves with discharge means at their lower ends, a base for said stand having a flange extending over said discharge means to close the same, said flange having an opening for alinement with a selective one of said discharge means to permit free manual withdrawal therefrom, said flange having a second opening for alinement with a selective one of said discharge means, and a check controlled withdrawal means cooperating with said second opening.

1,482,072. THROTTLE-ACTUATING DEVICE. WARREN H. FARR, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 1, 1919. Serial No. 341,764. 4 Claims. (Cl. 74—89.)

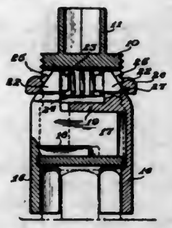


1. The combination of a steering post, a reciprocating control pedal, means rotatively mounted upon the steering post and adapted for manual actuation, a bracket carried by said steering post and adapted to hold said

means and said control pedal in proper relation with one another, and means upon the lower end of the first-

mentioned means adapted to act directly upon the pedal to cause reciprocation thereof by rotation of said first-mentioned means.

1,482,073. FOLDING TOILET CHAIR. RUTH FERDINAND, De Land, Fla. Filed Oct. 17, 1921. Serial No. 508,133. 2 Claims. (Cl. 155—31.)

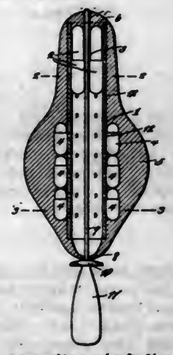


1. A device of the class described, comprising a seat, U-shaped supporting legs, hinges for connecting said supporting legs to said seat whereby the same may be collapsed, cross pieces hingedly connected to each of said legs, each of said cross pieces having an upturned extension upon the free end thereof, and rings slidably mounted upon certain portions of said U-shaped legs for engaging the upturned ends of said cross pieces to securely mount said cross pieces in horizontal supporting position when said supporting legs are in upright position.

1,482,074. MEANS FOR PROTECTING THE SPRINGS OF MOTOR CARS AND OTHER VEHICLES. PETER FRASER, Brisbane, Queensland, Australia. Filed Sept. 2, 1921. Serial No. 497,838. 1 Claim. (Cl. 267—37.)

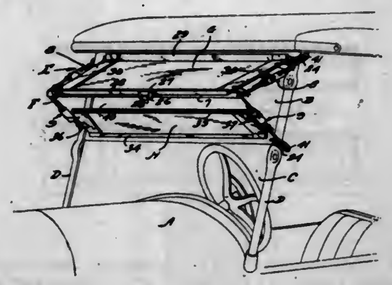
A protecting casing for the springs of motor cars and other vehicles including in combination with a stationary part of the car and a leaf spring traversing said car of an open ended metallic section disposed on the stationary part of the vehicle for receiving the spring, integral sleeves formed within and on opposite sides of the casing and provided at the upper ends with seats, U-bolts having their medial portions engaging the upper part of the spring and having their shanks opposed to the upper sleeve portions and provided with conical portions engaging the seats to provide oil tight joints therebetween, means for adjustably clamping the bolts and maintaining the spring and the casing in position, a cover removably arranged on the casing, other metallic sections enveloping the ends of the spring and flexible sections enveloping the side portions of the spring and secured to the open ended medial section and the end section.

1,482,075. SOCKET WRENCH. WILLIAM H. FISHER, Altoona, Pa., assignor of one-half to Andrew S. Fisher, Altoona, Pa. Filed Apr. 18, 1922. Serial No. 554,708. 5 Claims. (Cl. 81—165.)



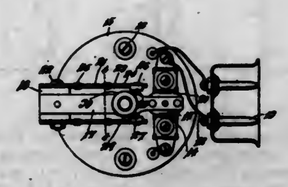
2. A device of the character described including a stock having a squared opening therethrough and provided in spaced relation to said opening with a second opening joined with the first opening by a connecting slot, coacting jaws adjustable upon the stock and provided with mating guide members fitting in the first opening of the stock, lugs upstanding from said guide members to project through said slot into the second mentioned opening of the stock, a spring bearing between said lugs tending to separate the jaws, the lugs being formed with inclined faces, and a nut adjustable upon the stock to coact with said inclined faces of the lugs for shifting the jaws toward each other.

1,482,076. MERCERIZATION AND FINISHING OF TEXTILE FABRICS. EMILE AUGUSTE FOURNEAUX, Manchester, England. Filed Feb. 2, 1923. Serial No. 616,606. 18 Claims. (Cl. 8—20.)



1. A permanently lustrous, soft and elastic cotton fabric produced from ordinary cotton fabric by alternate treatment with caustic soda and thiocyanates.

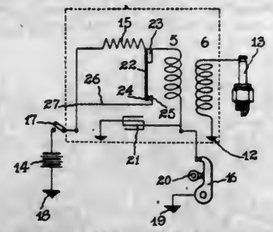
1,482,077. SUPPOSITORY. EDWARD GEARON, Chicago, Ill. Filed Apr. 24, 1923. Serial No. 634,340. 7 Claims. (Cl. 128—271.)



1. A medicinal suppository including a hollow perforated core, a series of soluble medicinal capsules. and an exterior partially soluble absorbent medicinal body, in which said core and capsules are imbedded.

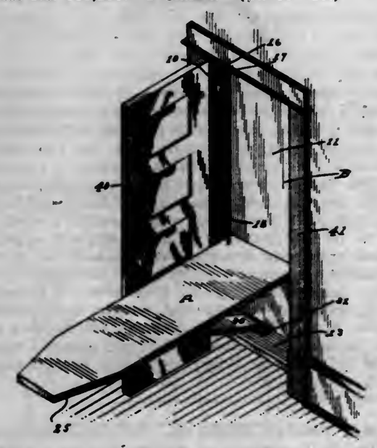
1,482,078. ADJUSTABLE VISOR. ELMER HIATT, Newcastle, Ind. Filed Dec. 15, 1921. Serial No. 522,529. 10 Claims. (Cl. 296—95.)

1. An adjustable visor comprising in combination, a frame including a front compression member and upper and lower side members at each end portion of said compression member, the upper and lower side members at each end of the visor swingable toward and from each other with the fulcrum at the end portion of said compression member, a flexible panel fitting between the upper side members and a flexible panel fitting between the lower side members, and flexible devices connecting the side members and end portions of their respective panels, said flexible devices having a tendency to draw the free end portions of opposite side members toward each other and retain the flexible panels taut, when an object is interposed between the free end portions of said side members.



1,482,079. CUT-OUT DEVICE FOR ELECTRICAL UTENSILS. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed June 4, 1919. Serial No. 301,724. 9 Claims. (Cl. 200—138.)

2. A circuit breaker having an electrically conductive circuit closing member, a spring supporting the same, thermostatic means at each side of said spring, and cooperating similarly inclined parts between each of said means and the spring, the surfaces on the opposite sides of said spring being oppositely inclined.



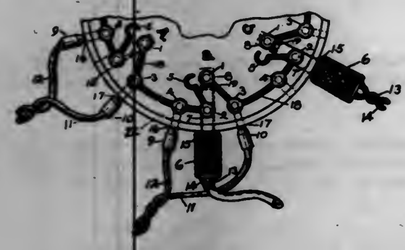
1,482,080. IGNITING SYSTEM. JOHN M. LEA, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 19, 1919. Serial No. 283,458. 18 Claims. (Cl. 123—148.)

1. In a high tension igniting device for internal combustion engines, primary and secondary coils arranged in inductive relation with one another; a circuit in which said primary coil is included and which circuit includes a source of current, a circuit breaking device for interrupting the flow of current through said primary coil, and a resistance coil; a shunt circuit of low resistance as compared with the resistance of said resistance coil; and a thermostat for closing said shunt circuit to

thereby short-circuit said resistance coil, and which thermostat is included in and forms a part of said shunt circuit.

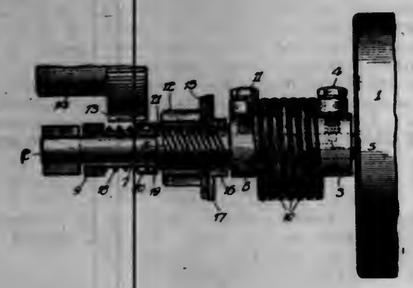
1,482,081. IRONING BOARD AND CASE. FRED W. LONCOSTY, Genesee, Idaho. Filed Jan. 23, 1922. Serial No. 531,259. 2 Claims. (Cl. 68—10.)

2. A device of the character described comprising in combination, a cabinet and an ironing board adapted to fit therein, said cabinet provided with opposite recesses open at confronting wall faces and open downwardly, projections extending from opposite sides of one end portion of said ironing board and adapted to be passed upwardly into said recesses when the board is in a horizontal position, a weight operatively connected to the said end of the ironing board from which said projections extend, tending to draw the ironing board upwardly, and a strut operatively connected to the ironing board and cabinet to aid in supporting the ironing board when in a horizontal position.



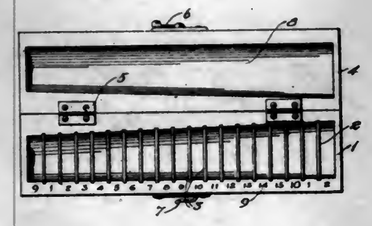
1,482,082. SIGNAL BOND. JOHN LUNDE, Crookston, Minn. Filed Sept. 25, 1922. Serial No. 590,532. 1 Claim. (Cl. 173—262.)

The combination with alined rails, and fish plates secured to and bridging the joint between the rails, of bonding members each consisting of a plurality of strands of copper wire twisted together and terminals mechanically and electrically united with the ends of said wire,



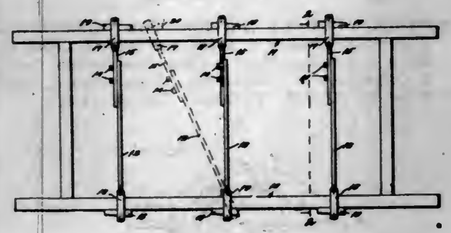
one terminal of each bonding member being electrically and mechanically united with a rail at the end of the same and the other terminal of the same member being electrically and mechanically united with the adjacent fish plate at the end of the same.

1,482,083. SERIES PHONE-CONNECTER BLOCK. ARTHUR B. MCCALL, Springfield, Ill. Filed May 4, 1922. Serial No. 558,517. 2 Claims. (Cl. 173—334.)



1. In a series phone connection block of insulating material a plurality of connecting sections adjacently connected in series, each section provided with a horizontally disposed socket for a phone plug, and two smaller sockets spaced on each side thereof adapted to accommodate cord tips of phone "head sets", vertically disposed positive and negative engaging terminals registering respectively with said positive and negative cord tip when in the sockets, two vertically disposed engaging terminals registering in alignment with said plug socket, each spaced to normally contact with the positive and negative poles of said phone plug when in operative position, means connecting said positive and negative terminals with corresponding terminals for the cord tips within the same connecting section, and a circuit switch adapted to open and close the electric circuit passing through said section.

1,482,084. ENGINE STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Sept. 17, 1920. Serial No. 410,932. 27 Claims. (Cl. 74—7.)

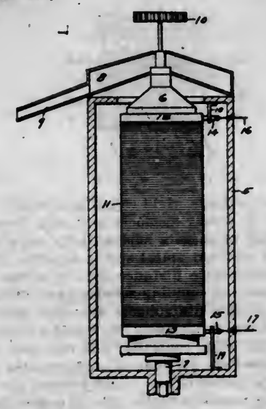


1. An engine starter drive including a rotatable shaft, a driving member mounted thereon for longitudinal movement thereof for engagement with a member of the engine to be started, and capable of rotary movement therewith after such engagement, an actuating member mounted for automatic longitudinal movement when such shaft is rotated and for rotary movement therewith when its longitudinal movement is stopped by contact with the driving member, said two members being normally disconnected and free of each other.

1,482,085. RECEPTACLE. ISAAC MARKS, Harvey, Ill. Filed Nov. 13, 1922. Serial No. 600,672. 1 Claim. (Cl. 206—16.)

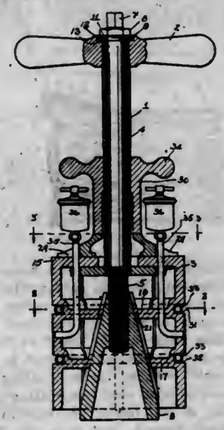
A watch-glass receptacle comprising a body, a cover therefor hinged to one portion of the same, said body and cover having complementally shaped longitudinally disposed tapered pockets therein, semi-circular in cross-section and adapted, when arranged in juxta-posed relation, to form a snug compartment varying in diameter throughout its length for watch-glasses, and a plurality of transversely disposed semi-circular partitions arranged in the pockets in said body dividing the same into individual compartments, the adjacent portions of said body having markings thereon, as and for the purpose set forth.

1,482,086. FLASK STRAP. JOHN H. MAYWORM, Milwaukee, Wis., assignor to Wehr Steel Company, West Allis, Wis. Filed May 3, 1921. Serial No. 466,576. 1 Claim. (Cl. 22—211.)



A pattern supporting strap adapted for longitudinal adjustment, hooks carried by the end portions of said strap for securing the same to a mold box, and notches formed on the lower edge of said strap and adapted to support the pattern within a mold box.

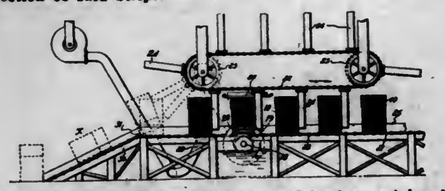
1,482,087. TUNNEL KILN. ROBERT H. MILLER, St. Louis, Mo. Filed Apr. 15, 1922. Serial No. 552,843. 16 Claims. (Cl. 25—142.)



1. In an apparatus of the class described, a confining means, a conveyor arranged for movement through the confining means, and means for directing a treating medium to travel lengthwise through said confining means and vertically through said conveyor.

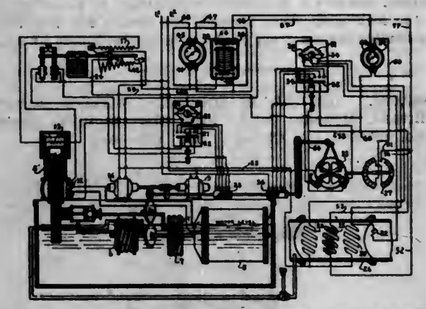
1,482,088. CENTRIFUGE AND MEANS FOR HEATING THE BOWL THEREOF. WALDEMAR OSCAR MITSCHERLING, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 21, 1922. Serial No. 545,620. 2 Claims. (Cl. 219—38.)

1. The combination with a centrifuge, its casing and rotative bowl, of a plurality of electrical heating elements disposed within the casing and surrounding the bowl and individually controllable.



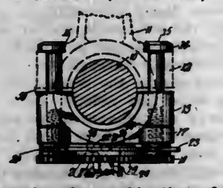
1,482,089. EXPANSION-PISTON LAPPING-IN TOOL. OLIVER C. MOORE, Cleveland, Ohio. Filed Jan. 15, 1921. Serial No. 437,576. 4 Claims. (Cl. 51—206.)

1. A lapping-in tool, comprising a pair of relatively movable supporting members, a sectional cylinder supported upon one of said supporting members, coacting means supported upon the other of said supporting members for enlarging the effective diameter of said cylinder, and resilient means for holding said cylinder sections together.



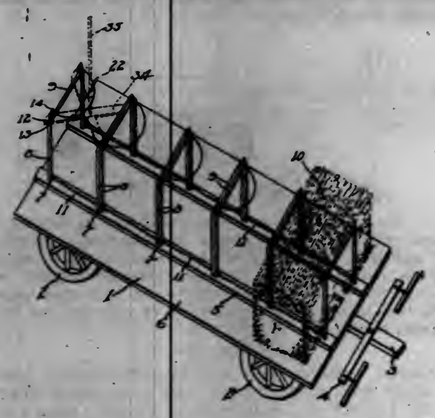
1,482,090. METHOD OF AND MEANS FOR COATING THE EDGES OF ROOFING ELEMENTS. FREDERICK C. OVERBURY, Hillsdale, N. J., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed July 24, 1920. Serial No. 398,684. 6 Claims. (Cl. 91—51.)

2. A method of treating fibrous shingle strips each having a plurality of tabs or projections and intervening slots, which comprises assembling such strips into a packet with their edges flush and then effecting a relative movement, transversely of the plane of the strips, of said packet and a coating member shaped to apply coating to the end and side edges of the tabs or projection of said strips.



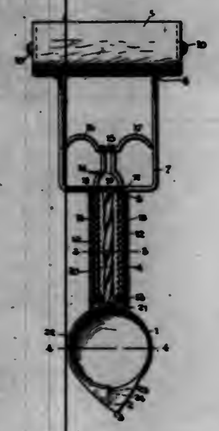
6. The combination of a coating roll having peripheral flanges, means for supplying a waterproofing compound to said roll and to both faces of said flanges, a table, and a conveyor having elements arranged serially to engage packets of roofing elements and feed them past and into contact with the surfaces of said roll and the flanges thereof.

1,482,091. APPARATUS FOR DETERMINING AND ALSO INDICATING THE TOTAL AVAILABLE HEAT OF A FLOW OF COMBUSTIBLE FLUID. HORACE N. PACKARD, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 18, 1921. Serial No. 493,479. 10 Claims. (Cl. 73—184.)



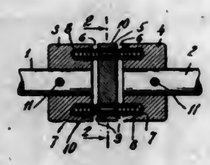
1. In apparatus for ascertaining the total available heat of a flow of fluid, the combination with indicating means, of means for causing the former means to indicate as a function of both the total heat per unit quantity of the fluid and the quantitative rate of flow thereof, the second mentioned means including means to compensate for variations in temperature, preasure and saturation of the fluid and including means rendering unnecessary division of the stream of fluid for ascertaining its quantitative rate of flow.

1,482,092. SELF-ADJUSTING BEARING LOCK. STEPHAN RATH, Chicago, Ill., assignor of one-half to August W. Hornig, Chicago, Ill. Filed Feb. 2, 1921, Serial No. 441,797. Renewed May 25, 1922. Serial No. 563,676. 2 Claims. (Cl. 64—55.)



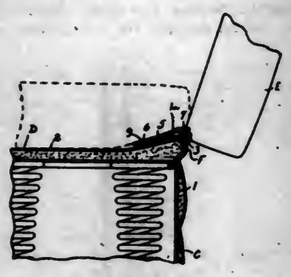
1. In bearing-locks, the combination of a multiplicity of bearing bolts; nuts with gear-teeth on said bolts for tightening the bearing; a gear engaging the nuts; and a tensioned spring for advancing the gear.

1,482,093. UNLOADING DEVICE FOR CORN. PETER M. RINDSBACHER, Stockton, Ill. Filed June 24, 1922. Serial No. 570,639. 6 Claims. (Cl. 214—65.)



1. The combination with a vehicle having a load supporting portion, of a sling having rigid sides and a flexible bottom arranged to rest on the load supporting portion, means for detachably connecting the sides rigidly to the load supporting portion, and means for detaching the flexible bottom from one of said side members at will.

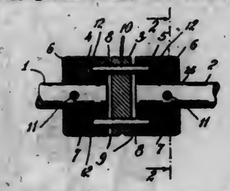
1,482,094. ICE-CREAM DIPPER. WILLIAM RODDIE RIPLEY, Modesto, Calif. Filed Mar. 5, 1923. Serial No. 622,991. 3 Claims. (Cl. 107—48.)



3. An ice cream dipper comprising a bowl having an opening through the side walls thereof adjacent to the edge thereof, a scraper adapted to work in the bowl, a rotatable screw extending through the opening and secured at its inner end to the scraper for operating the latter, a frame extending radially from the bowl and having a guideway through which the screw extends, a block slidable along the guideway and held against rotation therein, said block having a bore in sliding engagement with said screw, a grip member disposed at the outer end of the frame in spaced relation to the outer end of the guideway, a finger piece adjacent to said grip member, and a slide rod connecting said finger piece to said slide block.

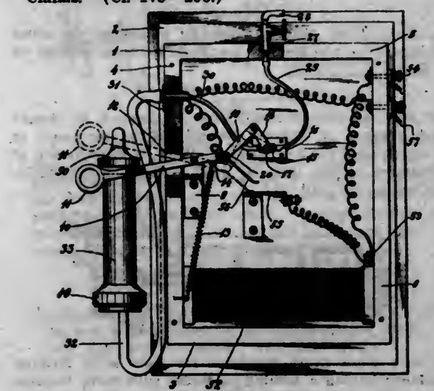
1,482,095. FLEXIBLE COUPLING. JOHN J. SERRELL, Elizabeth, N. J., assignor to Smith and Serrell, Mahwah, N. J., a Copartnership consisting of himself and Robert A. Smith. Filed Apr. 20, 1921. Serial No. 462,939. 2 Claims. (Cl. 64—96.)

1. In flexible couplings, rigid coupling members adapted to be connected to rotary members and each formed with an annular series of sockets substantially parallel to its axis, a series of resilient spiral sprig coupling pins each extending a considerable distance into a socket of each of the two cooperating coupling members and fitting loosely therein, and a rigid pin support arranged between and normally spaced somewhat away from said coupling members and formed with conically relieved end holes in which the intermediate portions of said coupling pins are permanently and substantially rigidly connected by expanding securing members inside the corresponding intermediate portions of said pins.



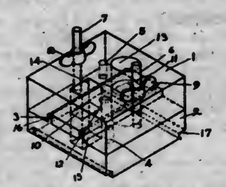
1,482,096. CUSHION. GEORGE A. SMITH, Los Angeles, Calif. Filed Oct. 17, 1922. Serial No. 595,028. 4 Claims. (Cl. 155—184.)

1. The combination with a seat of a removable cushion adapted to be mounted thereon, said cushion having an ornamental cover forming a flap extension at the lower front edge of the cushion, with said flap fixed to the underside of said cushion adjacent the front of the latter, and forming a free swinging portion adapted to extend rearwardly beneath said cushion for concealing the flap between the cushion and seat, and cooperating separable fastening connections on the top of the seat in spaced relation from the front thereof, and upon the free swinging portion of said flap, whereby said cushion may be removably fixed in position upon said seat, while permitting spaced relation between the fronts of said seat and cushion, and exposing said spaced relation to simulate the appearance of a cushion loosely mounted on a seat.



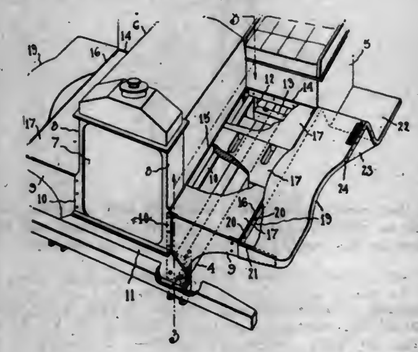
1,482,097. FLEXIBLE COUPLING. ROBERT A. SMITH, Mahwah, N. J., assignor to Smith & Serrell, Mahwah, N. J., a Copartnership consisting of himself and John J. Serrell. Filed Apr. 20, 1921. Serial No. 462,876. 10 Claims. (Cl. 64—96.)

1. In flexible couplings, vulcanized rubber coupling members adapted to be connected to shafts and formed with axial metallic bushings and end flanges on their outer separated ends, said coupling members being formed with an annular series of sockets substantially parallel to their axes, a series of rigid coupling pins each extending a considerable distance into the sockets of the two



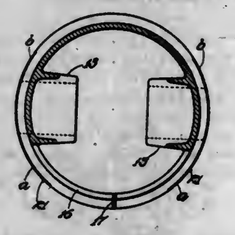
cooperating coupling members and a disc shaped pin support in which said coupling pins are rigidly and permanently mounted.

1,482,098. CIGAR LIGHTER. SIDNEY STOCKING, Herscher, Ill. Filed Oct. 19, 1921. Serial No. 508,768. 2 Claims. (Cl. 175—296.)



1. A device of the character described comprising a gas hand torch, a pivotally mounted lever for supporting said torch, means for conducting gas to said torch, means for electrically igniting said gas in said hand torch, a valve associated with said first named means and operatively connected to said lever, whereby said gas will be shut off when said lever is supporting said torch and whereby said gas will be turned on when said torch is removed from said lever, and a switch associated with said second named means and operatively connected with said lever, whereby said second named means is rendered inoperable when said lever is supoprting said torch.

1,482,099. HAND PUNCH. WILLIAM C. STOPPELWERTH, Springfield, Ill. Filed July 27, 1922. Serial No. 577,985. 6 Claims. (Cl. 164—118.)

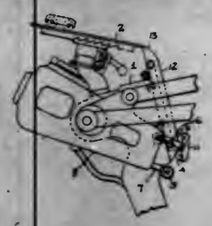


1. In a hand punch of the character described a detachable die plate adapted to operate in conjunction with a base casting and an anchoring cap used for holding said die plate detachably secure in a predetermined position when the die is normally used for punching holes in spring material, means comprising threaded bolts, thumb screws and guide pins for holding said elements in operative position as and for the purpose described.

1,482,100. FLOOR AND FENDER SUPPORT FOR MOTOR TRUCKS. ALFRED T. STURT, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 13, 1920. Serial No. 365,591. 12 Claims. (Cl. 296—28.)

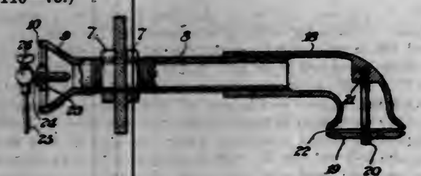
6. In a motor vehicle of the class described, a suitable frame; a radiator located adjacent the forward end of said frame and supported therefrom; an engine hood extending rearward from said radiator; a transversely extending seat supporting frame supported by the vehicle frame and located to the rear of said hood; a supporting member extending laterally from the radiator; and floor supporting means extending along the side of said hood and the forward end of which is supported by said supporting member, and the rear end of which is supoprted by said seat supporting frame.

1,482,101. PISTON. GEORGE A. TAYLOR, Boston, Mass. Filed Sept. 28, 1922. Serial No. 591,073. 5 Claims. (Cl. 74—108.)



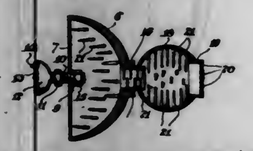
2. A piston for internal combustion engines having a head, a skirt and piston pin bearings, the skirt and head being integral on one side of the bearings and separated from each other on the other side by a slot, the surface of the piston being relieved about the bearings for a less amount on the integral side than on the slotted side.

1,482,102. PRINTING PRESS. RALPH S. TYLER, Cleveland Heights, Ohio, assignor to The Chandler & Price Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 30, 1921. Serial No. 481,454. 2 Claims. (Cl. 101—338.)



1. In a printing press, the combination with the bed, ink-distributing disk, and composition rolls adapted to pass over said bed and disk, of separate tracks, one on each side of said bed adapted to support said rolls in thus passing thereover; and adjustable means for securing said tracks to said bed, said means for each track including two eye-bolts one adjustably secured to said bed so as to project upwardly therefrom adjacent the upper

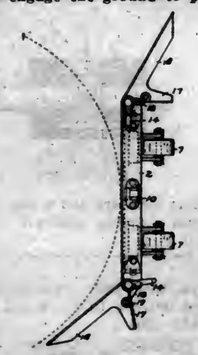
end of its adjacent track and the other adjustably secured to said bed so as to project laterally therefrom adjacent the lower end of its adjacent track, threaded bolts



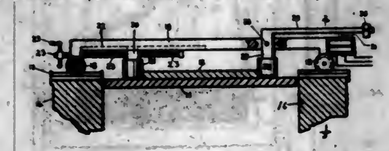
on the corresponding track engaging said eye-bolts, and nuts on said threaded bolts, one on the inside and the other on the outside of the corresponding eye-bolt.

1,482,103. CONVERTIBLE COAL SAVER AND GAS BURNER. GERRIT VAN DAAM, Buffalo, N. Y. Filed Jan. 20, 1921. Serial No. 438,798. 2 Claims. (Cl. 110—75.)

1. In a fuel saving device, the combination of an air conductor, leading from the exterior to the interior of a combustion chamber, a chambered body disengageably secured to the inner end of said conductor and provided with a comparatively restricted discharge vent, and means for disengageably associating a fluid fuel supply with the air intake of the conductor.



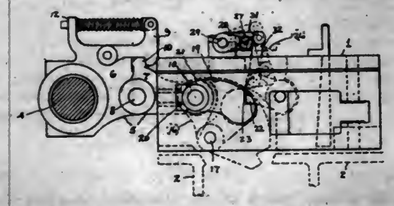
1,482,104. FUEL-SAVING DEVICE. GERRIT VAN DAAM, Buffalo, N. Y. Filed Feb. 7, 1922. Serial No. 534,673. 3 Claims. (Cl. 110—75.)



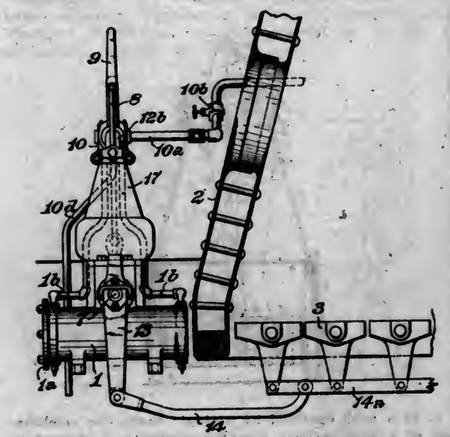
1. In a fuel saving device, the combination of two communicating chambered bodies having axes on the same horizontal line, one of substantially semi-spherical formation, having a flat wall adapted to lie adjacent an inner wall of the furnace, and adapted to receive air from outside the furnace, the other of substantially spherical formation adapted to discharge air into the combustion space of the furnace and a pipe formation threaded throughout its extent for connecting said chambered bodies, having fingers extending radially from its inner wall.

1,482,105. TRUCK. HENRY J. ANDREWS and JOHN M. LANDENBERGER, Fort Wayne, Ind. Filed Mar. 22, 1922. Serial No. 545,695. 2 Claims. (Cl. 214—85.)

1. A truck comprising a wheeled frame, adjustable members rotatably mounted upon opposite sides of the frame, means to releasably lock said members in elevated position, said members when released being adapted to lower into engagement with the ground to form skids for loading or unloading the truck, means on the members adapted to engage the ground to prevent overturning of the truck while loading or unloading the same and means to elevate the members to form guards on the frame.

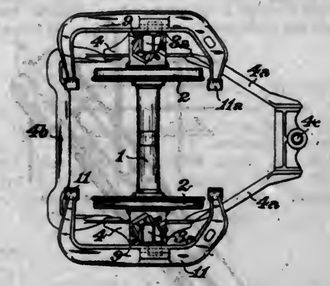


1,482,106. GLASS MACHINERY. CLARENCE W. AVERY and WENZEL G. VESEY, Detroit, Mich., assignors to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed Feb. 4, 1922. Serial No. 534,034. 6 Claims. (Cl. 49—3.)



5. In a glass width regulator for glass strip forming machinery having a moving platform with strip forming members associated therewith, a frame adapted to be moved transversely of the line of movement of the platform by a strip formed on the platform, an adjustable stop on said frame and a movable stop on said frame whereby the strip passing between the stops may cause the frame to vary its position relative to the platform, the adjustable stop may determine the width of the strip formed on the platform, and the movable stop may be actuated by variations in the width of the strip to vary the speed of the platform.

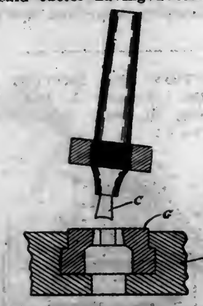
1,482,107. FORGING MECHANISM. JOHN R. BLAKESLEE, Cleveland, Ohio, assignor to The Ajax Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 27, 1922. Serial No. 603,451. 5 Claims. (Cl. 10—16.)



1. The combination with a reciprocable slide; of a crank-shaft and pitman for operating same; a member oscillatorily mounted on said slide, said pitman being pivotally connected with said member; fixed means limiting oscillation of said member in one direction; and movable means adapted to lock said member against oscillation in the opposite direction.

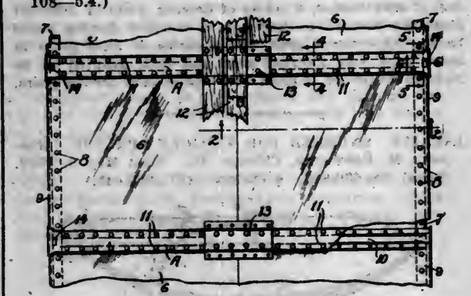
1,482,108. LOCOMOTIVE GRATE SHAKER. JAMES G. BLUNT, Schenectady, N. Y. Filed Feb. 21, 1921. Serial No. 446,766. 5 Claims. (Cl. 121—41.)

1. In a grate-shaking apparatus, the combination of a fluid-pressure operating-cylinder, a piston fitted to reciprocate therein, a fulcrum shaft journalled transversely on said cylinder, an operating-lever pivoted on said shaft and engaging said piston, a grate-operating lever also pivoted on said shaft, and means to clutch said levers together at their pivots.



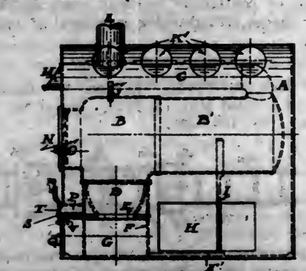
1,482,109. TRUCK-CENTERING DEVICE. JAMES G. BLUNT, Schenectady, N. Y. Filed May 4, 1923. Serial No. 636,568. 8 Claims. (Cl. 105—174.)

1. In a radial railroad truck, the combination of a truck frame; journal boxes, fitted therein; lower roller seats, mounted on said journal boxes and having lateral racks, each oppositely inclined in the direction of its length; keys, engaging channels in the journal boxes and lower roller seats, inclined in planes intersecting in the axis of the radius bar pin; upper roller seats, having lateral racks, each oppositely inclined in the direction of its length; and rollers, interposed between the roller seats and carrying pinions, engaging the racks thereof.



1,482,110. METHOD AND APPARATUS FOR CUTTING POLYGONAL DIES. WILLIAM F. BOLESKY, Detroit, Mich., assignor of one-half to John E. Moloney, Detroit, Mich. Filed Aug. 15, 1921. Serial No. 492,326. 12 Claims. (Cl. 90—33.)

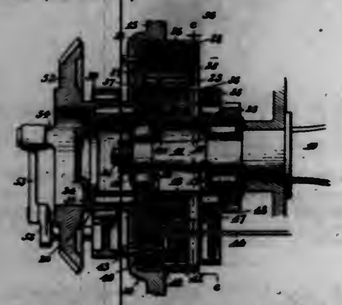
12. A machine for cutting polygonal blanks comprising a rotary work holder, an angular cutter, means for simultaneously rotating the cutter and work holder at different angular speeds, means for synchronizing said rotations whereby the angles of said cutter register with a predetermined number of points in the circumference of the work, said cutter having a contour between the



angles such as to develop a straight line in the work during said synchronized rotation, and means for relatively moving the cutter and the blank in a direction nonparallel to the axis of the latter.

1,482,111. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Jan. 10, 1923. Serial No. 611,755. 14 Claims. (Cl. 108—5.4.)

1. A car roof comprising a plurality of roof sheets whose adjacent marginal portions are offset upwardly and lapped and secured together to form weather proofing seams, the lapping portion of the lower sheet having a channel formed therein that extends longitudinally thereof.



1,482,112. HOT-AIR FURNACE. ERNEST G. BOOKER, Indianapolis, Ind. Filed Dec. 16, 1922. Serial No. 607,285. 5 Claims. (Cl. 126—99.)

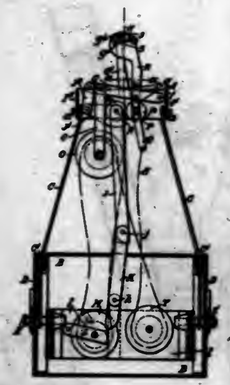
1. In a heating furnace, a horizontal combustion chamber, a fire-pot under the front end and discharging into the front end of said chamber, a fire-bowl jacket under and supporting the firepot and having an inside grate-

supporting flange and a rearwardly extended floor-plate, a grate on said flange, and a post on the floor-plate supporting the horizontal combustion chamber, and a casing surrounding said members and having cold air inlets below the combustion chamber and hot air discharges above it.

1,482,113. TRACTION AND DRIVING MECHANISM FOR VEHICLES. ANDREW J. BORST, Jr., Buffalo, N. Y. Filed Nov. 20, 1917. Serial No. 202,918. 7 Claims. (Cl. 74—7.)

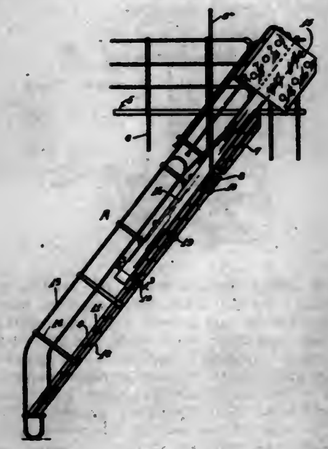
1. The combination of a vehicle axle, and a traction member on said axle comprising a pair of spaced supporting frames, an inner hub on said axle journaled in one of said frames, a series of driving gears of different diameters secured to said hub, a traction driving wheel having an internal gear, and a series of idler gears in mesh with said internal gear and each adapted to be moved into or out of mesh with one of said driving gears.

1,482,114. SNUBBER FOR VEHICLE SPRINGS. HERBERT M. BREWSTER, Chicago, Ill. Filed May 5, 1923. Serial No. 636,846. 6 Claims. (Cl. 267—45.)



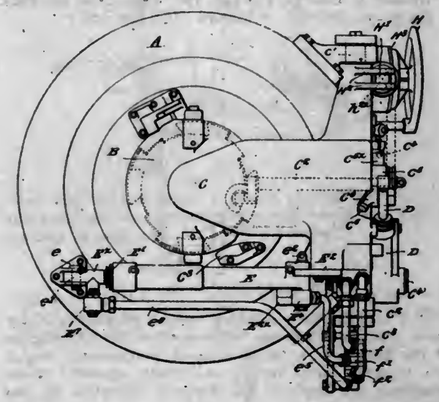
1. The combination, with a vehicle side frame member, an axle, and a supporting spring between said side frame member and said axle, of means for opposing recoil of said spring comprising a curved spring bar connected at its upper and lower ends to said side frame member and supporting spring respectively and having on its convex side a row of contiguous resilient compressible blocks serving to oppose straightening movement of said spring bar.

1,482,115. LOCOMOTIVE. ALFRED W. BRUCE, New York, N. Y. Filed May 15, 1923. Serial No. 639,044. 5 Claims. (Cl. 105—59.)



1. In a locomotive of the Mallet type, the combination of a rear group of driving wheels; a front group of driving wheels; two high pressure cylinders, the pistons of which actuate the rear group of driving wheels; and three low pressure cylinders, the pistons of which actuate the front group of driving wheels.

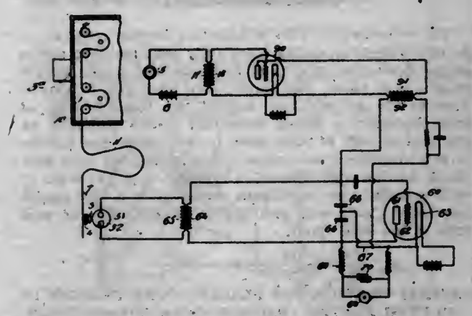
1,482,116. GRAB. ARTHUR MONTGOMERIE CALLOW, London, England. Filed May 12, 1923. Serial No. 638,495. 6 Claims. (Cl. 37—184.)



1. In a grab operated by a single chain, the combination of a head, a hook mounted therein and adapted to engage a suspender ring, a body, a bucket consisting of two halves hinged to the body, side rods connecting the bucket halves to the head, a frame capable of turning about a horizontal axis in the body, a sheave journalled in this frame and toggle links pivoted to the head and to the body and adapted to be engaged by the said frame.

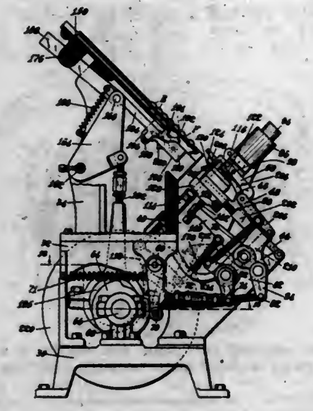
1,482,117. COUNTERBALANCE-LADDER CONSTRUCTION. JOHN T. COWLES, Chicago, Ill., assignor to J. T. Cowles & Company, a Corporation of Illinois. Filed Jan. 4, 1923. Serial No. 610,566. 6 Claims. (Cl. 227—5.)

1. A device of the class described, including in combination a pivoted structure and a counter-balance arm therefor, said arm being secured to said structure in parallel spaced relation, means for securing said arm along said structure comprising members having curved surfaces for contacting portions of the structure, certain of said members having portions adapted to engage and hold said arm in operative position, and means co-operating with said curved surface members for maintaining the same in contact with the said structure.



1,482,118. ORDNANCE BREECH MECHANISM. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, and DORSEY FROST ASBURY, Washington, D. C., assignors to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed Sept. 20, 1923. Serial No. 663,867. 26 Claims. (Cl. 89—20.)

1. In a gun, the combination of a swinging breech screw carrier, a rotatable breech screw, a crank shaft substantially radial with respect to the breech screw operating to lock and unlock the breech screw, and a motor on the carrier operatively connected to a crank on said shaft to effect rotation of said crank shaft.



26. In a gun, the combination of a swinging breech screw carrier, a rotatable breech screw, means for effecting locking and unlocking of the breech screw, and a hand operated device for swinging the carrier, said device being pivoted on the gun for swinging movement with respect thereto and including a screw threaded member adapted to be detachably connected to the carrier.

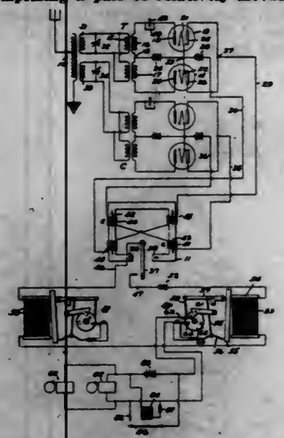
1,482,119. MEANS FOR RECORDING AND REPRODUCING SOUND. LEE DE FOREST, New York, N. Y., assignor to De Forest Phonofilm Corporation, Jersey City, N. J., a Corporation of Delaware. Original application filed Sept. 18, 1919, Serial No. 324,683. Patent No. 1,446,246, dated Feb. 20, 1923. Divided and this application filed Nov. 11, 1920. Serial No. 423,276. 10 Claims. (Cl. 179—100.1.)

1. The combination with an alternating current lamp, means for continuously supplying an alternating current to said lamp the periodicity of which is above the audible limits to effectively maintain said lamp a constant source of light, and sound controlled means for varying said current.

1,482,120. MACHINE FOR MOUNTING ARTICLES. WILLIAM E. ELLIOTT, Grand Rapids, Mich., assignor to American Button & Fastener Co., Augusta, Me., a Corporation of Maine. Filed Aug. 1, 1919. Serial No. 314,717. 84 Claims. (Cl. 218—18.)

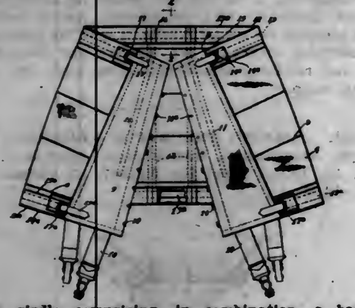
78. In a machine for mounting buttons and assembled securing devices upon a strip, a support, button-conveying means delivering to the support, means for advancing the strip into proximity with the support, means contacting with a securing device for forcing it with its button from the conveying means to the support and through the strip, and retaining means contacting with the button upon the support.

1,482,121. TURNING TRUCK FOR VEHICLES. JOSÉ DANIEL ERRECABORDE, Buenos Aires, Argentina. Filed Jan. 16, 1923. Serial No. 613,047. 3 Claims. (Cl. 280—131.)



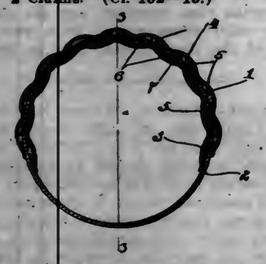
1. A turning connection comprising a crown embodying a pair of structurally-separate, circular frames having oppositely-curved outer rim portions forming annular recess therebetween and inner web portions provided with interfitting projections, and a ring fitted in said recess, the ring and crown being rotatably related; the web portions of the frame having fastening devices rigidly connecting them together, and the rim portions having their outer edges spaced from each other to expose part of the ring; substantially as described.

1,482,122. RADIO SYSTEM. WALTER N. FANNING, Vallejo, Calif. Filed Mar. 20, 1922. Serial No. 545,040. 4 Claims. (Cl. 250—2.)



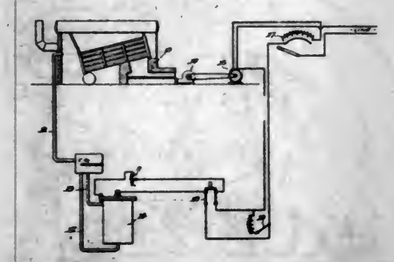
1. In a radio receiving system, an absorbing circuit, a thermionic device responsive to telegraphic signals received in the absorbing circuit, a thermionic device responsive to energy received between signals, an electromagnetic relay having a polarized armature, said relay being arranged to move the armature in one direction on receipt of a signal, by aid of the first mentioned thermionic device, and in another direction on cessation of the signal, by aid of the second mentioned thermionic

device, and a selector controlled by said armature, said selector comprising a pair of relatively movable contacts



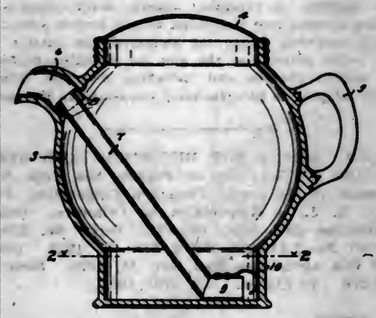
that are operated only upon the receipt of a predetermined, freely selected order of telegraphic dot and dash signals.

1,482,123. GIRDLE. JACOB N. FAUST and CLYDE A. FAUST, Chicago, Ill. Filed Jan. 28, 1922. Serial No. 532,358. 5 Claims. (Cl. 2—73.)



1. A girdle comprising, in combination, a band or body of substantial width made from longitudinally elastic webbing and having at its opposite ends cooperating fastening devices, and means enclosed by one of its longitudinal edges for varying the effective length thereof.

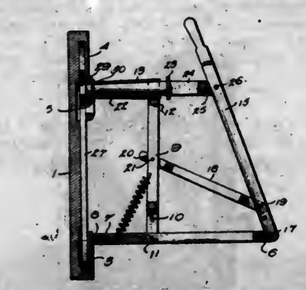
1,482,124. SELF-HEALING TUBE. WILLIAM FETTER, Baltimore, Md. Filed July 16, 1923. Serial No. 651,804. 2 Claims. (Cl. 152—13.)



1. An inner tube for pneumatic tires having the tread zone thereof provided with small pockets, some on the inner side of the tube wall and others on the outer surface of the same, self-healing material filling the pockets, the pockets on each side of the wall being so placed that they overlap, the pockets thus overlapped extending over the entire tread area of the tube.

1,482,125. COMBUSTION-CONTROLLING SYSTEM. GEORGE E. GASTER, Chicago, Ill. Filed June 12, 1923. Serial No. 644,996. 9 Claims. (Cl. 236—15.)

1. A combustion controlling system comprising a furnace, means continuously responsive to the CO_2 content of the flue gases, a liquid rheostat continuously responsive to said means, and an electrically operated blower supplying the draft of the furnace controlled by said rheostat.

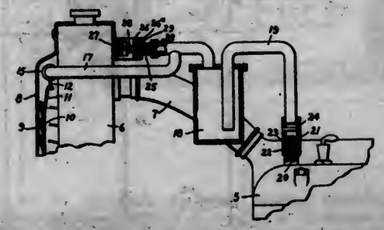


1,482,126. COMBINED MEASURING AND DISPENSING DEVICE. WILLIAM D. GIBSON, Seattle, Wash., assignor of one-half to Frank W. McCaffrey, Seattle, Wash. Filed Mar. 30, 1922. Serial No. 548,013. 1 Claim. (Cl. 221—98.)

The combination with a container having a spout, of a removable tube having rearwardly bent resilient means disposed on the upper end and arranged to fit snugly within said spout, said tube being arranged to extend downwardly at an angle toward the opposite wall of said container, a flared measuring device arranged on the bottom end of said tube to rest upon the bottom of said container, and resilient means disposed upon said flared portion and adapted to engage with the wall of said container to hold said flared portion in spaced relation to said wall and hold the upper end of said tube within said spout.

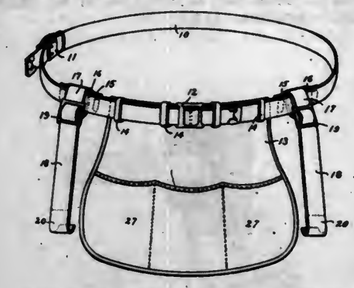
1,482,127. DEVICE FOR PLACING CORK INSERTS IN CLUTCH PLATES. RALPH B. GLICK, Riverside, Calif. Filed Oct. 9, 1922. Serial No. 593,463. 5 Claims. (Cl. 226—2.)

3. In a device of the character described, a supporting member, said supporting member being provided with an opening adapted to aline with an opening in the clutch plate, a supporting arm secured to said member and extending outwardly therefrom, a tube support secured to said arm, a tube carried by said tube support in aline-



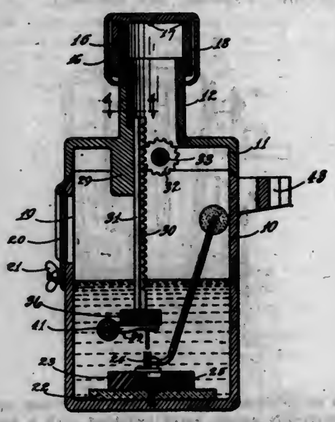
ment with said opening, a handle pivoted to said arm, and a plunger carried by said handle and adapted to be received in said tube.

1,482,128. DRILL BIT. CHARLES M. GODDARD and WILLIAM E. POWELL, Denver, Colo. Filed June 3, 1922. Serial No. 565,714. 1 Claim. (Cl. 255—61.)



A device for drilling coal comprising a body member of substantially rectangular cross-section, a channel in each narrow side and extending parallel to the central axis of the member, a removable cutter in each channel, a central socket in said body member, said socket being located midway between the channels and concentric with the central axis of the body member, a drill in said socket, the spaces on each side of the drill and the removable cutter being inclined at an angle to the side surface of the body member and also inclined with respect to the edge surface thereof, and a removable cutter secured to each inclined surface and adapted to cut the coal between the drill and the outer cutter.

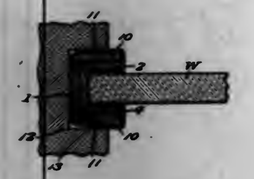
1,482,129. MEANS FOR REGULATING THE COOLING OF INTERNAL-COMBUSTION ENGINES. WALTER S. GOLL, Fort Wayne, Ind. Filed Dec. 31, 1920. Serial No. 434,291. 13 Claims. (Cl. 123—174.)



13. In combination with an internal combustion engine cylinder provided with a water jacket, a pressure chamber connected with the interior of the cylinder, a movable member associated with the pressure chamber and actuated by the pressure thereof, a radiator through which the cylinder jacket water circulates, a shutter positioned adjacent the radiator for controlling the passage of cooling air therethrough and operating connection between the shutter and the movable member of the pressure chamber.

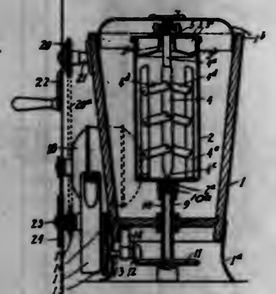
1,482,130. WINDOW CLEANER'S SAFETY HARNESS. HENRY J. GRIEST, Chester, Pa. Filed Oct. 31, 1921. Serial No. 511,647. 5 Claims. (Cl. 20—72.)

1. A device of the character described including a belt; supporting means attached to said belt and having curved means for embracing the edge of a window frame and being readily removable therefrom; adjusting means for varying the length of the front part of the belt between said supporting means; and means for varying the length of the belt independently of said first adjusting means; substantially as described.



1,482,131. OIL-FUSE DEVICE. GEORGE M. GRIFFITH, Dallas, Tex., assignor of one-half to Norton T. Lancaster, Dallas, Tex. Filed Dec. 5, 1921. Serial No. 520,140. 2 Claims. (Cl. 200—114.)

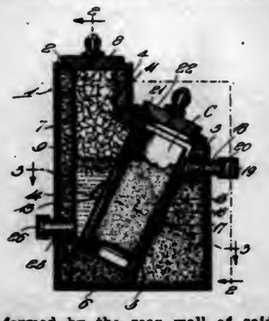
1. In an oil fuse device, a casing, said casing having a removable head, the lower portion of the casing forming a well for containing a non-conducting fluid, a door provided in the upper side of the casing, stationary contacts disposed in spaced relation in the bottom of the casing and insulated from the casing, means for admitting the conductors of a circuit, the said contacts adapted to be connected with the said conductors, a rack bar adapted to slide vertically, a cross head carried by the rack bar, contacts carried by the cross head and adapted to engage the stationary contacts, the contacts of the cross head having means for receiving and supporting an electrical fuse, a rotatable shaft extending transversely of the head



and thru the same, a pinion mounted on the shaft and adapted to mesh with the rack bar, and means on the outer end of the shaft for rotating the same, whereby the rack bar may be reciprocated to bring the cross head into registration with the door or to close the circuit.

1,482,132. WINDOW CHANNEL. ERNEST M. GUILLAUME, Worcester, Mass., assignor to The Felters Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Oct. 4, 1922. Serial No. 592,367. 4 Claims. (Cl. 296—44.5.)

1. A window channel comprising a flexible backing strip having a finished face, central and side bearing stripe having finished faces and edges superimposed upon said backing strip and forming spaces between bearing strips, the backing strip adapted to bend at the spaces to impose a finished edge of one bearing strip against the finished face of one adjacent bearing strip to form a channel of uniform qualities of strength due to the use of finished stripe of material.

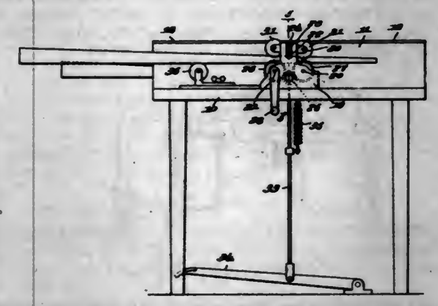


1,482,133. ICE-CREAM FREEZER. ALVIN L. HART, East San Diego, Calif. Filed June 15, 1921. Serial No. 477,673. 4 Claims. (Cl. 259—53.)

1. In an ice-cream freezer, a revoluble cream receptacle an hermetically sealed cover provided with a small central hole and a collapsible stationary mixing member mounted therein adapted to be removed through said small central hole in said cover without removing said cover.

1,482,134. ICE-CREAM CABINET. VICTOR LYTTON KING, West Point, Miss. Filed Feb. 15, 1923. Serial No. 619,322. 2 Claims. (Cl. 217—7.)

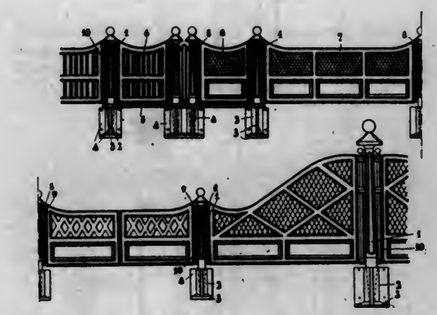
1. A refrigerating device comprising a cabinet whose top is formed with a forwardly declined front portion having an opening provided with a removable closure, a forwardly inclined can container in said cabinet whose upper end is disposed around said opening, and an ice receptacle in the cabinet behind said container having its



front wall formed by the rear wall of said container, the latter having an opening for admitting ice water to its interior from the ice receptacle.

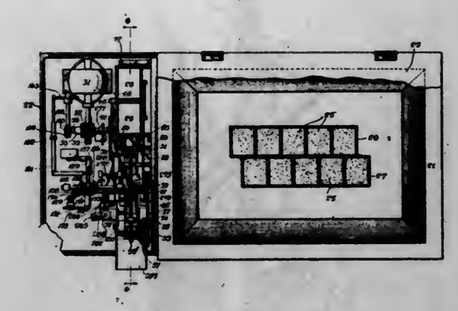
1,482,135. METHOD OF SECURING WRIST PINS IN PISTONS. THOMAS J. LITLE, Jr., Detroit, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 29, 1923. Serial No. 628,520. 3 Claims. (Cl. 74—108.)

1. In a device of the character described, a piston having wrist pin receiving bosses therein, one of said bosses having aligned openings therein, a hollow cylindrical wrist pin designed to be received in said bosses, said wrist pin having aligned openings adjacent to one end designed to register with the openings in the boss, a split sleeve of resilient material, and a locking pin designed to be driven thru the registering openings and the split sleeve whereby the locking pin and the wrist pin may be held from movement.



1,482,136. APPARATUS FOR STRAIGHTENING BILLIARD CUES. JOHN MAGONO, Boston, Mass. Filed Mar. 24, 1923. Serial No. 627,305. 4 Claims. (Cl. 144—255.)

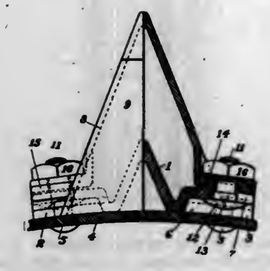
1. In a machine for straightening cues and the like, a frame adapted to support a plurality of positively driven grooved cue supporting wheels; means to drive



said wheels; a plurality of pressure wheels adapted to coact with said supporting wheels, said pressure wheels being arranged to automatically adjust themselves to the various diameters of a cue during its movements between said supporting and pressure rolls; means to apply pressure to a cue through said pressure rolls; and a supporting wheel adapted to be adjusted toward and from said frame.

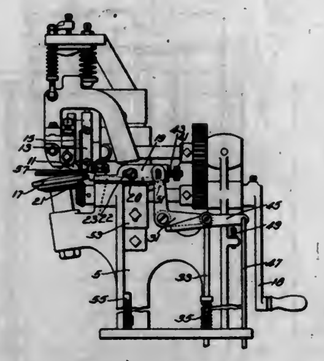
1,482,137. CONCRETE FENCING. JOHN FREDERICK MATTHEWS, Dover, England. Filed Mar. 9, 1921. Serial No. 450,827. 1 Claim. (Cl. 256—19.)

A reinforced concrete fence construction comprising reinforced concrete posts, lugs formed in the reinforcements of, and projecting from, said posts, an anchor box for each of said posts comprising a flat base and reinforcing projecting wing members, reinforced concrete fence sections, lugs formed in the reinforcements of, and projecting from the ends of said fence sections and adapted to register with the lugs on the post sections and coupling bars adapted to pass through the co-operating lugs for the purpose of uniting the post and fence sections together, substantially as described.



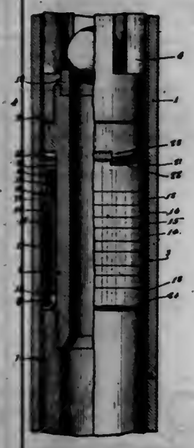
1,482,138. ICE-CREAM-SANDWICH-MAKING MACHINE. HARRY A. MOOMJIAN, Chicago, Ill. Filed Jan. 5, 1921. Serial No. 435,064. 33 Claims. (Cl. 107—1.)

1. In an ice-cream sandwich making machine, the combination of a plurality of supplies of ice-cream, means to sever layers of ice-cream from said supplies in a manner to cause their depletion substantially simultaneously, a wafer supply, means to feed said layers of ice-cream, and means to feed said wafers, whereby the ice-cream and wafer elements of said sandwiches are assembled to form such sandwiches.



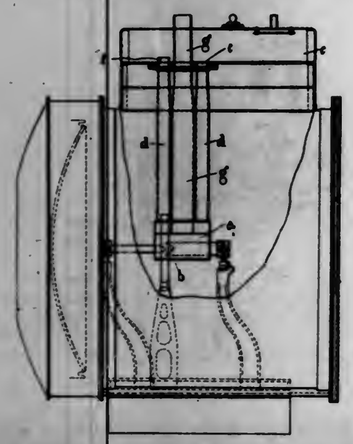
19. In an ice-cream sandwich making machine, the combination of a supply of ice-cream, a supply of wafers, means to form ice-cream sandwiches from said supplies, a supply of flat bags, and means to open said bags and to insert each sandwich in one of said bags.

1,482,139. LUG FOR WHEELS. NICHOLAS R. NELSON, East Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Apr. 12, 1920. Serial No. 373,106. 6 Claims. (Cl. 301—44.)



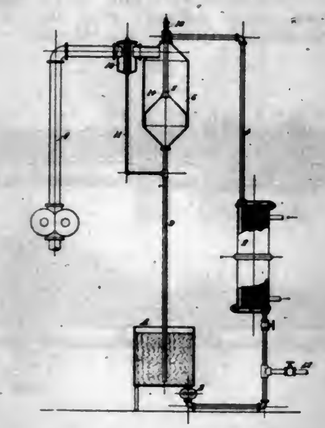
2. The combination of a wheel tire, a permanent lug having opposed flanges secured to the tire, a supplemental lug adapted to be superimposed on the permanent lug and having opposed flanges, and means to secure the flanges of the supplemental lug to the flanges of the permanent lug.

1,482,140. GAUGING DEVICE. EDWARD E. ORR, Weymouth, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 5, 1917. Serial No. 200,298. 38 Claims. (Cl. 12—47.)



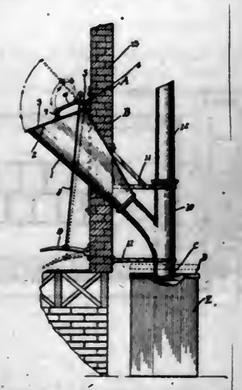
1. A sole-machine, having, in combination, a work support, a knife, an edge gage adapted to overlie the support to gage the cut made by the knife, and means for withdrawing the gage, at times during the operation of the machine, to a position below the work supporting surface of the table.

1,482,141. PACKING STRUCTURE. EMERSON M. PARKS, Sawtelle, Calif. Filed Oct. 24, 1922. Serial No. 596,633. 8 Claims. (Cl. 74—109.)



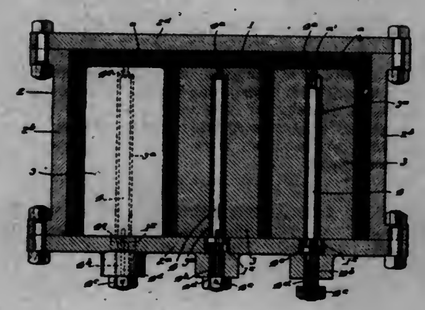
1. In a device of the nature disclosed, two relatively movable concentric members, one of said members having an annular seat and carrying a packing structure, said packing structure comprising an axially movable sleeve having an annular shoulder, and a reduced portion below said shoulder, and a compressible packing ring between said annular seat and said annular shoulder, the upper surface of the sleeve being exposed to the pressure packed against, whereby said pressure will translate the sleeve to compress the packing ring and force it against the walls of the sleeve and of the other of said members.

1,482,142. SEARCHLIGHT AND OTHER PROJECTOR. CHARLES ALGERNON PARSONS, EBENEZER BENNETT, and HARRY ROWE, Newcastle-upon-Tyne, England; said Bennett and Rowe assignors to said Parsons. Filed May 10, 1920. Serial No. 380,372. 3 Claims. (Cl. 176—51.)



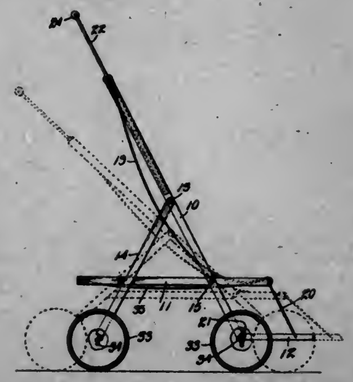
1. A lamp including a barrel, an arc within the barrel as the source of light, a water jacket for the arc and adapted to intercept the radiant heat from the arc, a reservoir supplying a cooling fluid to said water jacket, and circulation system including an inlet pipe and an outlet pipe extending into the reservoir, the reservoir end of the inlet pipe being at a lower level than that of the outlet pipe connecting said water jacket and reservoir.

1,482,143. APPARATUS FOR CONCENTRATING MILK. DAVID D. PEEBLES, Eureka, Calif. Filed Nov. 27, 1918. Serial No. 264,421. 7 Claims. (Cl. 159—2.)



1. In an apparatus for dehydrating liquid substance, an expansion and vaporizing chamber, means for maintaining a vacuum in said chamber, and a pipe connection between said means and the top of said chamber, a branch pipe connected to said first mentioned pipe and the bottom of said chamber, a separator in said pipe connection, a liquid heater, a pump and pipe connection for supplying liquid through the heater to the expansion and vaporising chamber, said last mentioned pipe connection terminating in a spraying nozzle within said chamber, said nozzle being below said first mentioned pipe connection and above the outlet of said branch pipe connection.

1,482,144. GARBAGE-DISPOSAL DEVICE. LORENZO DOW PENDER, Tarboro, N. C. Filed June 5, 1922. Serial No. 565,826. 1 Claim. (Cl. 193—34.)

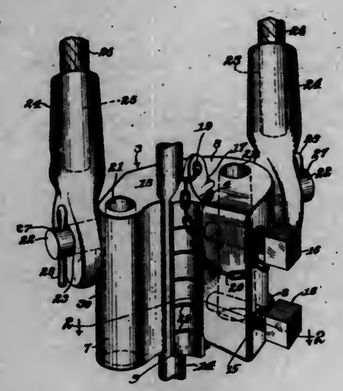


A garbage disposal device for mounting in the wall of a building, including a V-fitting, means for supporting the same in an upstanding position outside of a wall with one arm inclined upwardly toward the wall, a vent pipe extending upwardly from the other arm of the fitting, there being a space below the fitting to receive a container, a container cover slidably mounted on the lower arm of the fitting for engagement with a container to hold it assembled with the fitting, a downwardly tapered chute adapted to be mounted in a wall and engaging the inclined arm of the fitting, said chute having its large end uppermost, a hinged cover normally seated by gravity on the large upper end of the chute to close it, a bell crank lever supported above the chute, a connection between one arm of the bell crank lever and the cover, a foot lever below the chute, and a connection between the other arm of the bell crank lever and the foot lever.

1,482,145. MOLD. JOSEPH E. PERRAULT, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Jan. 18, 1923. Serial No. 613,490. 5 Claims. (Cl. 18—35.)

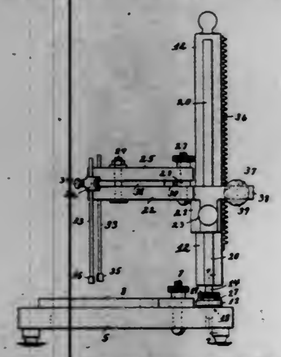
1. In a vulcanizing mold, a mold member, a core or mandrel carried thereby and having a vent passage therethrough, and means operable from the exterior of the mold for opening and closing said vent passage.

1,482,146. FOLDING BABY CART. ALESSANDRO POMILIO, New York, N. Y. Filed Oct. 3, 1921. Serial No. 505,056. 13 Claims. (Cl. 280—41.)



1. In a collapsible vehicle comprising a folding frame, a foot rest folding relatively thereto, and wheels mounted on pivoting axles for folding said wheels underneath the frame, substantially as set forth.

1,482,147. ELECTRIC-BULB ATTACHER. FRED HENDERSON POTTS, Asheville, N. C. Filed Apr. 3, 1922. Serial No. 549,213. 4 Claims. (Cl. 294—20.)



1. The combination with a pole; of a fixed and a movable jaw carried thereby, a spring pressed means movable longitudinally on the said pole to lock said movable jaw in either open or closed position.

1,482,148. CLAMP. JAMES P. RATIGAN, Los Angeles, Calif. Filed Jan. 4, 1922. Serial No. 526,966. 3 Claims. (Cl. 24—263.)

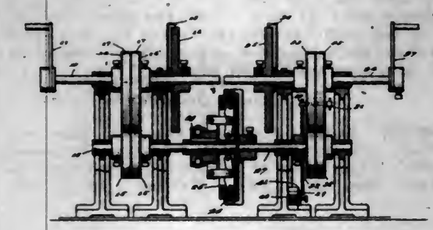
3. A clamp of the character described, comprising a body having a groove, one wall of the groove being channeled to receive a polish rod, a block in the groove having a groove opposed to the channel, means loosely engaging the block to force said block toward the channel, there being a lateral projection on the block engaging the body to prevent downward slipping of the block in the body when the block-forcing means are retracted, and means on opposite sides of the body to connect said body with a suspension tackle, the body having a leg disposed at an angle to the axis of the screw and said leg being provided with one of said connecting means and the connecting means being in a plane that passes through the axis of the rod that is held between the body and block.

1,482,149. PARALLELOMETER. FRANK J. REMY, Brooklyn, N. Y. Filed Aug. 22, 1922. Serial No. 583,486. 5 Claims. (Cl. 32—10.)

1. In a device of the character set forth, a base, a standard thereon, a shelf movable vertically on said standard, a clamping plate on said shelf, bars mounted between said shelf and plate and held adjustably thereby, and rods adjustably mounted in said bars.

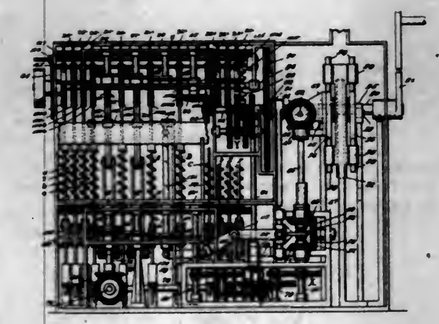
1,482,150. SAFETY. ZACHARIAH E. RICE, Landisburg, Pa. Filed June 6, 1922. Serial No. 566,299. 2 Claims. (Cl. 42—70.)

1. In combination with a gun stock, a plate supported thereon, a spring pressed indicating member supported by the plate, a sliding locking member supported over the plate and having an opening, said sliding locking member adapted to be moved to a position directly over the indicating member, an arm forming a part of the sliding locking member, and a spring member contacting with the depending arm to restrict movement of the sliding locking member.



1,482,151. METALLIC FASTENER. HEYMAN ROSENBERG, New York, N. Y. Filed Sept. 24, 1921. Serial No. 502,972. 11 Claims. (Cl. 85—44.)

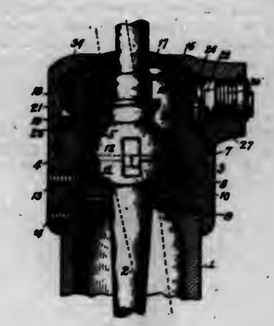
1. A fastener comprising a pin-like body having high-pitched threads extending longitudinally on the body, and an interlock formed on the body of the pin and adapted to be engaged by the material caused to move by the action of the threads in reaching their final position.



1,482,152. CALCULATING MACHINE. TAYLOR W. ROSS, Newport News, Va. Filed Nov. 9, 1918. Serial No. 261,765. 7 Claims. (Cl. 235—61.)

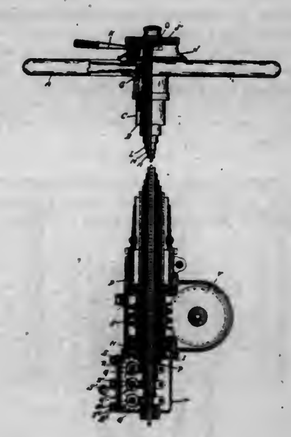
1. A calculating machine comprising a shaft carrying a number-indicating element indicating its angular position, a second shaft, variable-radius connecting elements between the first and the second shafts whereby movement of the first shaft will result in a movement of the second shaft proportionate to a logarithmic function of the movement of the first shaft, a separable connection between the first and second shafts whereby successive movements of the first shaft may be cumulated in the second

shafts, a third shaft carrying a number-indicating element, and separable connections between the second and third shafts whereby the cumulated position of the second shaft may be translated into a number position of the third shaft corresponding to the logarithmic position of the second shaft.



1,482,153. CALCULATING MACHINE. TAYLOR W. ROSS, Newport News, Va. Filed June 18, 1921. Serial No. 478,468. 9 Claims. (Cl. 235—60.)

1. A calculating machine comprising a primary operating element, means for indicating in numerical terms variations of said primary element from initial position, counter mechanism for indicating logarithmic values, separable connections between the primary element and the logarithm counter for moving the logarithm counter in either direction by movement of the primary element in either direction, said connections embodying a pair of coacting elements, one of which is moved through distances measured in logarithmic values corresponding to distance movements of the primary element measured in numerical values.



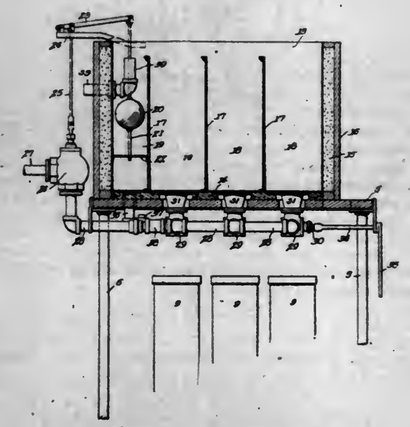
1,482,154. LOCK. AUGUSTUS C. SAXTON, Chicago, Ill., assignor to H-R Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 27, 1922. Serial No. 564,052. 12 Claims. (Cl. 70—128.)

10. In lock mechanisms for shift levers for transmission devices comprising a support and a lever operatively supported thereby, a member movable with the lever, a second member movable into and out of the path of movement of said first mentioned member, a lock element con-

nected to said second mentioned member and movable to move the same to or out of the path of movement of said first mentioned member.

1,482,155. STEERING GEAR. EARL H. SHERBONDY, Detroit, Mich., assignor to Sidney D. Waldon, Detroit, Mich. Filed Apr. 20, 1921. Serial No. 463,003. 7 Claims. (Cl. 74—39.)

1. In a steering gear, the combination with a tubular steering stem, of a plurality of tubular control shafts telescopically engaging said stem, control levers secured to the respective control shafts and in the same plane, and hubs for said control levers forming spacers between the several tubular shafts, said hubs being cut away to permit a limited independent movement of each lever.

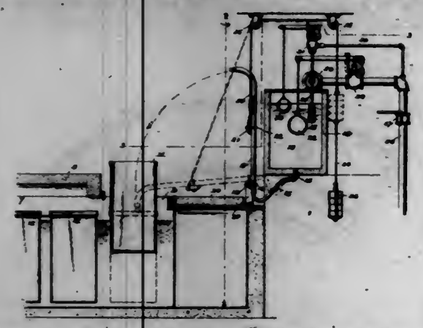


1,482,156. ANTISKID ATTACHMENT. FRANK P. SHERONAS, New Haven, Conn. Filed Mar. 15, 1921. Serial No. 452,491. 2 Claims. (Cl. 152—14.)

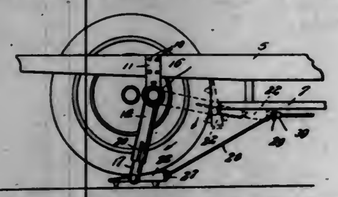
1. An anti-skid attachment for wheels, comprising a U-shaped member adapted to embrace a spoke of the wheel, a threaded pin connecting the arms of said U-shaped member to retain it in position on the spoke, a plate secured to the base of said U-shaped member and extending transversely of the wheel, one side of said plate being curved to fit the inner side of the felly of the wheel, said plate being provided with curved ends, a piece of spring

metal secured to said plate and cooperating with said curved ends to form chain securing means, and a chain extending transversely of the wheel and having its ends secured in said chain securing means.

1,482,157. MEASURING CAN FILLER. THOMAS SHIPLEY, York, Pa. Filed June 30, 1923. Serial No. 648,813. 5 Claims. (Cl. 226—105.)



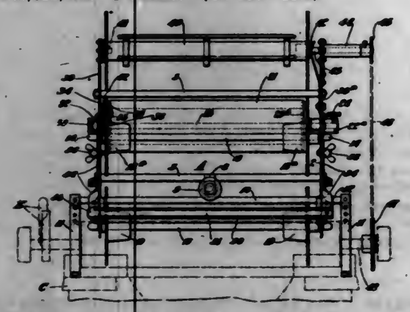
1. In a liquid measuring device, the combination of a measuring chamber having an overflow; a valve mechanism serving to control the alternate filling and emptying of said chamber; means operable by liquid passing said overflow and serving to terminate the filling flow to said chamber; and a connection controlled by said valve mechanism and serving to return the overflowed liquid to the measuring chamber as the latter starts to fill.



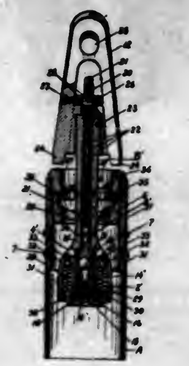
1,482,158. WATER MEASURING AND FEEDING DEVICE FOR CAN ICE PLANTS. THOMAS SHIPLEY, York, Pa. Filed June 1, 1923. Serial No. 642,797. 10 Cams. (Cl. 226—105.)

1. In a liquid measuring device, the combination of a plurality of measuring chambers; controllable means for discharging liquid from said chambers; a header connected with each of said chambers near to but slightly below

the maximum liquid level therein, whereby the header serves as a level equalizing connection when th chambers are substantially full; and means controlled by the level of liquid in one of said chambers serving to control the supply of liquid to said header.

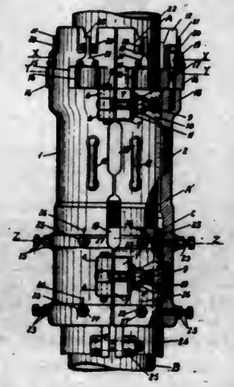


1,482,159. EMERGENCY BRAKE FOR VEHICLES. DELMAR R. SPUNG, Crooksville, Ohio. Filed Mar. 6, 1923. Serial No. 623,094. 1 Claim. (Cl. 188—4.)



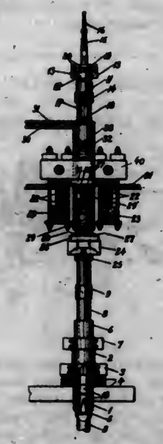
In a vehicle emergency brake, a pair of tubular supporting members supported for rocking movement upon the vehicle chassis bars and forwardly of the vehicle rear axle, rods carried by said supporting members, brake shoes pivotally disposed upon the free ends of said rods, means for maintaining said shoes forwardly of the vehicle rear wheels, means for releasing said first mentioned means for permitting said shoes to swing downwardly beneath said wheel, and means for normally maintaining said shoes in close contact with said wheels.

1,482,160. TYPEWRITER ATTACHMENT. HAYES C. STEVENS, Pittsburgh, Pa. Filed Jan. 13, 1923. Serial No. 612,431. 4 Claims. (Cl. 197—133.)



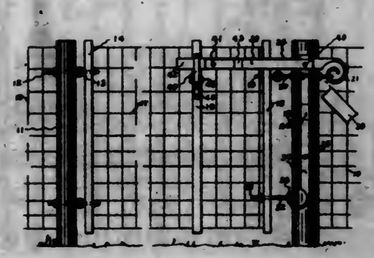
1. The combination with a typewriter having the usual body portion, carriage and rotary platen, of an automatic paper and carbon sheet supply mechanism supported on said carriage and adapted to supply original, copy and carbon paper to said typewriter, said mechanism comprising a frame member consisting of a pair of side members secured to said carriage, and connected by a plurality of tie rods, a pair of paper supply rolls journaled in said side members, a copy windup and storage roll journaled in said side members and adapted to receive the copy paper after it has passed beyond said platen, means operated by said platen for rotating said windup roll, a carbon sheet supply roll journaled in said frame, said last named roll being adapted to automatically retract the carbon sheet after each writing upon the operation of the paper release mechanism of the typewriter.

1,482,161. DEVICE FOR RAISING PETROLEUM AND THE LIKE. JOSEF STREDA, Trutnov, Czechoslovakia. Filed Nov. 13, 1922. Serial No. 600,733. 6 Claims. (Cl. 294—69.)



1. A bailer of the character described for raising liquid out of petroleum wells, comprising a valve body having an enlarged valve head, a bailer tube having in its upper part a valve seat whereby it can be suspended on said valve head, and means for suspending the apparatus through the medium of the valve body so as to prevent the liquid from being expelled by the expanding gases when the apparatus is raised.

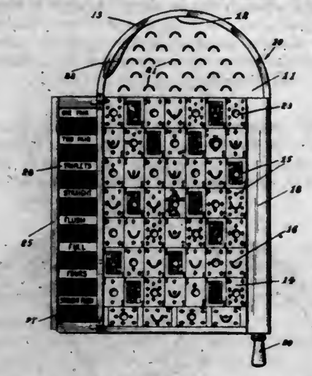
1,482,162. DEVICE FOR ALIGNING PIPES FOR CONNECTION. JOSEPH STREDA, London, England. Filed Dec. 4, 1922. Serial No. 604,942. 5 Claims. (Cl. 29—84.)



1. A device for aligning pipes for connection, comprising a sleeve adapted to receive the pipe ends, radial screws fitted in the lower part of the sleeve for centering the sleeve on and securing it to the pipe end, and adjustable rollers mounted in the upper part of the sleeve so as to hold the other pipe in alignment with the first one while both are screwed together.

1,482,163. METHOD OF AND MEANS FOR FREEING JAMMED EARTH-BORING COLUMNS. JOSEPH STREDA, London, England. Filed Dec. 4, 1922. Serial No. 604,947. 5 Claims. (Cl. 255—1.)

1. A method of freeing jammed earth boring columns, consisting in forming a space underneath the lowest end of the column and subjecting the latter to simultaneous downward pressure and percussion.

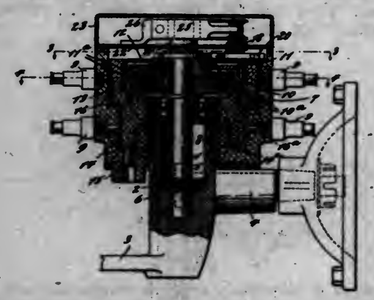


1,482,164. WIRE-GATE LATCH. HARRY H. SUTTON, Lucas, S. Dak. Filed Jan. 18, 1923. Serial No. 613,849. 4 Claims. (Cl. 292—247.)

1. In combination with a flexible gate, a gate post, a latch pivoted on said post and having a hook, means carried by the gate to engage said hook, and a keeper on the gate for receiving a part of the latch.

1,482,165. GAME. JOHN THOMAS, Montreal, Quebec, Canada. Filed Nov. 5, 1921. Serial No. 513,096. 1 Claim. (Cl. 46—61.)

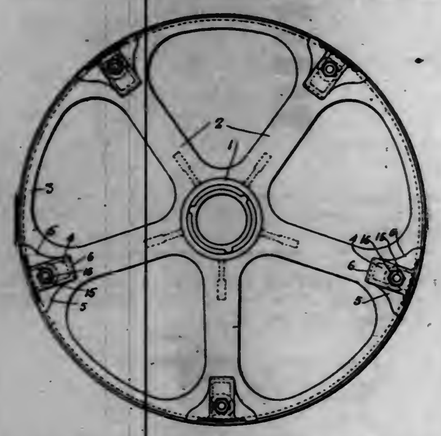
The herein described game board comprising a body portion having a curved upper end, means for elevating one end of the game board, a flange extending around said board, a pad attached to the flange, deflectors secured to the board, a projection mechanism at one side of the board, balls movable over the surface of the board, a covering for said board having indication marks thereon representing the cards of a pack of playing cards, means centrally of each card for engaging the balls and holding them against further movement, an attachment at one side of the board, means for removably holding the attachment in position,



said attachment forming a channel, and means within the channel to indicate the number of points and the like for the game.

1,482,166. CURTAIN BRACKET. HARRY A. THORDOX, Chicago, Ill. Filed Oct. 22, 1921. Serial No. 509,661. 3 Claims. (Cl. 156—22.)

2. A curtain bracket comprising an elongated plate; a hook at one end of said elongated plate; a pair of window casing engaging prongs at the other end of said plate disposed at right angles to the latter, said prongs being pointed and the remote edges thereof being parallel; a short plate attached to the elongated plate with one end portion of the short plate providing a shoulder disposed parallel to said prongs; and a hook at the other end of the short plate.

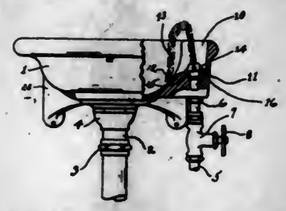


1,482,167. CIRCUIT CONTROLLER. RICHARD VARLEY, Englewood, N. J., assignor to Varley Duplex Magnet Company, a Corporation of New Jersey. Filed Aug. 1, 1919. Serial No. 314,643. 17 Claims. (Cl. 200—20.)

4. A circuit controller comprising a rotative primary member arranged to be driven by a prime mover, a rotary secondary member having a floating relation with the primary member when the latter is stationary, resilient retractible means impelling the secondary member in one direction, a movable contact arranged to be closed by the secondary member when the latter is rotated against the force of the retractile means, and means for transmitting a torque from the primary member to the secondary member in excess of the force of the retractile

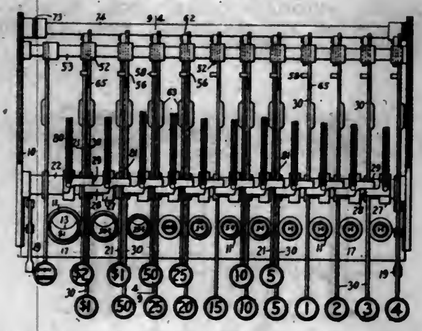
means, said torque transmitting means being inoperative to couple the two members when the primary member is stationary, whereby the secondary member is free to be retracted and open the contact and rotates relative to the primary member to open contact position under the influence of the retractile means when the primary member stops.

1,482,168. WHEEL. FRANK H. WALKLEY, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 25, 1922. Serial No. 596,714. 6 Claims. (Cl. 301—22.)



1. In combination, in a wheel, wheel spokes and rim, a plurality of bolts passing through the free ends of each of said spokes, supporting shoulders adjacent ends of said spokes, three point clamps carried by said bolts, a locking ring, one portion of said clamps engaging with the shoulder on the spoke and the other portions of which engage with said locking ring carried on one wall of the spokes, and a demountable rim engaging therewith and with the inner wall of the spokes.

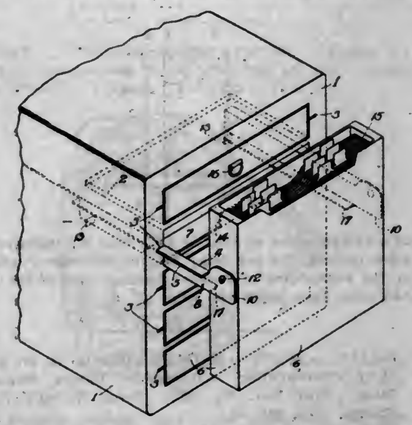
1,482,169. SLIDING SASH WINDOW. JACOB WEBER New York, N. Y., assignor to Standard Comfort Window Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1920. Serial No. 433,768. 3 Claims. (Cl. 20—43.)



1. In a window, a relatively wide sliding sash and guides therefor, a relatively narrow sash adapted to pass between the guides of the first-named sash when the latter is in one of its extreme positions, means for freely suspending said sashes pivotally connected upon a horizontal axis to the lower extremities of said sashes, and guides for the second-named sash, terminating in a position which permits said sash when moved upon its pivotal connection to freely pass between the guides of the first-named sash when the two sashes are in opposite extreme positions, whereby said second named sash may be entirely reversed upon its pivotal connection without removing said first named sash.

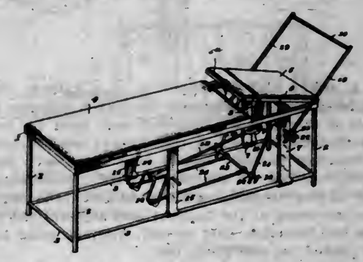
1,482,170. SANITARY DRINKING FOUNTAIN. EDWARD T. WEBSTER, Milwaukee, Wis. Filed July 28, 1921. Serial No. 488,066. 8 Claims. (Cl. 299—12.)

1. In a drinking fountain, the combination of a catch bowl and a nozzle therein, said nozzle being provided with an upwardly extending laterally inclined nozzle port leading through the top of the nozzle, said nozzle also having a series of openings leading from an intermediate portion of the port through the walls of said nozzle below the outer margin thereof.



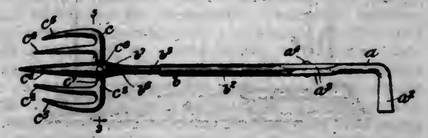
1,482,171. CHANGE-MAKING MACHINE. CHRISTIAN J. WEINMAN, MARK T. SCHUSTER, and JAMES O. CAYLOR, Dayton, Ohio. Filed June 6, 1921. Serial No. 475,267. 44 Claims. (Cl. 133—2.)

1. In a device of the character described, a plurality of receptacles, each adapted to contain coins of a single denomination, an ejector for each receptacle, actuating devices for the respective ejectors, an operating member normally connected with a predetermined number of said ejectors and normally disconnected from the remainder of said ejectors, and means under the control of the operator to cause a selected number of said actuating devices to change their operative relation with their respective separately engaging them for holding them in an upright position.



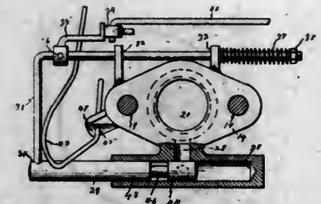
1,482,172. FILING DEVICE FOR TALKING-MACHINE RECORDS. ANDREW L. WEIS, Monroe, Mich., assignor to The Weis Manufacturing Company, Monroe, Mich., a Corporation of Michigan. Filed Jan. 29, 1921. Serial No. 440,934. 2 Claims. (Cl. 45—96.)

2. In a filing device, the combination of a cabinet, sheet metal slides disposed in a horizontal plane within said cabinet, a receptacle pivoted upon and between the outer ends of said slides, to tilt about a transverse axis, and means to rigidly connect said slides, each slide comprising an upper outer flange and a lower inner flange, the cabinet having grooves forming guides for the



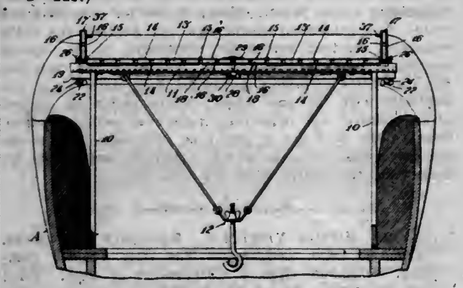
upper flanges of the slides, the outer ends of the lower flanges of the slides serving as stops to limit the tilting motion of said receptacle, and the inner ends of the lower flanges of the slides being formed to limit the outward sliding motion thereof in said grooves.

1,482,173. EXERCISING APPARATUS. CHARLES E. WILLARD, Washington, D. C. Filed Sept. 13, 1922. Serial No. 588,038. 10 Claims. (Cl. 128—70.)



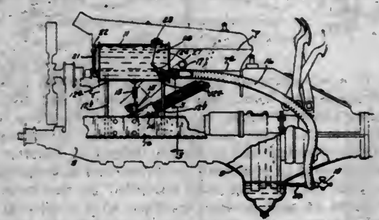
1. An exercising apparatus comprising a table adapted to support a patient in a prone position, said table comprising a stationary section and a movably mounted section, an arm bar mounted on said table and adapted to have a swinging movement thereover, and common means for swinging the arm bar and moving the movable section.

1,482,174. CLINKER, COAL, AND CINDER TONGS. JAMES H. WILLIAMSON, New York, N. Y. Filed Apr. 12, 1921. Serial No. 460,736. 5 Claims. (Cl. 294—11.)



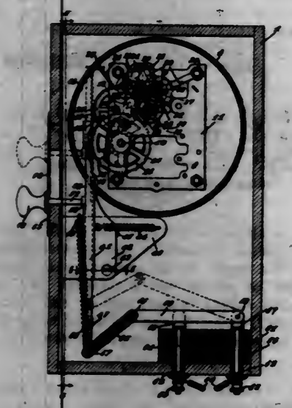
1. A pair of tongs of the class described comprising handle members pivotally connected and provided with arm extensions provided with similar claw shaped jaws having fingers which increase in length from the opposite sides thereof inwardly the lengths of the arm members or extensions being longitudinally adjustable.

1,482,175. VAPORIZER. HARRY C. WILSON, Detroit, Mich. Filed May 13, 1922. Serial No. 560,856. 13 Claims. (Cl. 123—119.)



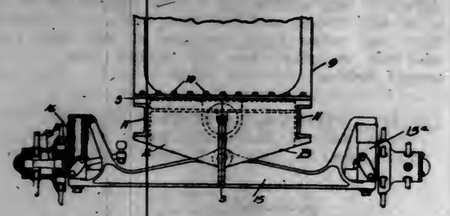
5. The combination with a gas engine having an intake manifold, a carburetor and control mechanism for operating the same, of an auxiliary air supply means; and a pair of means for controlling the flow of air through said supply means, one of said control means being manually operable and the other being disconnected from and operable by said control mechanism.

1,482,176. CONVERTIBLE MATTRESS SUPPORT FOR AUTOMOBILE BEDS. JET WIMP, Chicago, Ill. Filed June 5, 1922. Serial No. 566,171. 9 Claims. (Cl. 5—119.)



1. A mattress-supporting device comprising in combination a body portion and a wing hingedly connected at one side thereof, said wing being formed of separated slats, and means lying alongside of said slats and separately engaging them for holding them in an upright position.

1,482,177. INTERNAL-COMBUSTION ENGINE. WILLIAM A. ZIEGLER, Minneapolis, Minn. Filed Oct. 10, 1921. Serial No. 506,910. 2 Claims. (Cl. 184—103.)



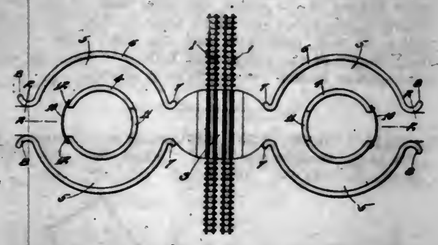
2. The combination with the crank case of an engine, of an elevated auxiliary oil supply tank having an oil delivery conduit arranged for gravity feed of oil therethrough into said crank case, and at the place of delivery into said case having a small short approximately horizontal regulator tube, the conducting capacity of which is not more than one-fifteenth that of the body of said oil delivery conduit, whereby there will be no feed of oil through the conduit when the engine is idle but oil will flow through said conduit when said engine is in action and the lower end of said conduit is then covered.

1,482,178. TIME SWITCH. GEORGE ZINZEL, Scranton, Pa. Filed Feb. 17, 1922. Serial No. 537,225. 7 Claims. (Cl. 200—33.)

1. In a device of the class described, an operating train comprising a gear wheel; spring means for operating the train; time-controlled mechanism for holding the train releasably against movement responsive to the spring means; a rack bar; means for mounting the rack bar for transverse swinging movement, into and out of engagement with the gear wheel; means under the control of an operator for imparting transverse swinging movement to the rack bar at any time to release it from engagement with the gear wheel; a switch; and means for connecting the switch with the rack bar.

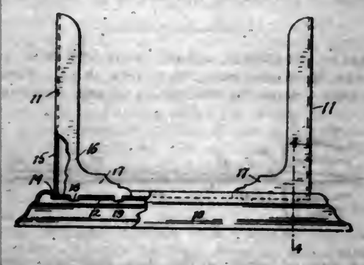
1,482,179. MOTOR VEHICLE. BENJAMIN C. ZUHARS, Columbus, Ohio, assignor to The Ohio Tractor Company, Columbus, Ohio, a Corporation of Ohio. Filed July 22, 1921. Serial No. 486,873. 2 Claims. (Cl. 180—1.)

1. In a structure of the character described, a bolster constructed with front, rear and side walls and also with integral interior walls to provide an open-top water chamber in the upper part of said bolster extending substantially throughout the length thereof, a radiator supported on said bolster with its lower end communicating with said chamber, an axle straddled by the front and rear walls of said bolster together with a pivotal connection between the same, and a power unit having a part on its forward end journaled in the rear wall of said bolster.



1,482,180. FOLDING BOX. WILLIAM BAMBER, Sutton, England. Filed Mar. 27, 1922. Serial No. 547,238. 4 Claims. (Cl. 229—37.)

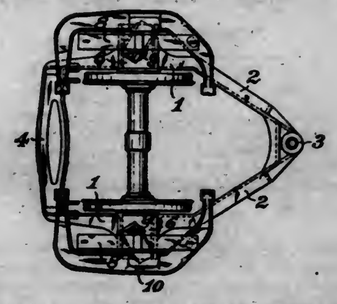
1. A folding box comprising two sides and two ends, one end and one side being adapted to fold upon the other end and the other side when collapsed, flaps extending from one edge of each side of the box and adapted to form front and back closures for the same, the ends of the box being of equal length when collapsed, and the one end being creased in such manner that it will fold to a V-shape when erected, while the other end is creased



adjacent its sides so that it will form an indented end when erected, the box being held in the erected position by the engagement of tongues forming part of the front and back flaps inside the sides of the box.

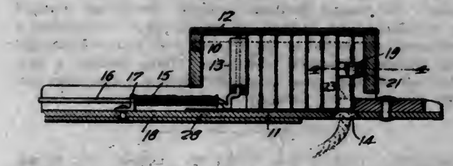
1,482,181. SAFETY HIGHWAY APPROACH TO RAILWAY CROSSINGS. WILLIAM H. BANKS, Winthrop, Mass. Filed Nov. 15, 1922. Serial No. 601,172. 4 Claims. (Cl. 238—3.)

1. A safety highway approach to a railway crossing comprising an enclosed area of curved contour in the middle of the highway somewhat back from the crossing and surrounded by a guard, the highway being divided into two branches to pass around said area, said branches merging together on the side toward the crossing, the guard having movable sections adjacent the beginning of the branching of the highway and adjacent the merger of the two branches, said movable sections being adapted to be opened for emergency use.



1,482,182. CARD HOLDER. WARWICK G. BATH, Newton Falls, Ohio. Filed Feb. 19, 1923. Serial No. 620,085. 4 Claims. (Cl. 40—124.)

1. A card holder comprising a sheet metal base member tapering toward the top and having a flat top portion, and a pair of sheet metal standards of channel form arranged with the channels facing inwardly and having squared lower ends resting on said flat top portions of



the base member at the opposite ends thereof, said standards having tongues projecting through openings in said flat top portion of the base member and bent against the under surface thereof.

1,482,183. TRAILING-TRUCK FRAME. JAMES G. BLUNT, Schenectady, N. Y. Filed May 15, 1923. Serial No. 639,047. 1 Claim. (Cl. 105—174.)

An integral trailing truck frame comprising two side members; two inwardly inclined radius bar arms, extending therefrom to a radius bar pin box; two journal boxes, each extending outwardly from one of the side members; and a transverse member, connecting the rear ends of the side members.

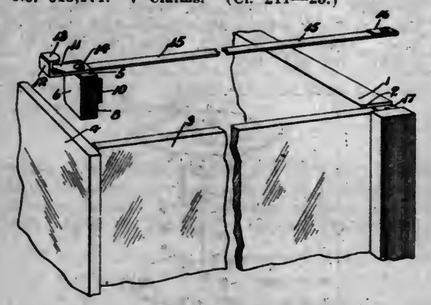
1,482,184. TOOL FOR HANDLING BLASTING CAPS. ELMER DIAL, Mill Run, Pa. Filed May 25, 1923. Serial No. 641,363. 5 Claims. (Cl. 86—22.)

1. A magazine for caps having an outlet hole and means for crimping the walls of a cap upon an inserted fuse adjacent said hole.

1,482,185. MOLDING PROCESS. HENRY C. EGERTON, Ridgewood, N. J. Filed Apr. 14, 1919. Serial No. 289,960. 8 Claims. (Cl. 18—56.)

1. The process of molding thin warped surface articles comprising a number of layers of fabric carrying impregnating cured phenolic condensation cementing material, which comprises assembling on a removable metallic mold facing a plurality of article blanks, heating the mold facing and article blanks and forcing the blanks together into substantially contact to form a contoured shaped partly cured article blank substantially corresponding to the finished article, transferring the removable mold facing and article blank to the pressure curing mold having a shaped molding cavity corresponding to the removable mold facing and forcing an equalizing molding member against the article blanks to complete the final shaping of the article and heating them to effect their heat curing while they are strongly compressed to consolidate the layers of fibrous material.

1,482,186. SHEET-METAL DRAFTING INSTRUMENT. EMANUEL F. FALES, Wilmington, N. C. Filed Dec. 10, 1919, Serial No. 343,783. Renewed Dec. 27, 1923. 30 Claims. (Cl. 33—27.)



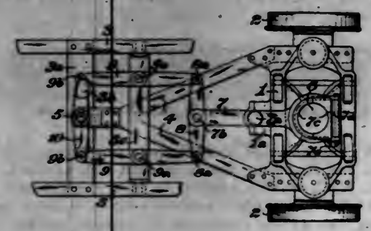
1. A drafting implement comprising a shank, a disk mounted on one end thereof, and a pair of disks mounted upon the opposite end of the shank, said pair of disks being adjustable relatively to each other and to the shank.

1,482,187. CONCRETE-BLOCK-MAKING PLANT. ARTHUR G. HATCH, Duluth, Minn. Filed July 3, 1922. Serial No. 572,362. 2 Claims. (Cl. 25—2.)

1. A concrete block making plant, comprising concrete mixing and conveying means, a mold bed, said bed comprising mold sections adapted to form one face and the sides of blocks, and upper sections adapted to form the remaining face of the blocks and to support another layer of molds, and conveying means for the molds and formed blocks.

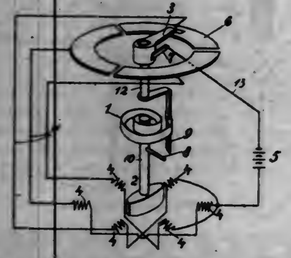
1,482,188. SHOWCASE CONSTRUCTION. RODNEY L. HENRICK, Grand Rapids, Mich., assignor to Grand Rapids Show Case Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 17, 1923. Serial No. 613,171. 7 Claims. (Cl. 211—25.)

1. A device of the class described comprising a sheet metal construction having two spaced apart sides, a top and an end, spaced apart tongues struck from one of said sides at right angles thereto, a member having a leg located against the upper side of the top and pivotally connected thereto to turn about a vertical axis, said leg at its free end being bent upwardly at right angles for a



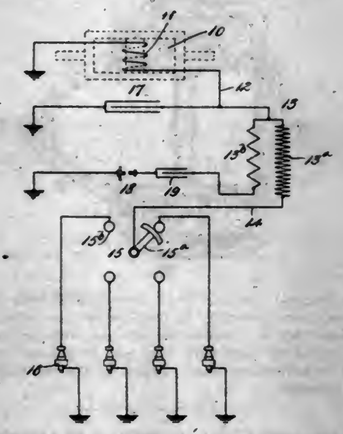
distance and then back over the leg and parallel thereto to terminate in a tip paralleling the leg, and a length of metal tape attached to said member and said sheet metal construction and turning with the member about its pivotal connection to the said construction, substantially as and for the purposes described.

1,482,189. LOCK. FREDERIC K. HEYER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed May 29, 1923. Serial No. 642,253. 4 Claims. (Cl. 70—92.)



1. In a cylinder lock, the combination with a cylinder and two key operated plugs mounted therein and adapted for operation by different keys, of a cam loosely mounted on one of said plugs, and means controlled by the other plug for connecting said cam with and disconnecting it from the first mentioned plug.

1,482,190. LOCOMOTIVE TRUCK-CURVE-ADJUSTING MECHANISM. FREDERICK C. HOHENSTEIN, Dunkirk, N. Y. Filed Mar. 29, 1923. Serial No. 628,468. 4 Claims. (Cl. 105—174.)

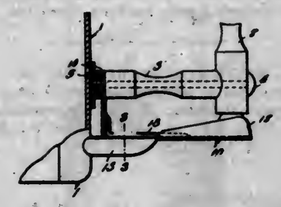


1. The combination, in a locomotive, of a main frame; a two wheeled truck; a radius bar, connecting said truck pivotally to the main frame; and means for governing the fulcruming point of the truck swing by the swing of the truck itself.

1,482,191. ELECTRIC WINDING DEVICE FOR SPRING MOTORS. WILLY HORNAUER, Neukolln, Germany, assignor to Vox Maschinen-Aktiengesellschaft, Berlin, Germany. Filed Dec. 4, 1922. Serial No. 604,849. 5 Claims. (Cl. 185—40.)

1. In a spring motor, the combination with a driving spring, of a rotary electric switch connected to the trail end of said spring so as to be rotated thereby, a magnet system controlled by said switch so as to create a rotating magnetic field, and an armature arranged in the field so as to follow the rotation of the latter, the armature being connected to the leading end of the spring so as to advance it in proportion as the trail end is being retracted.

1,482,192. IGNITION SYSTEM. DOW B. HUGHES, New York, N. Y., assignor to Motor Ignition & Devices Company, a Corporation of West Virginia. Filed May 10, 1912, Serial No. 696,334. Renewed Apr. 25, 1921. Serial No. 464,260. 3 Claims. (Cl. 123—148.)



1. In an ignition system for internal combustion engines, an engine driven generator, a transformer, a spark plug connected to the secondary of the transformer, and means for timing ignition and for advancing ignition in acordance with increase in engine speed, comprising a condenser connected to the generator so as to be charged and thence discharged when the voltage reaches a predetermined value, said condenser having a discharge circuit including the primary of the transformer.

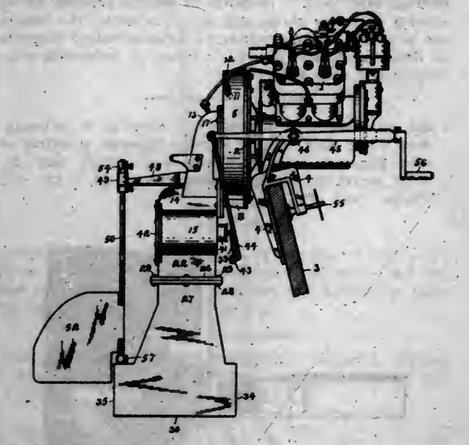
1,482,193. CLAMPING DEVICE. GEORGE C. HUME, Chilton, Wis. Filed July 5, 1923. Serial No. 649,504. 1 Claim. (Cl. 24—248.)

A clamping device for bags, comprising a supporting plate provided at one end with a lug which projects laterally from it at substantially a right angle and is provided with a slot, said plate having also two arms which project laterally of it under the said lug, an eccentric clamping block pivoted between the said arms upon a pin arranged crosswise of the said slot and adapted to clamp a bag against the said plate, and a handle secured to the said block and projecting through the said slot and limiting the movement of the block away from the said plate by contact with the outer end of the said slot.

1,482,194. HANDLE PROTECTOR. JOHN ELMER JANES, Industry, Ill. Filed July 27, 1923. Serial No. 654,195. 3 Claims. (Cl. 53—3.)

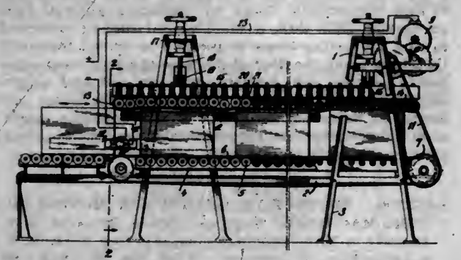
1. A percolator handle protector comprising a plate having a right angular extension at one end to form an attaching tongue, said tongue having a longitudinally extending slot with an opening through one side wall thereof.

1,482,195. DOUGH-WORKING MACHINE. CHARLES KERN and AUGUST KAMINSKI, St. Louis, Mo., assignors, by mesne assignments, to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 22, 1919. Serial No. 340,017. 18 Claims. (Cl. 107—12.)



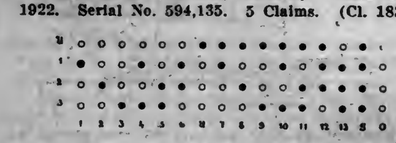
1. In a dough working machine, a dough folding mechanism comprised of a single swinging frame bearing a pair of spaced apart opposing conveyors.

6. In a dough working machine, the combination with an endless travelling support, of a dough hopper, a pair of sheeting rolls arranged there adjacent, a folding mechanism arranged below said sheeting rolls comprising a pair of opposing conveyors adapted to swing from a single fulcrum and held a set distance apart from one another, and means for swinging said mechanism whereby to deposit the dough sheet as it is passed from between said sheeting rolls from said travelling support in folds arranged transversely of the dough sheet, and a second set of sheeting rolls arranged at right angles to said first mentioned sheeting rolls for resheeting said lapped dough sheet.



1,482,196. CENTRIFUGAL PROPELLER. ORLANDO C. KETRING and JACOB LE ROY KETRING, Portland, Ind. Filed May 14, 1923. Serial No. 638,772. 6 Claims. (Cl. 115—16.)

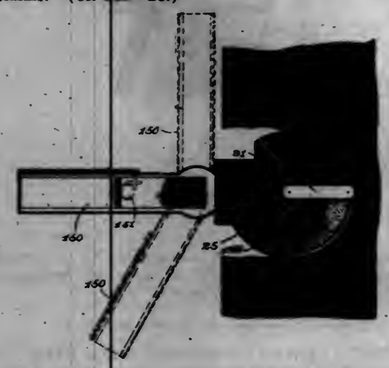
3. A propeller for boats comprising a pump, means for operating the pump, a cylinder spaced from the pump, means for conducting water between the cylinder and both the intake and the discharge of the pump, a head located below the cylinder and adapted to convey water both upward and downward at the same time, a core rotatably



mounted in said cylinder and adapted to be turned to change the direction of flow of the water through said head, all substantially as shown.

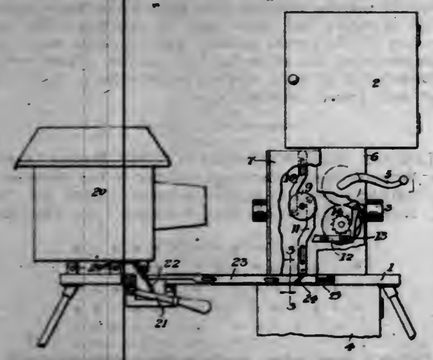
1,482,197. CARTON-CLOSING MACHINE WITH AUTOMATIC STOP MECHANISM. WALLACE D. KIMBALL, New York, N. Y., assignor to Standard Sealing Equipment Corporation, New York, N. Y., a Corporation of New York. Filed July 16, 1921. Serial No. 485,189. 12 Claims. (Cl. 93—6.)

1. In a machine for sealing filled cartons, a presser member for applying pressure to the flaps of the carton, means for advancing the carton into the machine under the action of said presser member, and automatic means for discontinuing the advancing force applied to said carton immediately after its complete introduction to the action of said presser member.



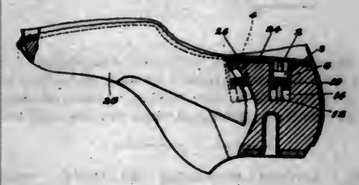
1,482,198. CARD-SORTING MACHINE. MARTIN LEBEIS, Berlin-Friedenau, Germany, assignor to Vox Maschinen-Aktiengesellschaft, Berlin, Germany. Filed Oct. 12, 1922. Serial No. 594,135. 5 Claims. (Cl. 183—92.)

1. In a card sorting machine, the combination with a vertical delivery channel and with a plurality of receivers communicating with said channels, of a plurality of flaps forming part of the channel walls and being ar-



ranged so as to divert admitted cards into different receivers according to their position, operating elements controlling said flaps, a plurality of feelers adapted to co-operate with the cards, and means whereby the feelers can be utilized for controlling as many operating elements as there are feelers plus the number of obtainable combinations of such feelers.

1,482,199. MINING MACHINE. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Mar. 20, 1916, Serial No. 85,243. Renewed Jan. 22, 1923. 182 Claims. (Cl. 262—28.)



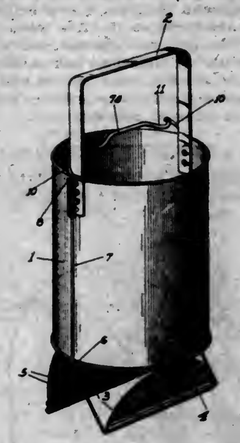
1. In a mining machine, the combination with a main supporting frame, of a supplemental frame pivotally connected at its rear portion to said main frame in a relatively low position, means mounted on the forward end of said supplemental frame for dislodging material from an upright mine wall, a supplemental support connected to said supporting frame in position to extend forwardly therefrom along the floor of the mine chamber, means connected between such forward extension and said supplemental frame for assisting in supporting the latter, and means for adjusting the height of said adjusting mechanism by swinging said supplemental frame on its pivotal support relatively to said main frame.

1,482,200. PROTECTIVE DEVICE FOR MOVING-PICTURE MACHINES. NICHOLAS POWER, Brooklyn, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 25, 1913. Serial No. 750,530. 8 Claims. (Cl. 88—17.)

1. In a moving picture machine the combination of a plurality of protective casings enclosing the operating mechanism and the film reels, said casings having movable portions for permitting access to the interior thereof, means for preventing the operation of the machine when said movable portions are out of their protective position and means operatable when said movable portions are closed for rendering said machine operative.

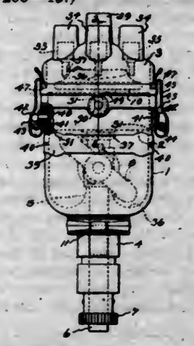
1,482,201. METHOD OF MAKING SHOES. ARTHUR F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 23, 1921. Serial No. 502,666. 12 Claims. (Cl. 12—142.)

10. That improvement in the art of making turn shoes which comprises providing a second last and a combined heel pad and stiffener, one having a plurality of recesses and the other a plurality of projections to co-operate with the recesses, each recess and its co-operating projection being spaced at the same predetermined distances from the heel end of the shoe, then assembling the heel pad on the last with the recesses and projections in co-operative relation to hold the pad in predetermined position on the last and to prevent relative longitudinal movement of the pad and last, inserting the pad and last in a turned shoe, lasting the heel-seat of the shoe upon said pad, and then completing the shoe in the usual manner.



1,482,202. JEWELRY TRAY. CAMILLE E. ROY, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 510,025. 5 Claims. (Cl. 211—28.)

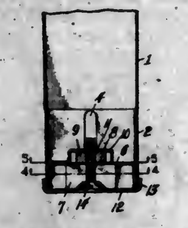
1. A tray including in combination a frame of sheet metal, a wood insert and a bottom, the inner wall of said frame forming an inwardly-projecting shoulder and terminating in an inwardly-projecting flange, the outer wall of said frame projecting downward and terminating in a plurality of lugs, and the said insert having a recess on the upper inner edge to fit said shoulder and a recess on the lower outer edge to receive the said lugs of said outer wall.



1,482,203. POTATO AND FRUIT PICKING BUCKET. SHIKATARO SAKAMOTO, Stockton, Calif. Filed July 5, 1922. Serial No. 572,976. 2 Claims. (Cl. 226—36.)

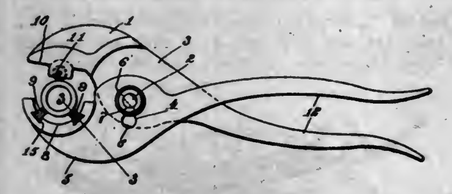
1. A bucket comprising an open topped receptacle, bottom members for the bucket hinged thereto at opposed points, said members when in alinement forming a complete closure for the bottom of the bucket, a rigidly fixed bail for the bucket projecting thereabove, an auxiliary bail slidably mounted on the outside of the bucket for vertical movement relative thereto, and connected to the bottom

members, and catch means on the auxiliary bail adapted to engage the main bail when the bottom members are in their closed position.



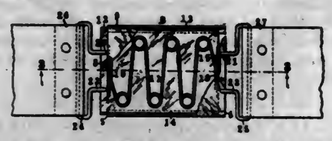
1,482,204. TIMER DISTRIBUTOR. WOLFGANG E. SCHWARZMANN, Longmeadow, and ADOLPH ROSNER, Springfield, Mass., assignors to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed June 4, 1921. Serial No. 475,063. 9 Claims. (Cl. 200—19.)

1. In a timer distributor having an interrupter mechanism, a distributing mechanism and a driving shaft therefor, the combination of a three part housing comprising a supporting member housing the driving shaft and having a bearing therefor, a cup housing the interrupter and being removably supported in said member, and a distributor cap housing the distributing mechanism and being detachably fastened to said member, said cup having an upstanding peripheral flange coacting with said member to center said cup around the shaft, and having means coacting with a continuous shelf in said member to locate said cup axially of the shaft.



1,482,205. FOOT CAP FOR FURNITURE LEGS. CLEMENT R. UHL, Toledo, Ohio, assignor to The Toledo Metal Furniture Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 30, 1923. Serial No. 635,430. 4 Claims. (Cl. 45—137.)

4. A metal furniture leg rectangular in cross section and having a slot extending inward from its outer end at a corner thereof, means within the outer end portion of the leg forming a nut, a strip of metal fashioned to conform to the cross sectional shape of the leg and adapted to telescopically fit thereover and having its meeting edges

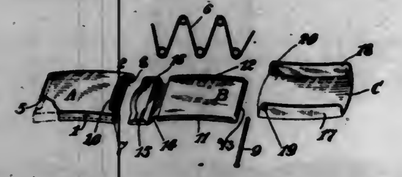


inwardly flanged and adapted to fit into the leg slot, a cap fitted over the outer end portions of the sleeve and leg, and means threading into said nut and detachably holding the cap and sleeve to the leg.

1,482,206. GLASS-TUBE CUTTER. LEROY L. TULEY, Wood River, Ill. Filed Feb. 20, 1923. Serial No. 620,154. 1 Claim. (Cl. 49—52.)

A glass tube cutter consisting of a pair of jaw members, means adjustably and pivotally connecting the jaw members, a glass cutter on one said jaw member and spaced, yielding abutments on the other jaw member.

1,482,207. SPRING-LINK BELT. GABRIEL ABRAHAM, New York, N. Y. Filed Feb. 11, 1921, Serial No. 444,088. Renewed Dec. 13, 1923. 1 Claim. (Cl. 267—69.)

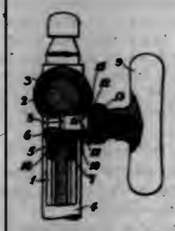


A resilient relief link for belts comprising an elongated plate having edge flanges spaced apart from and parallel with said plate and on one end a spring-retaining lip; a slide plate sliding within said flanges and having an end spring-retaining lip; a compression spring reacting against said spring-retaining lips and located between said plates; and one of said plates being provided with a perforation in its end at a shorter distance from its said spring-retaining lip than the distance from the spring-retaining lip of the other said plate to its end and a belt connection passing through said perforation and serving as a stop to lock the parts together.

1,482,208. SPRING BUCKLE. GABRIEL ABRAHAM, New York, N. Y. Filed Feb. 26, 1923. Serial No. 621,176. 3 Claims. (Cl. 24—191.)

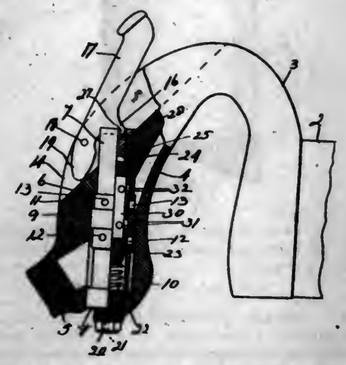
1. In a spring buckle in combination, a base having parallel lips provided with flanges along its longitudinal edges and having one end provided with an interior spring-buttress and the opposite end extending outwardly and back overlying the body of said base to form a strap-grip, transversely aligned perforations being formed in the ends of such lips at the ends adjacent said strap-grip;

a slide having a spring-abutment at its far end and a strap attaching means at its near end and adapted to work within said base under said flanges; a compression-spring lying between said slide and said base and reacting against said abutment; a cam-like face-plate adapted to overlie said base and operate to grip a strap against



said strap-grip having edge positioned right-angle extensions provided at the end near said grip with aligned holes; and a thorough-pin passing through said holes and perforations to swivel said face-plate and form an end-closure for said otherwise open ended base and by means of which the entire structure is assembled.

1,482,209. AUTOMATIC GRIP-RELIEF BUCKLE. GABRIEL ABRAHAM, New York, N. Y. Filed July 18, 1923. Serial No. 652,230. 7 Claims. (Cl. 24—191.)



1. An automatic gripping buckle comprising a casing, providing a strap passage-way having a re-acting wall; a rocking gripping cam pivoted to said casing automatically to grip the strap and force it against said reacting wall; an operating lever secured to said cam and a tension link free from conection with said casing and working freely in said passageway; pivoted at one end to said operating lever and being provided at the other end with a strap eye, a pull on said link clamping said cam towards said reacting wall and a push on said link tending to release said cam.

1,482,210. ADJUSTABLE HINGE OR JOINT FOR WIND-SCREENS OF MOTOR CARS AND THE LIKE. ARTHUR COLLINS AUSTER, Birmingham, England, assignor to Auster Limited, Birmingham, England. Filed Mar. 29, 1922. Serial No. 547,672. 1 Claim. (Cl. 296—92.)
